A World Search For Democracy

by

W. E. Burghardt Du Bois

1937

In Explanation

The trip around the world in 1936, which forms the basis of this book, was made possible by a grant from the Oberlaender Trust for a six months stay in Germany. I purposed there to study education and industry and I did. But curiosity for the plight of democracy there and in the world drove me to eastward in the end and here I am, due West. I thank the Oberlaender Trust.

A Search for Democracy

by

W. E. B. Du Bois

Chapter 1 - What is Democracy?

"Professor, just what is Democracy?"

Professor Jones hesitated; why, he could hardly have said. He knew exactly what he would say for he had said it a hundred times and more. Moreover the student who asked was an obvious type: he had not read the day's assignment and preferred argument to recitation. Nevertheless Professor felt a distaste for the hackneyed answer which he heard himself repeating: "A government of the people, for the people and by the people". Of course the student came jauntily back, as the professor knew that logically he must: "Is there any such thing as democracy anywhere today?" Professor opened his mouth for a quick decisive answer. He opened his mouth and closed it. Then he opened it again and began to think aloud, almost forgetting the class, to its perfect content.

"I do not know. I used to know. I was quite certain. But today I am puzzled. I believe in democracy still quite surely, almost passionately, which in itself is an alarming sympton. I know it exists, but where and in just what form - that I do not know, and I want to find out. Something has happened to the world and to me, and I feel like undertaking a new search - a sort of voyage of discovery."

"Do you think it might be hiding in Russia?" It was a girl this time, an earnest sceptical body, who read much, believed little, and got low marks.

"It might be," answered the professor, thoughtfully, "and it may be hiding here - "

"Well if it is in Georgia, it's sure hiding," affirmed the first questioner; and then the debate got quite out of the professor's control until it was ended by the bell.

Now all this was more serious than it would seem to a stranger. Hartwell A. and I. College was a conservative orthodox institution for Negro youth, supported in Macon by passing the hat among Northern whites and governed in the name of a highly respectable

absentee
do-nothing board of trustees. The president, a small brown man, was keen, precise and careful, and ruled the college intensively by carefully organized gossip. In his office all lines of information were gathered up - teachers' tales, students' gossip, servants' tittle-tattle, stories from town, and all that the president's bright eyes themselves saw, which was not a little. He heard very soon of Professor Jones' discussion of democracy - his mention of Russia, his doubts of the United States. This called for action and fitted in with the letter on his desk. This was an application from a new Ph. D. to teach sociology, political science, history and allied and associated subjects; and he could be had cheap as jobs were scarce. And Bolshevism and lack of patriotism would hurt Hartwell in high places, North and South where it had friends.

Professor Jones was not surprised to be summoned to the President's office next day. The President received him gently and inquired solicitously after his health. Was he - er - well? He looked a little fine drawn - yes, er fine drawn. Poor Professor Jones whose health never troubled him in the slightest, began to feel slightly ill.

"I wonder if you ought not to have a little rest and - er - change of scene? It happens I have here fortunately, right here word from a young man who might - well er of course not take your place, but substitute for you, if you took say a year's leave - "

Professor Jones leaned forward eagerly.

"I was thinking of study - I did want to search for - "

"Without pay of course", added the president and hastened on as Professor Jones looked aghast. "Well I am sure the trustees will consent and we may, provisionally of course, consider the matter settled; and," he rapidly calculated a saving of $250 next year on the difference in salary, and deftly forstalling another attempt of Professor to get in a word, said as he rose, "And dear Professor Jones, er - if I were you, and I am sure you'll pardon my mentioning the matter, I would refrain for the remainder of the term from mentioning - er - Russia or disparaging our beloved country. And somehow too I - er - doubt the widsom of admitting to unformed minds any lack of precise know-

ledge and conviction on - er - current - er - controversies. Well, good-bye - good day - so glad - " And Professor Jones found himself in the hall.

Of course he went straight to Jane. He always did. Jane Kent was tall and straight. She was not pretty, but clean, light brown and beautiful of skin. Her hair was crinkly and black. She had a cool reserve, that made white people dislike her, and colored people afraid of her. A close friendship had grown up between her and Professor Jones in the last four years since both had begun teaching at Hartwell. His name at first appalled her - Abraham Lincoln Jones! It sounded like a Williams and Walker comedy. But she gave him quick sympathy when one day he suddenly told her how he too hated it and yet would not change it. He still believed in Abraham Lincoln. "Of course he wasn't God, was unwilling to attack slavery and wanted all Negroes to go to Africa. But he learned! He learned, he learned - what more can a man do?"

Jane looked at Jones. He was not impressive. He was shirt and inclined to be stout, with a mahogany skin, and nondescript features. He was the type of colored man that white people call "George" and mistake for a porter. His manners were not good and his clothes usually did not fit. But from the first, Jane liked him. He was so perfectly honest and naive. His great and beautiful black eyes had that rapt and other-worldly look, which told of a soul a-search for truth and beauty. So Jane who was fed up with pretty men and masterful males bent on easy conquest, took up Jones, first in sympathetic self-defense and gradually in genuine friendship. They could talk together as "man to man". There was no small "woman stuff" or sex dalliance. He always came as he did today, without greeting, plunging into his talk. Of course they had no place for pleasant conversation or leisurely meeting. That would have savored of "immorality" at Hartwell. Others went to homes out in town or took trips by auto or refuge in cinemas. But Jones and Jane walked down the long front walk of the open campus and even this annoyed the President. Once he mentioned the matter to Jane, but only once.

Jones told of his interview. Jane listened thoughtfully. Poor Jones, she thought silently, he's lost his job and doesn't know it. All he's worrying over is whether or not

he should use his savings on a trip to discover democracy, when he'll probably need them to support him until he finds new work. But I don't care! He must go. It will make him. What matters if he does starve a while when he returns - he can have my savings - and then came a terrifying thought: suppose she went too?

Jones meanwhile was talking with growing excitement: "I have got nearly a thousand dollars in the bank, and I might borrow a few hundred more on my small life insurance, which might be a good thing as the company has been wobbly and may go yet. I could go to England, France and Germany - "

"But you wouldn't dare to leave out Russia, China and Japan?"

"I suppose not - but what of India and South America and - "

"I'll lean you another thousand."

And Jones almost blurted out, "O, you come along too," but he didn't. He did not dream that Jane would marry him. She was too good-looking. She might easily marry a well-to-do physician or insurance agent. And Jane who knew almost exactly what he was thinking was almost disappointed. Could she marry him? He was certainly not handsome and his children would be ugly; but - the prospect of Hartwell, or indeed any place without this constant friend was appalling, and if he had asked her then - well -

"You are lucky, Jones, to get a chance to leave this place," she hastily said. "We are all wrong here. I am teaching 'English' - piffle! And 'expression' to children who haven't a damn thing to express." (Jones winced. He always winced when Jane swore and she would swear now and then.) He winced instinctively as a born Baptist. But he never said a word of protest as a reasoning being.

"I love your silences," she said one - "you can be so intelligently silent." "You see," she continued, "today we ought to be reciting sociology and history and physics in English - good, idiomatic, correct and corrected English. Every examination paper ought to be at once a test in both English and Mathematics or Biology or what-not? Or why shouldn't we do French History in French and German in German? We are all cut up and isolated mentally from each other so that I am supposed to be an expert on Expression and yet am as ignorant of the social facts of this muddled world as I would be if I were illiterate

or deaf and dumb. I hate it. And look at the rest of us: there's Jackson, expert in chemistry, and don't know English grammar; and Gorman teaching history and don't know what psychology is; and Winston, a Ph. D. in psychology and can't read German; and Seales who never heard of Karl Marx, teaching business. All these separate ignorances applied to a small soul is suppose to make it educated. If I don't get fired soon I'll fire myself. Jones you're lucky."

Jones looked alramed. He did not like the assumption that he was fired, and he was not sure just how to use this sudden leisure, even if he were to return.

"Easy," said Jane. "Go to England and then to France, and so round the world and just snoop. Just look at the scene and say: what is this world order? How far does it spring from popular demand; how far is it serving the real interests of people? How far are the people running it themselves? And above all who are people, so-called? On the voyage take along some bibles: Aristotle, More, Marx's "Capital" which nobody reads and everybody refutes; Wells' vivid dreams; Smith's "Wealth of Nations" - O you know so much better than I. Rest and read for ten days - for of course you'll take a slow boat - and then look and learn."

"I'll do it!" said Jones.

"And meanwhile I'll read what you don't see. I'll bone up on India, Africa and the South Seas and perhaps South America.. Above all I'll keep you posted on America. That's the card - I'll mull over democracy right here and now and among us Negroes. There'll be the election meanwhile and God willing a few deaths on the Supreme Court bench." Again Jones winced, but again kept silent.

Chapter 2 - Jane Plans the Search

Jones dragged his steamer to a deserted corner and read his steamer letter from Jane. He was feeling, not sea-sick, but uneasy in soul and stomach, which he attributed now to the loss of Jane and now to the motion of the boat. It was certainly not home-sickness. He saw Liberty fade into the west with positive relief. He settled himself and read.

"Dear Jones" - he liked Jane's salutations. It was not the stilted "Dear Mr. Jones" nor the some sickening diminutive; of course it couldn't be "Abraham"; - and "Abe", dear God; "For some time I have been invading your domain and getting from advice and chance words from you, material for giving you advice. I've been reading Economics. I have read the latest college text-books, and tried to keep au courant with modern politics here and in Europe. And I have come to one conclusion, right of , and that is: if you want to know a country, know the distribution of its income. Income isn't all, and doesn't explain all, but without exact knowledge of it, little else can be explained. I am convinced that our present frustration and muddle all over the world is primarily due to our ignorance as to whom wealth belongs and just where income goes and why.

You are my ambassador to prove this. Do not fail me. I prize the Louvre - I'd give a tooth this minute for a half hour before the Venus of Milo. But if the world is going to have people who can look at Venus and recreate her beauty and half appreciate it, it must abolish Ignorance and Poverty - and the greatest of these is Poverty. Don't come back to me, then Dear Jones, telling me how Hitler looks, or what you saw in the Winter Palace; I'd love to know - but; I shall not be interested in Art or Literature, Politics or Elections, until I know what part of the folk have enough to eat and wear, and homes for children and children in them, and chance for knowledge; and what voice they have in the conduct of civilization. When I know that, then I can judge the meaning of the result in Culture. I don't despise culture, I hate Work, and I am no lover of Mobs as Mobs. But I am fed up with the Lie that Art is the pet perquisite of a few snobs who by hook or crook got more money than they needed; or that civilization is the product and property of the few people who are today civilized; or that the present number of cultured, effici-

ent and honest people, is anywhere near a fair sample of the possibilities of mankind. You said in that memorable hesitation before your class, that you believed in Democracy. So say we all of us. But I conceive Democracy first of all as opportunity to secure from the multitudinous manifestations of the human body and spirit - white men, yellow men, brown men, black men; from the dives and the gutters, jails and asylums, homes and palaces, a new and magnificent humanity, ~~on which a new and magnificent humanity~~, on which a new world can be built, incomparably wider, vaster, deeper, than anything we have now with our dependence on sheer accident, brute strength, murder and theft for making men. In part America herself proves this - didn't we comes from jails, gutters, asylums and slave ships as well as homes and manors?

"So go, Dear Friend, and look at the world today, and tell me what of the night; what does Democracy mean today? Does it mean voting and who votes? Or does it mean Power to direct Government? If it means Power, then inseparable from that power must go control of Wealth and Income. If economic power rules the world, in whose hands does this power rest, for where it rests there is the real ruler. How wide then is the basis of this power? If it is one man, its basis cannot last for man lives but seventy years; if it is an oligarchy of technique or monopoly, it is doomed by the inevitable accidents of degeneracy; if it is an aristocracy of a million or ten million, then it will survive only if its chief aim is progressive widening of its base to a hundred millions, to the thousand millions of humanity.

"Am I quite insane, my friend? Search and see!

But heavens how I run on. Forgive me and think of me - all alone.

P. S. And O Jones about the voyage; ~~of course~~ you'll meet all sorts of petty discrimination, but for the most part it is petty and you're so big and calm, you won't mind. Of course you won't be truculent - you couldn't be, but don't be a door-mat - don't let them walk on you, Jones, for the sake of others to come. I remember your telling me of the woman who pretended to mistake you for a waiter and ordered a glass of water. You got it. Well I'd have gotten it too but I'd have poured it down her neck, not for my sake but for hers.

Of course you've already been put through it for a seat in the dining-room and are now at the darkest corner table, perhaps with a few derelicts. Tip the waiter well. He'll remember when the next Negro sails. Its justifiable bribery. You'll find two sorts of Americans abroad - those who resent your presence, and those who want to pity you. Avoid both. Most will do neither, only let you severely alone. Thank God for them. Don't expect to make friends but if possible for your own sake, make a few enemies. They always come in handy.

Chapter 3 - Jones Considers England

There was a long silence before Jane had a letter. She knew it would be so. Jones would have no idea of time, once he was launched on his quest. Above all it would never occur to his mind that Jane was hanging on a word from him. Not simply from him personally - she was not aware herself the extent of that - but word of his search. At last he wrote:

I think I am beginning to understand something about Democracy. Partially my understanding has come from not following your advice about white people. That glass of water would have helped her thick hide but little, and it didn't hurt me. She meant to humiliate me, but my reaction left her fat, funny and surprised. There was a white man at my table, who made no effort to be seated elsewhere, and also did not try to make talk by talking down to my supposed level. He was simply courteous. His accent Englished him, and I started in one morning without preliminaries, on the British Constitution. We talked off and on during the whole voyage and during my stay in London, we met often and my previous reading and present observation was thus checked by one born and bred in England and yet not so British as to be unable to see the empire and world beyond. These conclusions then are not simply mine; they are mine checked and criticized by England.

Democracy in England is effective as far as it goes, but it is straitly limited in the matters to which it may be applied. In the vaster and most important matters of modern life, there is little democratic control: that is, in the determination of the work men do; of the kind and quantity of goods produced and their distribution; in the allocation of human services; in the ownership of accumulated wealth and division of income, there is little democratic control; yet these matters as you say form the primary interests of life. The voter to be sure approaches these matters; he may to some degree set minimum limits to wages, and determine some conditions of labor and relieve extreme poverty. But in the main matters of industry and income he has no voice. England rules more or less completely vast numbers of colored peoples. Over most of this area, English voters also

have no real voice. Of course Englishmen are beginning to think on these matters as matters of government: the right to decide on limits of private wealth or size of income; the kind of goods which the nation shall produce; who shall be employed and how and at what wage and at what kind of work; while government and policies of all kinds in colonies comes only remotely before public opinion and conscience, and only now and then and in very general terms under the control of English voters.

In most of these matters outside the present purview of English democracy, it is still said that they are in the realm of private judgment and initiative; yet they touch the most important and vital interests of all Englishmen and are matters today especially of the very greatest public concern. That they may come under the control of the voters eventually, no Englishman would deny. But the power to decide what and when democracy in England shall rule, lies outside democracy entirely, and in the hands of a powerful oligarchy. This oligarchy was long an aristocracy of birth, whose power rested on land and privilege. By slow and momentous change, this basis of power became invested capital, with its opportunity for education and social training, and on conspicuous ability.

The present British oligarchy is perhaps the most remarkable in the world. It is rich and educated, and it is saved from degeneracy and imbreeding by constant recruiting of ability from all ranks of life in England, its colonies and dependencies, and even from foreign lands. This oligarchy controls democracy and limits its scope by an ingenious combination of methods: first by sheer ability; the level of ability in the ruling class in England has not been surpassed in a generation in any part of the world, and whereever in England ability appears, it is very apt to be appropriated by the oligarchy, rewarded handsomely and often incorporated in it. Eventually ability must of course conform. A certain latitude in dress and manners will be tolerated; a certain freedom of speech and pronunciation; but there must be ultimate respect for British Institutions: for the Throne, which includes subtly, Property, Nobility, Invested Capital, and more vaguely, but quite certainly, the Empire. To insure this ultimate economic orthodoxy, comes education. It is frankly and openly class education; and confines

itself not merely to the formal training of the schools, but is a strict and life-long training in manners and morals, which makes the English "gentleman" a widely copied ideal for physique, clothes, speech, and deportment. Practically the full course of English education is available only for the rich and the inner sanctum only for the high born. Popular education while possible lags in length and depth. Finally the English oligarchy has made extraordinary use of drama, and by sternly repressing ridicule and even humor, has retained with solemn pomp, the Crown, titles, public pageantry, ancient even silly customs, in a way that tremendously impresses children, half-educated people, snobs, climbers, foreigners, and the ambitious in all lines. Once the glamour, charm, color and manners of social England, together with its vast wealth, is trained on a provincial or a radical and he usually succumbs without a murmur to its subtle lure.

That lure is no mere matter of display and arrogance. It is the long-studied determination to guide and limit democracy in England for the benefit of English aristocracy, under the firm conviction that these interests coincide with the best interests of England - in other words in the honest belief that English aristocracy is England, and by that token the hope of the world.

English democracy, therefore, shows itself in trained leadership, which may be guided and in some degree controlled by public opinion and popular vote, and even at critical times definitely ordered in certain directions. But entrance into the ranks of administration is strictly limited by wealth, birth, education and conspicuous ability; and not only that, but the path, method and goal of government is narrowly fixed and alterable in its main lines only with great difficulty and very slowly by public opinion. And entrenched in the inmost recess of this conserv tism are the rights of Property. Yet Property and its power and privilege have since the triumph of capitalistic production, become the central stronghold which democracy must carry or perish.

In this way Democracy in England is allowed, within set limits, considerable freedom in general law-making; the choice of a large number of officials; and slow, indirect, but strong influence on general governmental policies. In restricting democracy, the

English administrators have learned thoroughly certain rules of the game: the positive value of opposition to rulers; the wisdom of freedom of speech even for those whose thoughts are wrong and possibly dangerous; and the absolute necessity of watching for ability and as carefully as possible bringing it into the service of the state. On the other hand, there are certain things which England has not learned, and these may yet be her undoing: first, that there is ability, desert and human need outside the Anglo-Saxon race, and that the limited methods so successful in England could also work in Asia and Africa. Moreover a central thesis of English rule still remains the conviction that ability, while inherent in the English ruling class is largely accidental and a sport of nature outside that class. To be sure English history proves just the opposite, but nevertheless deep-seated belief assumes that present methods of education and opportunity is securing for England a fair maximum of ability, while in all probability, it is securing a dangerous minimum and thus curtailing and killing democracy at its very source. Even in England and the white British dominions, the ability and capability of mankind has not begun to be exploited. Today it is largely sheer accident that a Ramsay McDonald or a Keir Hardy escapes jail, asylum or dumb obscurity. A system of real education for children and adults; an increasing attempt to give the wider and wider masses of men the same opportunity to develop strength and ability, as is now reserved for the darlings of the gods, and a few sports of fate, would in time widen the basis of democracy in England or rather make it feasible so to broaden the limits of democratic control as to bring under its purview, the whole realm of work and wage, wealth and income, production and distribution; as well as the welfare of the five hundred million persons whom Great Britain rules today chiefly for private profit. Lack of faith in the possibilities of the people - English and white, as well as yellow, brown and black, is the danger of British Democracy.

But it is not mere negative lack of faith in men that limits British democracy - it is the positive demand for income and large income on the part of the English ruling class. Their high scale of expenditure is well-known and world famous. The so-called

necessary expense for "comfort" on their part requires for an English upper class family as much in a week as would support a Chinese peasant a year. The ordinary ideal of a well-to-do Englishman is to have an assured income which relieves him of all necessity for work, and lets him follow Art or Politics with assurance, with no temptation of bribery and with liberty to cultivate the amenities of human intercourse.

Thus the British Gentleman is a type and ideal of what real existance may mean. On his shoulders rest the maintenance of certain standards of conduct and customs of living, and that elusive, but real thing called "Sportsmanship". But all this requires income and regular and certain income in large sums. This has led in the past to slavery and the slave trade, the Industrial Revolution, and still leads to a ruthless exploiting of large masses of English labor for profit. When and as the Factory legislation and the increasing political power of labor, together with the diminishing returns of investment in England brought down this rate of profit or threatened to, England turned to forced labor in Africa and coolie labor in Asia and the South Seas. Cheap colored labor thus gradually displaces white English labor, and the British Empire becomes mainly a matter of profitable investment. English labor was long the skilled manipulator of raw material raised by blacks and yellows, until gradually in China and Japan, colored labor began to do this skilled manufacture and throw white labor out of employment or reduce their wage. Brown India and black Africa will eventually follow the same path, under the pressure of the English oligarchy and others for income based on private profit. This prospect arouses labor unrest in England, and the Oligarchy must allay it at any cost. It is accepting today a staggering burden of taxation, probably heavier than in any other civilized land, and using the income for doles and other temporary expedients so as to avoid admitting a further encroachment of democratic control over industry and income. Comes such control, and oligarchy loses income, power and supremacy. Rather than lose that oligarchy will fight with national army and navy and police. This will be revolution. But such revolution is not imminent, because of the continued skill of oligarchy and the dilemma of labor looking across a color line and still deluded by ambitions to become bourgeois.

Oligarchy recruits its ranks continually from the best brains and ability of the nation that is able to rise from obscruity. Few of the possible have such a chance to emerge. But some do. Any Englishman of evident ability may die a gentleman or a lord, even if he sprang from the gutter. This resembles at first glance, the acme of democratic opportunity. But in truth, the rising Englishman is subjected to influences that almost invariably change him as he rises in power and wealth into a member of the ruling oligarchy, as eager as any to maintain its privileges and income. Labor loses a leader and oligarchy loses an enemy and renews its strength.

The method of oligarchic rule has been carefully perfected over generations, and continually adapted to change. It must deal with two main classes which imperceptibly fade into each other: the middle class of shopkeepers, civil servants and engineers; and the laborers, skilled and common. The middle class is allowed, or cannot be kept from, Freedom of speech and agitation, and political power enough to force reform in time. Oligarchy retains only a suspensory veto which slows up reform and allows new enthusiasm to cool. Labor in England is ruled exactly like labor in Africa, by devolution of authority, which gives a semblance of power, leaves an area of freedom and self-determination, but maintains the paramount authority of the ruling class so far as the vital matters of wealth, wage and income are concerned. On the other hand, labor itself is uncertain: its really vital problem is the competition of colored labor and the recognition of colored workers as a laboring class. Any really efficient labor movement must face the fact that the labor world cannot exist half slave and half free. Nevertheless upper class labor, represented by the trades-unions and aping bourgeois aristocracy, resents a world where "chinks", "niggers", and even "dagoes" get English wages. They can then usually be counted on as allies of the capitalist oligarchy in any real crisis, - especially in war.

Thus the English oligarchy of income, rule at home and abroad, by yielding enough to democratic demand to keep order and yet preserve income. The middle classes get votes and freedom and achieve substantial reform. At the same time the Oligarchs have in all parts of the earth, been among the worst robbers and murderers the world has known. Out-

siders, not comprehending this inner paradox, have explained the anomaly by the phrase "Albion perfide", not realizing that the seeming hypocrisy is the clash of two ideas, which some day must settle the question of supremacy by reason or revolution. The middle class and labor are depending on votes, if once they get clear objectives. The Oligarchy has always depended on brains backed by force.

The results are well known. Industrial oligarchy needs wealth, great wealth. Its path is a path of gold, its expenditure the greatest on earth. It cannot brook democratic interference - leveling of income. Production must cater to its whims. We see the astounding anomaly of naked blacks of Africa, digging diamonds, by hundreds of thousands, to deck the bodies of the idle rich. We see little Chinese children working ten hours a day for the cost of a good cigar, in order that sheets may be cheap and clean for the bodies of England. We see Poles sweating and starving in order that English laborers may have a Sunday suit. This is the price of English oligarchy. Is it worth it? English labor says, Yes. African and Indian labor say, No.

One hardly knows what to say of the Coronation - that popular circus and pageant of empire which England plans after Edward's repudiation. It is Propaganda like Germany's Olympic games. It shows ~~are~~ low average intelligence and our ~~deep~~ high dramatic instinct. If only we could reason! If only the stuff of our art could be more real and true.

Chapter 4 - Jane Glances ~~at America~~ and Democracy

Jones, dear, I've got it. It's been slowly maturing in my mind for days, but it cleared today as I was reading your letter from England, walking down the long path. "The president was spying, damn him - wince, Jones, but "God", "damn", and "hell" are good English, and as Barrett Wendell once said, 'Swearing is all right, only most folk swear so inartistically'; I'm going to find something male to walk down this path with me if it is a cat.)" Jones reflected that this was not exactly complimentary, but smiled and continued to read:

Democracy is the inescapable logic of human government. All else is paradox and contradiction. There are no hereditary kings. I mean there has not been discovered in any family or strain of blood such heritable qualities of human leadership that designate a man or a family, a clan or a nation for the beneficent domination of men. All effort at royal families has petered out, and of this Europe in general and England in particular are positive examples.

Self chosen leadership is a leap in the dark, a gambling with death. It has been brilliantly successful at times as in the case of Toussaint l'Ouverture and Lenin and Keir Hardie. But such choosing must be straitly tested and restrained. We look always eagerly for genius and unusual gift; but selecting it, and placing it, and conditioning its action must always be a function of democracy. Oligarchy, or the rule of a group or class, depends either upon undependable heredity, or the conscious choosing of the members of the class; which reveal oligarchy as a limited democracy. The reason for limiting democracy in any way would be the recognition of the inequality of men and of the undesirability of having all interests recognized as equals. The delays and frustrations of the anarchy of opposing wills and wishes, threaten the established distribution of goods and services no matter how much it may forward self-expression and science. The paradox of majority rule which temporarily resolves anarchy, bridging over sharp antagonisms with temporary and shifting

surrenders of principle, becomes also dangerous. The tendency then is to restrict democracy and equality, and to revert to oligarchy or despotism, and to class status based on income and privilege.

Real democracy, on the other hand, is based upon the widest recognition of human equality. It assumes that wisdom in government comes from the widest knowledge concerning the governed, a knowledge eventually so wide that it becomes in effect a pool of human experience to which all human beings contribute. Shut off one rill from this ocean of human life and it is incomplete. But when it is all there despite its waves and storms, the sheltered inlets and hidden rocks, it becomes for the guiding of men the voice of God.

A knowledge of human experience wide even as the world does not settle but poses the problem of government. For what should this wide wisdom be used? Here comes the second invoking of human equality. No simply do we need in democracy a broad knowledge of human experience but we need also in the carrying out of democratic government a determination to give all human beings as nearly as possible equal consideration for their desires and wishes.

Government establishes authority. Authority in human organization is necessary to compose conflicting interests and desires of men and to regiment all human action into accord with inexorable natural law. The ultimate object of government is to leave for men outside this frame, for avoiding conflict and inevitable submission to the authority of natural fact and law, the widest possible freedom of human action and that unrestrained anarchy of feeling and art which the goal of the higher life. In this conflict of wills a government might consider the wills only of certain men and certain classes but here enters the great democratic concept of equality that all wills should have place and consideration.

This is no easy task. Manifold are the difficulties of democracy. First of all and the one most harped upon by critics is the manifest inequality of human beings; difference in natural endowment, difference in development between youth and age; between lives who have had contact with other lives and those who have not; between persons of different training and education or of no education at all; between sexes, nations and races. We have

grossly exaggerated these difficulties in the past; ~~we have made them in the past;~~ we have made them absolute, cutting the world into Greek and barbarian, chosen Israelite and heathen, Roman and enemy. We still today set meets and bounds between white people and yellow and black; between rich and poor, classes and masses. Just how far human differences have been exaggerated in the past, and are in the present, we do not know but we may shrewdly guess.

We may imagine a world peopled by folk unconstrained by poverty, trained and educated, given wide experience and incentive, and we may believe that the remaining differences based on actual difference of natural endowment will not be swept entirely away but will be much less than most people now believe. Nevertheless, the inequality of men, as it now exists or it may exist in some millenium, is a matter which democracy must consider.

Human judgment, democratically controlled by intelligent healthy voters, will and must weigh the wishes and desires of men in accordance with their gifts and desert; and we shall probably find here far less difference of opinion and complaint then we imagine today among a people whose judgment of men is marred by regarding labor as a commodity, regarding some races as having no rights which others are bound to respect, coercing the desires and wishes of their fellows by threat of starvation. More important, probably, than the natural inequality of human beings and the just guiding of action necessary to different human deserts and values will be the strict and to a degree unalterable physical laws of procuring a livelihood; the fact of the rhythm of the seasons, of the incalcuable chances of human existence, of the fact that work and hard work is necessary if men will eat and be sheltered and have the comforts of existence. There was a time when it took every ounce of energy and sacrifice to procure this for a few. There looms a time when perhaps three or four hours a day of labor by all will give everyone a civilized existence; but there can be no conceivable time when inexorable physical law will not condition human action and limit human freedom if men continue to live. Beyond natural inequality and physical law there comes the disposition of men to add to these two difficulties because of selfishness and envy; to make

such unequal incomes as will keep most men in poverty and a few men in unhealthy luxury; as will let the itch for power and pride push the world into massed murder. Of these difficulties of human disposition today, the matter of unequal income is the worst and at the bottom of war and race hate. ¶ We cannot today, to be sure, realize approximately perfect democracy and least of all perhaps democracy in industry, but we can pave the way. We can pave the way by a dictatorship which shall train nations in intelligence, and health, and equal income. It will perhaps begin work after bloody revolution, murder, loot and violence. But the strain on such a dictatorship will be immense. It will be working in a world which worships wealth display and individual power. It will have to use men trained in the economic inequality of the 20th century and not in the economic equality of the 25th century. I seem to see in the bourgeoisie and dictatorship of Germany and Italy the using of the authority of government for the benefit of the few and of the least worthy supportors of human culture. ¶ Surely one may have a dictatorship which resolutely seeks to hold authority and use it for the benefit of the mass of men, particularly for the mass of workers who are making livelihood for the world. Is such a dictatorship for the proletariat possible? Is it working in Russia? Will it work elsewhere? If it does work, then its job will be the paving of the way for democracy by organized and planned industry, but abolishing that anarchy of business enterprise which came into the world in the 18th century shouting the battle cry of freedom. But it meant freedom for capitalists and not for laborers. And lastly, and perhaps more important than all, is the systematic education of all men by schools and public propaganda. This is a costly and time devouring thing and therefore must wait upon planned industry and equal income before it can be carried through successfully, for no democracy can eventually permeate a nation or belt the world without the basic support of educated voters.

Here it is set down in regular teacher fashion, a philosophy of democratic government. Now, Jones, either demolish it or set your search for democracy into this matrix and then you and I will see it through.

Chapter 5 - Jones on Democracy

Jones replied didactically with an essay on democracy which he had spun out during a week spent in the British Museum and written evidently before he visited Germany or Russia. "It is not Truth," he said. "It is merely an hypothesis of truth, to be discarded when inexplicable fact obtrudes; but to be used for clarity of thought so long as it actually makes thought clearer. It is not original. It is compounded of Aristotle and Hegel, Marx, Laski and Pareto; but its composition is mine, and it has one added thought."

Through unconscious custom and tradition human society moves slowly but with increasing logic toward democracy among a select few. The authority vested by custom in the father, the clan leader, and the master of slaves is typified now in monarchy, now in oligarchy, now in a democracy of free citizens. This democracy involves equality among these few and eventually, by the urge of sympathy and unselfishness sprung from family life, leads to further equality, moving with religious sanctions from the witchcraft of the taboo through the pessimism of other-worldliness to the final optimism of ethics. From equality among men, from the custom of treating larger and larger groups as being composed of individuals of essentially equal worth, emerges the disruptive force of the individual urge for freedom, freedom of body and freedom of mind, self realization and expression, the inevitable questing for knowledge about the human soul and the physical world, among ever-widening circles of awakening men. This leads to art in imagination, anarchy in social action, and in mental development to science and technique; and toward wider and wider democratic equality in government, limited eventually only by the bounds of all humanity.

But fear and selfishness cut across and impede and distort this development toward democracy and equality; men fear the enemy without, but even more so, poverty within. Food, shelter, and most of the satisfactions of life are limited. There is at first not enough to go around and support life for all. Some must starve, or succumb to

weakness and disease. Then as knowledge and technique increase, and labor is more regular, and the number of laborers larger, there might be enough for all if they were equally divided. But if some by reason of their status receive more than others in services and goods, there is certainly not enough to support all at the higher level even if this were desirable. And to those favored, equality of goods and services seems less and less desirable because not only of their well-being but of social power which their possessions and rights bring them. The spread toward democratic equality forthwith meets opposition from the possessors of this economic power. This economic power was increased by geometric ratio in the 18th and 19th centuries because of the African slave trade, African slavery, and the black labor which was the foundation of the cotton kingdom.

Liberalism, freedom of thought and action, revolt against dogma, efforts to increase standards of living came in the 16th and 17th centuries. All its trend was toward democracy; toward the right of the governed to have a voice in government; and that voice tended to become not the corporate voice of the family and the guild and city but the voice of the emancipated individual. However, the cleft between the rich and the poor became more and more a great horizontal division into classes; and individual thought, freedom, and self-assertion made it necessary for both religion and government to pay attention to poverty and to guide incipient democracy. Ideals of perfect states arose. Europe moved toward greater and more inclusive democracy. Then there culminated a series of happenings that disturbed and threw aside the previous development and this was the African slave trade.

I know this is a new theory and I know it attacks and sets aside, or rather re-arranges, modern economic history as written. But I am convinced of its essential truth. For four hundred years labor which in Europe was a matter of serfs and souls; and in Africa of family; and in Asia of guild and village, became in an old and increasingly integrated world a commodity. Commerce added to the exchange of inanimate consumption goods, the bodies and blood of men whose value lay solely in their labor. And this black African slave trade became an institution because the labor could be applied on free land, on an almost endless mass of

fertile land; nor was that all. This land could and did produce an astonishing mass of goods, new goods in the sense that they were goods demanded not simply by the rich but also in increasing amounts by the poor. Thus there arose and made itself manifest by the middle of the 18th century the capitalism based on the buying and selling of labor as a commodity and profit which arose therefrom. A profit which furnished the first accumulation of capital goods and which was the incentive back of invention and technique which startled the world between 1738 and 1830. There was the cotton gin, the steam engine, the flying shuttle, the power loom, and the beginnings of our knowledge of electricity. All these things were not the cause of the Industrial Revolution; they were the result of the African slave trade and the new and growing crops of cotton, tobacco, rice, sugar, molasses, potatoes, indigo, and what not. A new attitude toward labor was being evolved at the same time that the new democracy was growing.

There came the mighty years which we may call the Imperial Dozen, the years between 1776 and 1789, when on the one hand, the Declaration of Independence and Kant's "Critique of Pure Reason" declared for free government and free thinking; when on the other hand, the Northwest Ordinance dedicated a new world to free labor and the "Wealth of Nations" dedicated the new trade and commerce to free and untrammelled enterprize. And when in the midst of this and as its perfect flower Warren Hastings raised hell in India.

The demand for freedom which burst in the French Revolution was primarily the demand of those who were making profits on the buying and selling of labor as a commodity and only secondarily the demand of the poor for higher standards of living. Thus freedom came for industry; and poverty came as a universal problem. Democracy as a method of government showed itself in the right of free commercial enterprize; not simply to be represented in government but to conduct government; and to allow the mass of people only limited participation in administration and law making. The determination of the poor to go further than this and to interfere in the new industry led to the series of attempted revolutions in the 19th century, but the net accomplishment of democracy was not large. The major problem of poverty, of wage, employment and income should have become the major matters of government but the new democracy through the ignorance of its voters was compelled to ignore the most important function of government and still ignores it.

In the last four centuries, geographical discovery, and a new slavery of labor led to an extraordinary exchange of goods over ever-widening areas of the world; when the resultant impulse to thought and action brought a series of scientific speculations and technical experiments. The thought, my Dear Jane, of the slave trade as a cause of the Industrial Revolution rather than as an accompaniment or result is most intriguing. I shall want to study it more carefully. I suspect already a mass of concealed and ignored facts. The surge toward de-

democratic equality among Europeans was too strong to be resisted [illegible]. It swept away religious dogma, curtailed privilege of aristocracy, and dethroned kings. But the new set of capitalists, who thus came to power, and who represented the new equality among men, who insisted on and took increasing freedom of thought and action themselves, in self defense of their new economic prosperity began unconsciously and deliberately to establish their democracy as a stronghold against intrusion from without. As owners of wealth and engineers of production they barricaded themselves against the poor of their own land and the slaves and heathen of the rest of the world. They were large enough in number and triumphant enough in culture to consider themselves the people. Any wide distribution of goods and services beyond their limits would serve not only to impoverish the people upon whom civilization depended but would do the laboring masses no good because they were not capable of rendering any service in return which would compensate increased consumption on their part. The rich and the poor were the necessary antithesis for the thesis of the cultural state, and beyond this the white European spelled real civilization as against the colored Asiatic, African, and American.

Nevertheless, this bourgeoisie soon found itself opposed by labor masses who claimed the right of entrance into the new democracy, who claimed presumptuously a share in the new wealth, even though this deprived the industrialists of many of the luxuries and quite possibly of some necessities. To the demands of this Mob Without, the Government Within had to respond by forms of democracy and equality without its substance, by a grant of universal suffrage, and even of the right to form labor unions and to demand in exigencies a dole of food and shelter and clothes.

If the workers had been unconnected with the owners and engineers of industry, they could have been barred from its benefits by force. But their connection with industry was two fold: first, their labor was an ingredient of production; and because since the 15th century and coincident with the whole Renaissance, they had bought and sold black African labor as a commodity, and too for a time white indentured servants; it was easy for them to regard white European labor also as a commodity to be bought and sold for profit. But on the other hand, and in flat contradiction to this status of labor as a commodity, was its status as consumers for whom most goods were produced and most services rendered. Manifestly the total labor involved in production equals in value all that it produces; nor can there be any other claim to share in the results of production save capital. And capital either represents past labor or is the monopolized bounty of nature belonging of right to all men. No magic of time can change these eternal facts except the unfairness of any free "bargain" between the privileged and the starving which would seek to

destroy it. Big business incubates eggs for its own discomfiture. Its success depends on profits and more profits to maintain and extend its power. The size of its profits depends on low wages but the less wages paid labor the worker the less power of purchase has labor the consumer. Without sale of goods profits dwindle and disappear. Hence the most successful business methods are the surest way to business collapse. There would remain only the problem of just distribution - difficult to be sure, but not insuperable. If however, any power in the community had the right to divert to one portion of the people, a larger share of the goods than their labor produced, the share of the others must be smaller than their efforts deserved. Moreover if labor were displaced by machinery and natural forces, then those who owned these agents or had legal right to their use, would own the resultant goods, while the displaced laborers would have nothing wherewith to purchase these goods. There would result "over-production" and "unemployment". Not only that, but through colonies and "spheres of influence", cheap labor and cheap materials could be gathered from the ends of earth, not only displacing home labor again, but accumulating in the hands of the owners of capital a new mass of wealth and new power based upon it. Home labor becomes helpless in the face of this, except as soldiers in wars to protect this new colonial wealth for their masters to gain more. Inevitable resultant war is inevitable revolution. This revolution will be beneficent, that is, a change in the right direction, if it be consciously guided by a dictatorship of the working classes which is aimed not only against the power of national or European capital but against colonial empires in Asia, and Africa, in South America, the West Indies, and the islands of the sea; and if it be intended not for white supremacy of white labor but supremacy of all labor - black, brown, yellow, and white, over all capital.

The danger of this, seen clearly in the later part of the 19th century, arrayed capital in opposition not simply to national democracy but to the appalling prospect of allowing primitive and half-civilized peoples and peoples with non-European types of culture, to act and think for themselves and share in government. Missionary Christainity and liberalism sought to envisage such a program, but their aims were turned awry and their acts made tools of exploitation and despotism by new organizations of capital. This

was made easy not only by the power of capital but also by the doubts of liberals and philanthropists. They continued to regard the heathen as a human liability for whom they were sorry. They could not dream of the mass of humanity as a source of power, ability, genius, and infinite source of enlightening experience. The vast possibility of a pool of human knowledge as wide as the living world never arrested their attention. They could not imagine that the freedom and development of all men would make in time a world Renaissance, beside which the little European Renaissance would seem small and petty; that art and science could look forward to greater and more wonderful conquests if it contemplated using the ability of all the world and not simply of a narrow section.

The possibility of any such world vision had to be smashed in its very beginnings. Only for a moment, in the United States of America in 1867, when four million black slaves had enfranchisement and the possibility of economic power added to their legal freedom, did the world trend set toward universal human development. Capitalism girded its loins. It swiftly nullified the Negro vote. It quickly warned Europe with terrible fiction concerning American Reconstruction. And in the meantime in both America and Europe capital set its house in order for a new conquest of the world.

This new orientation of capitalism sought first to buy concentration of power with wide bribery of profits. Hence arose Trusts, Cartels, and world monopolies. Secondly, this concentration of power led to oligarchy and despotism in the inner fortresses of capital with larger and larger numbers of stockholders, engineers, officials, and skilled laborers depending upon profit however it might be made. While without the strongholds of capital democracy was confined to fewer and fewer essential functions; elections became farces, and representative government and the courts represented capital and not labor. Even the forms of democratic control were done away with by the Fascists and the Nazis. Third, race hate and antagonism had to be raised to the status of instinct and religion so as to array not only the barriers of logic against the majority of the peoples of the world but the most dangerous barriers of unconscious, non-logical reaction. On this could be erected a new patriotism and new world empires of glory and conquest. Drums beat and the nations marched, sailed and flew. Then comes, late, sanity after blood and murder, cripples and

poverty, pain and despair, world revolution precipitated by capital and not by labor;— democracy invades industry, freedom speaks and acts, and the worker, satisfied, with simple food and shelter, sees the passing of poverty and war, and democratic equality for all men and all races. Gradually men realize that the talent and genius needed for civilization is here in abundance, instead of being submerged in gutters, killed in war or buried alive under dark skins and human hate.

Only one government in the world today recognizes the fact that the work and wage of a people is the first affair of government. What to do about it is another matter; but if Russia disappeared tomorrow, her unique contribution to modern life would remain: she has pointed out that the production and distribution of wealth is the first business of government. Has she done more than this? I do not know. But this I know, and my English experience confirms it: every democracy today is trying desperately to keep the matter of wealth, its production and distribution, just as far from democratic control as possible; and even where desperately against the will of captains of industry, governments are compelled to undertake some control over such matters as employment, wages, poverty and relief, and excessive wealth, they are doing it unwillingly, half-heartedly, with temporary planning; with eagerness to escape the task at the first minute, and with bitter refusal, on pain of physical punishment and social ostracism, to allowing even discussion of the possibility of a democracy which would deal not simply with choice of officials, but with the infinitely more important matter of the distribution of wealth. You mustn't even voice the idea - Bolshevik! Anarchist! Attack on Civilization! they yell, and this in the name of Freedom. The trouble with democracy today is that it refuses to admit that the production and distribution of wealth is in its domain. Even when forced, it sees only temporary necessity of dealing with these matters.

The reason of all this was the making of the most important body of labor in the world into a mere commodity, and the influence of that commodity idea of labor upon the whole labor of the world. Still today black and colored labor is regarded as a means of wealth

rather than as the object for which wealth is created. The shadow of this conception of labor lies over all white labor and will lay there until basic revolution of thought and action lifts it.

Singular is the light which all this throws on the Marxian philosophy - on Surplus Value and class consciousness. Marx assumed logically that when a labor class had been reduced to nadir it had nothing to lose but its economic chains. It had no effective motive except that of increasing its income and it would cling together into one gigantic fist to hammer its way to economic freedom. But across this idea in a way that Marx did not realize was race prejudice and race antagonism, an inculcation of human hate and the despising of men, and particularly black men, born into the world simultaneously with capitalism or even before the modern phase of capitalism. Thus one can find in the United States as the American communists did find that the lowest white labor would rather approach starvation than consort with Negroes and that race prejudice was the most effective bar to labor class consciousness in America. On the other hand, an unnoted proof of the Marxian theory of Surplus Value comes if we agree that Surplus Value is made by human labor and not by machines. The great profit of Modern Europe and America comes from the exploitation of colored human labor in Asia, Africa, and America and not from the use of machines in Europe and the United States. Yet the owners of machines through their economic power are able to gather to themselves a high average return of profit which is furnished by the Surplus Value created by colored labor.

Chapter 6 - Jane on Committees

All on my own I am going to study democracy right here in America, while you are gone. And the logical beginning of such a study, I have long thought, is with committees, trustees, boards of directors, and such. You see, Jones, that's how we are really governed today. We appoint a committee, we elect a board, we hand the whole matter over to trustees, and then we go home and await the salvation of the Lord. One of these days I am going to write a learned brochure on "Committees I have known". Usually the appointment even on important matters is a perfunctory thing, and tends among us more and more to Fascist methods. "Let the chairman appoint." This allows us to bring secret influence on the chairman, and also avoids public indication of our knowledge of our friends' shortcomings. If a committee of three is appointed, two shirk willingly or by suggestion and one carries out his own ideas. Argument or consultation is regarded in the worst taste. Get it done and let 'em howl even if its done wrong is our large Jowettsian gesture. Large committees, even for large projects calling for wide knowledge, are invariably frowned upon. Small, tight, quick-acting cliques are always in favor, and to question their decisions is to get yourself voted a spoil-sport.

Now there are committees and committees. I was once a member of a democratic committee. It was in a city where I was working in a Y. W. C. A. for a time. The secretary after much experimentation and many painful mistakes, got together an executive committee. We represented different races and colors, different points of view, different training, different temperaments. We had different functions in the Y. We deliberated. We listened to each other and learned. We grew to respect each others opinion. Sometimes we got irritated and impatient, but gradually we learned to be patient with the chronic objector, the enthusiastic optimist, the nearly silent discouraged one. We began to work with a harmony backed by a growing, widening wisdom. Our decisions became so increasingly unanimous, that we gained increasing respect for minority opinions and grew to seek instead of tolerate the freest expression of opinions. We criticized results without fear or excuse, and

then we consulted and tried again. It was real democratic work. Usually after argument and search for real facts we had unanimity or something like it. Often we did not or fell back on majority rule. That was bad. It was bitter to see things go wrong just because a majority thought it right as though seven was Omniscience and five Original Sin. It was, however, sportmanship or revolution and I'm not sure which is worse. Still we wavered on and were more often right, than wrong. We became a happy, harmonious, and on the whole effective group. But of course we lacked money. Then we got it. It came in the shape of a philanthropic society leader, rich, white and over-dressed, who was interested "in your people". Our committee was disrupted, rearranged and reappointed. In a month she had ruined it all. We were split by color and residence, reduced to a set of beggars and tale-bearers, suing for influence and favor. We became lick-spittles and yes-men, and for all wisdom we scurried down town to social authorities, who told us how to think and what not to do. Oligarchy, monarchy and plain muddle ruled our poor Y. But the budget balanced and nothing else mattered. I resigned to the unconcealed joy of Lady Bountiful. Since then the Y. W. C. A. has been a stench in my nostrils.

Remember, dear Jones, that the United States is ruled by committees, and that the number of these committees that are democratically appointed and run is infinitesimal. We have committees on work and play, religion and science, crime and philanthropy, health and disease, literature and art - indeed what haven't we committees about? All our institutions deliquesce into committees: Congress, the Church, Hospitals, Schools and Colleges. The permanent committee graduates into the Board of Directors. People join Boards of Directors usually on the express condition that they will not be asked to do anything. They are asked to join so that the public will think the enterprize is being conducted by these same directors. With the stage thus set, a few persons, or more often one "Executive Secretary" conducts a tight little monarchy, limited only by his ability to raise funds, or more infrequently by revolution in the shape of aroused public opinion in this particular little world.

Yes, we are ruled by committees, by committees in Congress and the powerful conference

And I mean by "democratically" appointed, not necessarily chosen by ballot but chosen to reflect and carry out the human interests involved, and able to know and weight those interests

committees which shape most of our Federal legislation and escape all publicity until the thing is done; by similar committees in legislatures and city councils, by political committees like the powerful party national committees; by committees on social reform, and committees in art and education; by boards of directors and trustees in religion and in business.

The method of this committee government has received little attention but really deserves it. It varies from absolute monarchy to pure democracy and, taking its tempo from business, tends toward oligarchy. The board of directors of a business corporation is by wide custom limited in its functions. Indeed its first function is apt to be window dressing. Names of lords and gentlemen and rich men who simply guarantee by the use of their names that satisfactory profit is being made mostly within the law. The directors may have some function in the selection of higher executives but that is usually pointed out by the ability of the candidates to make profit. There may be further questions of policy which the directors decide but influence over what should be the main matters of business: the price of goods, the wages of employees, the conditions of work, the allocation of salaries; all this is usually decided by one man or a few.

Religion copies after business. To have a church run in a business like manner is the heighth of most members ambition. Within the limits of the balanced budget the pastor may become an absolute monarch, particularly if his sermons and bedside manner are satisfactory to the majority of the flock. He attempts no restatement of religious dogma usually and his application of Christian ethics is pretty well limited. The committees and boards of various sorts are usually his appointees and do largely as he wishes. On the other hand, if the pastor is weak or unsatisfactory in doctrine or antagonistic to the aims of the church members, he may be virtually displaced in power by some influential member, or displaced indeed by another pastor. The democratic control of the mass of the congregation is seldom invoked save in unusual crises;

In social reform we have evolved a well-known pattern. A board of directors is

and then not to facilitate breadth or comprehensiveness of view and avoid fatal neglect of some human good, but simply to confirm an already made decision by a packed and instructed majority.

appointed. They are either busy with other matters or uninterested in this matter. They loan their names or attend perfunctorily. Their first business is to get rid of responsibility and load this on an executive secretary. Thenceforth the aims, government and methods of the organization will depend upon the secretary. If he is forceful and successful he will determine what the organization stands for, how it works, and what it accomplishes. An astute executive secretary who manipulates publicity without and cajoles by the directors becomes a monarch limited only the amount of money which he can beg or get. So long as the reform work is popular with the usual earmarks of success, the secretary goes on from one stage of authority to another with ever increasing salary.

On the other hand, if his work becomes unpopular or impeded or lacks funds he is liable to be displaced preemptorily without much careful inquiry as to just why he failed. It suffices to know that in certain essential particulars he failed. Such a secretary may of course use democratic methods, that is, he may regard his board of directors as a set of men of varied experience who are able to advise him carefully. He may consult with them and get their careful judgment; and even further than that get them to study and investigate on their own account and from their own point of view in order to furnish a real and valuable fund of information. And then in addition to this he may arrange that certain matters come to a vote. He may go outside his board of directors and take counsel with h$$ membership, or even better with those for whom the reform movement is suppose to be working. Perfect democracy of the most efficient kind may in this way evolve; but all this is rare and unusual. In most cases the secretary works alone, or with a small knot of intimates. They run the show and from them there is no appeal.

In education we are ruled by monarchy and oligarchy with the committee as a camouflage. Parents and teachers, while appealed to publicly, are not allowed privately to interfere or even be heard; but all this is so important and touches me so nearly that I am coming back to it in another letter. In art and science we have at the one end of the gamut the anarchy of individual taste and at the other end the absolute rule of a

president or a bureaucrat. Unfortunately the tendency is toward absolutism. The young artist who paints as he wills, sees what he wishes, or carves what he dreams is more than apt to run up against the ukase of a grim committee or curator who says, "No". The young scientist who wants to experiment finds himself hemmed in by starvation on the one hand and profit making on the other.

The meat of the matter is that the monarchy which rises in the home and extends itself to business is relieved by oligarchy in business, reform, religion, and art; that the actual work in these lines of human endeavor is in the hands of committees and boards; but that even then democracy does not usually obtain. Thinking in democratic terms even in the case of committees is unusual and unpopular. What we want and demand is efficiency of execution but we do not stop to think that efficiency and celerity may be bought at the expense of slurring over and killing a great, even if slow, method of making all experience our province and thus using human knowledge for human ends.

Chapter 7 - Jones Examines France

I am terribly handicapped in France. Of course I have some French, such as it is; but as a complete or even fairly well fitting suit for my soul it is quite impossible. Then too, one realizes how little one knows of a country by studying it afar and seeing it for a swift moment thinking of it as foreign. I set down this view of France, therefore, with all reservations. It is superficial and incomplete and yet I somehow think it touches truth. The glory of France is the widest, most intelligent, popular basis for democratic control which this world knows. One sees this in the public taste which regulates the statuary in the parks; the courtesy of human intercourse; the beauty of landscape and architecture; and the ability and willingness to read. France reads articles and does not merely look at the pictures, France reads books, and allows literature to be a well paid career, and France educates her children with a thoroughness and meticulous care limited only by too strict conventionality of method and narrowness of aim. The intellectual freedom of the French is unparalleled in the modern world, and draws the criticism and envy of those groups and nations which do not dare to let men think. There is consequently in French intellectual life an anarchy and enthusiasm, a division and inventiveness which would spell continual renaissance and undying renewal of life were it not for one thing which is the tragedy of France - and that is war. For a thousand years France has been baptized in blood. Hardly an effort at culture upbuilding, government by tyrant, nobility or democracy has been attempted but it has been frustrated, spoiled, or misdirected by mass murder; by wars, civil and foreign, wars of aggression and defense. These two things: intelligence and intellectual freedom on the one hand, and war on the other, explains France to my mind more than anything else; explains a spiritual expansion toward a universal soul, handicapped by a defense mechanism which makes the individual Frenchman not only thrifty, greedy, and suspicious, but the perfect victim of an organization of wealth and industry unsurpassed for power, cunning, and ruthless will to rule in the modern world. French

industry knows no national boundaries and no national patriotism. It is alligned with German industry, Russian, and Italian, and its exploitation of Africa is unsurpassed in English Kenya or the Belgium Congo. All of the latest paraphanalia for organized industry and securing its power, originated or was perfected in France: the Trust and the Cartel, arranged and purchased Publicity, graft, and widespread bribery, ownership of the public press, and ownership of government officials, not to speak of corporations for every human activity encircling the world.

The French laboring classes have led labor thought in the world and still do. It was no accident that Karl Marx sought sanctuary in France and incubated there his "Communist Manifesto". It is natural that all socialist thought and movement should have been started and developed itself in France. French labor has never completely envisaged the color bar to which English labor so willingly is nailed. The labor vote in France has been the back bone of French democracy, and yet in the endeavor of the mass of Frenchmen to exercise democratic control upon French policies and to attack the very centers and main depositories of human power today, that is, the direction of industry, the production of wealth and its distribution, have come repeatedly to naught, because the workers of France are divided into country peasants and city industrial workers, more completely than elsewhere. The first French democracy made the peasants capitalists and not laborers; gave them land and fixed its tenure eternally in their hands. The hard working thrifty French peasant became a small capitalist and backed the capitalists of the nation even when their objects and interests were as wide asunder as the world. The French Revolution did not realize as the Russian Revolution had to eventually, that the opposite of feudal land monopoly was not peasant ownership but nationalization of the land. On the other hand, the French industrial worker despite his trade unions, his socialist and even communistic idealogy has not been able to cope with organized capital. He has forced the political leaders further to the left than in any modern country save Russia, but whenever by political force labor has time and time again threatened political revolution it has been held back by the threat of war, which was not

But
expl

But their final powerful punch to real revolution is forever pulled by (a) fear of war; (b) exploitation of colonial labor and

simply possible but actual. The French laborer has had to fight organized capital in England, Germany, and Austria, leading against France the very laborers to whom France had given ideals of European solidarity; and against this onslaught French labor in modern times had to accept the leadership of organized ability furnished by French capital and has had to pay its price which was lip service to socialism and industry organized for war and exploitation for the sake of private profit. Moreover, the paradox of French democracy is to produce not only the strife and difference of opinion which arise from intelligence and is seen in the parliamentary blocs which rightly displace artificial attempts to allign thought in two or even three parties, but also by its very efforts at enlightenment and education to evoke out of the educated masses a leadership which misleads them. Thus French labor has educated its children to furnish the most efficient leaders for French capital and correspondingly to weaken the labor masses and strengthen capitalist forces.

~~This arises because of that~~ fear of poverty which education makes more realistic and war more certain. The faith that envisages a land without poverty cannot be inspired in the Catholic Church, that staunch defender of modern capital; nor in the French educational system which with all its freedom is directed by capital. Thus singularly enough, freedom and profits, democracy and higher wage present capitalism and industrial revolt have become so curiously intermingled in France as to leave no logical pattern except the one recognizable fact; that as an organization for private profit France is unsurpassed in Europe today and the only hope that clings to this red picture is the still unconquered freedom of the French intellect and the unchallenged supremacy of French taste.

More than most lands, France urges to a study of the technique of democratic methods. The obvious difficulties facing democratic government in France, fall into four main groups: 1. Freedom of thinking and doing; that is, such freedom of thought as will allow men to explore possibilities and expand their own characters, and make actual experiments in living. This freedom can be expressed most simply, but of course only roughly, by voting. It may be expressed more precisely by speaking, writing, and publication, and of course by actual conduct. Such freedom involves necessarily differences of opinion, personal antagonisms, and unwise even dangerous thoughts and actions; and yet only through such freedom can the world know what the individual knows and experiences and accumulate a pool of thought and experience for the guidance and wisdom of all. This the history of France finely proves.

Easily French with European and American white labor has been led to join capital in exploiting colored labor. It has allowed no color bar in French law, it has insisted on theoretical equality of opportunity in all the French empire; but it has allowed Poverty in Asia and Africa to be the founding stone of thrifty French profit, without protest or comprehension. This has been easier because of that French

2. Intelligence and knowledge; that is, the ability to think clearly and logically, and a knowledge of the facts of the world and of human existence. This corrects and conditions freedom. Intelligence depends upon careful training and opportunity, and upon mastery of a mounting accumulation of information in science and technique. Under primitive conditions the accumulation of knowledge may long be slow and its mastery temporarily simple. But in the tremendously increased tempo of the 19th and 20th centuries, the mass of facts to be known in science and technique has gone far beyond the ability of most men to master, and has led to such specialization along particular lines, that special knowledge is often, and indeed usually, combined with widespread ignorance of the main body of available human information.

3. The furnishing and sharing of natural resources, manufactured goods, and human services; that is, the making of a living. This again is comparatively simple in certain stages of human development, but may become a most difficult matter in primitive societies and in highly civilized eras like ~~our own~~ France, until we actually face the paradox of a world of plenty with millions of unemployed and a startling increase of poverty. Manifestly, unless the average citizen can make a living, freedom and knowledge become impossible for any considerable number of men.

4. In these three matters: freedom, knowledge, and earning a living, there comes continually to the fore the paradox of majorities and minorities which no mere democratic theory can resolve. What happens, for instance, when one person thinks and believes in one way and another in another way; and when inaction is impossible; some opinions, some lines of action must give way, and the authority that determines which thought and policy prevails is the authority of government whether that government be democratic, oligarchical, or monarchical. Efficiency in quick determination of such disputes is necessarily in the hands of the oligarchy or the monarchy; but ultimate wisdom and right must lie in the hands of democracy; for only there have you the full expression of human experience as a guide. If, however, even in a democracy, real freedom of

thought is curtailed and there is widespread ignorance, the paradox of authority and freedom becomes great and dangerous; and in any case, only a populace trained in patience and in willingness to listen to opponents and able to sacrifice, at least for a time, its own conviction of right and widsom; only a populace of such a character can maintain the forms of democratic government.

These four difficulties which face democracy have been met and emphasized in different ways at different times, depending upon the general conditions of the community, the state, and the world. The late 18th century recoiled from a regime of excessive suppression of the individual and dogmatic regimentation of thought; and emphasized, in its fight for democracy, freedom of thinking and doing. It recognized the need of intelligence and knowledge but assumed that these would flow automatically from freedom because it saw no difficulty in the mass of people earning a living. It finally evolved a complicated solution of the paradox of authority by investing authority in the majority of voters, whether that majority was right or wrong, hoping that if it proved wrong, the consequent evil and suffering would in an intelligent and alert electorate change the minority into a majority.

The 19th century inherited and developed this theory of democratic control but as the century grew, the increase of science and technique was enormous and spread from specific European countries around a large part of the world. The century soon despaired of the ability of the common man, even though he could read and write, mastering science and technique and especially the technique that had to do with the new and complicated manufacture of goods. This was emphasized by the conception of labor as a commodity - child of the Slave Trade - and most men as laborers. There came, therefore, the gradual erection of a government within a government. The new inner government had to do with work, property, the production of goods, and the distribution of goods and services. For this it needed knowledge and authority and these in the name of freedom were concentrated in the hands of a few persons who exercised vast power over nearly all men. The function of nominal and legal democratic government became narrow and complicated

France has such a people; but no nation, not even France, momentarily threatened by the Hell of War, can always dare democracy.

and subservient in many respects to the inner oligarchy of wealth. Men went through the form of elections, law making, and administration; but the elections were not decisive as to policies, nor clear cut as to decisions. The laws were made mainly by legal experts which rendered them difficult of application, and the administration of them fell more and more into the hands of persons who acted consciously or unconsciously as tools of the industrial oligarchy.

The result was that the 20th century became used to regarding freedom of thinking and doing as dangerous to actual government, and to peace and order, as indeed they were if one remembers that actual and official government was in the hands of the inner oligarchical government and only partially in the control of the legal democracy. Intelligence and knowledge were largely increased by putting them into the employ and the service of the inner oligarchy, and also made widely ineffective by the training of technical experts rather than men of wide philosophical grasp of ideas. The matter of making a living passed almost entirely into the control of the industrial oligarchy, while the very paradox of authority and minority opinion was used to discredit democratic methods and prove their inefficiency except in narrowed fields.

The result was war and revolution. Emerging from the revolution various governments took different methods in their effort to restore normal government, and fix the function and limit of democratic control. In England, France, and the United States, freedom of thinking and doing were curtailed and controlled but not abolished. Men could to some extent discuss communism and fascism, poverty and wealth, voting and obedience; and the increasing intelligence and knowledge of the mass of citizens compelled the legal government to encroach upon and deliberately limit to some extent the function and field of the industrial oligarchy; so that wages and income, production and distribution, to some extent came under democratic control, although usually this was looked upon as a temporary expedient due to the breakdown of industry.

Chapter 8 - Jane Writes of Schools

What appalls me is that we are losing the habit of democracy. Instead of considering the first and natural method of doing thing as involving consultation in ever widening concentric circles of knowledge and experience, we proceed in exactly the opposite direction from general interest to a tight little secret clique, which gets things done. Contrasting the least form of democratic control with this college, I am aghast. Perhaps it was true in the college I attended. I do not know. I think I took it for granted that in a school run by a faculty of learned men, Democracy governed its deliberations and decisions. Certainly some share was given students in making rules and regulations, although the faculty "adviser" tended to be more of a censor or even tyrant - tended to, but didn't - quite. We saw to that.

But here when I came as teacher, I was utterly overwhelmed with the complete nonentity of the faculty, so far as any voice in the policy or government of the school was concerned. We are governed at the top by a board of trustees, who care little and know less about the actual conditions and problems of the school. They get their whole information about the school from the president, and the president virtually appoints them to office. They meet at the school once a year or less. They have several good meals, strut about the campus, get off jokes and tell the students the secret of their own success. The students applaud. The only real function of the trustees is raising money; the only criterion of a successful year is a balanced budget. A trustee seldom consults with or even sees a member of the faculty. Indeed it is tacitly assumed that any attempt on the part of a teacher to inform or complain to a trustee, is disloyalty to the president and a contributary if not a sufficient reason for eventual dismission. Consequently the trustees in case of any major upheaval or outbreak always complain that they had no warning. "Why wasn't something said?"

The Board of Trustees is the glorified edition of a Board of Directors and infests colleges especially. The board is selected for various reasons: because they are rich and may give the college money; because they are business men and know how to make

enterprizes profitable; because they are talked about and therefore valuable for publicity; finally, a trustee may be chosen because he knows about education or some branch of science; but this is unusual. Most trustees are elderly men, successful alumni or whatnot and not disposed to devote time or energy to this job of honor super erogation. This suits the plans of most institutions admirably. They are seriously alarmed if insurgent alumni force some young energetic members on the board who want to do something. The board of Trustees is not supposed to do things. It acts as a vast and respectable balance wheel. Yet the public believes that it is responsible for the policies, teaching, and standing of the school. ¶ This is seldom even partially true. ¶ Of course, say the unitiated, the faculty bear the real responsibility. Wrong, again and even more wrong than first. The faculty is usually without voice or entity. It is seldom or never consulted on the major policies of the school, and when consulted its decisions are ignored as often as not. Its sole function is to teach and grade students, and even here the grades are ignored if the president so decides in cases of pet students, or students of influential parents, or students whose time is required for football. There is no liaison or intercourse between members of the faculty or departments of teaching save through the president, and his time is taken up by cases of discipline and raising money and adjusting race relations so as not to have his buildings burned by a mob some fine morning. Over every member of the faculty hangs like a pall the fear of losing his job. His tenure depends almost absolutely on the decision or even whim of the president. Not only his present job, but future jobs, for the president's recommendation or lack of one goes far. ¶ Here then for us is American democracy at the source - in the education of youth. It varies of course from school to school. It is non-existent in the public school system, white and black, north and south. All that the public school teacher has salvaged is the doubtful check on dismissal from the system in some states. In the greater northern colleges, some vestiges of democratic control remain, but not many. A wide reputation may protect a great scholar's bread and butter but not even that always. That is the reason of the professors' trade union, the Association of College Professors.

in the colored south

In the Wild West, he fears politicians.

Chapter 10 - Jane on Local Government

It is to laugh. This wise text-book says owlishly: Start with teaching the student local government and then proceed to state and federal government. Or in other words, start with muddle and end with mess. Who in high heaven knows how a Georgia county is governed? First of all it begins with a frank, openly confessed negation of democracy. Negroes are not people. Thus at a stroke over a million of the three million population sink from all political sight and sound. But the same reasons that make them unfit for democratic functions - poverty, ignorance, crime and disease - apply to 100,000 white illiterates, and at least 400,000 other whites too ignorant to reason; a million whites too poor to live in decency according to modern standards. If Negroes then are too ignorant to express a valid opinion on what is wrong with their world; if the rich support the state and the poor are a "burden"; if crime and disease are proofs of depravity and weakness and not evidence of social maladjustment, then democracy in Georgia is threatened by fascism. Indeed the parallelism here to the Nazis is excellent: there are the Negroes instead of the Jews, disfranchised and mobbed and barred from public office; there is "Race Purity" to preen over; always public opinion can be diverted from essential by the psychopathic appeal to impudent Negroes, Confederate veterans, General Sherman, etc. Meantime a small group of persons rule by secret conclave, tempered by outbreak of personal quarrels mainly over patronage. Last year a Fascist leader seized power and ruled the state several months in defiance of the legislature and the courts. He even harbored ambitions to be president. His most vivid intellectual appeal to his constituents was a pair of red suspenders.

County government in Georgia is carried on by cliques of local politicians with the well-to-do land-holders as referees. There is little open discussion of plans or policies. There are no plans and policies usually, save for keeping down taxes on property, distributing petty offices and arranging graft for illegal activities. Recently Georgia has proposed to take local county legislation out of the hands of the legislature

and put it in the hands of grand juries - a body chosen by secret understanding. Why is this travesty on democratic government allowed in the South? In order to exclude the Negro from any voice in government. One third the population - in the Black Belt, sometimes two thirds - is not considered human. A deep-seated psychosis, fed by age long propaganda, makes this conviction on the part of the overwhelming mass of the whites more powerful than law or religion. Even economics yields to it; cheating "niggers" is still in the South recognized as a perfectly legitimate industry without ethical rules or limits. The poor whites cannot see that political and industrial oligarchy in the rural South is built firmly on the disfranchisement of the majority or large minority of the workers.

Nothing illustrates this better than the Black Belt of Georgia - the forty-eight counties, half or more of whose population is of Negro descent. Here live (1930) 917,990 persons, 240,929 white, and 677,061 Negro; enough to call for three members of Congress, and actually sending fifty-six members to the legislature. These counties are ruled absolutely by the 240,000 whites and mainly by the 50,000 richer whites. They control the state law-making, and they manipulate the money for the schools: they have 120,552 Negro children of school age and 66,605 white children. Yet they spend for the instruction of the whites, $1,081,426, and for the Negroes, $302,752. Of their total school funds, $2,545,512 come from State and Federal funds, or a million more than enough to pay for all their teachers without a cent of local taxation. This million and other gifts and local taxes are spent riotously on white school-houses and high costs of "operation". Thus hidden snugly in 159 little independent oligarchies in Georgia, we have the rulers of state and nation. The same paradox obtains in South Carolina, Alabama, Mississippi, and Louisiana.

In my western home there was what I call democracy. First as to money: father who was head cook at the local hotel, earned most of it; mother earned some by dressmaking, and the boys and I earned a little: I waited table in the summer hotel rush; the brothers worked in garages, did errands, mowed lawns. We all knew exactly how large this income was, and particularly how large it wasn't. It was distributed in family council, with mother as the final arbitrator and judge. I know now that even this minimum of industrial

democracy is rare, and that the income of most families is hidden in considerable mystery, even from members who contribute to it, and spent by absolute monarchy or oligarchy. Most all of our political and economic ideas came straight down from New England. We were fairly sure that poverty was the rightful punishment for laziness and waste and that wealth was entrusted to the good by God. In New England the older vision has faded in the face of the Irish, the Italians, the French Canadians, and others. Men do not believe in the rule of the masses. They believe in the influence of what they call Americans especially if they happen to be rich. They defend inner forces against invasion of the "muckers". The Harvard crew must have a Hallowell, even if it gets beaten, as it usually does.

We had town meeting, although we were a bit exceptional. This relic of New England was a primary republic. Once a year the men met and discussed town policies and elected officials. Of course the main policies were set in irrevocable custom, and the choice of officials was narrowed to a small group of the well-to-do, with some sectarian and national rivalries. Fundamental things like property and wages we never touched. Taxes loomed large; we believed in schools but thought they cost too much; we narrowly scanned public improvements and were usually unanimous in shouldering them on the State; we were deeply suspicious of poor-relief and cynical over misfortune. We believed in Crime and the police court was God. Unemployment was settled simply by calling it laziness and treating it accordingly, if we could; if we couldn't, we did nothing. Important matters I now realize were so manipulated that discussion and decision were more apparent than real, and elections were usually fixed. There was much quiet bribery by job giving and favors, hardly distinguishable from normal weakness of human judgment; and yet singularly enough inuring to the private gain of lucky ones. Chiefly the town was a bit careless and half-contemptuous of this jewel of democracy born and nourished in its midst. It all grew to seem picayunish, "small town stuff", compared with Chicago and New York, for instance, etc. And we did compare. To us the city was heaven. All the local weeklies, had a column of petty local gossip, straight from Broadway. We talked familiarly and knowingly of Michigan

Avenue. Town matters, town interests dwindled in our attention. Increasing numbers of important matters came to be left to administrative decision. Moreover our ability to think decreased, because our alert young ambitious men and women hied them to the city. In the city fame was really fame; all the talent, all the confident young strength of the nation was lured there.

Was the city democratic? Nowhere has democracy been so debauched, discredited and openly ridiculed as in American cities. Consider New York, our city of cities: the only place in all America, where a man may publish a book, or edit a national periodical or manipulate a national hook-up in ope a, politics or women's fashions. For generations New York has been a synonym for public theft, graft and rackets, bribery and lying, and the open cynical and criminal sale of political power. No New Yorker believes in democracy; with the constant, unwavering bombardment of anti-democratic ideas, the unceasing ridicule of "Reform", the unashamed worship of luxury and concentrated rule of wealth - with all this New York is synonym of oligarchical, secret power to control the 130,000,000 of citizens for the benefit of the rich, the criminal and the smart. What is New York? It is an arena where men fight and bleed for wealth, power, fame and pleasure; there are few real rules to govern the contest. The line between legal business and the organized crime "racket" cannot be drawn. It is catch-as-catch-can, hit below the belt, and devil take the hindmost. Yet our culture, our pattern of life, our democracy is born and bred here. Our American culture is a city bred culture. In our cities alone are literature and art, predominantly; such forms of art as painting, sculpture and music are confined to cities; the theatre is confied to New York; the movie is concentrated in a suburb of New York - Hollywood. There is no adequate reason for t is since electricty and wings have annihilated space; save for what we have wantonly destroyed, there is color to paint all over the land and particularly outside the cities; form and mass is no city denizen exclusively; music and theatre perhaps are more dependent upon crowds; writing hates them. But we have the habit - it will long persist despite telephone and television.

The city philosophy of New York has captured the East - New England, Pennsylvania, New Jersey and Delaware and Maryland. The masses of the people here - the working classes,

the clerks, the managers and engineers, the small business men, the rank and file of teachers and ordinary professional men - all these writhe and rebel from time to time, but they are without leaders or leading ideas. They do not know whether they want democracy or fascism, or for what they want either. They want at bottom decent incomes for themselves, but not necessarily for others. This income hunger conditions all else in life - religion, literature and art. Yet here our thought is not clear. What would a world be where everybody had incomes adequate for decent living? How many Americans would like that? Think of Irish and Dagoes and Hunkies and even Niggers with good homes on paved avenues, near parks and schools and playgrounds? Who would be left to wash our clothes and dishes; empty our garbage and dig mud? No! Average city bred America believes in a society with low-paid mudsills. It wants equality among equals, and wants to decide who shall be equal. It wants democracy so long as democracy levels neither down nor up, but puts power where it ought to be, to rule over those who have no business with power.

Small town life and town culture - the broad breath of lands, sunshine, flowers and crops, has almost left New England and the East. Most of what is left of it is city-suburban, wealth-supported; the rest is slum. In the West it survived longer, reaching pleading hands to the South. In the West, settled country folk from Europe, eager for land, willing to farm for a living. Among them democracy persisted. It is significant that our only third party movements - our only attempts to correct corruption and collusion in national politics - have begun among western farmers and received from the rural west the chief support.

This west, helped by poor white immigration from the South before the Civil War and peasant immigration from Europe, opposed slavery and voted for free soil. After the Civil War, the West rallied for economic reform in money, income and wages. They offered alliance to the South in the Populist movement, and Tom Watson and other poor white Southern leaders sought the Negro vote to beat capital. The result was a blow at democracy in the United States second only to the revolution of 1876: Tom Watson and his Southern poor white workers were cajoled to demand the disfranchisement of their Negro

workers and thus halve their own political power and throw the South definitely into the control of oligarchic capital; while in the west the growing lure of land and railway speculation, gradually split the farm vote, and killed the last hope of a third party movement in the nation, so long as the rotten-borough South reinforced the wealth-ruled East. American democracy born in 1776, was wounded to death in 1876, and given the coup-de-grace in 1894.

Why not rebel, complain to heaven and honest men? Why not agitate, arouse, form a new party and sweep county, state and nation into a crusade for new democracy, new civic righteousness, real reform? It costs to much; we wee ones are too poor.

* * * * * * * * * * * * * * * * *

I was at first sorry, Dear Jones, that you did not go immediately from Germany to Italy, and complete the Fascist cycle as it were. But now I think that it is better to break it by a more human touch, by a broader glance and then return better prepared to judge it. Or, no, I have it: link Italy and Africa in one study - there is much in that point of view, far more than those who think that the conquest of Ethiopia is the end and not the beginning of an era.

P. S. Yes, Jones, I think of you (and she added mentally "too damned much!").

Chapter 13 - Jane on National Government

Propaganda and gerrymandering prevent democracy in this nation. The propaganda is carried on by news-gathering agencies, newspaper chains, columnists, radio broadcasts and movies, radical movements, and patriotic societies. Most of these depend on control of large amounts of wealth. They work openly by facts and subtly, by ommission of facts, by distortion, emphasis, ridicule and deliberate falsehood. The richer and more powerful bribe readers and hearers by gifts of pictures, fiction, entertainment, contests and diversions, which no poor and independent thinker can hope to rival. Direct bribery by money payment is out of fashion; large salaries, social prestige, stock manipulation and tips andpublicity are common. A real arena of ideas hardly exists today in this land because of direct costs and indirect penalties for the unpopular ideas; added to these are difficulties of publication and deliberately prejudiced audiences. Freedom of speech and of publication are rare. The fair presentation of a new idea, or the criticism of a current madness or of established prejudices is well-nigh impossible. A weak weekly press survives only by the largess of a Certain Rich Man and serious books sell but sparely; if among 120,000,000 people, a publisher sells a book to one in every 10,000 he is satisfied. If he sells one to every 1,000 he faints with joy and surprise. Only a rich corporation, or a successful demagogue or a president of the United States can usually secure a real radio audience. Nearly all the agencies of national thought control, have for a generation, ridiculed, derided and decried the essentials of democracy.

Of course, if the masses demanded enlightenment, sought ideas, critical propaganda - the way would clear. But the mass is stupid because it is poor and has no leisure nor money for education beyond a poor minimum; it is more frightened of poverty than ignorance, of propaganda than of prejudice; it clings with waning faith to but one rough tool of salvation - the vote; and this is fading beneath its very grasp. The denial and distortion of the popular vote is next to poverty and because of it the most fatal of all handicaps to American democracy; some American citizens have ten times the voting power of others;

five percent can prevent the constitution from amendment; a small minority can easily prevent major legislation; a decided minority can elect a president. The former slave states by the simple expedient of disfranchising and suppressing half of their labor vote can wield a block of 140 electoral and congressional votes and thus not only hold the decisive balance of power in all national elections and legislation, but monopolize the chairmanships of all major committees of Congress which determine all laws. Chairmen of Congressional committees are chosen by seniority, that is, by heredity. This puts a premium on local oligarchy which can keep men longest in office. Thus the South which never had democratic government, has all the chief and most powerful chairmen. Little legislation can be hoped for without a favorable committee report. All that wealth or anti-social influences have to do is to get at committees.

Some answer this by saying that the South is exceptional - the Negro problem and all that; then they dismiss the matter as though it had nothing to do with the North nor West. Ah, but it has; it has all to do, and for that reason comes first in any consideration of government in the United States. First of all there is extraordinary difference in the political powers of the different sections. This arises, first of all, from the number of persons disfranchised. The disfranchisement is for various reasons: some open and clear like the ability to read and write; others involved and deliberately ingenious like the various laws in the Southern states which are really designed to disfranchise colored voters. Then there is another sort of more or less voluntary disfranchisement of people who do not vote because of lack of interest, because of fear of reprisal such as losing their jobs or missing promotion; and lastly of sheer despair: what is the use of voting anyway? For all these reasons 36% of the persons of the United States twenty-one years of age and over do not vote (1930). But this disfranchisement is curiously distributed: 25% in the Far West; 26% in the Middle West; 30% in the East; 32% on the Pacific Coast; 34% in the Border States; and the astonishing figure of 68% or over ten and one-half million in the South. Even among those who vote their value as electors varies tremendously. It takes only 37,000

voters in the South to choose an elector of the president of the United States; while in the Middle West it take 113,000; and the East requires 106,000; the Border States only 83,000. Individual states vary enormously in their political power. In the last presidential election we have the following astonishing record of the number of electoral votes necessary to choose a presidential elector in the various states of the United States: first there are the rotten boroughs due to gold and silver mines which require only 8,000 people in Colorado to choose an elector; and the rotten boroughs due to slavery requiring 14,000 people in South Carolina, 18,000 people in Mississippi, 24,000 people in Georgia, and 33,000 in Louisiana for each elector. We may then move West for startling contrast: Michigan needs 94,000; Kansas 95,000; Minnesota 102,000 to choose an elector; while Massachusetts, New Jersey, Pennsylvania, Ohio, Indiana, New York and Illinois require from 107,000 to 136,000. Contrast Illinois with South Carolina. The South Carolina voter has nearly ten times the political power of the Illinois voter.

Three things explain this discrepancy: the exploitation of natural resources which admitted rotten boroughs like Colorado and Idaho into the United States; and Negro slavery which built in America a prejudice which still refuses to admit black men into a democracy, the unfair equality of the states in the Senate which over emphasizes failing and growingly unimportant state lines; and finally, of course, the fear and distrust of all democracy which American industry has given birth to.

Mr. Deen from the eighth district of Georgia has over 241,957 persons in his district of whom a hundred thousand are twenty-one years of age or more. Of these only 21,000 voted in Mr. Deen's election. Nearly 80,000 were disfranchised - involunarily because they were black; or voluntarily because they were white and uninterested.

Even with an intelligent, educated, alert, unfettered and fearless electorate, the task of restoring or rather establishing democratic control in the United States would be enormous against these obstacles. Two well nigh insuperable obstacles remain: the mass of the citizens could not vote reform even if they wished, because those who determine their income would not allow it, save at the risk of deprivation if not starvation; and secondly, most citizens do not want reform, because of the long, persistent and subtle propaganda against democracy carried on throughout the nation since the Civil War.

Americans have come widely to disbelieve not only the possibility but even in the desirability of democracy in the United States. The experience with the Irish in New York; the Irish and Italians in New England; the Germans and Scandinavians in the West; the Negroes in the South - have convinced the majority of Americans that democracy, if it includes the masses of men is just what they do not want: that it would not work; and that if it did work they would like the result still less. Quietly then but determinedly they sabotage this democracy; they ridicule it and criticize it unmercifully. They teach their children to doubt it. What they would mean by democracy is the rule of property and class; they emphasize heredity and birth and they decry the danger of mob-rule. Exclusive social prestige is given excessive space in popular newspapers. The "best" colleges tend to become the special preserves of the "Best Families", and even the state universities seclude themselves by exclusive fraternities. The very circumstance which should protect democracy in our land, is killing it: we are sprung from the lowly; the proletariat not of one but of many peoples; from Negro slaves, from white beggars and prostitutes, from poor half-starved Irish, refugee Germans, poverty-stricken Italians, landless Scandinavians and bitterly oppressed Slavs. One might imagine that the offspring of such lowly might

stand together as a rock wall against caste and race hate. Not so. The second generation of these folk want to be identified with the ruling classes. They despise each other heartily. They want democracy for themselves and their betters, but not for any persons beneath them or capable of being pushed beneath. What may Negroes expect of the Irish? Or Hunkies of Italians? Or Chinese of Negroes? Hence we hailed Mussolini and even Hitler when he threatened our richest.

All this comes from anti-democratic propaganda. We despise humanity in the concrete present. And we defend this ponderously: shall the Mob (i.e., Negroes, Dagoes, Irish, Jews) overwhelm civilization and gentle culture? Did you ever see an Irish Wake? Have you noted the manners of Jews? Have you seen the "niggers" at a Southern station? Well the, does democracy mean that I must eat, drink with and marry such people? Must Art and Letters descend to such canaille?

No, it means that by slow and infinite pains these must ascend to Culture and to real culture and not necessarily to just your conception of Culture. No and Twice no, is the bitter retort to such a hope: they cannot; they have not the brains, nor the sensibility, nor that delicate, elusive genius of the gifted among men. They are born inferiors. To which the eternal rejoinder is: there is not one among the present Elect of America whose ancestors less than a century ago were as unlikely subjects for culture as the most ignorant among us now. Great genius is rare among all groups but the real accomplishment of democracy has been to prove how often the lowliest may achieve civilization. The tragedy of present day America is to see those who have risen by democratic opportunity seek to slam the doors in the faces of the still disinherited and forgotten. And too because we have been seduced by money-making, we all like sheep have gone astray and produced a bastard culture of flamboyant imitation, instead of the finer thing that beckoned us when we still believe in this democratic ideal.

It is no longer possible to distinguish between Nation and States in our government,

in any logical way. The attempt to do so spells muddle. Airplane and railway, telegraph and radio have so pulled the ends of the nation together that national interests have swamped the local, and our whole conception of the natural limits between state and federal jurisdiction is increasingly difficult to realize. Yet democracy had nested in our towns and as it disappears there we have no national substitute.

Most astonishing and disconcerting is the Decline of the West. After the defection of New England, after New England began to become rich and proud of its blood and suspicious of the Irish, after it became the center of tariff protected industry and manufacture, the hope of democracy moved west. It was here that there arose the cry for free soil which killed slavery and offered open arms to the poverty stricken of Europe. It was here that agrarian revolt began and industrial democracy. It was here that there arose the possibility of an entirely new conception of democracy in the United States during Reconstruction. If the peasant controlled West had then united with the labor controlled South wealth tyranny and the extremes of exploitation might never have swept America. But the peasant was seduced; like the Kulaks of Russia he found profit more alluring than democracy. The rise of land values based on monopoly, railroads, and other exploitation made him dependent more upon speculation than upon agriculture. Instead of supporting the labor South he was induced by subtle propaganda to join hands with reaction in the South which dethroned labor, black and white, and put in the end Eastern monopoly on the Southern throne. The Populist Movement of the nineties tried to re-thread this alliance of the West and South but southern leaders like Tom Watson were stampeded into race prejudice rather than to labor class consciousness and the whole movement flattened out and died. All the third party movements have arisen in the West. They tried lately to unite industrial democracy in cities with peasant democracy on the land but they failed; and while one cause of their failure was lack of belief in democracy, the other cause was the disfranchisement of the West, the fact that the reactionary South could disfranchise two-thirds of its possible voters and still retain full voting power and choose an elector with 37,000 votes while the intelligence of the Middle West called for 113,000 for each elector, in an electorate where three-fourths of the people voted. Here then died democracy in the United States and it isn't yet resurrected.

Of course, if without government, (which would be Blessed Anarchy, and I'm all for it) we could administer civilization, police the anti-social, and abolish Poverty and Ignorance, there would lie our obvious path. But in just the realm where the modern world has given Anarchy its fairest trial (and that is Business) we have had our most glaring failure and threat of failure. Whatever seemed about to be brilliant and spectacular industrial success and world empire was followed continually by shattering depression until at last, permanent recovery, permanent advance without crisis seems impossible. Nor can Capitalism in private hands blame democracy, socialism or communism for this result. The power of capitalism to rule is still where it long has been.

universities where capitalistic economics and European culture, not only prevail, but prevail almost to the exclusion of anything else or any other points of view. The history and existence of most human beings is utterly ignored in these colleges. Naturally these men are then grabbed up with rolling eyes and eager mien by the best Southern Negro schools. Now if these Negro schools have any real meaning, it is that in them another point of view, different or at least supplemental to the white point of view, should be evolved. It might or it might not be radically different. It might bring something entirely new or be mostly an adaptation of surrounding civilization; but certainly it would logically bring a newness of view and a re-examination of the old, of the European, and of the white, which would be stimulating and which would be real education. But right here we have not only little or no advance, but we even have attitudes which make advance impossible.

On the matter of race, for instance, these guys are ultra-modern. There are no races. Consequently there is no sense in studying racial subjects or inculcating racial ideals, or writing racial textbooks, or projecting vocational guidance from the point of view of race. And yet standing in stark contradiction to all this, are the surrounding facts of race: the "Jim Crow" seats on the street cars every day, the "Jim Crow" coaches on the railroads, separate sections of the city where the races dwell, separate or no jobs and lower wages for Negroes. Georgia has just announced new and reformed teachers wage: Negroes of the same training and work as whites will get 60% of white wages. The discrimination in law, and beyond that the widespread division of the world by custom into white or black is a flat fact. It is true indeed, and I rejoice to know it, that physical differentiation of race is scientifically impossible; that we are not Negroes in the sense of conforming to a describable and measurable and heritable racial standard. But in spite of all that, we form a perfectly definite group, not entirely segregated and isolated from our surroundings but differentiated to such a degree that we have very largely a life and thought and history of our own. And it is this fact that we as scientists, and teachers, and persons engaged in earning a living, have got to take into account and make our major problem. In the face of that we have these young intellectual exquisites who smile if they do not laugh outright at our railings.

see nothing,
Their practical program is so far as our race or group is concerned: do nothing, think nothing, become absorbed in the nation. To which the flat answer is: this is impossible. We have got to do something about earning a living. We have got to think and think clearly about our present situation. Absorption into the nation, save as a long, slow, intellectual process, is unthinkable and while it goes on, its trend and result depends very largely upon what kind of group is being absorbed; whether such racial integration has to do with poverty-stricken and half-starved criminals; or with self-guided, independently acting men who know what they want and propose at any civilized cost to get it. No, separated and isolated as we are so largely, we form in America an integral group and this fact in itself has its worth, and values - call it by any name. "Negro" is best because historic, clear and a rallying point for other groups; and then On and Up! Only this we must not forget: all human advance is primarily economic, and our advance to be successful must run with and not counter to, the forward economic trends of our day. Which being interpreted means we American Negroes have got to evolve a racial or group economic program, and that it must accord and blend with the best modern advance toward socialism as all men know that is the world's goal. Yet here in the seats of learning, are young Negro scholars teaching economic raction.

This too in a world where everywhere capital is failing - unable to keep order, unable to save democracy, unable to feed the hungry and clothe the naked, and all because their technique of industry is so modern and efficient that it breaks down doing what it is planned to do. In a successful capitalistic world, the argument for the equitable distribution of wealth, would be strong; but in a world of failure, the argument is overwhelming.

(Here rather suddenly, Jane stopped. She was wishing rather desperately that Jones would sometime somewhere in his letters casually mention the fact that he missed her. Of course he did, he could not help it - but he was so prissy and moral. She was afraid (afraid?) that if he were here this dreary end of day, and if he should boisterously and forcibly kiss her, she would enjoy it. But imagine! He wasn't. He was three thousand

miles away and going further. And his mind was working methodically and clearly on Problems. A month would go by before she heard another word and even then - Yet she loved it. She was to him an Intelligence, and not a mere receptacle for protoplasm. It was good to live and think - only, not alone, not alone.)

I am not sparing us. We black folk have striven to be Americans. And like all other Americans, we have longed to become rich Americans. Wealth comes easiest today through the exploitation of labor, and if we have exploited our own and other labor to but a slight extent the praise belongs not to us, but to those whites whose monopoly of wealth and ruthless methods have out-run our tardy and feeble efforts. This is the place to pause and look about, as well as backward and forward. The labor movement in America as in Europe, deceived us just as they deceived themselves. They left us out. They paid no attention to us, whether we were drudging in colonies or slaving in cotton fields or pleading in vain at the doors of union labor factories. The object of white labor was not industrial democracy, it was to join capital in sharing the loot from exploited colored labor. So we, only half emancipated, hurled ourselves forward, too willing if it had but been possible, to climb up to a bourgeois heaven on the prone bodies of our fellows. But white folk occupied and crowded these stairs. And white labor loved the white exploiter of black folk, far more than it loved its fellow black proletarian.

What to do? We went to school. But our industrial schools taught no industrial history, no labor movement, no social reform, - only technique just as technique of trades was changing to mass industry. Our colleges taught the reactionary economics and anti-democratic philosophy of Northern schools. We landed in bitter and justifiable complaint and sought a way out by complaining. Our mistake lay not in the injustice of our cause, but in our naive assumption that a system of industrial monopoly that was making money out of our exploitation was going to help us to escape *its* talons. It was real funny and everybody except us laughed heartily over it.

Now in the year of God, 1937, and of our freedom from slavery not yet the first, we ask seriously, what can we do to force our entrance into a democracy that wants neither us nor democracy, but is faced by serious dilemmas: Waste of the national resources,

muddle of governmental efficiency, breakdown of the industrial machine and loss of faith in mankind. By grace of 20th century imperialism we cannot withdraw to ourselves and fight for salvation by ourselves. The possibilities of the 17th century are not ours. We have got to study our situation here and start to right it here.

For this I've worked out a creed. You'll laugh at it and criticize it. But think it over:

1. We American Negroes forming a distinct social if not a purely racial group are threatened today with lack of opportunity to work according to gift and training, and lack of income sufficient to support healthy families according to standards demanded by modern culture.

2. In industry, we are a labor reserve, fitfully employed and paid a wage below subsistence; in agriculture, we are largely disfranchised peons; in public education, we tend to be disinherited illiterates; in higher education, we are the parasites of reluctant and hesitant philanthropy.

3. In the current reorganization of industry, there is no adequate effort to secure us a place in industry, or to open opportunity for Negro ability, or to give us security in age or unemployment.

4. Not by the development of upper classes anxious to exploit the workers, nor by the escape of individual genius into the white world, can we effect the salvation of our group in America. And the salvation of this group carries with it the emancipation not only of the darker races of men who make the vast majority of mankind, but of all men of all races. We, therefore, propose this:

BASIC AMERICAN NEGRO CREED

(Banc)

A. As American Negroes, we believe in unity of group effort, so far as this is necessary for self-defense and self-expression, leading ultimately to the goal of a united humanity and the abolition of all racial distinctions.

B. We repudiate all artificial and hate-engendering deification of "race" and race separation as such; but just as sternly, we repudiate an enervating philosophy of our escape into an artifically privileged white race which has long sought to enslave, exploit and tyrannize over all mankind.

C. We believe that the Talented Tenth among American Negroes, fitted by education and character to think and do, should find primary employment in determining by study and measurement the present field and demand for racial action and the method by which the masses may be guided along this path.

D. We believe that the problems which now call for such racial planning are Employment, Education and Health; these three: but the greatest of these is Employment.

E. We believe that the labor force and intelligence of twelve million people is more than sufficient to supply their own wants and make their advancement secure. Therefore, we believe that, if carefully and intelligently planned, a cooperative Negro industrial system in America can be established in the midst of and in conjunction with the surrounding national industrial organization and in intelligent accord with that reconstruction of the economic basis of the nation which must sooner or later be accomplished.

F. We believe that Negro workers should where possible join the labor movement and affiliate with such trade unions as welcome them and treat them fairly, and in other cases we should form and federate our own Negro unions. We believe that workers' councils organized by Negroes for interracial understanding should strive to fight race prejudice in the working class.

G. We believe in the ultimate triumph of some form of Socialism the world over; that is, state ownership and control of the means of production and equality of income.

H. We do not believe in lynching as a cure for crime; nor in war as a necessary defense of culture; nor in violence as the only path to economic justice. Whatever may have been true in other times and places, we believe that today in America we can abolish poverty by reason and the intelligent use of the ballot, and above all by that dynamic discipline of soul and sacrifice of comfort which, revolution or no revolution, must ever be the only real path to economic justice and world peace.

I. We conceive this matter of work and equality of adequate income is not the end of our effort, but the beginning of the rise of the colored races in this land and the world over, in power, learning and accomplishment.

J. We believe in the use of our vote for equalizing wealth through taxation, for vesting the ultimate power of the state in the hands of the workers; and as an integral part of the working class, we demand our proportionate share in administration and public expenditure. But we know that control of capital by the masses is fundamental to all political and social power.

K. This is and is designed to be a program of racial effort; and this narrowed goal is forced upon us today by the unyielding determination of certain elements in the white race to enslave, exploit and insult Negroes; but to this vision of work, organization and service, we welcome all men of all races and colors so long as their subscription to this basic creed is sincere and is proven by their deeds.

I ventured to show this to our great scholar. At first he withered me with a glance but I refused to shrivel. Finally, with a sigh he explained very very patiently and with a condescension almost jovian: No, cooperation would not work among American Negroes because of Basic Industries. I looked dumb in order not to look murderous. I proceeded imperturbably and despite a glance at his watch, to sketch a possible Negro Consumers' Trust beginning with food raised on the farm and proceeding to homes, bakeries, restauraunts, laundries. He conceded that theoretically this might be possible making due allowances

for space and time, but he pointed out that it would not necessarily be cheaper. Indeed, these consumers might find themselves paying more for their meat and vegetables, their eggs and butter, their bread, and personal services. I admitted this gayly but showed him that if we actually increased the employment and wage of Negroes by spending more of our income on them this system might really pay us; and contrasted that situation with our present method of spending and missing the employment which would give us money to spend.

He admitted that it would be conceivable that a group should pay indirectly consumption taxes in order to distribute employment among themselves. But he asked with grim sarcasm, "Would they?" They would, I averred, if they were intelligent enough to know what they were doing. He sniffed. Then he explained further that granting among the five and one-half million Negroes now employed that such difficult and intelligent cooperation might possibly by a wild stretch of imagination employ a half million, how about the other five million, he asked: the miners, the laborers in manufacturing and mechanical industries and in transportation; the porters in trade, and above all the servants? I stuck to my ground and declared that in many lines of service we might organize our productive power. We might furnish clean, efficient, educated, skilled, reliable house service for a wage that would not only be higher in money but higher in decent treatment so that house service would cease to be the chief source of supply for prostitution; that we might increase and systematize our already considerable knowledge of cooking and serving; that we might furnish to a larger and better degree music, dancing, painting, and pottery; that by consumer organizations we might even go into the vast clothing industry, using our own cotton, South American wool, and Asiatic silk. He waved all this dream aside and concentrated on coal, oil, iron and steel, lumber, automobiles, building, chemical industries, tobacco factories, glass factories, flour mills, slaughter and packing houses, and all the endless list of human enterprises in which at least three million Negroes labored. What of them he asked triumphantly.

I answered, discipline them by our power as consumers. Secondly, withdraw successive groups of black workers from the overflow labor reservoir which makes their labor power cheap and negligible. One of the first groups to be withdrawn would be our two million

farmers. We should change them not into helpless, isolated, peasant proprietors but into cooperative owners of collective farms joining their whole effort to the black consumers in towns and cities. Of course, we could not quickly withdraw the whole two million but with sense and effort we could withdraw a half million tomorrow and a half million in a few years. We could withdraw from dissatisfied menial service a portion of a million and half now sunk and smothered therein, by organization of their work, by domestic industries linked to the new electrification program which can easily in time disintegrate the factories and restore production to the home. And then having made Negro labor scarcer in the Basic Industries and stronger in its power of bargaining, we could make our approach to the white labor unions.

Then I carried the attack into his country. You are always blaming Negro workers for not joining the labor movement. You are telling them to join the union, when you know the union will not let them join, or if they join give them the most unfair and difficult positions. And these unions do this because they under estimate the ability of the Negro and his capacity for organization. But let Negro workers come to them fresh from their consumers organizations, organized in their own Negro unions whereever absolutely equal reception is not available in the white unions, and then these Negro workers would represent not a liability but an asset for the whole labor movement in the United States. In this way the Negro would become an integral part of that movement.

He scoffed. He said, what you are asking for is not an economic movement but a religion. Exactly, I said. Our fraternities and sorrorities, our bridge clubs, and our churches, our secret societies have got to turn around and concentrate on the building of character. It is just that element that Marxians leave out or take for granted. We assume that pointed the economic way of salvation all things will be added unto it. They will not unless you have real men, men of sacrifice, who prefer good to evil. Without them your socialistic state is going to end in the domination of selfish bureaucrats and there is no inevitable evolution that willward off this disaster. On the other hand, if we have an increasing number of men of real benevolence and good-will; of workers willing to work for something more than wage and for objects bigger than their bellies; if you have this we are going to make a new World. But he had thrown up his hands and flown. "Idiotic!", he jeered.

Chapter 16 - Jones in Japan

Foreigners who visit Tokio are vastly intrigued by its contrasts. It is at once a vast, glamorous modern city of six human millions, and an endless village of paper houses and little shops and neighborhood life. Top-hats and kimonos; a few jinrickshas and flocks of bicycles; modern machines and ancient handwork - these incongruities strike Japanese even more than foreigners with a sense of fatal clash between old and new, East and West. For the honest foreigner knows that his own land has the same contrasts, only the old has preserved less of beauty and use, and accumulated more of ugliness and menace. Contrast and contradiction spell civilization, are inevitable; the crucial question is how far the community is conscious of the paradoxes, and what loss and gain may or should accompany further progress. Japan seems alive to this, sensitive and worried; western Europe takes Wealth and Poverty for granted, even when evinced by idleness, unemployment, sullen and blazing discontent, rags and diamonds. Perhaps I exaggerate when I say this - it is such a temptation to exaggerate for purposes of perspective - but what I mean is that Japan seems more sensitive over less violent contrasts of income than London, Paris or New York. And I mean here not merely money incomes, but satisfactions. Japanese life appears attractive to the average Japanese. Perhaps much of suffering is concealed, perhaps much of discontent has been driven underground by harsh restrictive laws. Yet there is evident in Japan more of simplicity and beauty in life, more of simple joys widely shared, more of art among the multitude, than one sees in the West. There is not that sharp and insistent contrast between the Enjoying and the Enduring that pervades the West. One element in this content must be early marriage and family life. The sex-starved woman and sex-wild man are not so evident in Japan, because of early marriage and because of legal provision for sex life outside marriage. The family then, composed of persons not so contrasted in age as in Europe, is further integrated in pleasures, holidays, religion and work. Not dogma but Shinto, a simple ethic of family honor and national patriotism, is the realistic religion of Japan; while Work is an integrated national organization unexampled among industrial lands. Japan is a land organized for manufacturing goods for export, and raising crops

for consumption except in the case of silk - which is a large and important exception. The price of rice then is the matter that enters into class discontent and had more to do with the abortive revolt of 1936, than anything else. Here the peasant backed army and not the city proletariat attacked capital. The proletariat has potentialities for discontent, in long hours of work, work of women and children and low wage; but conditions of work are according to long custom, and the wage brings the Good Life or enough of it still to satisfy. Beyond this the forces that make for endurance and content are foreign and not domestic: European aggression, Australian exclusion and American insult.

Japan went to manufacturing for profit. She not only manufactured with the cheap labor of Japan, but crossed the Yellow Sea and successfully demanded recognition as an exploiter of China. This was dangerous. What the Japanese could do, surely the Chinese themselves with training and experience could also do. The Japanese expansion met double opposition: the bitter opposition of Europe, whose prestige they were threatening, and whose whole system of world industry, they were slowly but surely undermining; the bitter opposition of China, who beheld a kinsman and rival, apeing the methods of the white oppressor, demanding territory and concessions and eventual leadership as over inferiors - over China itself, whose civilization gave birth to Japan. This split between China and Japan was emphasized and furthered consciously and unconsciously and with every open and concealed weapon, by the white world, until China actually came to regard Japan as her real and main enemy and Europe and America as her friends - perhaps the most astonishing paradox of modern times. While Japan, seeing all too clearly the menace of Europe to the yellow world, bent every effort to achieve the hegemony of that world, even to the length of dismembering China already partitioned and threatened with extinction by Europe. Here at fantastic cross-roads, stood the East, when a new West arose in Russia, with a new labor philosophy.

None will ever estimate just what that astute diplomatic lie, after the Sino-Japanese war, cost the world: O, no, no, no! said Russia, Germany and France, April 23, 1895, Japan should not think of taking the Liaotung peninsula, although it pointed like a dagger

at Japan's heart and the Shadow of Hands groped toward that hilt. Great Britain was "neutral", and neither the United States nor Italy had "good offices" to offer on Japan's behalf. Japan still asked for Kwantung but Russia said No, peremptorily, and in "Honor and Dignity", Japan withdrew. Thereupon Europe started a scramble for China like that for Africa which followed the Berlin Conference of 1884. In 1897, Germany "leased" Shantung, dominating North China; next year, Russia "leased" Port Aruthur on the tip of that same Liaotung Peninsula, whose possession by Japan shocked Europe in 1895. Immediately, England took Wei-hai-wei, near Germany on the Shantung Peninsula and extended her Hongkong loot, while France got a port, Kwanchow-wan, in south China. Italy wanted Sammen, but was refused, not yet being a big robber.

That bit of astute international plunder cost the world, the Russo-Japanese war, the Manchurian seizure, and indirectly, the World War and the rape of Ethiopia - a fairly pretty price. Australia with fewer folk than live in Tokyo alone, was shut up to Japanese, just as though Americans were forbidden to enter Mexico. England embraced alliance with Japan in 1902, fearing Russia, renewed it uneasily in 1911, because of Australia and the United States, and dropped it eagerly in 1921, under the convenient wing of the League of Nations. The United States having negotiated a "Gentlemen's Agreement" in 1908, to stop Japanese labor from migrating to America, decided in 1924, to exclude all Japanese. This was accomplished by an alliance between the South and West in Congress, by which the West voted not to stop the lynching of Negroes, and the South voted to exclude Japanese; thus insulting two colored races with one vote. Also the League of Nations, with Wilson and England, declined to consider a resolution avowing racial equality.

So a disillusioned Japan faced the world after the World War. Either she must dominate China or Europe would. Domination meant not conquest, but commercial exploitation. Suppose Japan organized herself for underselling Europe and America in the markets of the world? She found she could do it. Moreover, her lack of certain basic raw materials, could be balanced by a closely knit capitalistic power of bargaining as a national unit -

an integration across possible class lesion. Suppose Japanese laborers demand better conditions of work? They immediately expose themselves to the whole menace of race hate; to treatment which the white world metes out to colored labor, which is infinitely worse than the treatment of Japanese capital. White labor recognizes no solidarity of labor across the color line.

Cowering behind unbreachable ramparts, China lives on, and because of this, Europe hopes and Japan fears. Unless Japan successfully interferes, there is no reason why imperturbable China, resting stolidly, should not indefinitely form one of the richest fields of capitalistic exploitation the modern world knows. But the example of Japan disturbs the situation. It arouses jealousy and resentment in China and emulation, and with communistic urge, may become practically and effectively anti-capitalistic. Meantime capitalism in Japan expands toward world empire. The white world watches it in unfeigned alarm, but that alarm has two unreconcilable faces: white economic reaction based on imperial exploitation of colored peoples, wants Japanese capitalism to collapse lest it undermine white domination. White economic reform, wants Japanese capitalism to collapse in order to advance the universal collapse of industrial imperialism. Both reformers and investors cheer heartily for the economic debacle of Japan but for fatally opposite reasons. It faces Japan with a unanimity on the part of the white world which has all of the too familiar earmarks of the Color Bar.

Thus Japan in turn faces her enemies and easily confounds if not misjudges them. Why, she logically asks, is Europe, gorged with the loot of centuries, become suddenly so solicitous over the rights of backward peoples? Why is England today defending the integrity of that same China which she more than any people on earth, reduced to impotence and helpless disorganization? What new and lofty regard for human dignity is animating self-righteous America, which declares the yellow race even less worthy of citizenship in the republic than black slaves? And whose knight in shining armor refused at Versailles, even to consider a League of Nations declaration in favor of racial equality? On the other hand, while Europe wards off Communism as a pest and threat to

present culture, why is it so complacently envisaging a war of Russia and Japan, unless it be with the pious hope that both these threats to European hegemony of the world, may be egged on utterly to destroy each other?

This is leading and must lead Japan carefully to appraise her present position. First of all the Japanese economic set-up does not loan itself to the western European conception of development, and the Marxian interpretation must be changed to accord with a different set of facts. Primary accumulation of capital in Japan was largely a government function, and therefore government control of capital is natural and awaited. Private property is a family rather than an individual matter, and even there a communal welfare must be considered far more than in Europe and America. Mr. Matsukuo, the erstwhile delegate to the League of Nations, who walked out after the Manchurian Incident, said to me: we Japanese have always been communistic in a sense; we always hold our property for the common welfare, rather than for private profit exclusively. This is not wholly untrue in Europe and America, as extraordinary public philanthropy testifies. But it is more true of Japan and in more regular and less spectacular and more widespread ways because in Japan labor was never a saleable commodity. Thus with property less strictly subject to private control, and with the government more generally recognized as exercising control and even ownership in industry, the path of reform in Japan lies in different directions than in Europe. The Class Struggle is and must be less clearly defined, not simply because of the survival of feudal ties which led straight through Shinto to the Emperor, and in his person became identified with Government itself; but even more important, the contrast in class incomes is not nearly as great as the money wage would indicate, since in the distribution of social satisfactions there is wide equality: celebrations, home festivals, national and local customs, all enjoyable at prices or sacrifices all can easily afford. Consequently a working class which Kagawa's cooperatives can feed adequately at eight cents a day for three meals and which has a family income of less than thirty cents a day, is nevertheless not a conspicuously discontented class of workers. This comparatively contented working class gives Japan a tremendous advantage in international trade. It foreshadows a time when the cheap labor of Japan, China, India and the South Seas,

will drive industrial Europe off the commercial map by shear underbidding. All that protective tariffs can do in opposition is to tax white consumers to the breaking-point in lands of increasing unemployment. Such industrial disaster, Japan could lead by furnishing capital, engineers and entrepreneurs. But only of course in case Japan is not overthrown by Russia or convulsed by internal industrial revolution.

Internal revolution in Japan is foreshadowed not by industrial discontent but by agricultural. To be sure, strict repression and propaganda to keep workers loyal and satisfied, may not long work, and workers may gradually come to demand consumption goods for themselves rather than for manufacturers profits; but at present the signs of dissatisfaction among industrial labor are not overwhelming. On the other hand, the peasants are not only poor and dissatisfied, but are represented and articulate in one of the most powerful departments, the Army. The Army in its search for efficiency has become more democratic than the parliamentary system. Big Business captured politics and by scandalous bribery sought to dominate the state. But the army stood separate from the state, with direct veto on parliamentary action and direct access to the center of power - the clique of advisers who speak in the name of the Emperor. And in the army, by democratic competition, peasant officers, who knew the plight of the agricultural workers and could speak for them, had a chance to challenge big business in the very inner citadel of power. Thus the class struggle in Japan has taken today a peculiar twist: younger army officers, championing the farmers, have sought by assassination and violence to overthrow the power of capitalism entrenched in the parliamentary system. At the same time military Fascism is bent on extending the Japanese empire in China and the South Seas for new capitalistic enterprize. This imperial capital is, however, furnished by the state and very strictly under state control. To pick in this intricate whirl the classic pattern of Marxian determinism is impossible.

There is no doubt but that the wages of Japanese labor are too small and the income of the Japanese peasant below the danger point. This is partially balanced by the spiritual returns: Shinto the religion of honor; mystical reverence for the myth of empire which beats high in every true Japanese heart; and the little beauties of Japanese life in song and celebration, color and form, flower and tree. But on the other side the Japanese do not have enough to eat; not enough for health; not enough for proper physical growth. Their long hours of work emphasize this deficiency. Unless, therefore, this is corrected and corrected so n and radically Japan will fail in her great mission.

But the world protest against this does not ring true. If Japan would manipulate her exploited workers as other exploited classes of the world and particularly the colonial peoples are manipulated, there would be no protest. This would call for maintaining the prices of goods in international markets, and a division of the market by understanding with the great producing countries. When, however, Japan insists on accomplishing her object of breaking into the charmed circle by under selling, she disrupts the entire exploitation program of the white world. And Japan's object in doing this has been flatly and openly stated by Major-General Tada in 1935: (Utley, "Japan's Feet of Clay" page 35)

"The international situation . . . may be regarded as the beginning of a racial war for the emancipation of the coloured people who form the greater part of the human inhabitants of the world from the enslaving oppression by the whites. . . . It is also the beginning of a spiritual war for rectifying the material civilisation of the West by the moral civilisation of the East. These two great missions from Heaven are the natural obligations which our Japanese Empire must bear."

This is no chauvinistic attack on civilization; it is re-righting its present unbalance. Consider for a moment the exploited people: the Chinese, East Indians, the Malays, the Negroes, the Indians of the West. When one talks today of colonies little or nothing is said of their inhabitants. There is alm st no argument about consulting them about who shall be their industrial and political masters. They are swapped like horses. And yet their labor power rather than the extent of raw material is the real question back of colonial enterprise. What the colonial powers want is not simply raw

material; it is the labor that produces raw material and gradually more than that. What the exeluded powers want is not merely raw\material; it is slave labor for raw material and for other purposes. It is labor as a saleable commodity. These peoples are exploited far more than the Japanese with deadly danger to their very physical existence and utter murder of their moral values. Yet on this labor, modern industry has reared a large part of its magnificient edifice.

Come now the Japanese and propose to re-build this edifice with higher but still far too low returns to their workers, and with the threat of bringing Japanese labor in competition not simply with colonial labor but with white labor the world over. A just solution of all this would be the gradual rise in the wage of colored labor the world over until its possible solidarity in object with white labor would gradually appear. It is this that white capitalism and white labor together is fighting; and it is this that makes white labor a strong and effective wing of the petty bourgeoisie the world over.

In seeking to break this vicious circle Japan faces a terrific task. If her laborers should try to make the break by striking for higher wages and overturn the present Japanese government, where would they land themselves? When the United States insulted her own colored labor by refusing to curb lynching in the South, and at the same time insulting the orientals by the Japanese exclusion law, two Japanese walked to the entrance of the America Legation in Tokyo and fell upon their daggers scattering their blood on the door sills in mute and awful protest against this insult. This shows that the Japanese masses know what they face: exploitation and too low wage at home, but greater exploitation and far lower wage if they overthrow Japan andface the industrial mercy of white Europe.

Three thousand miles south of Tokio and Canton, equdistant from crowded China and India, lies an empty continent held barred against the colored world by white capital and a handful of petty bourgeoise in the name of civilization. It is an anomaly and a challenge. It cannot endure. This Japan knows.

Chapter 17 - Jones looks back on China

The most obtrusive fact to me in China was the bitter feeling against Japan. I had known there was rivalry. I expected to find considerable feeling but I was not prepared for the depth of resentment that I found when, for instance, I was being pointed out memtoes of the "last war" in Hang-Chow. I was a bit puzzled when the guide explained, "Oh, we mean the War of 1932." Then I cast about to remember that of course it was that uprising in Shanghai, which we in the West thought of as a petty incident but which in China looms as a great battle between Japan and China. An official of the South Manchurian Railway told me that he had lived in Japan sometime and at last his neighbor said with some curiosity, "Are you really Japanese? We thought Japanese were devils." It is the sort of fierce fight that starts in a family, or a feud between cousins; or to make it more specific, war between mulattoes and blacks in the West Indies or between the English and Irish in the British Isles. The Chinese and Japanese are blood relatives. Of course, the mixtures are different and those used to the East can tell them easily apart. I think I began to sense the difference and yet they are very near each other. The Japanese without doubt borrowed much of their civilization and methods of culture from China and in recent years China has learned not only facts but a whole world attitude from Japan. But this nearness does not allay the strife. It makes it, as I have intimated, even more bitter.

I sat down with a number of Chinese: officials, social workers, teachers, and newspaper men. We lunched together and then talked. First I told them about myself and my problems and then whirling perhaps a bit suddenly I said, "There is one thing I cannot understand. You Chinese surely know that you have suffered more from the English and Europeans than from any one else, and granting causes of estrangement from Japan, why is it that it is so much more in evidence than the natural resentment against Europe." I did not have to point to what I meant. Sitting there, we were in a Chinese city

ruled by Europe. The whole valley with its myriad millions was a pawn to European investment. The whole emancipation of China was primarily an emancipation from European capitalistic control. They knew it. They told me some of the plans and work toward freedom. I even went down and visited that new ghost capital between Shanghai and the sea which was planned to cut Shanghai's supremacy in trade and put it in a Chinese city ruled by the Chinese. But it was a thing half-begun and half-done. A beautiful and empty library stood in the city, a marble city hall. Streets were there and some houses, everything but people. And they explained that it took capital to do it. They did not have the money. And therein lay the secret. They proposed to out-capital capital. They were going to build a new Chinese industry which should emancipate them from European industry; and they felt themselves able to do this and they bitterly resented the intrusion of Japan coming in as though she were a western power destined to dominate orientals; as though she, the culture child of China, was going to show China the way of life - that China which had lived a thousand years before Japan was known and would live long after Japan's end. The intrusion of Japan was resented because of its very success and because of its all too apt imitation of western technique. They were not called upon to take hold of the hands of their yellow brother and march side by side toward freedom and domination. They were asked rather to put their millions at the mercy of Japanese exploitation and let Japan finish what England and France and Germany had begun, but should never complete.

The Kuomingtang is leading a one party state and can be compared to Russia on the one hand and to Hitler and Italy on the other. It is more like Russia because without doubt its leaders are single minded, self-sacrificing men working for the good of the masses of China. But it is like Germany and Italy in that it pins its faith upon capitalistic development, upon the old Western industry revivified. Its ideal of democracy which the Kuomingtang hoped sometime to introduce is the 19th century European liberalism inoculated with the communism of Sun Yatsen. But between ideals here communistic, here

capitalist, the Kuomingtang has not been able to choose and its objects waver helplessly before the enormity of the task. To penetrate the Chinese family and the Chinese clan; to infiltrate into the Chinese village and begin the basic work of reform calls for every ounce of a nation's genius and ability. In the way stands the terrible legacy of corruption, inertia, fatalism which the Empire left to the wavering republic. Graft has been ingrained in Chinese officialdom so long that it seems almost hopeless to eradicate it and of course until income and its sources are entirely readjusted it cannot be eradicated. There is almost no way for a man to earn a decent living in political life save by graft. If now capital increases production to a modern scale by water, electricity, steam, and machinery, the resultant goods might be distributed so equitably that graft would be driven out. England made her civil service in India incorruptible by giving her servants magnificent salaries and retiring allowances and pensions; but to do something similar in China, not for a government satrapy but for the mass of citizens, would call for a technique of distribution which capitalism has never invented, and by its very constitution, never could.

It is here in the matter of distributing goods and in allotting services and training men and seeking out character that the kuomingtang despite its marriage to capitalism finds itself pushed more and more toward communism and toward the ideal of becoming itself a dictatorship of the proletariat for the eventual birth of industrial democracy. The outcome is not sure. It is obscured by the inner struggle to put down bandits and bandit chieftains and curb grafting generals and officials.

Above and around all that, swoop the plans of Japan. Japan sees a clear path with control of the raw materials of China. She could be independent of the western world with her cheap efficient labor supplemented by the labor of China and perhaps eventually even of India. Her absorption of North China would put under her comination a territory forming a more nearly complete economic unit than exists in the East and which would only be rivaled by the United States, Russia, and the British Empire. Secure in the

possession of the coal and iron and cotton of North China, Japan might march forward and compel by competition the emancipation of the colored labor of the world. This program is bitterly opposed. It is opposed by Europe lead by Great Britain most naturally and explicably.

The resistance of China to this program is great and growing. It is doubtful if it can ever be carried through. What next? Next would come a change in object on the part of Japan, and a change of aim on the part of China. There are some signs of this. The change would mean that Japan and China together as equals would try to industrialize the East and produce goods which the East itself needs as well as goods needed by the rest of the world. And these goods which the masses of China and Japan need, would by the pressure of the communistic trends in China, be distributed upon a new basis, not according to the ideals of the West which Japan is following so strictly, but according to a new ideal much nearer that of Russia and strangely enough corresponding also in part with that integration of Japanese industry which makes the nation one industrial whole instead of a class divided industrial system. It must of course be Marxian in its abolition of private individual profit, which family and state communism in Asia already tends toward but which has been frustrated by European influence; it must be Marxian in its equalized division of income; but it may be distinctly Asiastic in its resistance to a bureaucratic reaction toward a new bourgeoisie.

It would take a new way of thinking on Asiatic lines to work this out but there would be a chance that out of India, out of Buddhism and Shinto, out of the age old virtues of Japan and China itself, to provide for this new kind of communism, a thing which so far all attempts at a socialistic state have failed to produce; that is, a new Asiatic communism with its Asiatic stress on character, on goodness, on spirit, might ward off Thermidor, or in other words the tendency of the socialistic state to freeze into bureaucy it might through the philosophy of Gandhi and Tagore, of Japan and China, really create a vast democracy into which the ruling dictatorship of the prole-

tariat would fuse; and thus instead of socialism becoming a stark negation of the freedom of thought and tyranny of action and propaganda of art, it would expand a great democracy of the spirit. There is hope here, vast hope; but the horror of it all is to see the fear of Russia and the blandishments of Germany and perhaps even of Italy, seducing Japan away from China and Asia and seeking to create a Fascist bloc which the finer world eventually must kill or itself perish.

Of course, today Jane, this may sound a bit rhapsodic and I confess my basis of fact wavers and my words trip each other. I cannot make out of this vast world, and out of this little glimpse of it, one coherent picture, one complete logic of understanding; and yet something is here. We have missed in the West goodness, and truth, and honor. We have tried in our machine civilization to evolve necessary human character from Hegelian dialectic. It cannot be done. Nothing, nothing can take the place of the man of good will. I think I see your criticism of our own world, and I also have long been realizing your veiled suggestions that I have lost my job. I think if I had not lost it I should now give it up. I am wondering if possibly you and I couldn't plan some way to work together. I do not know just how. I am sailing home but I shall expect a letter from you in Hawaii.

Chapter 18 - Jane on Indians, brown, black and red.

Jane had not been able to reach Jones with letters between his two communications on Japan and China but finally one get to him. Jane said, "I am fascinated by your telling of old China and New Japan. I might have stood a word or two more of Nikko and Nara; I should have loved a further description of the white marble platform of the Altar of Heaven; and then something of silk and porcelain and jade; but of course you must be about your father's business and so must I.

Now I am off for a journey in the air. I have never been in India, nor in South America, and have had but a holiday view of the West Indies. But you were in Haiti, were you not? It is wretched luck that you were not able to visit India on this trip. Of course so vast and intricate a world, added to what you did see, might have been bad for your mental digestion; unless of course you could put a year or two into it. And why not? It is a shame that we are so circumscribed and held down in this matter of travel. Think what it would mean if a dozen of us could spend a year in India with its three hundred seventy millions of black, brown, and yellow folk, and in Malaysia and the South Seas with many other millions.

But what I am trying to do is to set down my thoughts as to where these dark folk stand in any survey of democracy today and tomorrow. Here in India, as in so many other parts of the world, we have the primitive sub-stratum and the invading conquerors; but real India is not the invaders either from the North or the West. It is the dark brown Dravidian with his belief in the unreality of mere things; in the simple life, in the transmigration of souls, in non-violence, and occupational caste. On this poured conquerors from the North, so called Aryans, whatever that may mean. But they did not displace the older and in many respects finer culture. They froze it into hard and fast forms of religious dogma, hedging conquest; and settled its eternal roots in three-quarters of a million of village communities where older and darker India lives forever.

Then came the religious revolt of Buddha attacking caste and spreading culture, peace, and art over all Asia. Afterward came eight centuries of Mongolian and Mohammedan conquest lasting to the 18th century.

Finally came the Europeans. This was the last and greatest catastrope. Katherine Mayos by the score may invoke and insult the raped and scarred body of Mother India and yet the bitter truth remains, that Europe, and especially the British Empire, having begun the ruling of India in the time of Shakespeare and utterly dominated it since the day of George Washington leaves it today a people where less than one-fifth of the population can read and write; where the poverty of the masses, whose peasantry tries to live on fifteen dollars a year, is so abysmal as to make them perhaps the most wretched of mankind. The reason for this is as simple as it is clear. England takes annually in profit out of India four hundred million dollars at least, and in many industries for every $6 paid in wages to Indians, European investors get $500 in profit.

The revolt against this began late, for the 700,000 villages bent beneath the long impact of oppression and yet did not yield. But in the Sepoy Mutiny of 1857, came the first blind, cruel reaction and the fear of it has never since left England. Organization finally came in the Indian National Congress in 1895. It was at first complacent and liberal and gained some concessions. Early in the century under Tilak and Lapat Rai it became nationalist and after the War, Rai was murdered for his patriotism. My father knew him in New York. He was plump, brown, and earnest and particularly wanted to know of American Negroes and wrote about them for India.

Indian nationalism grew under Rabindranath Tagore. It turned to literature, art, and dancing, and to the vision of an Indian culture to influence and lead the world. In 1905, it began to force reforms by revolution and terrorism. But the official English response was characteristic. It drove a religious wedge between the masses of Indians emphasizing the rival religions of Hindu, Mohammedan, and Sikh and even the Untouchables.

ns

The Russo-Japanese War enthused India, and the World War strengthened their determination. They went into it whole-heartedly to support England with a determination to extract independence as a result.

In 1919, Hindus and Mohammedans were fraternizing but England struck at the freedom of the press in war-learned tyranny. Gandhi arose to leadership after the secession of the liberals from the National Congress and became the greatest figure in India and one of the great figures of the world. The beginning of his leadership coincided with the Massacre of Amritsar when a British general nobly murdered 379 unarmed Indians with one burst of machine gunfire and left 1,200 wounded unattended on the ground. He was relieved of his commission but the House of Lords praised him and the English public gave him $100,000 as reward.

Gandhi began to perfect his tactics of peaceful non-cooperation with British government, including a boycott of English goods and government schools. His followers could not restrain themselves from violence and the English government was pleased with a pretext to send him to prison for six years; still the fight went on. In 1919, the provisional and central councils gained a majority of Indian members restrained by an official minority and unlimited power of veto by viceroys and governors, while finance and the army remained in the hands of the ruling despot. The Simon Commission of white men to study India came out in 1926. India refused to cooperate with it and declared for independence in 1928. But the English labor party came to power in 1929, and a round table conference of Indians and British was called London. The Congress raised its flag and declared for Indian independence. The civil disobedience strike was one of the most astonishing the world has ever seen; even the secluded Indian women walked the streets to support it. The world depression helped to embitter the situation. The economic strike against British goods was astonishing efficient. The condition of the peasants forced them toward revolution under the leadership of Nehru.

Despite the redoubled efforts of the British government, the Indian Congress increased in power and influence, and in the round table conference of 1930, there was an attempt to compromise, although the Indian Congress represent 85% of the Indians was not represented. Curiously enough the 582 Indian princes and rulers representing eighty millions of people and yet as Gandhi said "being only British officials in Indian dress" joined in the demand for autonomy and were welcomed by the British as the allies of capital.

At the second conference in 1931, Gandhi himself was present, but the result was not encouraging. In the midst of whippings and violence in India, there was evolved a new and intricate government, the provisions of which increased religious differences in India; granted limited democratic control to Indians overshadowed by the despotic power of veto held by the English governors and exercised in finance and in the army. In response to this the Indian National Congress has beaten all parties in most of the new elections and refused to take part in government unless the veto is not used.

We see today a strike of democratic India against British commercial exploitation. There has been no fight for democracy in modern days equal in extent and drama to this unfinished fight in India. Its repercussions and influence go down through all the Malay states and South Sea Islands; its success is the success of democracy in the world. It is far more significant than Hitler in Germany or Fascism in Italy. It combines tremendous forces and almost insoluable problems: the color and race bar; the infinite subdivisions of political power; the unlimited and subtle exploitation of labor; the expenditure of Indian taxes for armies to keep India in subjection, and for the support of a highly paid white Indian civil service; the attempt to reconcile differences of religion, and religious custom; the heart-breaking attack upon ancient caste and the despising of millions of human beings. Yet this fight of India for freedom and democracy is a fight for the laboring masses of the whole world, and the eyes of men should be tied to it.

Turning now to the Indians of the West. We turn to people who have no bond with the people of India save the biologically insignificant but socially significant bond of color. Millions of slaves were poured into the West Indies in the 16, 17, 18, and 19th centuries. Most of them flowed on to the other Americas. Those who stayed died by the

thousands and the rest mingled their blood largely with the Red Indians and with the whites. They played in nearly every island, astonishing dramas of amalgamation, mutiny, revolt, and civil war. Then gradually in the West Indies and of the slave trade there was born the Industrial Revolution of the 19th century. Do not stare, my Dear Jones, nor smile. I am following you fast. I have been reading furiously in these lone months and I have come to your conception of the Industrial Revolution. It will require, I am sure, more learning than I have and the keen analysis and criticism of your mind, but the thesis is this: the Industrial Revolution did not start as we usually seem to be taught with cunning invention and thrifty savings, and individual initiative applied to new raw materials. No. It started first with a new conception of human labor, human labor as a commodity to be bought and sold. Never before in the world, and nowhere save in the Americas had such a conception been arrived at. It had been approached to be sure. Men had been bought and sold but temporarily; incidentally, almost eventually they had been settled upon the land and in homes and anchored there. Religion had more or less effectively insisted upon their essential and individual humanity and the eventual salvation of their souls. But in the case of the African slave trade beginning in the older ways and bringing casual masses of Negroes to Portugal, Spain, and the West Indies; there was gradually evolved in the course of five centuries a new idea. Labor became goods regularly and systematically acquired goods with recorded rates of sale and methods of collection and distribution. Labor became a commodity. Even in law and in Virginia it became real estate. For a long time even its conversion to Christianity was not recognized under English law, and in the slave codes no such institutions as marriage, the family, the church were legal among the slaves. This mass of labor sent sugar, cotton, rice, tobacco, indigo and other raw materials to Europe. It was this mass of new raw material that made the Industrial Revolution. It put a monopoly of wealth in a few hands; it inspired and instigated invention; invention harnessed power; capital, machines, and natural power revolutionized industry. New cities, centers of commerce and factories

leaped into being: Liverpool, London, Hamburg, New York. Thus out of the slave trade the Industrial Revolution was born and the new status of labor as a commodity to be exploited by the newly accumulated capital. The people of the West Indies, as this industrial pattern covered the world, were left as the lowest remnant and victims of modern labor and land exploitation. They lie there today kicked aside, almost forgotten little islands of poignant beauty used as playgrounds for white folk, and laughed at and played with by artists; forgotten beginnings of the most tremendous revolution this world has seen.

Gradually all the West Indies have today been hammered into conformity until the pattern today is so clear and conventional that people hardly notice its significance. The dispersion of Negroes did not stop in 1861; it spread the descendents of Negroes over the new world, at least twenty-five million of them, to form a new proletariat but an uneasy and bitter one, inoculated with modern education and in close competition with white workers in both North and South America. First there is in each island a mass of black peasantry; able for the most part to read and write, but poverty stricken; and either landless or, where they hold land, taxed to the limits of its possiblilities of production. Above them is the foreign investor: English, French, American, or what not; who dominates the whole industrial organization by his investments and ownership of ships and machinery; his local representatives form a white collar class or petty bourgeoisie of clerks, small business and professional men; and the higher class of artisans are mulattoes with a few whites and blacks who form a local aristocracy and yearn to be rich Englishmen or Frenchmen. There is democratic representation in the legislatures and councils but always with a minority representing the officials and commerce and back of that the full force of European power. Sedition in the line of economic revolt, strikes for higher wages, or radical proposals are put down swiftly and quietly. And all of these populations and their isolated islands are kept from intercourse or counsel, provincialized in tradition and saddled with enormous governmental costs and enough pomp and circumstance to impress the people. Perhaps

democratic control is more manifest in the French West Indies and in large islands like Jamaica and Guiana of the South American coast. On the other hand, ruthless capitalistic exploitation is shown in Cuba, Hayti, Puerto Rico, and Santo Domingo where American economic control has often eventuated into political domination. Over all this is the inability of the overwhelming Negro element to assert itself spiritually or socially. The Negroes recognize no unity in their black blood and consequently talk of themselves as English, French, or Danish; recoil from any alliance with American Negroes and refuse to envisage their one great future in the shape of a black republic sweeping from Florida to Guiana. Democracy here is a matter of impulse, of enlightenment, or ideas. It will come suddenly even after long dead years, but it will come.

Of other Indians, of these dark mongolian people who once held North America, and sweep today from Alaska to Tierra del Fuego, and who form the predominant element in Mexico, Central America and South America and an appreciable element in North America.— Of all these folk I know little. There has been among them no self-assertion as Indians. They have succumbed. They have allowed themselves to be divided into helpless weak individuals and exploited endlessly and at leisure by the whites. Their beautiful art in building, music and cloth has dwindled and died. Their blood has drifted into other veins and remained there inert and inexpressive. They have apparently never conceived of an American India, of peoples who despite their English, Spanish, and Portuguese blood have also an equally desirable Indian blood, capable of its gifts to the world. There have been great Indians but no modern Indian nation. They illustrate bitterly, what happens to a group which refuses to see its social bonds in common suppression and suffering and dies crying "There is no race problem!" Indians as individuals and men of Indian blood are forwarding democracy, industrial and agrarian democracy in Mexico and South America; but not as an Indian race and I wonder why?

It is sinful thus to dismiss the southern Americas with but a bit of a chapter but what can I do? You won't go around the rest of the world, but at any rate the pattern

is clear even to those who have had neither eyes nor ears for this great continent. Here in the future Negro, Indian, and Latin will work out a world more really new than North America ever conceived. The capitalist regime, the monopoly of wealth which England, and America have fastened on South America will be in time changed not so much through the insurgent bourgoisie who have played football with democracy in Brazil and Chile, Venezuela, in Peru and Mexico, but the new force will come from Negro and Indian peons who somehow and sometime will develop a leadership, a democracy in industry, a dictatorship of sacrifice which will put this dark proletariat in the saddle. Perhaps even race pride will have to be invoked to exorcise a spineless ignoring of racial elements which leaves them here like the blacks of French West Africa leaderless. All this is vain imagining but it is none the less true.

Of course, Dear Jones, you will see in this the curse of quotation, the wisdom of mere reading. You will recognize that all of it has been abstracted from other peoples thoughts and writings, but it does sort of help to fill in the picture, doesn't it? Your letters are slow these days and so is life on this dump.

Chapter 19 - Jones on Haiti

This postscript Jones wrote and attached to Jane's letter, since he could not mail it from the boat immediately.

One thing, you forgot: one tremendous fact. The drama of the West Indies typifies itself in the story of Haiti. It is a story that has been half told but it is the most heartening thing I know of. Here was the nadir of labor, a great amorpheus mass of black commodity flesh, dumped into a little island of heavenly beauty and exploited with every ecstasy of cruelty and blood from the mass murder of Indians in the 15th century to the sugar cane exploitation of the 18th. And then, suddenly in the night, there came revolution. It came as Marx would have had it, not from the educated and able mulattoes, but from the great black mass of slaves led by an incredible man. Those slaves drove out the imperial Spaniards and the commercial English and ruined Napoleon Bonaparte's dream of commercial empire in the Valley of the Mississippi. They set up a free and independent state.

The world alternately grew red with anger and roared with laughter while this little state born of slavery and revolution started its tempestuous career. Its real problem was not political although it had to struggle for political independence as against France and the United States. But the essential struggle was for economic independence; for feeding and sheltering these slaves and enabling them to trade with the world for a share in world commerce. They established first under the great Christophe, whose monument is still the most marvelous building in America, a communism of the African tribal government with emperor, chieftains, clan and family life. This raised Haiti from the inertia of reaction to organized and efficient economic life. Above all, this regime accomplished the most astonishing thing in the modern world: it divided the land among the peasantry in fee simple sharply in contrast with the land monopoly of Europe, the land theft of Africa and America, and analogous to the land division of China.

But after all this island of communist effort and peasant proprietorship was in the midst of a sea of private profit organized during the Industrial Revolution and coming in the early 19th century to its perfect flower. Political subjugation could not be forced

on Haiti but economic subjugation was almost inevitable. The French insisted on enormous tribute which Boyer reduced in actual figures but which remained more than this poor community could pay and live. The pressure of American investment began, culminating in impudent demands for strategic territory and finally in attempted subjugation.

The result in Haiti was that the people limped forward wavering between the attempted leadership of presidents analogous to African chieftains and presidents who represented the French élite of capital. The élite could establish no exploitation in modern form because there was little industrialization, peasants owned the land and held it fiercely, and agriculture was at the mercy of colonial imperialism throughout the world. Capital was offered Haiti only on the severest terms, with political control in the background. Finally the United States conceived of Haiti as a way station to the Panama Canal and Wilson at the behest of American investors and manifest freebooters seized the country. The resistance was not mainly and could not be physical. The new engines of war were too terrible. But Haiti put in action a sit-down strike, a silent refusal to cooperate; it used all of the difficulties of a language which the Americans did not know, and of a law code which they could not practice; the inability of the conquerors legally to monopolize land; and above all a determined propaganda among the Negroes of the United States which captured even President Harding.

There were only two ways out: murder which the Republican party with its Negro supporters did not dare inaugurate or compromise. Compromise consisted of compelling Haiti to accept a debt which was nothing less than highway robbery and included every lie and cheating contract that it could on the most disadvantageous terms. Haiti again became "free" but her existence depended upon a dictatorship which should, on the one hand, keep the peace; and on the other hand, pay one-seventh of its annual revenue to the National City Bank of New York. Under such circumstances no new orientation of object could easily take place. The new voices of industrial democracy were sternly repressed and perhaps had to be if the threat of American subjugation was not to return. Nevertheless, the voices were there and

the effort. The voices that declared that the end of Haiti was to raise its land holding peasantry to further economic independence and intelligence; and perhaps the most prophetic echo was when Bellegarde in the League of Nations raised his voice against the South African murder of the Bondelschwartz repeating in the African world the complaint of the whole world of exploited black folk.

Chapter 20 - Africa

Jones crossed the 180th meridan on his way from Yokohama to Hawaii and had lost a day or gained one, which he wasn't sure. At any rate he had two successive Tuesdays for writing Jane which was as inexplicable as it was true. The result was that no letter was written. The burst of tropic bloom that was Hawaii overwhelmed him on Christmas Day. He sat on deck and stared at it. He had no wish to touch it or see it closely. He just wanted to realize it, and so he let the ship dock and sat listening to the voice of the singers and yet sat still. Then came the steward with a thick letter. It must be from Jane. No one else in the world wrote letters. So Jones sat back and faced the royal palms and listened to the sound of the surge of the sea on the sand and read.

Jane said: I have had two glipses of Italy and one of Africa. This being interpreted means that you were in Italy in 1900, and told me about it and I was there in 1924, and saw it with new eyes. And my good friend Johanna died in South Africa in 1923, trying to be a little brown missionary to black folk but doing her finest missionary work among whites. Also I have read up on Mussolini.

It is the belated lands that play Hell. The lands that seem to assume that all civilisation should be at dead heat. In fact when some nations forge ahead, the others ought to deliberate, to linger, and learn, and teach; but they rush in and kill and muddle. And that is what Italy is doing today. Italy breaks my heart - this center of the soul of beauty, born of the muck of bigotry and world conquest and disunion to a new joy and song and color - "Kennst du das Land?" So Italy aping Great Britain and France and Germany and copying a dying technique of empire that needs not copying but an entirely new art, plunges a red knife into Africa's heart and dances and struts in savage joy amid her squalor.

So what is this Africa? Guernier to my blank surprise repeats in 1933, the ancient lie of 1833: "Seule de tous les continents, l'Afrique n'a pas d'histoire." This pre-

ludes quite modestly his thesis that Africa is the future field of exploitation and expansion for Europe; that Europe is being hemmed in and forced out of the teeming and revivified East; that Europe can hope for no further foothold in the American West, but that the black south can be regarded as open, virgin, empty soil.

The drama which has played itself out in Africa has been as human and dramatic and intensely interesting as that of any other continent. That it did not finally integrate into one great and unified culture like that of Europe or of China was the clear and logic result of its physical characteristics and the slave trade. The human spirit which expanded in Africa was the same humanity that all the world knows. It shows itself in family and clan, in town and city, in individual genius and above all in art, an art that stands today among the great aesthetic traditions of the world comparable to the Chinese, Chaldean, and the Mayan.

But all this was surrounded and conditioned by a plateau that warded off easy egress to the sea; by a desert that cut off the way to Europe; and by a climate alluring in some respects - in others the most deadly in the world and the most difficult with which human life ever fought. Within the confines of this continent came the earliest seething and writhing and movement of human beings toward food and shelter, protection and adventure. It swept the Valley of the Nile and flowed out the Mediterranean isles and the Valley of the Tigris Euphrates. It centered in the Great Lakes; it sailed down the Niger and up the Congo; but the jealous desert kept it back from Europe save through narrow outlets through which it planted its black hand on Egypt and Crete. And to the southward the impentrable forest and the hot jungle kept it from integration and contact.

Yet in these centers it throve with its cities of villages in the west; with its states and kingdoms in the center; and with the continual drizzle of its elements along the Nile and along the shores of the Mediterranean. Then finally came integration, state empire building, a new invasion of a new religion along between the shores of the desert

ludes quite modestly his thesis that Africa is the future field of exploitation and ex

and the south shores of the Mediterranean until turning southward suddenly, a part of the stream found, through the gateway of the ancient kingdom of Ganah a way to break the spell of the desert. Great states arose and in the 15th century the outlook for black African civilization south of the desert was commeasurable with the outlook for reborn civilization north of the Mediterranean.

Then came heart disease; then came the slave trade; then came the most unique human experience which the modern world has known: the forcible transplanting of a race so that black Africa lost not less than fifty million and probably a hundred million human beings through capture, slavery, killed defendents, and corpses thrown into the Atlantic. More than the annual increase of the continent was drained away. A trade in human beings more systematic than anything which the world has known was begun, expanded, and made customary for a space of half of a millenium. No rush for gold ever equalled this rush for blood. The whole economic foundation of life was changed in a way more significant than the raids of barbarians across Europe and Siberia with conquest of the Mongols and the Islam.

The economic revolution thus incited rests upon two facts: first, the institution of human labor as a saleable commodity; and second, the application of that labor in massed industry upon a new, fertile, and virtually empty land. In America no permanent integration of social life had spread sufficiently upon its double continent to take real possession, leaving an almost empty land. Here the black slaves and most of the brown Indians were put to work to make new goods for the expanding wants of Europe: tobacco, cotton, and sugar. Their coming incited the ingenuity of men. It was not a series of inventions that made the Industrial Revolution. It was the new commerce and goods made by black men that incited men to invention and built a new world. An extraordinary class struggle arose; not among the peoples of one land but between modern civilization and the primitive virtues transported to the free land of the West. The whole attitude of the world was changed to fit this new economic reorganization.

This raid destroyed wealth and capital far more completely than in India where a Nizam can still rival a Rockefeller, and hold the world's toadying respect. But in Africa, gold, ivory and metals, art objects and relics were all stolen, destroyed or removed, leaving the 20th century a race so poor that all the wealth-worshipping world could despise its poverty.

Black Africa which had been the revered example of ancient Greece and the welcome companion of imperial Rome became a thing beneath the contempt of modern Europe and America. All history, all science was changed to fit this new condition. Africa had no history. Wherever there was history in Africa or civilization it was of white origin and the fact that it was civilization proved that it was white. If black Pharaohs sat on the throne of Egypt they were not really black men but dark white men. If miracles of art appeared on the West Coast it was imported from artless Portugal. If Zymbabwe with mine and irrigation appear in the East it was Asiatic. If at any time, anywhere, there was evidence in Africa of the human soul and the same striving of spirit and the same build of body found elsewhere in the world it was all due to something non-African and not to the inherent genius of the Negro race.

A new world emerged built upon the immense accumulation and monopoly of capital goods due to black labor, free rich land, and the consequent new mastery of natural forces. The demand for additional black labor decreased because of the gradual filling of land, of the law of diminishing returns, of the competition of white labor. The slave trade stopped in a sudden blast of blood and fire known as the Civil War in America and the world turned to new commercial technique and tried desperately to forget the stealing of men. But there could be no forgetting. The growing disparity between wealth and poverty, - between power and toil, which the slave trade and world trade based upon it, now brought, exaggerated a bitter class struggle in the various European countries. To mitigate and solve this, to keep power in the hands of the capitalists they turned toward the weaker parts of the world; where technique and political power had lagged and found to their vast surprise and yet in perfectly logical sequence that Africa was weakest. Weakest because her states had been crushed by war and rapine; her inner social organization disintegrated; her religion blasphemed. So in the 19th and 20th centuries instead of stealing workers from Africa the world turned to forcing the remainder of the

workers whom they had not stolen to toil at home and thus to use Africa as a new reservoir of raw material and labor to supplement the industrial organization of Europe. It divided up Africa. It demanded the right to exploit and develop an unexploited land. It talked openly about raw material, pointing out as it does today that already Africa is furnishing one-fith of the world's copper and 12% of its magenese, 8% of its tin, 41% of its phosphate, most of its palm oil and ground nuts, nearly all of its cocoa, and vast quantities of other necessary materials. And knowing too that its supply of iron, zinc, rubber, gold, cotton and wool may be almost infinitely increased. But when Italy and Germany called for these raw materials what they really meant was forced labor back of the raw material, and it is this demand of the countries of modern Europe and America to have at their disposal the cheapest human toilers which makes of the problem of Africa just what it makes the problem of Asia and the South Seas; and too, what it makes of the labor problem of Europe and white America.

The products of Africa today are as follows: wheat, rice, corn, barley and other cereals, cotton seed oil, linseed oil, palm oil, coffee, cocoa (of which it has three-fourths of the world's production), forest products, fibres, cotton, jute, sisal, raffia, rubber, sugar, tobacco, meat, hides, wool, fish, petroleum, phosphates, iron, copper (four and one-half million tons), gold, diamonds.

Of black and brown peoples, Negro and Negroid, 140 millions live in Africa. Let us glance at the figures of their industrialization:

The Belgian Congo had in 1930, 9,584,936 natives. Of these 409,665 were employed in European undertakings, an increase from 45,702 in 1916. This includes agriculture, personal service, mining, and the service of the state. Recruiting agents are used and propaganda and the government try to guard against threats and fraud and on the other hand to keep workers from being enticed from one employer to another.

In the Union of South Africa there are 6,479,700 non-Europeans of whom 5,681,100 were Bantus, 196,400 Asiatics, and 602,200 colored. Native labor is used in agriculture,

gold mines, sugar plantations, coal mines, diamond mines and secondary industries. In 1930, 475,909 were in regular employment on European farms. In 1934, there were in the gold mines 244,262 natives drawn from the Cape Province, Portuguese East Africa, Basutoland, Transvaal, Natal, and other areas; in the diamond mines in 1932, owing to limitation of production, 19,146 natives. 50,000 were on the cane sugar plantations in Natal in 1930, and 22,000 natives in the Transvaal and Natal gold mines in 1933. In manufactures, 1929-1930, 127,561 non-Europeans most colored were employed in the factories. The Rand Gold Mines are the dominant factor in recruiting labor and drawing labor from as far away as Nyasaland.

In Southwest Africa there were in 1932, 242,290 natives. The mining industry there has been closed down practically since the depression. In normal times the mines employed 10,000 natives. The natives now are engaged only in agriculture. Basutoland, Bechuanaland, Swasiland export laborers to the Rand Mines and other South African industries.

Southern Rhodesia had a native population of 1,055,000. In 1930, 185,312 worked on European farms. In 1931, 38,463 were in the mines, 25,310 in domestic service, and 17,000 in transportation service. In Northern Rhodesia there was a native population of 1,382,705 in 1932. It is an agricultural country chiefly but has a great supply of copper. In 1930, there were 31,941 natives in the mines. In Nyasaland there were in 1932, 1,606,431 natives. 32,000 natives were growing cotton, and 53,000 growing tobacco. There were 10,000 clerks and skilled laborers, and 41,00 unskilled laborers. 30,000 natives were working outside the protectorate.

Tanganyika had in 1932, 5,022,640 natives. They were chiefly engaged in raising sisal and coffee on European farms and cotton and ground nuts on native farms. Gold, tin, mica, diamonds, and salt are mine employing 28,000 natives in 321 undertakings. In Kenya in 1932, there were 3,076,343 natives and 68,000 non-natives. Six and a half million acres of land have been alienated and over five million acres in European occupations. The productions are coffee, maize, and sisal. 160,000 natives were employed on farms

in 1929. In Uganda there was a native population of three and one-half million. The agriculture was native and produced cotton. European planters grow coffee, tobacco, tea, and rubber. In 1932, 400,000 natives were employed as unskilled laborers in native agriculture. In Spanish Guinea are 120,000 natives. The production is mahogany, rubber, coffee, and fruit. Much of the labor formerly came from Liberia. In French West Africa there were 14,000,000 natives, mostly engaged in agriculture and raising ground nuts, oil palms, cocoa, coffee, bananas, and sisal. Most of the agriculture is native although in 1930, 1,200 concessions for European plantations had been granted. In the Cameroons were 2,200,000 natives. In 1930, there were 25,000 natives employed by Europeans on plantations and in the forest. In French Equatorial Africa twenty to twenty-five thousand are kept employed on the Congo Ocean Railway. 25,000 or more than one-fourth of the able bodied males of Gabun were used in 1929, in the forest. In Portuguese Angola there was a native population of three million mostly independent cultivators together with 50,000 traders and 45,000 skilled workmen. 6,000 are employed in the diamond mines and 15,000 in industrial undertakings. Mozambique has four million natives chiefly raising copra, cane, sugar, cotton, oil, maize, wheat, sisal, and tobacco. The natives employed were 308,000, and 76,000 were working in South Africa and Rhodesia.

The problem of regimenting, and using, and exploiting this black labor in Africa forms a problem mounting in intricacy, and calling for many sorts of solution. In French Africa, dominating the Northeast and the Northwest, are three leading ideas: first, freedom for the rich and fortunate blacks to become Frenchmen without let or hindrance, but the poverty of the blacks is too great for this to mean much; second, the use of this reservoir of men to supplement the French Army of which it forms today one-third and may easily form one-half or two-thirds; and third and more important than all, a place where French capital can make paying investments. These three objects are mutually contradictory and it is only because the last of the three is dominant that the French are able to come to satisfactory terms with the other colonial powers.

British Africa is on the West Coast, the southern peninsula and the lake region stretching up to the Valley of the Nile. It represents historical and logical differences. It begn with direct and ruthless exploitation and conquest. Then it changed to exploitation under the low wage system such as is dominant in the South African mines and in the Rhodesias. Then sensing the invevitable it tried indirect rule especially in Nigeria and then in the Gold Coast, Uganda, Tanganyika and Nyasaland. Indirect rule started with the fact that British civil and military power could not afford the increase in man power and wealth to over-awe many of these colonies and that, therefore, tribal government was maintained by devolving power upon the chief. But the chiefs were kept in subjection by bribery and force. If the irresponsible governor appointed by England was a benevolent despot this rule might be a step toward or even eventual autonomy, independence. If he was in the employ or under the influence of exploitation, this became a clever method of continuing exploitation.

Moreover, there soon came because of the unsophisticated efforts of missionaries the problem of education and the advancement of black men. It was first settled by the simple fact that black men could not advance. It then contemplated for a time the leadership through black capitalists and black teachers and preachers; but this was likely to cost white European capital too much and the end was doubtful. There came, therefore, the double-tongued idea that Africans must not be educated to become Europeans but educated along their own bent and genius, which meant denying them the use and knowledge of the English language and the more valuable lines of modern technique and of contact with Europe. And here in British Africa the matter rests today with a thwarted intelligensia which England recognizes only under protest; with a mass of workers who are being used for modern industrial purposes.

This situation is aggravated in the Union of South Africa, where two million whites propose to build a civilization which will dominate seven million blacks after impoverishing them by taking most of the land from them; by using the blacks for extreme exploita-

tion and yet maintaining what South Africa calls "independence and freedom" for this part of the continent. It is an impossible situation. It has already resulted in a theory of racial separation with the power on the white side of the separation and appeal on the other side, to be made only through white men chosen to represent the blacks. It is a theory that can never work.

In Portuguese Africa we have an unsertain land dominated by mulatto capitalists with masses of laborers who work for the white capitalists of other lands. This is the territory which Germany itches to seize. In the Belgian Congo we have the greatest anaomaly: a little European country, decent, industrious and thrifty but for the fact that she owns an Eldorado forty times her size, where she has stolen the land is allowing her capitalists to exploit the resources to the very limit of the physical endurance of the black natives. This was the country established, as Henry M. Stanley, said "By a philanthropic society which numbers noble minded men of several nations and it was to bring Christian civilization to the heart of Africa." It brought instead an avalanche of filth and immorality from which not even the reforms of our day has let the land recover, and cannot so long as profit and not human uplift remains the chief ideal.

Here then is Africa in its national aspects; but internationally it conforms to one pattern: black troops under the command of white officers, hold black Africa politically disintegrated and virtually helpless while white capital is putting black labor into industry as quickly and effectively as possible at a wage which is below civilized living conditions; and this industrialization of Africa is expanding far faster than education, political training, or religious teaching.

* * * * * * * *

Jones laid down the letter with a sigh, before he had read the subscription and the inevitable postscript. He looked across the sea in a desperate endeavor to see again the beauty of the palms but what he really saw was Jane. He stared helplessly. He scrambled hastily to his feet and kissed her; then he stepped back in utter confusion but Jane said, "If you apologize I'll scream."

Chapter 2Ø - Jane Jones

"Get your things together," said Jane practically, "we are going ashore."

"But we have only a few hours," objected Jones, "and have you got your ticket and your cabin?"

"We are not going by this boat."

"But you see," said Jones lamely, "I must go by this boat. My transportation is paid through to San Francisco and If I should stay over a few days or a week it would cost me a hundred dollars more and frankly I haven't got another hundred."

"But if you stay over a month you can get another Japanese boat and it will cost little or nothing extra."

"Except," said Jones, "the price of staying over."

"Which I have got," said Jane.

"Yes - but I - you know I have no work -

"And I have thrown up my job," said Jane. "It was quite impossible and I have got that thousand dollars which I have saved and we are going to sit down here in Hawaii because it is a very beautiful place and soothes my nerves and because it is full of remnants of exploited and colored people. We are going to sit down here and think all this thing through."

So, of course, Jones did as Jane proposed (not easily, and with misgivings, it must be said) and the afternoon found them looking for quarters. There was a little cabin facing the sea on Waikiki Beach.

"Quite large enough for two persons," said Jane and looked contemplative.

"Ye - es - quite," said Jones then hesitated and his dark cheeks grew hot, "if they were - married," he added, lamely.

"In that case," said Jane practically, "and for that reason I am afraid we will just have to get married; other wise we cannot afford this little holiday."

Just how surprised Jones was, he never said, Jane often wondered. But they were married quite simply and sat down on the little porch without chairs and with twined arms and looked out toward the sea and proceeded to build a new life.

"The end of our search," said Jane, "is this: the world cannot escape the logic of democracy. It is hindered by ignorance, illness, dishonesty, and poverty; these four, but the greatest of these is poverty. Men are ignorant mainly because they are poor. They are sick because they are poor and ignorant. They are criminal because they are poor, and ignorant, and sick. And they are poor, not because they are lazy, but because we regard poverty as inevitable for the mass of men, and allow the degradation of the masses into poverty without protest from state or public opinion. We steal the land from natives in Kenya and South Africa in order to force poverty upon them. We stole the land of the South in the United States to keep Negroes slaves. We stole the land in the western United States to make millionaires and tenants. Poverty is unnecessary and the clear result of greed and muddle and spawns physical weakness, ignorance, and dishonesty. There was a time when poverty was due mainly to scarcity but today it is due to monopoly founded on capitalistic exploitation. This strangle hold must be broken. It can be broken not so much by violence and revolution, which is only the outward distortion of an inner fact, but by the ancient cardinal virtues: prudence, courage, temperance, and justice; and the more modern faith, hope and love. Already the working of these virtues has increased health, intelligence, and honesty despite poverty and further increase is only thwarted by the blind and insane will to mass murder which is the dieing spasm of that decadent exploitation of human labor as a commodity born of the Negro slave trade; and this attitude is today strengthened and justified by persistant disbelief in the ability and desert of the vast majority of men.

Jones, listened carefully and answered slowly. If all production and most human services were divided as equally as practicable, I wonder how high a standard of comfort could be provided? Could we support healthy life, and art, and science? What proportion of luxuries could we have? How many could have autos and separate homes with bathrooms? How many could travel, and how far, and for how long? How many could spend time in laboratories and observatories searching the stars? I presume, said Jane, with just distribution of goods and reasonable allotment of services we should all be poor at least as the rich now count pov-

The proletariat of the world consists not simply of white European and American workers but over whelmingly of the dark workers of Asia, Africa, the islands of the sea, and South and Central America. These are the ones who are supporting the superstructure of wealth, luxury, and extravagance which the Coronation so impudently typified. It is the rise of these people that is the rise of the world.

Perhaps the role of the American Negro as well as of the Japanese is leadership of this dark army. But whether toward world hegamy of dark folk using the old weapon of exploitation and force and ending in the same morass. Or a hegamy of world workers dark and white leading to a race-less as well as classless world.

erty. Certainly none would deck themselves like the Dowager Queen of England with two million dollars worth of jewels on any occasion. There would be no private yachts nor palaces. We should not manufacture cloth of gold nor silver brocade; and banquets would be reduced from fourteen to four courses. We could have simple individual houses and gardens; beautiful but not extravagant clothes; simple food and the resultant good digestion; few so-called physical luxuries but free speech and uncensored art. I see now reason why most people who wished could not have automobiles capable of twenty-five miles an hour but some might prefer private parachutes.

"I have met," said Jones, "three classes of reformer: the revolutionist who things that everything is so bad that only immediate murder and destruction can begin new life. Then there is the critic to whom nothing is good but who depends with rare faith upon time to right things and does nothing now. And finally, there is the man of action who sees good and bad and wants to do something about it. The most that war and violence can do is to clear the way, if it can accomplish even that, and then must be done all the things necessary for the establishment of justice and many of these things certainly might have started before the revolution and if they had been, who knows, the revolution might not have been necessary. We pause thus, on the one hand, before the better as the enemy of the best; and on the other hand, before the worse as a step to the good.

"Which is quite considerably off into the air," said Jane, "now as to us."

"I have come to the conclusion, that there is one lacuna in modern thought on social problems and that is Character."

"You mean religion?" said Jones.

"That is precisely what I do not mean. I suspect that because our thought of character has been so mixed up with religion that we have got ashamed to mention the word. By common consent we leave it out of education, advice, and human judgment. As a matter of fact there is no necessary connection between character and religion. Usually people with the weakest and poorest characters are most religious and profess to believe in dogmas that sane people cannot possibly accept. I do not mean then by character either Christianity, Mohammedanism, or New Life."

"That leaves only heathenism."

"And that is what I meant to leave," said Jane. "I mean doing right because it is for the best for all."

"Now you see we have tried to substitute for that something mechanical. We have tried to say that if people had an adequate income and were contented then they would be good and the earth would begin to take on some of the characteristics of heaven. But you see Jones that doesn't follow. It is, of course, the inevitable and inescapeable perequisite, and because of this we have hitherto concentrated all our thought and planning upon it, but we can no longer do so. Everywhere in the world is forcing forward democracy even if slowly and haltingly. forcing increased economic justice, a better division of goods and services among workers. Now before we go a step further we have got to think of the time when poverty approaches abolition; when men no longer fear starvation and unemployment; when health is so guarded that we may normally expect to live our seventy years and more without excess of pain and suffering. In such a world living begins; in such a world we must have freedom of thought and expression, and just as much freedom of action as maintenance of the necessary economic basis of life permits ~~needs~~;

that is, given three or six hours of work under rule and duress we ought to be sure of at least eighteen hours of recreation, joy, and creation with a minimum of compulsion by anybody. Even then we are not out of the woods."

"The mechanical dictatorship of the proletariat may bring a socialist state with rising wages and the possibility of democratic control but it also will bring to the front ruthless men of ability, greedy of power and first thing comes Thermidor - comes the substitution; comes the transformation of dictatorship that represents the mass and to a dictatorship that represents itself. And although this second state is not as bad as the first, it calls for more revolution. Now I do not suppose that all this can be avoided. Perhaps we shall go from economic incarnation to reincarnation until the bureaucratic socialistic state dissolves into the democratic state of men who are willing to have other men their equals. But I do not think that even that will occur unless we stress more and work more for the feeling of equality and good will, and desire for other people to become men even as we are. Not even Trotsky's universal communistic revolution is going to provide automatically for this kind of man. How shall we get him, Jones?"

"We shall only get him, Jane, by being him; that is, reformers must be willing to be equals. Here Asia must help us with its austerities and Nirvana, with its dream of transmigration of souls; that is, not the hermit in filth and dire poverty but the man well clothed, well fed, busy with the work he wants to do and yet eager that other men should have the same opportunity and absolutely refusing himself to grasp or steal powers that will hinder other men from doing this. The willingness of such an individual to lose himself in common effort for common weal, and the belief in a kind of immortality which does not mean the eternal ego but does mean the endless succession of cause and effect in human deed. So that you get a better world by getting better things."

"In other words," said Jane, "we have got to get good men. I know it is a mushy word and terribly vague and yet its very simplicity gives it meaning. We have got a world full of smart men, and bitter men, and powerful men, and bad men. All these must

be transmuted into good men, and while I should hate to put down in black and white a definition of good, I think the word itself is clear enough and that being that, what now shall you and I do?"

"I suggest," said Jones, "sometime well before your thousand dollars is all exhausted and gone to follow my one hundred which disappeared ~~sometime since~~, that we go settle in some city perhaps west, perhaps east, but better in the South, and that we go to work to earn a living in a decent sort of way, avoiding charity on the one hand and exploitation on the other. And let us see just how good a life we can lead in keeping with others like-minded, young and old, white and black."

"Just what kind of a job we can wrangle up that will fill all these conditions I am not at all sure. We can, of course, teach, but where? We both have better training than most of the people teaching in colleges and yet most of the colleges where teaching would be worthwhile wouldn't have us. We would be hard put to get recommendations, and what we taught would soon be called communism; and what we did would be looked upon as radical if not worse. We would be set in a narrow mold and in a few years turn to cement. The same is true of the public schools only it is much worse. They are dominated by fools, businessmen, and politicians. They are quite impossible."

"Except," mused Jones, "there are odd schools in odd places in little towns or parts of cities which either because they escape observation or are by accident under enlightened control give teachers a chance."

"True," said Jane, "but that will take a lot of searching for. Beyond that we might work, as men say, that is go into industry: a factory or shop or a mine."

"We would have insuperable difficulties, answered Jones. First of all our time and strength after we have done our stint wouldn't permit our doing anything else worthwhile. All our effort, all our whole strength would be put into making profits for capitalists. We would have little time left for anything else. Secondly, it is doubtful what that anything could be even if we had time for it. Our fellow workers would be hard to convince and lead. And third and last, we couldn't get into the ordinary

factory or shop because most trades unions don't want "niggers".

"Very good," said Jane. Suppose we start into business for ourselves: a little store, a little industry, or even a cooperative venture?"

"This," said Jones, "would call for capital; must be done in the face of severe competition; would place us at the mercy of credit agencies; and make us learn a new technique for which we might easily find we had no aptitude."

"So far then as I can see," said Jane, "we have an elegant chance to starve to death, but we could starve together and do it gracefully with some by-products and results that would not be altogether bad."

"There is the civil service," said Jones.

But Jane answered hastily, "There is the civil service for the United States government, the state, the cities, and country, and there I hope to God we will let it stay. There is no use getting buried before we are dead."

"I am still thinking," said Jones, "of some kind of cooperative effort like that foreshadowed in your credo."

"Excellent," said Jane. "But of course you will have to remember a few things: first we can't afford babies; secondly, we shall always be in fear of starvation.

"I can not see," said Jones, "that our prospects are just what you call brillant but we have the first, happiness, that is, I have," and then he glanced at her, "I mean we have. And that is a good deal to start with. We have health which is the second necessity. And the very fact that we are in Hawaii and married and have no jobs shows the amount of faith that we have.

Said Jane, this then is our program: to settle our own problem of poverty by securing subsistence, health, books and papers, [illegible]. Secondly, to teach and heal and be good. For this we will need a home and a garden and a job for each of us. And outside the job we will talk, and teach, and form clubs, and have friendship, and letters, and

write. We may now and then be able to borrow a car and a trailer. Our teaching will be that Poverty is sin; Profit is theft; Sex is joy, Love is God and Work is His Prophet. Let us sing and dance, sleep and guard our health, so we may live long eager days, close in communion with the world that was and is and is to be. Lastly may we die in each other's arms, regretting only the children we could not afford and the Beauty we could not see; but rejoicing always in the Freedom which is ours forever.

"Does it sound too dithyrambic, Jones?"

"It sounds fine," said Jones, "like you."

"Very well then let's take the plunge."

And they went down to the beach and plunged and coming up on top of the wave, came out of the sea and afterwards floated on it, second class in the next Japanese boat for San Francisco. Thence they made their way to Alabama, Jones learning with unexpected ease the art of the pullman porter and Jane riding in coaches, reading, and waiting for his visits. Eventually in Alabama they found work, but what it was and how they did it is quite another story. At any rate they lived happily and in the shadow of the fear of starvation all their lives.

A WORLD SEARCH FOR DEMOCRACY

Fragments and notes

We can point to improvement in race relations in the U. S. — slow, faltering but decided & undeniable. We have better Negro schools & colleges and a better trained leadership & more wisely educated men; our colored brothers are working & saving with more wisely & carefully used; ~~& conduct~~ our writers & artists, while still few & widely imitated by fear & being unnatural, still press forward & at times attain notable recognition; contact between white folk & colored while still resented is broadening & becoming more normal.

Of course, all of this is butting an age-old stone wall, with arguments, excuses, curses and extenuations just as old. Granted a world made suddenly smaller, with all its ends in collision, and race friction is inevitable. But the cost of human friction, of group antagonisms, of national hates and racial prejudices, is so high, so appalling, that no work in social betterment demands more serious and constant effort. Here start all problems of Peace and War, Poverty, Sex, Education and government. We may not escape the fact that in the silent, continuous clash of black and white folk in America, we have, in microcosm, World War on a universal scale. We may minimize this, deny it in newspaper headlines, rostrum openings and radio broadcasts; and yet the bitter clash of Europe, Asia and Africa, the ever-threatening war of worlds, can best be made unthinkable by first rendering possible the human and cultural development of the dark tenth of our own nation. The failure to do this, links the ~~pending attempt of Mussolini to conquer Ethiopia and its oil,~~ with peonage in the Mississippi ~~Valley~~.

The answer to such statements is a chorus, disconcerting by its very unanimity: "Of course--to be sure--certainly!" See what has been accomplished already. Slavery is ended. The Negro is a citizen--in part. Who is complaining? All is well or at least,--better.

Yet all is not well. No more critical moment ever faced black America, than faces it today; not in 1830, nor in 1861, nor in 1867. What are the facts? The appeal of the Negro for elementary justice in this nation today still falls on deaf ears. Three-fourths of us are disfranchised, yet no writer on democratic reform or Third Party movements says a word about Negroes. The Bull Moose movement refused to notice them; the La Follette Third Party barely mentioned them; the Socialists still keep them in the background. Our children are systematically denied education; yet the National Education Association has no word of protest and when it asks for national aid to education it insists that present discrimination shall be perpetuated by the present local authorities with no check on inter-racial injustice. Once or

Insert No. 1

The world ~~conquest~~ quest of the human spirit was ever Freedom - that independence, initiative and anarchy of the undying soul which is the Summum Bonum. But successive falling and mounting barriers have arisen. From the high areas of domination in the primitive clan down to the anarchy of ages of empire, up to the police and regimentation of today with its domination of work and wage. And this latest attack upon freedom has come because the machine which should free labor has enslaved it. This can doubtless be remedied by intelligent planning but intelligence fails. Indeed democracy's most ghastly failure is in education and that primarily because we have never believed that the mass of men can really become intelligent. Even the grand children of the gutter, risen to place and power, do not believe that the miracle of their accomplishment is universally possible and unite with privilege and monopoly to lead the world to stupidity and mass hysteria. For the same kind of contradictory reasons the African cannot be educated; the African should be educated for the inferior place which he must always hold; the attempt to select and train ability among Africans is ~~impossible~~ unwise and a threat to white supremacy; the African should be trained just so far ~~and no farther~~ as he increases the profits of industry. All this is and must be a passing phase both for Europe and Africa. We have got to have back of democracy a large majority of intelligent, efficient, broadly educated voters. Without this no real democracy is possible and yet democracy is eventually inevitable. For a day will dawn when above police and planned work and apportioned income will blossom a realm of real freedom wider than space and unlimited in time. We dreamed of this in Russia and saw steps toward it. We were disappointed because the steps were not longer and faster. Permanent disappointment is impossible in Russia, in Europe, in America, in Africa.

Ch. 12 - Radek

To this [illegible] [illegible]
But hand writing, I know Radek (but: I know a man who

On the other hand and cutting across all this argument like a red knife, is one [illegible] knew Radek. Not intimately and well, but we spent a long afternoon in 1928 in his room in the Kremlin. It was a scholar's room, a man of bread, international interests There were magizines and books in all languages, strewn about, evidently in frequent and con stant use. Radek himself was carelessly clothed, alive, alert, interested in all mankind and all its actions. They talked of the world broadly and sympathetically. Always afterward, he stood in my mind as the finest example of the Russian communist; who wanted economic and spiritual emancipation for all men. Who sought this thru the light, thru knowledge, thought severe reason; by this path and discipline, Radek had come to ~~think~~ what seemed to me whole- hearted and passionate support of the Soviet govern ment. And that was his meaning to me: Russia even revolution, and despite oligarchy and harsh administration of a strict dictato ship could select and raise to power and influence, thinkers and leaders of the type of K Karl Radek. For there in this dictatorship of the Proletariat lay the danger: that Mediocrit ty risen to power might strangle thought, in fear or envy; that there would be no room honest difference of opinion, out of which Truth would arise. Democracy selects leadership by vague, inefficient, hit or miss methods, but it does get the opportunity to hear the varies sides of Truth, and if really intelligent and unselfish, chooses in the end the best or if it chooses wrong, can change its mind. Oligarchy can choose more quickly and effectiv ly, and thus carry through fundamental change, when democratic methods would utterly fail; but this can be done only if leaders like Lenin miraculously appear. Thereafter comes the problem of successors. That is Russia's problem today; that is the perpetual problem of all revolution. I had thought Russia was solving this problem with unusual and indeed not to be expected success, when thse wholesale murders and persecutions of Russian thinkers come in m mass. There is no question of the dangers Russia faces in a capitalistic world, lead by

(I am bitterly awakened in reluctant doubt

~~15~~

Hitler, Musselini and British, French and American reaction against the newer demands of the laboring classes. Doubtless Stalin must chose flatly between Tretzky' immediate world revolu- tion and the less spectacular but surely wiser plan of Russian socialization first. But how should Stalin treat the opposition? So as to drive honest and thoughtful men into desperate and underground revolt, or so as to permit within reasonable limits, difference, discussion and reference to a trusted electorate? This would have indicated such beginnings of abirth of real democracy in Russia, which the friends of Communism await with bated breath. The harsh murder and suppression of ideas, may have still been necessary for the survival of the Russian state, but the burden of proof rests upon Stalin. He is under no compulsion to prove his case before every carping critic of Communism. But before the friends of Karl Radek and others, Russia owes explanation and proof.

Of course you will say and I agree-- How much freedom and right to differ have we in free America? We donot kill our rebels quickly and mercifully-- we starve them slowly and most effectively to death, by denying them jobs-- because they joined the Union; because they read Marx, because they want a particular woman whom you do not want. Or worse, far worse, you starve and frighten them into orthodoxy. Do you remember the starry-eyed radicals of your youth? Not seers, maybe, but the stuff that Truth is forged from. Where are they? Beaten into bitter disillusioned old men, plodding the tread-mill for a living. Because they were wrong? Sometimes, perhaps often to be sure; but too often because they dared to think to explore, to question; because they bucked smug and powerful public opinion represented by stolid fools who wielded power. Perhaps it would have been better -- who knows?-- to have shot some of the wild wills forthwith, rather than crucified them and their ideas for fifty years. Cannot Man concieve a philosophy and technik of Dissent? Thank god for

rebels, dreamers & martyrs. ~~God~~ (I only this Soviet had just one!

Dear Christ!

F. this Jones sent a hurried note, as he sleffed on the Trans-Siberian

Of course the basic problem of Socialism that frets the soul of the thoughtful and chills the heart of the cultured is this problem of the mob. In their experience, the mass of men is synonymous with barbarism or at best cheap mediocrity in all things worth living for. They hate starvation even for cats and loathe snobbery. But, they ask, can you have the Free Spirit, and Art, which is its only child where the masses of men are Dictators? No, clear answer as yet only one cloudy and confused. But is it fair-- is it time to expect an answer yet, after but the first momentary break in the clouds of industrial slavery, and while yet surrounded by the threat and mad rage of the Hitlers and Mussolinis, and the cooler, but none the less bitter enmity of all contemporary civilized powers?

Moreover, the major matter to think of is not the present reality, but the future possibility of the mob. We are used to a world with most men poor and stupid. We are educated to to think in these terms as tho this were cosmic law. But is it? The proof is at hand: most of the cultured today are sprung from the masses, and not from the well-born. Is it not possible to dream of a world just as cultured as the best of this world, with most men educated, cultured and free, instead of the few? Is not this a vaster, finer vision than the present assumption that most men must be barbarians, if the Talented Tenth survive?

Chapter 1. I Come to Russia

I am in Russia. I am here where the world's greatest experiment in organized life is making. Nothing since the discovery of America and the French Revolution is of equal importance, whether it fails or not. And yet this experiment is being made in the midst of unexampled hostility; amid deep-seated bitterness and recrimination, such as men use usually for crime, degeneracy, blasphemy. I have read Stoddard; I listened to the frenzy of hate and loathing when the Nazis at Nuernberg spit on Russia; I have just read the prayer of that old and dying man whom millions call the sucessor of Jesus Christ, as he brackets War and Communism in one curse. Yet can one doubt the sincerity of Russia? Can one question for a moment, the gain to civilization if it were proven possible to make human wellfare rather than private profit, the chief end of Industry? Even If Russia fails to accomplishxxx this, or accomplishes it only in part, what a magnificent adventure, what a search magnificent, and at a cost so far less than that of any similar revolution in the world's history, if perchance there ever was such an effort on such a scale.

What is the sober truth? This is no Utopia, no fairy land of joy and plenty. Moscow looks much like other cities. Even its distinctive features like the golden domes are disappearing. There are people in crowds-- well-clothed and ill. There are various insignia of poverty and crowding. There are poor homes, crowded street cars, tired workers. But with all that one conventionally expects in a modern city, there are some things astonishing. First of all one misses the stores. Conceive a great modern city without street upon street of shops-- stores and stores again; duplicate stores; stores for necessities, for luxuries, for firvolities, for food and clothes. There are stores in Moscow, but few widely spaced and run by the state. Think first of the space abd rent saved; think of the saving in advertising alone. On the other hand, the comparative paucity of stores must entail trouble and loss of time. One sees cues at little shops waiting to be served. Yet here is an attempt at system in the most anarchic part of capitalistic enterprise-- the distribution of goods to the consumer. Here has been in the past an area of waste, graft, cheating, duplication of effort, muddle of plan, and dislocation of supplies that was the dispair of economics; here Lenin himself had temporrarily give way in his

N.E.P., which was gleefully hailed by capitalism as the surrender of socialism to capitalism. The ultimate triumph has come. The private shops have disappeared from opposite the Kremlin. The state directs retail trade. Threre are compact, well-stocked stores, here and there thru out the city; to all appearance efficiently manned and run, with goods a-plenty. But not all goods. There are a few luxuries: perfume, face-powder and other bits that my friend says were either unpurchasable in 1928, or imported at high prices. These are "Made in Russia". Most goods are necessities, made not because they bring the greatest profit to someone who has the power to say what shall be manufactured, but made because the mass of the people need them and because the state alone has the power to say what goods shall be made.This is tyrrany; this is interferance with the liberty of action which some few folk have had for ages. But this liberty was bought at the price of poverty, and the present tyrra ny is the will of people's wellfare.

The churches have disappeared. Not all, but most of the multitude of them that characterized old Russia. Even across the land as we ~~xxxx~~ rode east, the village was no longer heralded by the guardian church. Why? Why did Fascism in Italy and Germany fight the Church? Why did anti-slavery in America fight the church? Why did woman suffrage in America and universal suffrage in England fight the Church? Because ~~stands~~ and must stand for things as they are, for re-action, for dogma; the Church may conserve, after the battle for righteousness has been fought, but it never has and never can fight for unpopular ideals. Thus every cause, be it right or wrong must begin by an attack on established religion, or it will never begin. With us, as you know, the church has never as such opposed lynching!

There are new buildings-- mostly great office buildings for the officials of administration. The take the place-- with less duplication, of the endless office buildings of New York and London. In them the socialistic state guides and regulates production of goods, manufacture of goods, distribution of goods, application and training of human services. Here then is a civil service, which adds to what we are used to regarding as the functions of government, all these matters which we used to think must by order of nature be done by unregulated and unguided private initiative. They could not be; we soon found that out and supplied private government, with private police, and private war ~~and regulation~~ and still maintained that what we were doing and must do to maintain Big Business, could no not for some queer reason be done by these same people acting together as a state, because the private business worked for money and the state tried to work for the public weal.

The answer was that most of the workers for private business did not work for money but for support and joy of job; and it is precisely this motive that Russia is seeking in its state work plus a plan for state -wide weal. Is it impossible?

No doubt but the kernal of the problem is the securing of a civil service. That Russia has not failed completely in this, is in itself a triumph. The astonishing thing is that up out of the mass of the Russian people is apparently coming the talent and devotion for this exacting task. I say apparently, for I do not know-- noone is yet certain. But if the underlying assumptions of democracy hold, Russia must succeed. Those who doubt Russia , doubt democracy. Look around the world and see.

But my freind says, that the present effort to answer Russia's problems of men and materials lie outside of Moscow, in the vast East, which we now approach.

But how I'm running on, and forgetting my main research into democracy. The meaning of the Russian revolution is the realism with which it approached its task. It followed Karl Marx, but inductively, not by the dialectical dogma. It studied the facts of the situation and then by careful inductive reason asked how far the keen analysis of Marx applied. It was not afraid to modify the dogma in face of the fact. Thus Lenin evolved a newer Marxism suited to Russian conditions, just as future economic change must do. The end aimed at was a state democratically ruled by the working classes. But the Russian working class was too ignorant and inexperienced to rule. It must be led and taught. The self-appointed ~~leaders~~ formed a small compact group and built around themselves a small communist party. This working class party did not contain all the workers, and here the revolumet the difficulty of the class struggle idea. The workers did not form a class with conscious uity and opposition to the rich. Such a class consciousness had to be taught and its expression disciplined-- a long hard matter of mass education, still going on. But at any rate, the facts once known, proved the thesis. But the industrial workers of Russia were a comparatively small class-- terribly exploited by foreign capitalists, who before the war were makiking often 50% profit. On the other hand, most of the workers of Russia were peasants, the largest proportion of rural population in the world. The leadership of these seemed an easy task, despite their ignorance and isolation. They demanded land. They got it immediately, as much as they wanted or could use. But their ideology was capitalistic, from age-long training. They did not follow the working class revolution. In effect they revolted. They refused to plant for the nation except at a profit.

The Russian revolution was easier because the workers had not been differentiated int

into classes whose interests conflicted, as technicians, highly skilled workers, semi-skilled and laborers. They had no capital in homes and savings accounts. Thus literally they had nothing to lose but their chains. When now it became imperative that the new Russia train technicians and import foreign technicians to help in this training, there arose the danger of counter- revolutionary ideas among the industrial elite-- the desire to amass wealth, the temptation to despair over the herculean task that faced Russia. Here was a second danger. Finally, the threat of capitalist countries gave emphasis to Trotzy and others who followed the Marx dialectic and avowed that there could be no one socialist state unless all other states became socialistic. Universal revolution then was their primary program, before attempting to make Russia independent.

Here were three enemies of Russian communism at its very start. They had to be met and overthrown or the revolution was in vain. The revolting peasants were starved into acquiescense in collective farming, and thus brought into cooperation with the workers. The technicians who were not loyal were shot as traitors or expelled. The Trotzyites were executed At the same time, the industrialization of Russia was begun on a gigantic scale. The centre of economic life was shifted from Leningrad and Moscow to beyond the Urals. VAST works of electrification, mining, railroad building, and heavy industry were undertaken and carried thru to the astonishment of the world. At the same time the almost impossible task of building a modern army was finished so effectively that all real fear of interference from without disappeared, and Russian aid was sought by the very powers that had attacked her and slandered her and sneered at socialism. For the first time in the world it was admitted that communism might succeed. Stalin was vindicated: for if communism is successful in Russia it will take no revolution for it to spread like wildfire over the world. Already Italy and Germany have been prepared by Fascism, for Fascism is communism minus the chief ingredient: abolition of private profit.

Furthermore Russian communism is based on ultimate democracy-- democracy divorced from capitalistic control, and carried on by an electorate both literate and intelligent, with an education covering their adult lives, and giving them the truth. Such education the present leaders of Russia have sought to give the people by nation wide and intensive propaganda. But propaganda can be used by Error as well as by Truth; and the most difficult task before Russia, is this task of mass education so carried on as to ensure not simply truth as pr sent leaders conceive it, but truth such as springs from fertile and free minds, uncensored as well by socialism as by capital. This is a long, hard and extremely dangerous task -- fatal if begun before the dangerous mis-teaching and perverted ideals of acquisitve society have been thoroughly uprooted for a finer, more unselfish culture. Yet Ru is making the gesture in her new constitution. She becomes the best hope of future fr universal democracy, because she alone of all modern lands has resolutely faced the that government includes economics, that industry must be planned and not left to se anarchy, and private profit must yield to public weal. She has faced these facts res utely while all other nations have dodged them. Whether the manner of Russia's attackin this vast new governmental duty is the right one ~~xxx~~ or one ofthe right ones remains to be seen. But this tremendous fact is true: Russian communism has not yet failed.

all. Further than this we may go into matters where there is more dispute and yet certain clear lines of thought. The modern method of buying and selling labor and making the amount and kind of production dependent upon private profit rather than public weal; or in other words production for profit rather than for use is a basic cause if not the one preeminent cause of our economic muddle. We have got to distribute wealth not on the basis of ownership but on the basis of work. Income must eventually depend upon service and not on power. Thus we have indicated, and all the world knows it, a vast revolution of method and the way to accomplish it is the way that all human progress must be accomplished and that is by reason and sacrifice. There is no other way and whether the path lays over violence and blood or silent straining of sinew and pain of nerve it comes nevertheless back to the same thing. Reason and sacrifice are the secret of the progress of men.

muddle of governmental efficiency, breakdown of the industrial machine and loss of faith in mankind. By grace of 20th century imperialism we cannot withdraw to ourselves and fight for salvation by ourselves. The possibilities of the 17th century are not ours. We have got to study our situation here and start to right it here.

For this I've worked out a creed. You'll laugh at it and criticize it. But think it over:

1. We American Negroes forming a distinct social if not a purely racial group are threatened today with lack of opportunity to work according to gift and training, and lack of income sufficient to support healthy families according to standards demanded by modern culture.

2. In industry, we are a labor reserve, fitfully employed and paid a wage below subsistence; in agriculture, we are largely disfranchised peons; in public education, we tend to be disinherited illiterates; in higher education, we are the parasites of reluctant and hesitant philanthropy.

3. In the current reorganization of industry, there is no adequate effort to secure us a place in industry, or to open opportunity for Negro ability, or to give us security in age or unemployment.

4. Not by the development of upper classes anxious to exploit the workers, nor by the escape of individual genius into the white world, can we effect the salvation of our group in America. And the salvation of this group carries with it the emancipation not only of the darker races of men who make the vast majority of mankind, but of all men of all races. We, therefore, propose this:

BASIC AMERICAN NEGRO CREED

(Banc)

A. As American Negroes, we believe in unity of group effort, so far as this is necessary for self-defense and self-expression, leading ultimately to the goal of a united humanity and the abolition of all racial distinctions.

B. We repudiate all artificial and hate-engendering deification of "race" and race separation as such; but just as sternly, we repudiate an enervating philosophy of our escape into an artifically privileged white race which has long sought to enslave, exploit and tyrannize over all mankind.

C. We believe that the Talented Tenth among American Negroes, fitted by education and character to think and do, should find primary employment in determining by study and measurement the present field and demand for racial action and the method by which the masses may be guided along this path.

D. We believe that the problems which now call for such racial planning are Employment, Education and Health; these three: but the greatest of these is Employment.

E. We believe that the labor force and intelligence of twelve million people is more than sufficient to supply their own wants and make their advancement secure. Therefore, we believe that, if carefully and intelligently planned, a cooperative Negro industrial system in America can be established in the midst of and in conjunction with the surrounding national industrial organization and in intelligent accord with that reconstruction of the economic basis of the nation which must sooner or later be accomplished.

F. We believe that Negro workers should where possible join the labor movement and affiliate with such trade unions as welcome them and treat them fairly, and in other cases we should form and federate our own Negro unions. We believe that workers' councils organized by Negroes for interracial understanding should strive to fight race prejudice in the working class.

G. We believe in the ultimate triumph of some form of Socialism the world over; that is, state ownership and control of the means of production and equality of income.

H. We do not believe in lynching as a cure for crime; nor in war as a necessary defense of culture; nor in violence as the only path to economic justice. Whatever may have been true in other times and places, we believe that today in America we can abolish poverty by reason and the intelligent use of the ballot, and above all by that dynamic discipline of soul and sacrifice of comfort which, revolution or no revolution, must ever be the only real path to economic justice and world peace.

I. We conceive this matter of work and equality of adequate income is not the end of our effort, but the beginning of the rise of the colored races in this land and the world over, in power, learning and accomplishment.

J. We believe in the use of our vote for equalizing wealth through taxation, for vesting the ultimate power of the state in the hands of the workers; and as an integral part of the working class, we demand our proportionate share in administration and public expenditure. But we know that control of capital by the masses is fundamental to all political and social power.

K. This is and is designed to be a program of racial effort; and this narrowed goal is forced upon us today by the unyielding determination of certain elements in the white race to enslave, exploit and insult Negroes; but to this vision of work, organization and service, we welcome all men of all races and colors so long as their subscription to this basic creed is sincere and is proven by their deeds.

Add to Search for Democracy

Ignoring names and phrases, the crucial question of government is: How far is the State being conducted for the best interests of Mankind,

(A) In the State at present
(B) In the State of the immediate future.
(C) In white Europe and America
(D) In the world at large

There subsidiary and iterpretive questions, like: What contradiction can there be between present and future interests of any State? Are the interests of the White world and the World at large antagonistic either at present or in the long run? Are the interests of mankind dependent, at any time or always, on the the interests or welfare of a particular group, be that group aminority by birth, gift or training, or a majority by numbers? (1)

A State being conducted for the best interests of Mankind, in any of the above senses, the next query is: by whom is it being conducted to this end?

(2) (A) If it is conducted by a single dictator, whether King, Leader, Boss President, how is his power maintained, how does he get his knowledge of means and method, and what super-power holds himto his task, and insures the continuity of his p work power, in case of his failure, disability or death, orrecognizes or foresees , changes of method necessary for the maintenance of the main objective?

(B) If it is conducted by an oligarchy, in the shapeof an aristocracyby birth, an organized and diciplined political group, by organized and concentrated capitalistic investors, or by any powerful group, similar questions follow: first of all is it clear, that the interests of mankind ,and not the interests of thei group is the object and the continuing objectof the endeavors? Who decides between the special interests of the group and the interests of humanity? Whence comes the physicalpower by which obedience is compelled? How is knowledge of method and ability to act supplied; how is power delegated and handed on, and how are changes of facts and conditions provided against? What super power compels adherence to the main object of government despite change in thepersonitality of the ruling group?

(C) If the State is conducted as a democracy, just what is the form and method of the democracy?Who are the voters and how are their representatives selected? Just how is power balanced between the voters and those chosen to represent them? Are the voters of sufficiently intelligent to know their own interests and the interests of mankind, and are they free to excersize this knowledge by their vote? How are the voters educated , and given reliable information of what their government is doing and of what has happened and is happening in the world? How are the interests of the interests of the ignorant, imbecile, criminal and young, safeguarded? How far does Oligargy flourish under cover of democratic forms? Aboe all how are the voters trained for their high and difficult function, and what checksinsure the proper functioning of of their power?

Across all theseproblems of government, cuts the Great Disintergration, the problemof earning a living. This distorts the whole picture, or as Marx would init becomes the picture. If everyone had enough of food , clothes and shelter to ensure physical health,by reasonable endeavor, their further efforts wuold be directed toward increased physical enjoyment, theenjoyment of Beauty and thuoght and creative action. There wuold be time for education, and and rivalry so far as it was injurious to others, or envy, selfishness and greed, would have a minimum of incentive, and could be kept in check by aminimum of government. (3) This is the anarchy, toward which all philosophic mind looks forward, but which is a possibility today only to the rich and privileged, and to them only ni so far as they are persons education, taste and intelligence.

In the past some primitive tribes have approximated this condition, by making food and shelter a matter of unified tribal effort, leaving abundant leisure for art, thought and action. Scarce food, primitive technique, war-like enimies and resultant defense mechanisms, taboosand superstitions, not only made food and shelter call for greater time and effort, but brought slavry and subjection inplace of freedom. The modern European solution of this problem has been capital investment.The relation of the owners of capitol to government has been the increasing problem of the I9th century and the crisis of the 20th.

(I) Is there or can there be conceived, a humanity, whose collective inters, regardless of class, race or nation, are or should be paramount in the world?
("2) What is the source of his physical power to compel obedience?
(3) This would give that maximum of personal freedom to move and think and act, which is the highest ambition and dream of real , emancipated human souls.

The desperate and continued effort of individual andgroup interests to use the State, for their own ends, wishes and purposes; with the assumption that this is natural, historical, and logical, and calls for no defense save that itworks and is patently beneficial to a few.

The work of Sociology is not to work out logical systems, but to endeavor by careful collections of facts and by measurments tosee how far these facts prove or disprove the assumptions of Marx, Veblen, and the defenders of privately owned Capital. Today facts are lacking, but the experience of the U.S.A., England, Germany, Italy and Russia would give a mine ofpertinent fact, if the truth became accessible.

The main problems of human government are

1. Authority, backed by physical force
2. Education of children
3. Education and information of adults
4. Freedom of indivual thought and action
5. Production and distribution of wealth

The liberal theory of democracy is that the voting population has indirect(and their elected representatives, direct,) charge of I and 2, while 3,4and 5 are le left to free individual initiative, with some curb and control in extreme cases. The theory is based on the fact that only by the free expression of opinion and choice by the mass of intelligent voters, can all sections of the nation find expression for the their views, attention foor their complaints which none know as they do, and that essential indivual freedom, which is the real source of inititative and method of discovering ability.

Democracy is challenged today directly and fiercely, by Fascism and Co Communism. Neither challenger denies certain fundamental tenets of democracy: that the weal of the mass of the people is the chief end of the State; that children must be educated and adults given detailed and careful information. But they they both contend that the production of wealth and its distribution must be under the strict control of the state, and that indivual freedom must be seriously limited and curtailed for the main interests of the state. Above both Fascism and Communism contend that because of the ignorance and inexperience of the mass of men, and because of the the interest which certain groups and indivuals have in deceiving and misleading them, it is fatal to leave their fate in their fate in their own hands, by delegating authority to the ma mass of voters. Both admit, or at least do not deny that when an intelligent electorate is available, gradually it will assume all authority in the state.

Meantime where shall authority be lodged and by what process? And what shall be the ends for which this autoritarian state shall aim? In all cases the method was revolution-- the application of force which the constituted authorities could not withstand: the Bolshevist uprising of 1917; the march on Rome; the German "election" o of 1930. In the objects of the new states, the Fascists and the Communists are in less agreement: they all seek the welfare of the People. But who are the People. On this point Communism is clearest: the people are those who produce Wealth. This is a direct, clear interpretation of an era and acivilization whose main object is the production of goods. and in which the mian social and political has drifted into the hands of those who control this production, and monopolize its income. Of course, Russia has been compelled i n logical self- defense to liberalize its definition of wealth and wealthproducer, to avoid the paradoxof a State advocating a life for the masses which is not mere meat, and yetpe nalizing the higherpaths of human action in Art, science,and the professions including civil service. The Fascists are deliberately vaguein their definition of the State and its people: they certainly do not confine "People" to workersbut practically include th e whole of the investors, captains of industry, etc., and leave the distribution of social and political power in their hands. But they insist on such adistribution of wealth as shall give workers a larger share. Russian Communism in its orignal poverty in consump tion goods had to distribute wealth in the form, indirect, of privileges, vacations, am usements and services. These Fascism imitates. All this is temporary expedient on both sides. The main question which both must face, and which all civilization must face,is the ultimate ownership and control of wealth. The communist answers: the State, controlled by its workers. The fascists say, the State, controlled by authority, but they do n not specify who ultimately will controll present authority. Democracies, like England, the United States and France explain that the ultimate source of authority must be the people , armed with universal suffrage. But both Fascists and Communists point out bec cause of lack of intelligence on the part of the voters, as the Fascists say,; on accoun of the compulsion, as the Communists say. Wherefore the Fascists propose to relieve or partially abolish poverty by the autoritarian state; the Communists propose to abolish it byby State ownership of capital and the abolition of private profit. Democracy proposes to amelioriate poverty by universal suffrage and to make education more effective

All parties face difficulties; the Fascists; the seat of athority and freedom of human development; the Communists, the seat of authority and the education of thre people. Democracy, the intelligence of the voters and the maintenance of authority.

Fascism is a direct and terrible challenge to democracy and does openly what democracy does by indirection and under cover-- i.e.governs, under democratic forms by means of concealed authority, which authority tends to rest today in the hands of the owners and controllers of capital. We assume popular government, but where does it really function?

Logically, democracy must be the ultimate aim of all government; this is openly declared by Communism and tacitly admitted by Fascism. Present democracies have sought this end by a wide grant of the right of suffrage, wide freedom for busi- enterprize, public education of children and free speach and press; authority resting on the action of popularly elected officials, backed by current public opinion. With much success, this attempt at democracy has a wide record of failure, and in crises like the World War and the subsequent economic crisis, broke down widely; intirely in some lands, partially in all that had attempted it. Why? For one obvious reason, and another les obvious ,but more fundamental. First, voters were asked to make decisions on which they had neither sufficient intelligence nor experience to decide; this was clear to the dullest student of government. The second and more fundamental reason was obscured by convention, religion and long usage-- namely, poverty; the fact that most voters were so near starvation that they cuold not cast an unfettered vote even were they intelligent enough to know how to vote. This fact fact nullified a basic assumption of democracy-- i.e. voters wuoldlearn wisdom and state craft by experience. But the samepower that compelled the voter to cast his vote in a certain way, also controlled the chief sourses of information concerning the resul ts of policies and votes. Economic slavery brought mob-law and wide disrespect for authority of all sorts.

The world of thought foresaw these difficulties fronting democracy and long sought to curb the freedom of capital in private hands. But the industrial revolution and a marvellous new technique put such power in the hands of private capital and led to such visions of universal wealth, that no successful attempt to curb capital investment was possible until the World War, when one of th e largest of the nations attempted an experiment on a gigantic scale.

Russian communism started with the assumption that no real democratic gov ernment was possible unless the government owned and controlled land and capital and thus abolished poverty. With all menassured of sufficient food, clothes and shelter, they could by education and experience learn to govern themselves intelligently. That without such social control of capital, wage slavery, poverty and ignorance wuold deall attempts at democratic government. The Russian experiment started with a dictator ship or trust to hold the power of the State until the people could be entrusted with the rule. To facilitate this the dictatorship proceeded to teach the people by a widespread propaganda, the truth concerning the world and Russia.

Proganda during the war had turned an oldweapon into a new and scientific ~~during~~ of government . The new technique of the radio, the older telegraph, and a world-wide and closely monopolized machine for news-gathering, came to be used every whrere "To win the war" regardless of the exact truth, so long as the main thesis was maintained. This was continued after the war to bolster many national policies in many countries, and it was most effectively used by the new Russian communism. Soon its use spread to the enemies of communism until there arose in Europe, what has been called Fascism, but which should, with Communism be called Propaganda Democracy, in distinction to direct attempts to establish democracy. The necessity of this indirect method and the force and revolution needed to establish it, are based by the communists on the Marxian dogma, and by the Fascists on fear of Communist success.

Propaganda democracy is a self-assumed dictatorship, which seeks to rest on popular support, and uses its power to insure that support. It must control capital and wages, it must take over all education, even that supplied by papers, periodicals books and news-agencies, and it must convince the mass of people in the state, that their welfare is its sole object. Once the mass of people are convinced of this, the sole task of the dictatorship is to supply continous and efficient leadership to keep the people satisfied and happy. A Machiavelli is needed to work out a treatise on the rules of this statesmanship.

The difference between the Propanga democracy of Russia on the one hand, and ofGermany on the other, is that in the case of Russia the object of the experiment is to introduce an entirely new economic and social structure. While Germany seeks to maintain the present structure, but to conduct it by authority and not by universal suffrage, at least not for a long time. Private capital and private profit are being sustained, and what we have in Italy and Germany is an attempt to rehabilitate private capital by state control of the most rigid type.The parodox is that thus Socialism shou

of a system of human effort, which more than any other in our day has demanded indivual freedom. Moreover if private capitalism survives, it would seem to have more chance un- Fascism than under current democracies.

Let us now consider the present situation in Germany.

We may distinguish

Ultimate democracy
Group democracy
Industrial democracy
Propaganda democracy, autoritarian state, engineers dictatorship
Communistic democracy, proletarian dictatorship

In America, democracy has broken down in Federal affairs, and largely in state affairs IT works well in some localities, in others not at all. It works most effectively in small groups and committees.In Germany it is confined to committes, boards and secret groups, whose members are selected by indeterminate methods and changed by chance , force or assassination. In England, democracy works within narrow limits. These limits are fixed by the power and influence of a small aristocracy of birth, wealth and learning.The ranks of this aristocracy, are open to nearly all comers, and freedom of speech and opinion are allowed on a wide scale. The power of this ruling group, lies in its control of labor and income, its social sanctions, and its chance to make its opinions known. As a result the ruling group is itself liberal, and while it does not directly represent the mass of workers, it does know much of their needs and demands, and continually to them, often welcoming a direct representative of this class to power and depend on reason and social power to win his support for their main plans.Through this partial democracy, England has maintained the power of her aristocracy and at the same time yielded to the demands of the masses a great deal. She in this way has avoided the dangers of ignorant mob rule. In France democracy is absolutely curbed by the interests widely distributed property rights.Peasant, shop-keeper, and small investor stand continually with large commercial interests to balk the workers.

The problem of authority in the state, is grave, and has been neglected by democracy, whose devotion to indivual freedom is anarchy. It is attacked by Fascism and Communism, and results in tyrranny and revolution.

In the will of the people must rule the State. But what is the will of the people and who are the people? Is the will of the people what they now want, or they will will eventually want or what they should want? Are the people the majority of persons in a state, or amajority of the rich, the good, the learned, the able? Should the people have what they want or should they be made to want what the state thinks they should want, for the best interests of the state, or of those who rule tha state?

One thing we may not forget: there is horror in Eurpoe. There is the shape of fear, before each eye-- death, bereavement, pain, cruelty. Black gowned women abound, graves are shrines, hate and hurt lie in shallow burial. I mind me of a man I saw in a movie in Nuremburg -- he wept at the plight of the Kaiser von Kalifornien.

One the Wretched will compel the inter-nation, once they recognize their likeness in all peoples. The Uncivilized will make the Inter-race, once the presence of the uncivilized among all peopls and in all lands is clear to men.

The silly assumption of the mondern technical world, that men must want and use what the machine can produce, instead of an organized demand on the part of buyers for what they want and need. Sucessful Business today is to be sure the science of present human wants, no matter howsilly or deleterious their satisfaction may be.

Authority may be used positively, to promote one's own good, or to promote the good of all. Or it may be used only negatively, to prevent harm to others.

The man who today argues against the socialized state-- against Socialism, talks like a peculiarly unintelligent jackass: the only road to individual freeman and philosophic anarchy, lies through the curbing of the power of the private owner of capital, based on the extraordinary development of modern technical mastery of the material world. This is recognized in every civilized land today.

Socialists who fear the authority of the socialist state are fools. Only by collective authority over individual freedom in industry, can freedom of thought, travel and art be achieved. Social authority must dominate and dam life until there is sufficient food, clothes and shelter for all. Then and only then can freedom rise and spread.

Anarchy is practical only among among a population of education and high character, with a large supply of genius and ability. It is seen today only in a few artist groups, and in certain closed aristocracies. Free democracy through universal suffrage can only be realized, if the power of technicians and owners of capital and controllers of wealth is so curbed that it cannot obstruct the popular will through poverty-- i.e. the veto of wealth over the expressio of public weal be abolished. The autoritarian state can only succeed only by curbing the profit-makers on the one hand and on the other hand securing the support of the proletariat. This support can be had by satisfying to a sufficient degree the demands of the proletariat, first for food, clothes and shelter, and then for recreation and information and the ends of living.

What is the truoble with the World? Fascism says lacck of intelligent Authority; Democracy says, in terference with Freedom, especially in industry; Com munism says: Poverty.

It is the business not to make logical systems out of these theories, but to test them by facts and measurements.

The New Freedom, says Communism, is freedom from the chains of Poverty and its awful brood of Crime, Disease and Superstition. Some argue that abolition is not as pressing as promotion of Art and Science. But Poverty narro ws Art and wastes ability. Its cost is too great for civilization to pay and survive. Culture today because of Poverty occupies but a narrowedge of life and is always in danger of a descent of barbarians.

It may be argued that Poverty cannot be entirely abolished.That its present relative decrease is due to modern productive technique under capitalitalistic system. That this system depends on freedom of private initiative and the private profit motiv Until Oct. 1917, the answer to this could only be theoretical and based on the anology of human advance in other directions under social compulsion. But the Russian revolutio we are a laboratory test on a scale sufficiently to be convi ncing, and suficiently removed from the controll of private capitol tobe real.The success of Russia must be studied continuously and impartially and deeply. The success of Communism in abolishing Poverty in Russia, will mean the adoption of Communism everywhere. Of this there is not the slightest doubt. Communism in Russia has not yet succeeded in Russia. But it has jus as certainly not failed. They greatest tribute to its measure of success is the compliment of imitation of method which the whole civilized world is today paying Russia. It may be argued that this simply means that effort under capitalism and private profit can alleviate Poverty, and that Russia has shown certain steps toward this end which ar worth imitating. Whereever the truth lies here -- and this again is a matter of study rather than dogma -- the factof imi tation is clear.

The anthropomorphism of simple minds must enter the equation .Many minds perhaps most must personalize their ideals: they must worship God or Hitler, Lenin or Christ.

Propanganda can be used to convince the masses of their prosperity compared with others of their natural superityand of their dangers. The final decision lies with the proletariat, curbedby the transient ability of the state to use force. Art and education meantime may prepare the masses for more effective democracy.

It is a difficult thing to know a nation. Nothing is so misleading and false as a judgment of 66,000,000 human beings,based on a summer's wandering. I am painfully aware of this, and express my conclusions with all reservations andhesitations I have been in Germany for 5½ months. I have had no special facilities given for knowor obversation. But I have travelled widely-- in north-west Germany, in the old Haensa cities; in the Rhine valley from Strassburg to Duesseldorf; ni Wurtemburg, Bavaria Thuringia and Saxony; in Hannover, Mecklinburg axdxsi, Pommern, Schlesian and East Prussia. In Berlin I have lived two months, and I have visited Prag and Wien.Of inner home life I have seen little, but a good deal of life on the streets, in restaurants and pl places of amusements; I have glimsed schools and factories, and I have read many newpapers and talked to a limited number of persons. As a backgruond for my observation I studied two years in Germany in I892-4, and at that time saw much of German home life and travelled widely. I therefore speak and understand the language fairly well. I spent a few weeks in Germany in I928, and I have read considerably in German books and literature for many years. My basis of knowledge is thus neither wide nor deep, but it of enough value to be put into words.

First as to general impressions.(Insert A)

TheGermans are a healthy unspoiled people-- perhaps, physically, the xxxxxgx suondest of the larger national groups of Europe. They are an out-door people; they are not of the keenest intelligence, but sensible, plodding,honest and sincere. Above all they are regimented in mind and body. They are used to authority. For 300 years they ha have been taught to obey, to take orders, without question.They have never lost the prim mitive man's joy in his workx. The craftsman is usally willing to be a craftsman, and rejoices wholehesrtedly in a good job. The waiter is a waiter is a waiter for life and takes pride in his service. The average German is satisfied to be what his father was in an improved degree. It certainly does not occur to him that it essential that he rea reach a higher social plane than his father. This psychological attitude is probably due to the fact that French Revolution, and no Chartist nor Reform bill agitation ever stirred the German masses. They came to their rights and privileges methodically and slowly and never had a sudden break with their past.

This is the nation which Adolf Hitler and his National -socialistic party rules. They are not responsible for the characteristics of the nation. They found it so Today there is not the slightest doubt but that Hitler's rule is satisfactory to nine tenths of the German people. There are many things about their situation which they do not like-- which they hate. They do not want war, or military service; they want a l larger degree of personal liberty;the workers want better wages, and better conditions of work; industry wants to be freed ofits political trammels and taxation-- all this is true; but it is also true that all these elements are satisfied with Adolf Hitler and satisfied that he is doing the best and only thing that can save Germany.

Save Germany from what? To answer this one must look carefully at recent German history. During the Napolonic wars, Germany became the football of Eurppe, respected by none, least of all by Germans. She started to climb out of thi slough of despond by the democratic revolution of I848. She accomplished unity, respect and power by means of Bismarkian absolutism and military powerHeryielding to demands for popular controll took the form of a paternal state socialism. The raising power of parliament was kept in strict check by two considerations: the fear of outside military aggression and the gerrymandering of popular representation ni favor of wealth and birth. The fear of war was in part sound, but in part encouraged by a persistent propanda thet pi pictured the fatherland surrounded by jaelous enemies. The power of birth and wealth was used for privilege, leadership, and gradually for the development of a gigantic and singularly efficient industrial organization, designed to xxdxxx be the greatest in the world. World War came , so far as Germany was concerned, because it had been promised so long by propaganda, that prophecy had to be fulfilled, and because industry fav ored it, beleiving that victory was certain, and that Germany's industrial hegemony of the world wuold follow. To the disgust of the nation, Germany's political leadership f failed ignominiously, and fighting the whole world, never so bravely, she could not hope to win under the circumstances. She gave up and for the first time in history, Germany tried popular rule. For success, she needed peace, industrial opportunity, and generous sympathy. With all this , she might have turned toward Communism and made with Russia, an attempt to build a statewhich wuold control land, capital and labor and abolish priate profit. For this end she possessed what Russia did not have, a trainded body of tec hnically efficient workers used to regular toil, an unrivalled set of engineers, and a trained civil service, above the suspicion of graft.

But Germany was compelled to make her experiment in industrial democracy aiming at communism, amid renewed threats of war; without markets for her goods

Chapter 6 - Jane on Committees

~~All on my own I am going to study democracy right here in America, while you are gone.~~ ~~And~~ the logical beginning of ~~such~~ a study, ~~I have long thought,~~ is with committees, trustees, boards of directors, and such. You see, Jones, that's how we are really governed today. We appoint a committee, we elect a board, we hand the whole matter over to trustees, and then we go home and await the salvation of the Lord. One of these days I am going to write a learned brochure on "Committees I have known". Usually the appointment even on important matters is a perfunctory thing, and tends among us more and more to Fascist methods. "Let the chairman appoint." This allows us to bring ~~secret~~ influence on the chairman, and also avoids public indication of our knowledge of our friends' shortcomings. If a committee of three is apointed, ~~two~~ shirk willingly or by suggestion and one carries out his own ideas. Argument or consultation is regarded in the worst taste. Get it done and let 'em howl even if its done wrong, is our large Jowettsian gesture. Large committees, even for ~~large~~ projects calling for wide knowledge, are invariably frowned upon. Small, tight, quick-acting cliques are always in favor, and to question their decisions is to get yourself voted a spoil-sport.

~~Once I belonged to an ideal committee in our home Y. It had been assembled slowly by our secretary, after infinite experiments and trials.~~ We represented different races and colors, different points of view, different training, different temperaments. ~~We argued, listened, thought, we decided and then acted and reported.~~ We criticized results without fear or excuse, and then we consulted and tried again. It was real democratic work. Usually after argument and search for real facts we had unanimity or something like it. Often we did not or fell back on majority rule. That was bad. It was bitter to see things go wrong just because a majority thought it right as though seven was omniscience and five original sin. It was however sportmanship or revolution and I'm not sure which is worse. Still we wavered on and were more often right than wrong.

~~Then came the chairman of our city-wide committee, rich, white, dictatorial, efficient.~~ In a month she had ruined it all. We were split by color and residence, reduced to a set of beggars and tale-bearers, suing for influence and favor. ~~I resigned. We became worms instead of reasoning beings. I get sick even now when I hear of a Y.~~

Now there are committees and committees. I was once a member of a democratic committee. It was in a city where I was working in a Y.W.C.A. for a time. The secretary after much experimentation and many painful mistakes, got together an executive committee ~~we represented several localities, many points of view, considerable differences in education, and~~ we had different functions in the Y. We deliberated. We listened to each other and learned. We grew to respect each others opinion. Sometimes we got irritated and impatient, but gradually we learned to be patient with the chronic objector, the enthusiastic optimist, the nearly silent discouraged one. We began to work with a harmony backed by a growing, widening wisdom. Our decisions became so increasingly unanimous , that we gained increasing respect for minority opinions and grew to seek instead of tolerate the freest expression of opinions. We were a happy, harmonious, and on the whole effective group. But of course we lacked money. Then we got it. It came in the shape of a philanthropic society leader, rich, white and over-dressed, who was interested "in your people". Our commitee was disrupted, re-arranged and reappointed. We became lick-spittles and yes-men, and for all wisdom scurried down town to social authorities, who told us how to think and what not to do. Oligarchy, monarchy and plain muddle ruled our poor Y. But the budget balanced and nothing else mattered. I resigned to the unconcealed joy of Lady Bountiful. Since then the Y.W.C.A. has been a stench in my nostrils.

Remember, dear Jones, that the United States is ruled by committees, and that the number of these committees that are democratically appointed and run is infinitesimal. We have committees on work and play, religion and science, crime and philanthropy, health and disease, literature and art -- indeed what haven't we committees about? All our institutions deliquesce into committees: Congress, the Church, Hospitals, Schools and Colleges. The permanent committee graduates into the Board of Directors. People join Boards of Directors usually on the express condition that they will not be asked to do anything. They are asked to join so that the public will think the enterprize is being conducted by these same directors. With the stage thus set, a few persons, or more often one "Executive Secretary" conducts a tight little monarchy, limited only by his ability to raise funds, or more infrequently by revolution in the shape of aroused public opinion in this particular little world.

We are ruled by committees, by committees in Congress and the powerful conference committees which shape most of our Federal legislation and escape all publicity until the thing is done; by similar committees in legislatures and city councils, by political committees like the powerful party national committees; by committees on social reform, and committees in art and education; by boards of directors and trustees in religion and in business.

The method of this committee government has received little attention but really deserves it. It varies from absolute monarchy to pure democracy and taking its tempo from business tends toward oligarchy. The board of directors of a business corporation is by wide custom limited in its functions. Indeed its first function is apt to be window dressing. Names of lords and gentlemen and rich men who simply guarantee by the use of their names that satisfactory profit is being made mostly within the law. The directors may have some function in the selection of higher executives but that is usually pointed out by the ability of the candidates to make profit. There may be further questions of policy which the directors decide but influence over what should be the main matters of business: the price of goods, the wages of employees, the conditions of work, the allocation of salaries; all this is usually decided by one man or a few.

Religion copies after business. To have a church run in a business like manner is the heighth of most members ambition. Within the limits of the balanced budget the pastor may become an absolute monarch, particularly if his sermons and bedside manner are satisfactory to the majority of the flock. He attempts no restatement of religious dogma usually and his application of Christian ethics is pretty well limited. The committees and boards of various sorts are usually his appointees and do largely as he wishes. On the other hand, if the pastor is weak or unsatisfactory in doctrine or antagonistic to the aims of the church members, he may be virtually displaced in power by some influential member, or displaced indeed by another pastor. The democratic control of the mass of the congregation is seldom invoked save in unusual crises.

In social reform we have evolved a well-known pattern. A board of directors is appointed. They are either busy with other matters or uninterested in this matter. They loan their names or attend perfuctorily. Their first business is to get rid of responsibility and load this on an executive secretary. Thenceforth the aims, government and methods of the organization will depend upon the secretary. If he is forceful and successful he will determine what the organization stands for, how it works, and what it accomplishes. An astute executive secretary who manipulated publicity without and conjoles the directors becomes a monarch limited only by the amount of money which he can beg or ~~obtain~~ get. So long as the reform work is popular with the usual earmarks of success, the secretary goes on from one stage of authority to another with ever increasing salary. On the other hand, if his work becomes unpopular or impeded or lacks funds he is liable to be displaced preemptorily without much careful inquiry as to just why he failed. It suffices to know that in certain essential particulars he failed. Such a secretary may of course use democratic methods, that is, he may regard his board of directors as a set of men of varied experience who are able to advise him carefully. He may consult with them and get their careful judgment, and even further than that get them to study and investigate on their own account and from their own point of view in order to furnish a real and valuable fund of information. And then in addition to this he may arrange that certain matters come to a vote. He may go outside his board of directors and take counsel with his membership, or or even better with those for whom the reform movement is suppose to be working. Perfect democracy of the most efficient kind may in this way evolve, but all this is ~~special~~ rare and unusual. In most cases the secretary works alone, or with a small knot of intimates. They run the show and from them there is no appeal.

In education we are ruled by monarchy and oligarchy with the committee as a camouflage. Parents and teachers, while appealed to publicly, are not allowed privately to interfere or even be heard; but all this is so important and touches me so nearly that I am coming back to it in another letter. In art and science ~~we have~~ we have at the one end of the gamut the anarchy of individual taste and at the other end the absolute rule of a president or a

~~curator~~ bureaucrat. Unfortunately the tendency is toward absolutism. The young artist who paints as he will, sees what he wishes, or carves what he dreams is more than apt to run up against the ukase of a grim committee or curator who says, "No". The young scientist who wants to experiment finds himself hemmed in by starvation on the one hand and profit making on the other.

The meat of the matter is that the monarchy which rises in the home and extends itself to business is releaved by oligarchy in business, reform, religion, and art; that the actual work in these lines of human endeavor is in the hands of committees and boards; but that even then democracy does not usually obtain. Thinking in democratic terms even in the case of committees is unusual and unpopular. What we want and demand is efficiency of execution but we do not stop to think that efficiency and celerity may be bought at the expense of slurring over and killing a great, even if slow, method of making all experience our province and thus using human knowledge for human ends.

Chapter 4 - Jane glances at America and democracy

Jones, dear, I've got it. It's been slowly maturing in my mind for days, but it cleared today as I was reading your letter, walking down the long path. (The president was spying, damn him - wince, Jones, but "God", "damn", and "hell" are good English, and as Barrett Wendell once said, 'Swearing is all right, only most folk swear so inartistically'; I'm going to find something male to walk down this path with me if it is a cat.) Jones reflected that this was not exactly complimentary, but smiled and continued to read:

"Came that wonder-year, 1776, when the Declaration of Independence, and the "Wealth of Nations" were born. Well, people, that is people who were articulate, demanded a share in Government. And they meant by government, the selection of officials and the making of laws ensuring physical freedom after universal slavery. Many opposed this; they said, how can ignorant people choose good administrators or make laws? Many answered: freedom will give opportunity for knowledge and ignorance will disappear. What happened? Ignorance did abate, Democracy worked, until Capital and Technique appeared in new form. The African slave trade was allowed to re-establish slavery, and slavery and the new technique concentrated capital more and more in the hands of a few. The problem of Poverty appeared - the problem of wages, employment, income, wealth. They were major problems of a new life, and should have become major matters of government. But the new Democracy was induced through ignorance of its voters, to ignore the most important function of government - earning a living, and still ignores it. Education flared and dwindled. Only one government in the world today recognizes the fact that the work and wage of a people is the first affair of government. What to do about it is another matter; but if Russia disappeared tomorrow, her vast contribution to modern life would remain: she has pointed out that the distribution of wealth is the first business of government. Has she done more than this? I do not know. That you my friend must tell me. But this I know, and your English letter confirms it: every democracy today is trying desperately to keep the matter of wealth, its production

and distribution, just as far from the function of democratic government as possible; and even where desperately against their will, they are compelled to undertake such matters as employment, wages, poverty and relief, and excessive wealth they are doing it unwillingly, with temporary planning, with eagerness to escape the task at the first minute, and with bitter refusal, even to physical punishment and social ostracism, to allowing any discussion of the possibility of a democracy that deals not simply with choice of officials, but with the infinitely more important matter of the distribution of wealth. You mustn't even voice the idea - Bolshevik! Anarchist! Attack on Civilization! they yell, and this in the name of Freedom. The trouble with democracy today is that it refuses to admit that the production and distribution of wealth is in its domain. Even when forced, it sees only temporary necessity of dealing with these matters.

Am I right, Dear? Tell me if I am. Warn me if I am not.

Of course, if without government, (Which would be Blessed Anarchy, and I'm all for it) we could administer civilization, police the anti-social, and abolish Poverty and ignorance, there would lie our obvious path. But in just the realm where the modern world has given Anarchy its fairest trial (and that is Business) we have had our most glaring failure and threat of failure. No, that is wrong - of course its wrong: we have our most brilliant and spectacular success; but followed continually by shattering failure until at last, permanent recovery, permanent advance seems impossible. If it is possible to rescue Capitalism in private hands, why not get at it - the power is still where it long has been.

I keep trying to concentrate on the results of attempts at democracy here in America. Our work - of government and society, depends largely on committees and boards. One of these days I am going to write a learned brochure on "Committees I have known". Usually the appointment even on important matters is a perfunctory thing, and tends among us more and more to Fascist methods. "Let the chairman appoint." This allows us to bring secret influence on the chairman, and also avoids public indication of our

knowledge of our friends' shortcomings. If a committee of three is appointed, two shirk willingly or by suggestion and one carries out his own ideas. Argument or consultation is regarded in the worst taste. Get it done even if its done wrong. Large committees, even for large projects calling for wide knowledge, are invariably frowned upon. Small, tight, quick-acting cliques are always in favor, and to question their decisions is to get yourself voted a spoil-sport. Once I belonged to an ideal committee in our home Y. It had been assembled slowly by our secretary, after infinite experiments and trials. We represented different points of view, different training, different temperaments. We argued, listened, thought; we decided and then acted and reported. We criticized results without fear or excuse, and then we consulted and tried again. It was real democratic work. Then came the chairman of our city-wide committee, rich dictatorial, efficient. In a month she had ruined it all. We were reduced to a set of beggars and tale-bearers, suing for influence and favor. I resigned. I get sick when I hear of a Y. We became worms instead of reasoning beings.

We are ruled by committees in America, but not democratically; in business, our directors do nothing as long as profits come in. Business is monarchical as long as it pays private profit. Let a director begin nosing into the wage scale, the hours of labor, the endless questions of business ethics, and he becomes an insupportable bore. In the Church, the committees are yes-men to successful pastors and willing to do as little as he wishes leaving ~~God to his flock.~~ "to the devil the rest" At most they curb his expense account, by controlling what he may spend, not what is needed. In work of social organization and reform, the function of the Board is to find an executive secretary, put all the power he can use in his hands, and listen wisely to his monthly reports. Any member who wants to probe or question is regarded as a nuisance, unless he is rich. In that case he is humored.

The legislation of cities, states and the national government is laid out by committees, and these committees are the center of influence and bribery of all direct and indirect sorts. Their members are chosen by all methods except that of securing

discussion and light. Chairmen of Congressional committees are chosen by seniority, that is, by heredity. This puts a premium on local oligarchy which can keep men longest in office. Thus the South which never had democratic government, has all the chief and most powerful chairmen. Little legislation can be hoped for without a favorable committee report. All that wealth or anti-social influences have to do is to get at committees.

In general democratic government in this land has been continuously and deliberately muddled so as to defeat its objects, make it ridiculous, and conspicuously ineffective. Start with your local government to teach go ernment, say the text-books blithely. I'll bet there isn't a professor of political science in South Carolina, who has the faintest idea how ~~this~~ his county is governed, or could find out. And as for the State, the mess is even more muddled.

We are having a national election, ~~Dear Jones.~~ Do we know what or whom we are voting for? Not on your life. First of all the nation is so gerrymandered that some citizens have no votes and some have seven. Citizens of Mississippi, the most ignorant in the land have the greatest political power of any. In states like New York, the ignorant country can out vote the criminal city two to one and this brilliant division of political power is supposed to insure democracy. The duty of voting, the efficacy of voting, the possibility of democracy are all systematically sneered at by all public men and makers of opinion. It is impossible to get vital questions in such form that they could be intelligently voted on, even if folk were intelligent enough to vote. And most are not, because after giving children some knowledge of reading, we leave them for the rest of their lives with no training in intelligence, no authoritative information, no dependable intellectual or moral guidance. They get their real education from newspapers made to sell, radio programs made to sell, movies made for profit, ministers gagged by rich pews, demagogs on the make, and big business in charge of universities. Then we say democracy won't work and yell for freedom - to make money.

I tell you, Jones, of all modern countries America is least prepared by intelligence

or moral stamina to face the fact that government by private capital has failed, that the proud empire of Big Business which we have builded at such horrible cost cannot longer carry on without aid of public taxation and that democracy in America must first function and then resolutely assume as one of its major tasks the control of wealth, the planning of production for the wisest consumption and a distribution of goods and services for the widest consumption on the part of the mass of the people of America. Whew! Can't you hear 'em swear at such a proposition as an alternative to the rugged individualism of Hearst and Al Smith!

So, now you're off to Germany, where once you studied. Good luck and keep out of jail, if possible. Kiss Hitler for me. I hear he hates being kissed, and I'd like to do anything to add to his discomfort.

Chapter 13 - Jane on National Government

Propaganda and gerrymandering prevent democracy in the nation. The propaganda is carried on by news-gathering agencies, newspaper chains, radio broadcasts and movies. All these depend on control of large amounts of wealth. They work subtly, by omission of facts, by distortion, emphasis, ridicule and deliberate falsehood. They bribe readers and hearers by gifts of pictures, fiction, entertainment, contests and diversions, which no poor and independent thinker can hope to rival. An arena of ideas does not exist today in this land because of difficulties of publication and deliberately prejudiced audiences. The fair presentation of a new idea, or the criticism of established prejudices is well-nigh impossible. A weak weekly press survives only by the largess of certain rich men and serious books of ideas sell but sparely; if among 120,000,000 people, a publisher sells a book to one in every 10,000 he is satisfied. If he sells one to every 1,000, he faints with joy and surprise. Only a rich corporation, or a successful demagogue or a president of the United States can secure a real radio audience, and then seldom and for a minute. Nearly all the agencies of national thought control, have for a generation, ridiculed, derided and decried the essentials of democracy.

The distortion of the popular vote is the most fatal of all handicaps: some American citizens have ten times the voting power of others; five percent can prevent the constitution from amendment; a small minority can easily prevent major legislation; a decided minority can elect a president. The former slave states by the simple expedient of disfranchising and suppressing half of their labor vote can wield a block of 140 electoral and congressional votes and thus not only ~~thus~~ hold the decisive balance of power in all national elections and legislation, but monopolize the chairmanships of all major committees of congress which determines all laws.

Some answer all this by saying that the South is exceptional - the Negro problem and all that; ~~they~~ they dismiss the matter as though it had nothing to do with the North nor West. Ah, but it has; it has all to do, and for that reason comes first in any consideration of government in the United States. Take for instance, Congress.

Insert figures

Mr. Deend from the 8th district of Georgia has over 241,957 persons in his district of whom a hundred thousand are twenty-one years of age or more. Of these only 21,000 voted in Mr. Deend election. Nearly 80,000 were disfranchised - involuntarily because they were black; or voluntarily because they were white and uninterested.

Even with an intelligent, educated, alert, unfettered and fearless electorate, the task of restoring or rather establishing democratic control in the United States would be enormous against these obstacles. Two well nigh insuperable obstacles remain: the mass of the citizens could not vote reform even if they wished, because those who determine their income would not allow it save at the risk of deprivation if not starvation; and secondly, most citizens do not want reform, because of the long, persistent and subtle propaganda against democracy carried on throughout the nation since the Civil War. Americans have come widely to disbelieve not only the possibility but even in the desirability of democracy in the United States. The experience with the Irish in New York; the Irish and Italians in New England; the Germans and Scandinavians in the West; the Negroes in the South - have convinced the majority of Americans that democracy, if it includes the masses of men is just what they do not want: that it would not work; and that if it did work they would like the result still less. Quietly then but determinedly they sabotage this democracy; they ridicule it and criticize it unmercifully. They teach their children to doubt it. What they would mean by democracy is the rule of property and class; they emphasize heredity and birth and they decry the danger of mob-rule. Exclusive social prestige is given excessive space in popular newspapers. The "best" colleges tend to become the special preserves of the "Best Families", and even the state universities protect themselves by exclusive fraternities. The very circumstance which should protect democracy in our land, is killing it: we are sprung from the lowly; the proletariat not of one but of many peoples; from Negro slaves, from white beggars and prostitutes, from poor half-starved Irish, refugee Germans, poverty-stricken Italians, landless Scandinavians and bitterly oppressed Slavs. One might imagine that the offspring of such lowly might

stand together as a rock wall against caste and race hate. Not so. The second generation of these folk want to be identified with the ruling classes. They despise each other heartily. They want democracy for themselves and their betters but not for any persons beneath them or capable of being pushed beneath. What may Negroes expect of the Irish? Or hunkies of Italians? Or Chinese of Negroes? Hence we hailed Mussolini and even Hitler when he threatened our richest.

All this comes from anti-democratic propaganda. We despise humanity in the concrete present. And we defend this ponderously: shall the Mob (i.e., Negroes, Dagoes, Irish, Jews) overwhelm civilization and gentle culture? Did you ever see an Irish Wake? Have you noted the manners of Jews? Have you seen the Niggers at a Southern station? Well then, does democracy mean that I must eat, drink with and marry such people? Must Art and Letters descend to such canaille?

No, it means that by slow and infinite pains these must ascend to Culture and to real culture and not necessarily just your conception of Culture. No and twice no, is the bitter retort: they cannot; they have not the brains, nor the sensibility, nor that delicate, elusive genius of the gifted among men. They are born inferiors. To which the eternal rejoinder is: there is not one among the present Elect of America, some of whose ancestors less than a century ago, were not less likely subjects for culture than the most cultured among us now. Great genius is rare among all groups but the real accomplishment of democracy has been to prove how often the lowliest may achieve civilization. The tragedy of present day America is to see those who have risen by democratic opportunity seek to slam the doors in the faces of the disinherited and forgotten. And too because we have been seduced by money-making, we all like sheep have gone astray and produced a bastard culture of flamboyant imitation, instead of the finer thing that beckoned us when we still believed in this democratic ideal.

It is no longer possible to distinguish between Nation and States in our government, in any logical way. The attempt to do so spells muddle. Airplane and railway, telegraph and radio have so pulled the ends of the nation together that national interests have swamped the local, and our whole conception of the natural limits between state

was to him an Intelligence, and not a mere receptacle for protoplasm. It was good to live and think - only, not alone, not alone.

I am not sparing us. We black folk have striven to be Americans. And like all other Americans, we have longed to become rich Americans. Wealth comes easiest today through the exploitation of labor, and if we have exploited our own and other labor to but a slight extent the praise belongs not to us, but to those whites whose monopoly of wealth and ruthless methods have out-run our tardy and feeble efforts. This is the place to pause and look about as well as backward and forward. The labor movement in America as well as in Europe, deceived us just as they deceived themselves. They left us out. They paid no attention to us, whether we were drudging in colonies or slaving in cotton fields or pleading in vain at the doors of union labor factories. The object of white labor was not industrial democracy, it was to join capital in sharing the loot from exploited colored labor. So we only half emancipated, hurled ourselves forward, too willing if it had but been possible, to climb up to a bourgeois heaven on the prone bodies of our fellows. But white folk occupied and crowded these stairs. And white labor loved the white exploiter of black folk, far more than it loved its fellow black proletarian.

What to do? We went to school. But our industrial schools taught no industrial history, no labor movement, no social reform, - only technique just as technique of trades and changing to mass industry. Our colleges taught the reactionary economics and anti-democratic of Northern schools. We landed in bitter and justifiable complaint and sought a way out by complaining. Our mistake lay not in the justice of our cause, but in our naive assumption that a system of industrial monopoly that was making money out of our exploitation was going to help us to escape their talons. It was real funny and everybody except us laughed heartily over it.

Now in the year of God, 1937, and of our freedom from slavery not yet the first, and ask seriously, what can we do to force our entrance into a democracy that wants neither nor democracy, but is faced by serious dilemmas: waste of the national resources, muddle of governmental efficiency, breaddown of the industrial machine and loss of faith in mankind. By grace of 20th century imperialism we cannot withdraw to ourselves and fight

for salvation by ourselves. The possibilities of the 17th century are not ours.. We have got to study our situation here and start to right it.

For this I've worked out a creed. You'll laugh at it and criticise it. But think it over:

Not sensibly absolutely

The trouble with democracy in America is our obsession that democrscy is an end in itself and not means to an end; and that there is something divin about majority rule. Democracy is a rough rule of thumb, which put in contr of the state or filters into the seats of power the mass experience and know ledge of the inhabitants of the state in order thatvrhrough this body of knowledge we may accomplish the welfare of the state. It works of course if the voters are intelligent to comprehend teir experience and expreass th knowledge and therefore democracy assumes education and freedom to think If the electorate is ignorant or is not allowed to think, democracy become meangless word, In the Sovietsthe drive toward popular education is the gr greatest this world has ever seen. It surpasses in many respects what the United States has done. The figures of printed book circulation shows this But education cannot be accomplished in a generation and during that time t thought must be directed or the state will be in danger; particularly if the state is threatened as Russia is and has been by outside aggression Few states have allowed wider discussion and experiment than Russia. But when Russia found what she and her trained leaders thought was the truth she strictly guided thought abd dictated procedure. If her assumption of t truth was wrong, she is and will be in danger until the error is righted and the promise of such righting is education.

Meantime we, who are in no danger of aggression have stopped freedo of thought and knowledge of facts and guide our education into false channels. For this we must and will pay

For me then, Liberty, Equality and Democracy, have meanings different from most other Americans. I have seen Liberty as license to lynch and kill as the right to deny me decent privileges of travel; the right to refuse t to work beside me or let me buy or rent a decent house. It is to laught to hear States Rights and local home rule in the South defended as methods of keeping "niggers" in their place; denying them schools and bastardize ing their children.

In west and south there is singular equality among the mass of peopl and an absense of class snobbery and distinction which fills the stranger with a glow for human kindnes. But in that I and mine have little part. I am denied meals and hospitality; titles of courtesy; friendships and affection. And all this seeps over into the whole land and becomes patter of superior race assumptions.

The Democracy current in America is denied me; either entirely as in Mississippi and Texas or partially and with subterfuge and cheating as i Boston, Chicago and New York.

It was the knowledge of all this, and despite the slow breaking of hearts and barriers, that made me greet the promise of Russia with an up surge of emotion and hardly conceived hope. For I knew that we black folk did not stand alone

add Search for Democracy

Chapter 12 - Radek

Jane's answering letter flew to Jones on the Trans-Siberian in Novi-Sibirsk:

Cutting across all this argument like a red knife, is one fact: I knew Radek. Not intimately and well, but my friend spent a long afternoon in 1928 in his room in the Kremlin. It was a scholar's room, a man of broad, international interests. There were magazines and books in all languages, strewn about, evidently in frequent and constant use. Radek himself was carelessly clothed, alive, alert, interested in all mankind and all its actions. They talked of the world broadly and sympathetically. Always afterward, he stood in my friend's mind as the finest example of the Russian communist; who wanted economic and spiritual emancipation for all men. Who sought this through the light, through knowledge, through severe reason; by this path and discipline, Radek had come to what seemed to my friend wholehearted and passionate support of the Soviet government.

That is Russia's problem today; that is the perpetual problem of all revolution. I am bitterly awakened and in reluctant doubt. I had thought Russia was solving this problem with unusual and indeed not to be expected success, when these wholesale murders and persecutions of Russian thinkers come in mass. There is no question of the danger Russia faces in a capitalistic world, led by Hiter and Mussolini; and British, French and American reaction against the newer demands of the laboring classes. Doubtless Stalin must choose flatly between Trotsky's immediate world revolution and the less spectacular but surely wiser plan of Russian socialization first. But how should Stalin treat the opposition? So as to drive honest and thoughtful men into desperate and underground revolt, or so as to permit within reasonable limits, difference, discussion and reference to a trusted electorate? Such tolerance would have indicated beginnings of a birth of real democracy in Russia, which the friends of Communism await with bated breath. The harsh murder and suppression of ideas, may have been necessary for the survival of the Russian state, but the burden of proof rests upon Stalin. He is under no compulsion to prove his case before every carping critic of Communism. But to the friends of Karl Radek and others, Russia owes explanation.

No doubt but the kernel of the problem is the securing of a civil service. That Russia has not failed completely in this, is in itself a triumph. The astonishing thing is that up out of the mass of the Russian people is apparently coming the talent and devotion for this exacting task. I say apparently, for I do not know - no one is yet certain. But if the underlying assumptions of democracy hold, Russia must succeed. Those who doubt Russia, doubt democracy. Look around the world and see.

But my friend says, that the present effort to answer Russia's problems of men and materials lies outside of Moscow, in the vast East, which we now approach.

But how I'm running on and forgetting my main research into democracy. The meaning of the Russian revolution is the realism with which it approached its task. It followed Karl Marx, but inductively, not solely by the dialectical dogma. It studied the facts of the situation and then by careful inductive reason asked how far the keen analysis of Marx applied. It was not afraid to modify the dogma in face of the fact. Thus Lenin evolved a newer Marxism suited to Russian conditions, just as future economic change must do. The end aimed at was a state democratically ruled by the working classes. But the Russian working class was too ignorant and inexperienced to rule. It must be led and taught. The self-appointed dictatorship formed a small compact group and built a-

round themselves a small communist party. This working class party did not contain all the workers, and here the revolution met the difficulty of the class struggle idea. The workers did not form a class with conscious unity and opposition to the rich. Such a class consciousness had to be taught and its expression disciplined - a long hard matter of mass education, still going on. But at any rate, the facts once known, proved the thesis. But the industrial workers of Russia were a comparatively small class - terribly exploited by foreign capitalists, who before the war were making often 50% profit. On the other hand, most of the workers of Russia were peasants, the largest proportion of rural population in the world. The leadership of these seemed an easy task, despite their ignorance and isolation. They demanded land. They got it immediately, as much as they wanted or could use. But their ideology was capitalistic, from age-long training. They did not follow the working class revolution. In effect they revolted. They refused to plant for the nation except at a profit.

The Russian revolution was easier because the workers had not been differentiated into classes whose interests conflicted, as technicians, highly skilled workers, semi-skilled and laborers. They had no capital in homes and savings accounts. Thus literally they had nothing to lose but their chains. When now it became imperative that the new Russia train technicians and import foreign technicians to help in this training, there arose the danger of counter-revolutionary ideas among the industrial elite - the desire to amass wealth, the temptation to despair over the herculean task that faced Russia. Here was a second danger. Finally, the threat of capitalist countries gave emphasis to Trotsky and others who followed the Marx dialectic and averred that there could be no one socialist state unless all other states became socialistic. Universal revolution then was their primary program, before attempting to make Russia independent.

Here were three enemies of the Russian communism at its very start. They had to be met and overthrown or the revolution was in vain. The revolting peasants were starved into acquiescense in collective farming, and thus brought into cooperation with the workers. The technicians who were not loyal were shot as traitors or expelled. The Trotsky-

Peace and Civil Rights

(At the MADISON SQUARE GARDEN RALLY

TUESDAY, OCTOBER 24, 1950

BEFORE 17,000 PERSONS)

The world is astonished at recent developments in the United States. Our actions and attitudes are discussed with puzzled wonder on the streets of every city in the world. Reluctantly the world is coming to believe that we actually want war; that we must have war; that in no other way can we keep our workers employed and maintain huge profits save by spending 70 thousand million dollars a year for war preparation and adding to the vast debt of 218 thousand millions which we already owe chiefly for war in the past. Our present war expenditure must be increased, yet we cannot tax the rich much more since the lawyers who make the tax laws can also break them and let the bulk of wealth go untaxed. We cannot raise the taxes on the poor much higher because rising prices leave less and less to tax. Citizens have borrowed 200 thousand million dollars on homes, farms and furniture, and the poor and middle class have spent nearly all their savings. Yet we cannot stop; either we spend more and more on top of what we are spending or our whole industrial organization, with its billions of private profit monopoly, will face collapse. On the other hand, the Soviet Union whom we are determined to destroy does not at present seem willing to fight. We have warned and dared it. We have publicly and privately insulted it. We have eagerly given currency to every charge which anyone at anytime makes against the Soviet Union, its ecomony, its morals, its plans. We thought that at last in Korea we had them where they must fight and we prepared jauntily for World War III almost with shouts of joy.

We were sure the Russians had started the Korean uprising, were furnishing arms and ready to march to war. Henry Wallace actually saw them and ran backward so fast that he tripped over his own resolutions, and stepped

in the faces of his friends. Still the Soviets did not fight and began instead to call for world peace: for union against the atom bomb: for peace congresses. But the United States was not misled: not they. They stopped the peace appeal. They picked up and jailed advocates of peace. They barred from our shores foreign advocates of peace, even men of the highest reputation.

Highly placed public officials and military men began openly to declare that if the Russians would not attack us, we would attack them to keep them from attacking us. The Wild Man of Tokyo, who remembers shooting down World War I veterans in Washington, and who is turning ~~turned~~ Korea into a stinking desert, has received the President of the United States in audience. Whatever they talked about, the result, if MacArthur has his way, was not peace now or ever; until we seize China, conquer southeast Asia and drop atom bombs on Moscow. Meantime, wave after wave of our young men are being trained for murder, and congress is on the verge of calling every youth in the land for this purpose. We are set to "lick the world" with Eisenhower and Stassen, the educators of youth; Dewey and Hanley, the new brand of statesmen; and Herbert Lehman, supporting notorious General Anders, in order to make out foreign investment pay with oil, planes, battleships and artillery. We will restore Korea and when we are through restoration with taxes raised from out poor, Lehman Brothers and like investors will own everything in Korea worth owning and will draw fabulous profits from risks which they never took. After that we will rail at Korea for not loving us for our generosity while the Koreans pay for democracy at fifty cents a day and no land. This is what Europe sees us set for, in contradiction to everything we once professed—liberty, free speech, truth and justice. To this our masters will lead us unless you intervene: unless right here and now you, the people of the United States, say No! Enough of this hysteria, this crazy foolishness!

Our slow but steady descent into belief in complete and universal war and our determination to make all men agree with what some believe, rather

35-6-243

than to let them exercise their free American heritage of choosing truth--this literal descent into Hell in our day, and in this our own country, has been so gradual and complete than many honest Americans cannot believe what they actually hear and see; and sit bewildered, rubbing their eyes in order to get some vague conception of what can have happened to the land which once declared "These truths to be self evident that all men were created equal: that they were endowed by their creator with certain unalienable rights: that among these are life, liberty and the pursuit of happiness."

35-6-244

No American born before 1900 ~~could 1900,~~ could possibly conceive that the United States would become a land approaching universal military service; with its armed forces in every continent and on every sea; pledged to conquer and control masses of mankind, order the thought and action and belief of the nations of the world, and ready to spend for these objects more money than it ever spent for religion, education or social uplift altogether.

When men arise and say this and try to prove its truth, every effort is made by secret police, organized spies and hired informers; by deliberate subversion of the fundamental principles of our law, to imprison, slander and silence such persons, and deprive them of earning an honest livelihood.

Avoiding all hysteria and exaggeration, all natural indignation and instinctive defense of the right of free speech and hatred of thought control, it is clear to all Americans who still dare think, that my description of this America is true, and if true, frightening to all men who once thought of this land as the land of the Free.

My platform then, like the platform of every honest American who still dares believe in peace and freedom, takes its unalterable stand against war and slavery. There was a day when most men believed that progress depended on war; that by war, and mainly by war, had modern men gained freedom, religion and democracy. We believed this because we were taught this in

our literature and science, in church and school, on platform and in newspaper. It was always a lie and as war has become universal and so horrible and destructive that everybody recognizes it as murder, crippling, insanity and stark death of human culture; We realize that there is scarce a victory formerly claimed by war, which mankind might not have gained more cheaply and more decently and even more completely by methods of peace. If that was true in the past, it is so clear and indisputable today that no sane being denies it. And yet of all nations of earth today, the United States alone wants war, prepares for war, forces other nations to fight and asks you and me to impoverish ourselves, give up health and schools, sacrifice our sons and daughters to a "Jim-Crow" army, and commit suicide, for a world war that nobody wants but the rich Americans who profit by it.

35-6-245

If war were a matter of careful study and grave decision; of prayerful thought and solemn deliberation; we might take its fearful outbreak as at least no more than human error, soon to be stopped by decency and commonsense. But when did you ever vote for war? You who have spent most of your lives in a fighting, murdering world? When did you ever have a chance to decide this matter of maiming and murder? Never! And you never will as long as an executive of his own initiative can start a "little" police action" which costs the lives and health of 50,000 American boys, in order that big business can interfere with the governments of Asia.

Of what are ~~they~~ we in such deathly fear? Have we been invaded? Has anyone dropped an atom bomb on us? Have we been impoverished or enslaved by foreigners? Is our business failing and are our millionaires disappearing? Has the rate of profit gone down, is our machinery less cunning, or our natural resources destroyed by strangers? Is there any sign that the United States of America is victim, or can be victim of any foreign country? No! Then of what are we afraid, and why are we trying to guard the earth from Pacific to Atlantic and from the North to the South Pole, unless it be from ourselves?

Our rulers
They are afraid of an idea; tempted by a vision of power which this idea fights. The power they crave long misled and slaughtered the peoples of Europe and Asia, and now insidiously creeps into our own fever-mad heads; and that is Imperialism--world rule over the world. Once this was sought through by black slavery: then it was made easy by yellow coolies: then all "lesser breeds without the law," who could furnish a "white man's burden" and let him strut over the world, and lord it in Asia and Africa, and rule and rule without end, forever and forever. That was the vision of the nineteenth century. The fever of imperialism caught the United States as the nineteenth century died and we choked a few islands out of dying Spain. But these were but small change which whetted our appetite. With the first World War came the vision of an Imperial United States as successor of the empire on which the sun already sets. We rushed so madly at the spoils left by European empire, that we brought down our whole industrial system about our own ears.

It would seem that the memory of the great depression of the thirties would convince all thinking men that war is not the path to the millenium, and that what we need is reform of our own system of work and industrial organization, before we attempt to teach the world what to think or how to live.

But what the men of Big Business ignored was that the industrial system which they were seeking to re-install had already met a terrible and costly reverse; that modifications of imperialism and monopoly capitalism had already been suggested and tried. Such efforts comprehended loosely by the name "Socialism," were not invented by Russia nor first tried by Russia. On the contrary, Socialism is an English, French and German conception and was tried in Russia because that unhappy land was one of the last and worst victims of the capitalist system.

If tomorrow Russia disappeared from the face of the earth, the basic problem facing the modern world would remain: and that is: why is it, with the earth's abundance and our mastery of natural forces, and miraculous

technique; with our commerce belting the earth, and goods and services pouring from our stores, factories, ships and warehouses, why is it that nevertheless, most human beings are starving to death, dying of preventable disease and too ignorant to know what is the matter, while a small minority are so rich that they cannot spend their income?

35-6-247

That is the problem which faces the world, and Russia was not the first to pose it, nor will she be the last to ask and demand answer. The ~~19th~~ nineteenth century said that this situation was inevitable and must always remain because of the natural inferiority of most men. The ~~20th~~ twentieth century knows better. It says that there ~~is~~ can be food enough for all: that clothes and shelter for all can be provided: that most disease is preventable and that the overwhelming mass of human beings can be educated; that intelligence, health and decent comfort are not only possible, but should be demanded, by all men; planned by all states; and made increasingly effective by all voters in each election.

But the powerful who today own the earth and the fulness thereof; who monopolize its industry and own its press and screen its news; have another answer. They order us to fight any idea; to "contain" and crush any dream of abolishing poverty, disease and ignorance; and to do this by organizing war, murder and destruction on any people who dare to try to plan plenty for all mankind. From the ~~19th~~ nineteenth century, they attempt to take over imperialism to bribe the workers and thinkers of the most powerful countries by high wage and privilege, in order to build a false and dishonest prosperity on the slavery and degradation ~~,~~ the low wage and disease, of Africa and Asia and the islands of the sea; and to pay the price for this, they demand that you, your sons and daughters, in endless stream, be murdered and crippled in endless wars.

This is why we are fighting or preparing to fight in Europe, Asia and Africa— not against an enemy, but against the idea--against the rising demand of the working classes of the world for better wage, decent housing, regular employment, medical service and schools for all.

35-6-248

It does not answer this world-wide demand to say that we of America have these things in greater abundance than the rest of the world, if our prosperity is based on, or seeks to base itself on, the exploitation and degradation of the rest of mankind. Remember, it is American money that owns more and more of South African mines worked by slave labor: it is American enterprise that fattens off Rhodesian copper; It is American investors that seek to dominate China, India, Korea and Burma: ~~that~~ who are throttling the starved workers of the Near East.

Yet is it not clear that such a program is sheer insanity? That no nation, however rich and smart, can conquer this world? Have not Egypt, Assyria, Greece, Rome, Britain and Germany taught us this? And also that no idea based on truth and righteousness, can ultimately be suppressed by force and murder?

These start

I never thought I would live to see the day that free speech and freedom of opinion would be so throttled in the United States as it is today. Today in this free country, no man can be sure of earning a living, of escaping slander and personal violence: or even of keeping out of jail unless publicly and repeatedly he proclaims:

- That he hates Russia.
- That he opposes Socialism and Communism.
- That he supports wholeheartedly the war in Korea.
- That he is ready to spend any amount for further war, anywhere or at anytime.
- That he is ready to fight the Soviet Union, China and any other country, or all countries together.
- That he believes in the use of the atom bomb or any other weapon of mass destruction, and regards anyone opposed as a traitor.
- That he not only believes in and consents to all these things, but is willing to spy on his neighbors and denounce them if they do not believe as he does.

The mere statement of this creed shows its absolute insanity. What can be done to bring this nation to its senses? Most people answer: nothing; Just sit still ; bend to the storm; if necessary, lie and join the witch-hunt,

swear to God that never, never did you ever sympathize with the Russian peasants, fight to be free; that you never in your life belonged to a liberal organization, or had a friend who did; and if so, you were deceived, deluded and a damned fool.

But there are others who say: we can do something: that America needs no more cowards and liars. It needs honest men, and that honest citizens who are mistaken, are infinitely more patriotic than scoundrels who follow the herd.

35-6-249

We still have elections and we still have a secret ballot. If you do not want war, vote for men who will stop it. If you want the Bill of Rights restored to the Constitution, you have the legal right to say so. In this Democracy, you still retain the right to help elect your lawmakers and executives. If you fail to exercise this right, you will suffer and you ought to suffer. Today the vast majority of the American people who are not crazy, do not want war. Most Americans hate the current witch-hunt. The only way to oppose war and the death of civil liberty is to elect officials who agree with you.

When I ask for your vote, believe me it is for no personal reasons. I do not want to live in Washington. I hate ~~the~~ that provincial, "Jim-Crow" center of political graft. But you need to be represented there and by someone who will uphold the hands of that ~~m~~ a n of integrity, intelligence and guts, Marcantonio; who today fights in Congress almost single-handed for a decent United States. I would like to have the honor of standing ~~behind~~ beside him, because like him, I want progress: I want education; I want social medicine; I want a living wage and old age security; I want employment for all and relief for the unemployed and sick; I want public works, public services and public improvements. And because I know and you know that we cannot have these things, and at the same time fight, destroy and kill all around the world in order to make huge profit for big business; for

I want freedom for my people.

that reason, I take my stand beside the millions in every nation and continent and cry Peace--No More War!

A new era of power, held and exercised by the working classes the world over , is dawning and while its eventual form is not yet clear, its progress cannot be held back by any power of man.

35-6-250

PRESS CONFERENCE, HOTEL THERESA

SEPTEMBER 24, 1950

THE CAMPAIGN OF 1950

The great issue, of this time, of this nation, of this world, is PEACE; and the central theme of the campaign which begins here today is Peace, no more War. There are in this nation today, powerful interests which are determined on War. To this end, they are suppressing the Bill of Rights so as to stop discussion, distort the facts and stampede the nation through the hysteria of groundless Fear. Who is it among us who wants War and why do they want it?

The American Labor Party knows who and why, and there are many others who also know. But the American Labor Party not only knows, but it is going to do something about it. That right of action is the right to elect our lawmakers and executives by universal and secret ballot.

Our party therefore has selected candidates for governor and lieutanant-governor; for comptroller and attorney-general, for mayor of the city of New York and for members of the federal Congress.

It has asked me to run for the United States Senate. This is for me a new role. Like most men born and bred in the 19th century, I have always thought politics as a necessary career, but not the higher sort of work which a man would voluntarily choose. Largely then I have avoided politics and this is the first time in my life that I have consented to stand for public office. This is because it becomes increasingly clear to me, that this very recoil from political activity, is the reason for that surrender of our Government to men whose prime interest is not social but personal; and for the disaster of seeing repeatedly, a people with a Government which does not represent its real interests.

My standing for office then, far from being any matter of personal ambition, is rather proof that I am willing to forego my preference in order

to discuss with the public the serious objects of public life and action. For today curiously enough, it has become suddenly impossible to express publicly what one believes and knows unless one takes advantage of the few civil rights remaining to us and runs for office in order to talk freely without going to jail. What I ask and plead therefore in this campaign is that you vote, not simply for me but for me as representing the principles which I am trying to emphasize; with the deep belief that, however unimportant I may be, what I am seeking to make clear and stand for, is of the utmost importance to the Negro race in the United States, to the whites, and to the future of mankind.

Only once in my life have I held public office, and that was when for a month I was in 1928, made Special Minister Plenipotentiary to Liberia. My political activity has been almost wholly confined to writing. In this writing, with some speaking, I tried first to put the Negro vote in proper and effective relation to the national needs. In the first election of Woodrow Wilson, I sought to end Negro subserviency to the Republican Party. I tried to induce the "Bull Moose" movement to make Negro Rights a main plank and fought it when it refused. I opposed Taft's "lily-white" Southern policy, and supported the third party movements of La Follette and Henry Wallace. I have never been an active party worker, but I have been an enrolled member of the Socialist Party, of the Democratic Party under the New Deal, and lately of the American Labor Party.

The basic motive of my political thought and activity has been the securing for all Americans, civil and political rights, regardless of race or color. I assumed, and assumed too easily, that once color discrimination was done away with, the nation and the world would be free to attack and solve certain basic problems of human progress which I knew full well cried for solution. Behind and beneath this demand for rights, lay always therefore the assumption that, with the right to vote, the right to think and speak,

and the right to know, would come through the very exercise of these fundamental privileges: the basic right of human beings to live, to work; to eat and be sheltered, to be shielded from disease and have their children educated.

But to my amazement and fright, I have lived to see the era of peace which I was trained to look forward to as the only goal of civilization, transformed into plans for universal world war; a theory of progress by war and more war, each more savage and destructive than the last. I now realize that I, as well as you, am facing a crisis in which no consideration of ease or age, suffice to hold me back from a great duty. That duty is one of trying to bring reason and past experience to bear upon those of us who have gone temporarily insane.

25-6-253

The basic cause of this insanity is the effort of powerful interests, armed by control of press and radio, school and platform, backed by almost unlimited money, to turn the attention of the world from the fundamental problem of our age.

That problem is that in our unprecedented organization of industry, with its marvelous technique and world-wide extent, the vast majority of mankind remain sick, ignorant and starved while a few have more income in goods and services than they can use.

It is no sufficient answer to this fundamental problem, to point out that the present degradation of the worker is not near so great as it once was, or much less in some lands than in others. The point is that it is far too great than is necessary or decent, and calls for drastic cure now and not a thousand years hence.

This is the basic problem of our culture, no matter how much we try to conceal and ignore it; or try to divert attention from it to other matters. There are no other matters so important or so pressing. We may be led to yell our heads off to convince ourselves that the problem of the world today is the Soviet Union and Communism. That is deliberate

deception. The problem of economic justice to working men existed before the Revolution in Russia and would remain if Russia were swept from the face of the earth tomorrow. Proposals to solve this problem by socialism and communism, did not originate in Russia and will not end there. What Russia did was to attempt to solve this problem in a systematic way, at a time when the 19th century had bequathed to the world the dogma that the problem of economic justice was insoluble; that most men must always be poor, ignorant and sick, because most men were so inferior in gift and morals that this was inevitable; that civilization depended on making the Few masters of the Many, the Rich, the rulers of the Poor, and thus in this way, and only in this way, could civilization be built and maintained.

35-6-254

Is this true? Whether it is true or not, we have no right to stop people and nations from denying its truth--from denying the necessity of poverty, disease and ignorance, and from experimenting in their own way to ~~make a better world~~ abolish them. Moreover, our own duty is clear; and that is, not to pull down others, but rather to build ourselves up; to prove to the world that the economic condition of mankind can be bettered and that we know how to do this and that we propose to prove our belief by action. Instead of this, what are we up to? We are trying to fight an Idea. We are going to make nations agree with us and our way of life by using atom bombs, and bomber planes, battleships and artillery. And while wasting time, strength, and wealth in this effort; we are doing almost nothing to implement our own theory of progress.

Why? Why do we propose to make the Russian experiment fail, to throttle China and to throw the world into continuous war? The reason is clear: we fear that any success of socialism or communism will interfere with our own money-making. We have become a nation of money-makers. We think that money-making is the great end of man. Our whole ideology bows to this fantastic

idea. Religion, science, art and morals in America tend to be measured by the profit they bring, and the true vocation of American manhood is regarded as profitmaking business enterprise, and not social service.

War is Big Business and a business immensely profitable to a few, but of measureless disaster and death of dream to the many. Big business wants war in order to keep your mind off social reform: it would rather spend your taxes for atom bombs than for schools because in this way it makes more money; it would rather have your sons dying in Korea than studying in America and asking awkward questions. The system which it advocates depends on war and more war.

35-6-255

In order to have war, Big Business must have Hate; so its press and newspapers ask you to hate communists and if not communists, hate all who do not hate communists; indeed hate all who do not take orders from those who now rule America.

What has happened to the world is that those who profit from war, especially in the United States, have gained control of government, of information, of gigantic and unprecedented propaganda. This came about because of the First World War, which we entered with reluctance and in which we participated mainly by furnishing materials at a huge profit for those who controlled them. The result was two-fold; Americans conceived the idea of continuing to profit from the world's disaster and to move in as successor of the British Empire as ruler of most of mankind. On the other hand, Russia and other nations who had been through Hell because of war, began experiments for reforming, if not replacing the current methods of industrial organization. We joined the capitalists of the world to suppress their socialist experiments which threatened our plan of world industrial empire. However, just as plans were ripe for a mass attack, in particular on the Soviets, the bottom fell out of modern capitalist industry. This was no fault of Russia nor of

socialism, but was directly due to the overreaching greed of private profit.

But no matter what its cause, the result was that the Soviet experiment got a breathing space, while in the United States the New Deal was forced to adopt many radical socialist remedies for poverty, unemployment and disease: we curbed the profits of capital; we put the State into certain industries, and we adopted planned industry like the TVA, and we relieved the unemployed, and we established Social Security, and began to house the homeless.

35-6-256

In other words, the United States began to form and carry out its own plans for so reorganizing industry as to save capitalism whereever it deserved to be saved.

Here the American Labor Party takes its stand as the successor of the New Deal. It maintains that the Soviet Union has a right to adopt its own economic philosophy and carry it out as it will. And that also the United States has a right to attempt to save its own way of life and that this can be done, as the New Deal started to prove, when it was sabotaged not only by its enemies but more completely by its friends. What the American Labor Party asserts is that the present plan of Big Business to compel the world to adopt our philosophy and our methods by force of arms is not only unreasonable in the light of our failures to continue our own program of economic reform but impossible in itself and can only end in disaster.

It would seem that the futile efforts of a succession of master races to impose their will and power upon mankind would teach us that our program of world conquest is crazy. There is no possible chance for us to accomplish what Egypt, Persia, Greece, Rome, Great Britain and Hitler Germany failed to do. With our little "police action" in Korea shaking our resources to the foundations, how long and what effort will it take to conquer China, the Soviet Union, the Balkans--not to mention India? Our military plans are idiotic and still more so, if we depend on Germany, Japan and Franco to pull our chestnuts out of the fire. It will take more than one Wild Man of Tokyo to bring this fantasy into fact.

Moreover the American Labor Party points out that the persons who are forcing us to adopt this policy of force and violence are the upholders of Big Business; and they are profiting as never before by war and preparation for war, and are deliberately blind to the fact that their profit is the disaster of America and the world. Moreover, we point out that Herbert Lehman was trained in Big Business and today deliberately represents its interests. Last year, Herbert Lehman called John Foster Dulles "a bigot, an Anti-Semite and a Fascist." For that reason I voted for Lehman instead of Dulles. This year Senator Lehman welcomes this same Dulles into "bi-partisan" collaboration for war; he sponsors legislation for concentration camps for Communists and those called Communists; he ignores the restoration to power in Germany of the same gang which killed six million Jews, and acquiesces in their re-arming.

35-6-257

Why? What has changed Mr. Lehman? He has not changed. He follows automatically his training in the same school and on the same Wall Street which made Dulles a warmonger and attorney of the Nazis; and that is; foreign investment of American capital, so as to make enormous profit out of the poverty and helplessness of South America, Asia and Africa. American capital is pouring into South Africa and Rhodesia. We are the real owners of serf-labor in the Belgian Congo. We are wild to have Chinese factory hands at 12 cents a day. We helped shoot down the striking black miners in West Africa. And to bulwark our investment and guarantee high profit, the power of business joins hands with the military.

Thus, we are today ruled by Big Business and Big Brass for profit. A representative of the Steel Trust has been Secretary of State; a representative of Morgan and Rockerfeller is chief adviser of Truman on foreign affairs; another Morgan man has been under-secretary of State and may be second in command under Marshall; a Secretary of the Navy and Defense Chief represented Dillon, Read and Company, and another became Secretary of War.

Where Big Business does not control government, men trained for war do. We have just reformed our defense department by placing a soldier at its head in defiance of sound tradition; his first word is "universal military training of our children, for all-out war all over the earth, at a cost greater than we ever spent for education, health, housing and social uplift altogether. And for what? For profit to investors which is today piling up at the rate of $23,000,000,000 a year; with the prospect that the profit for 1950 will be four and a half times that of 1939, and twice as high as the enormous war profit of 1944.

35-6-25 8

It is the theory of democratic government, that when a situation like this arises, two political parties will examine, debate and dispute issues and acts until the poeple can make intelligent choice of the problems before them. Today we have only one political party which shares power for the same ends. Men like Dewey and Hanley can only try to outdo what the Democrats have already done; if the Democrats are for war, they are for more war; if the Democrats repudiate the New Deal, the Republicans loathe and despise it. The one point of agreement between the two so-called parties is war on any nation or movement which stands in the way of American profit; and the suppression of all discussion of the merits of the present crisis. I try to spread in America news of the peace movement in Europe and I am threatened with jail. Paul Robeson advises Negroes never to fight against people striving for a better world for black and white, and he is denied the right to make a living.

My platform then, like the platform of every honest American who still dare believe in peace and freedom, takes its unalterable stand against war and slavery. It warns all thinking men that the cause of our present failure and disgrace is simple and sheer mass insanity. We have known individuals to go crazy. We have long viewed this as an unfortuante disease, or

illusion fostered by a man's own weakness or by the wicked plots of his enemies.

We are learning all too slowly how to cope with and cure the individually insane. But mass insanity is a newer thing. To be sure we have experienced it in the race hate of the South, which we increasingly recognize as distorted mentality rather than deliberate will to harm; and while this dawning comprehension of one of the nastiest blots on our culture has not yet cured it, it has at least let us see our way to begin to plan the long upbuilding future. But before we are well-started on this path to goodness and truth, there comes an insanity, a wild and cruel madness, ~~and truth, there comes an insanity, a wild and cruel madness,~~ which engulfs the world, hurls us into planned and horrible murder calls to its ends every ingenuity of science, and even sets at its head followers of that Prince of Peace, who once out of degradation and poverty pled with a world far less guilty than ours; while we today give our world a distortion of his words and shriek:

"Come unto me all them that labor and are heavy-laden and I will give you war."

That the civilized world today, nearly 2000 years after the birth of Christianity, not mentioning those older and younger faiths, with their high hopes of reason and love of humanity--that this world today with all its triumphs which once we greeted with shouts of joy--that this world has gone crazy, no sane man can for a moment deny.

But he can pause and resting a minute from his Atom bombs, his Hydrogen horror, his propaganda of disease of body and mind, his mad destruction and wild waste of wages of the poor--pause and ask in this election season , Why? For God's sake, why? What are we yelling about? Of what are we in such deathly fear?

35-6-259

The present Senate of the United States is a war-making body and a body hostile to Civil liberties not only in the South but in this State. You have a right in November to help change the composition of the Senate. The present Junior Senator from New York is a respectable man. He has often, as Governor and Senator, voted for the right. I voted for him last year. But this year the whole picture of the world has changed and Senator Lehman has supported our war program and openly condoned in some cases the invasion of our Civil Liberties.

35-6-260

As representative of finance and investing interests he could hardly do otherwise. Remember what modern investment is; it is not as it once was, the loaning of your savings to help an enterprise which you knew about and watched. It is control of goods and labor over vast areas and under conditions of which you neither know nor care. It may and often does involve slavery and disease, ignorance and cruelty. It may drive wages to starvation, declimate and ruin family and group life; it may turn vast areas from happy primitive life to centers of crime and horror. But if it earns a profit; if it does not transgress the laws of the country where the investors live and where they largely make the law, then it is legal, legitimate and respectable. This has been the history of modern finance and investment all over the world. Its path is marked by blood, war, ignorance and the subjection of most of the peoples of the world to the comfort and convenience and luxury of the few.

The fight to curb uncontrolled investment and exploitation has been long and difficult and has had much success. But today and in America it is failing and resulting in a program of World War. The overwhelming influence and representation of finance capital in our legislatures in the executive and especially in the Senate of the United States must be curbed and curbed immediately. It is time that Senator Lehman be replaced by a man who is opposed to war and willing to fight for Civil

Liberties and not simply for the liberty of Corporations but liberty for the mass of working men and women.

It has been intimated however, that my candidacy is designed not really to replace Senator Lehman by a man willing to fight for peace and civil rights, but rather to elect as Senator a man even less qualified ~~fm~~ and less willing to represent progressive thought than Mr. Lehman. So far as I am concerned personally, I have but one object in this campaign and that is to win the election.

35-6-261

In a long life I never have and never expect to act as stool pigeon for any man or party. I shall not begin now. I know that every third party movement meets such accusations, which if heeded would make progress impossible. Everytime you suggest voting against a dominant party of a present official, you are met by the prediction that you are bound to fail. Upon this fear and risk, the old parties rely to hold their graft and power.

Today in this state and in the nation the Democratic and Republican parties stand for one and the same thing: war and the slave state. They cannot even phrase platforms that sound dfferent. They can only promise to do what the other is doing better---or worse. The nation faced the same predicament and prophecy in the slavery controversy a century ago. You ~~must~~ had to vote Democratic or Whig, because the Free Soil Party had no chance; because if you failed to vote for a Democrat you help elect a Whig. But that was not true, as the eventual triumph of Abraham Lincoln proved. Every defeat of a candidate for a free country, does not mean defeat for what he stands for.

Even if I be defeated for Senator, the vote for me would still be a vote for civil rights and against war, and eventually this program must win. If it wins this November so much the better; but if it wins ten years from today that victory must begin now.

It is the program and not the man for which you vote. The only assurance you have is that if I am elected to the Senate, no power in Hell, Earth nor Heaven will keep my mouth from speaking and voting, while I live what I conceive is the truth and right.

In this situation the American Labor Party takes its stand on the proposition "There can be no progress without Peace." We are the only nation in the civilized world, today advocating war and compelling other nations to fight. For this we are hated and feared. We call for the immediate settlement of the war in Korea, which an American soldier has characterized when he said: "I never saw such a useless damned war in all my life." Mediation with both North and South Korea in conference, and China represented in the United Nations, is the only solution. We ask resumption of the free flow of trade between East and West and the utter overthrow of colonialism even when masked under Point Four.

35-6-262

To stop this program of reason and progress, the allied and associated political profit-makers, called the Republican and Democratic parties, have adopted the last tactics of despair. They have made not only truth but civil rights a casualty of war! They have turned your attention from progress and peace, to hate and fear. They are making it illegal to think of progress or to advocate peace or progress. Every path to reform like taxation of great wealth; social medicine, effective rent control; river development, public housing and forest planning, are all called communistic or socialistic and their promoters threatened with disgrace, jail or loss of livelihood.

And now as a last exercise of tyranny, we are presented with the McCarran Act--the Fugitive Slave Law of 1950. You know what the Fugitive Slave Law of 1850 was: capital invested in human beings began to run away; foolish northerners, black and white, helped it hide. The Slave

Power which ruled the nation as Wall Street rules it today, passed a bill that made kidnapping of any Negro possible without trial, that made a man prove his freedom instead of forcing masters to prove property; and tried to make Abolitionism a crime. This law was so successful that in a decade it brought Civil War, and Abolition of Slavery, three years later.

So today, we are bidden to hate Communism when what we must hate is War; we are called subversive when we try to think and act as human beings and not as puppets. If we attack segregation in the army or civil life, we are called traitors to America. Against this the American Labor Party protests and fights. And as its candidate for the United States Senate, I ask you to vote to curb Big Business and War as represented by Herbert Lehman; War and Big Business as represented by that eminent veteran Joe Henley; and to uphold peace and civil rights, which are being sabotaged by Harry Truman. To the support of this program I welcome everybody who agrees with it, White and Black; Jew and Gentile; Democrat, Communist, and even Republican.

35-6-263

30

HARLEM IN THE CAMPAIGN

Golden Gate Caucus, Oct 9, 1950

~~W. E. B. DU BOIS~~

Harlem Is one of the most widely known localities on earth. In Europe, Asia, and Africa the average man has heard of Harlem and has some idea of its signigicance as a center, not simply of Negro expression but of a new concept of Democratic power. Naturally the meaning of Harlem has greatly changed in the course of time. At the close of the Civil War, there were only 15,000 Negroes in the whole city of New York and none in the empty farming district to the north of 14th Street.

By the beginning of the century the center of New Yorks' Negro population lay at 53rd Street. It was there that the music and drama which afterward made Harlem famous began; and between 1900 and 1910, Phil Peyton the Negro real estate man began the opening of Harlem to the crowded Negro population in the west side below 53rd Street.

It was the First World War with its stoppage of foreign immigration and new opportunities for work that brought the great influx of Negroes into this area of New York. The black community of 60,000 which had gathered here by 1910, became a hundred thousand by 1920 and doubled each decade to 200,000 in 1930 and 400,000 in 1940. Probably today Harlem and adjacent areas contain more than a half million persons of Negro descent; perhaps the largest Negro city community in the Western world.

In its earlier years, from 1900 to 1920, Harlem connoted Negro art in music and theater with Williams and Walker, Cole and Johnson, Will Marion Cook, Sissle and Blake and Florence Mills; hither came the blues from Memphis and Jazz with Jim Europe. The world looked on Harlem as a playground and slum which the rich and curious visited and which sent its singers and dancers around the world. But beyond and beneath this Harlem, was a crowded labyrinth of homes and workers; with poverty, disease, with all that swell and pulse

of living that makes life in a great city. Out of this came, in the twenties, attempts at expression, at writing and acting: poets, novelists and playwrights began to appear and a Negro literature whichwas a part and an important part of American literature. Also there came crime with gambling and prostitution, assault and theft and this made an ideal stamping-ground for politics in the lower sense of that term. Here among the poor and depressed, votes could be bought cheaply and both Tammany and the Republican machines soon began to disburse considerable funds to control the Harlem vote. This was paid for in cash and followed by a few offices and jobs and sale of the right to deal in liquor and women and the numbers.

35-4-499

Then came the depression of the thirties and Harlem sank in poverty, destitution and crime; the literary renassiance disappeared in a grim fight to live and survive; and by the advent of the forties there came to Harlem a new sense of the power and meaning of life in this section; born of struggle and of a growth of intelligence and planning. Politics took on new meaning and no longer meant simply pay for votes or for the privilege of breaking the law. The Harlem Negro began to demand representation in government and representation by men of his own choosing and not simply by those chosen and thrust over him. Political machinery began to pass into his hands and he enterd the city government, the police force, the civil service, the state legislature and the national congress.

During this time Harlem thought of itself as a Negro community dealing mainly with the problems of the American Negro. Althougha community of workers, it did not conceive itself as part of the Labor problem of the city or nation.

Although a part of the American expression of democracy, Harlem wanted to be a part of that democracy, for which others did the thinking and guiding. This was natural for a group brought up with a slave psychology: whose highest ambition quite naturally was to share and not to guide: to be recognized

and not to dictate. But Harlem lived in a changing age; in an age when the burden of governing was shifting from the privileged to the mass: from the owner of property to the creator of value. This meant often as men feared it would, transfer of power from intelligence to ignorance and from experience to uncertainity; yet at the same time, it was bringing a new thing into the world: a broad sense of unselfish care for the mass of humanity, instead of the fierce struggle of the smart to survive at any cost. And a feeling of the unity of mankind across lines of race as well as class. Thus the Harlem voter gradually began to feel himself not simpy as symbol of a race, but as part of a people: not simply as a center for entertaining the rich, but much more as a community of citizens whose duty it was to heop make a new nation and a new world.

35-4-500

45-4-55

To illustrate my meaning, I remember how a quarter of a century ago, I started a little theater in the basement of the 135th Street Library, to let Harlem portray and entertain and express itself. Young Aaron Douglas painted the scenery. The so-called Krigwa players wrote their own plays and acted the parts and furnished their own audiences. After hesitation we entered a nation-wide contest of little theatres downtown and won second prize. That ruined us. Broadway beckoned to our actors and they fled to money making and show-off, instead of sticking to the far finer task of building a community which through drama could take its rightful place in the building of a nation. Then the depression finished our venture and now a new world looks at Harlem in this cirsis of modern civilization. It sees it not as an entertainment center but one of the world's great testing grounds for modern democracy where the representatives of a great people have a chance to guide the world in a day when as perhaps never before the world needs guidance.

And it is a battle, make no mistake about it--the last great battle of the West; centered about a new development of the grave and unanswered question: where in the state-- in the organized community--does the real

ultimate power lie: the power of police control; of the organization of work and wage? The content and range of education? Of the ownership and distribution of property? In these matters of universla power, where and whose is the ultimate control?

We know how historically this power at first rested anturally in the father of the family; than as the family multiplied, it was shared by a council of elders and the leader who stood at their head by choice or self assertion. But as families and clans grew to tribes and nations, the owers and identity of rulers varied by chance and strength, until the right to rule became tangled, hidden and often incapable of any clear explanation or understanding. Then men had to clear away the underbrush and rationalize government; first into royal rule "by the Grace of Gos" until kings mistook themselves for God and were beheaded: until certain citizens, distinguished by birth, ability or wealth monopolized the right to rule the state. This often degenerated into a rule of self- nterest and privilege but in Europe in the 18th century and 19th, men grown rich by reason of new discoveries and inventions, took over the powers of government, yileding the working class some li ited rights to share their power. In the latter part of the 19th century this rule of the rich and property holding classes with increased numbers of workers sharing political power, brought the whole world under the control of Europe through a new science and technique and reduced to subservience the workers of the world outside Europe and North America. This was scarce accomplished when in the 20th century the world burst into flame, in a confused and rapidly changing series of wars; first a war to redistribute the colonies of Asia and Africa among the empires of Europe: then to prevent by force the working classes from controling the property and curtailing the powers of the rich: and finally the attempt of the colonial people themselves wholly to escape the control of Europe and North America.

This is the muddled world in which we find ourselves today; its basic problem of porperty, wage, power and privilege are increasingly clear; the answer to these problems is not war: and the interests involved are not simply nor mainly the interests of the rich, nor of industry in inself. A new era of power, held and exercised by the working classes the world over, is dawning and while its eventual form is not yet clear, its progress cannot be held back by any power of men. It is facing this problem that Harlem stands today and in its light, we must act and vote. First then peace and civil rights, then study, education and public informat on in a press free from the control of Big Business is our program.

It may seem nonsense to a proverbially modern group to conceive that they who have always followed, listened and asked; should today with a certain suddenness be ordered to lead, to inform and speak out in clear, firm tones. Yet this is far more true than you think. The majority of the poeple of the world are today watching Harlem and American Negroes with fascinated interest. Today in China, India, Indonesia and the Phillipines, through the length and bredth of Africa; in the Caribbean and the South Seas, in the Near East and South America and Behind the Iron Curtain, men are asking--many have asked me personally--what is this dark group of 15 million Am ricans thinking and advising? The group which has fought and faced Europe and America hand to hand for three awful centuries until today, while not yet free, still they stand with two million ballots in their h nds and brains in their heads to vote as modern men and not as purchased slaves: what do they think and advise in this crisis of the modern world. Where does Harlem stand in the battle for Peace and Civil Rights?

Your answer should be calm and clear: Harlem stand s for Peace and Civil Rights: for Peace among all nations, before and behind the Iron Curtain, for civil rights for all men, Chinese, and Koreans, Russians and Poles, Black Brown and Yellow peoples, as wellas for Englishmen and Americ ns.

A pretty batch of scoundrels we are supporting in order to make money for persons who already have more than they can spend. Chiang Kai-Shek and Syngman Rhee, Quirinal, Bao-Dai, the rulers of Persia and Greece, Budens and Bently, the Anti-Semite Anders, whom Lehman now embraces and a host of allied and associated spies, thieves and liars. The people of communities like Harlem foot the bill and sacrifice thris children for this precious privilege.

In order to stop you from discussing or voting on war, we have erected again in America, a slave state: just as a century ago we made the discussion of Negro slavery illegal. It is possible today than an honest American, without committing a crime or an illegal act, can be jailed and impoverished if he talks peace, higher wage or civil rights; they may be done even without trail or hearing; and any public discussion of the case can be absolutely stopped. I am a candidate for publice office today, because only in a campaign like this can I discuss peace and civil rights on the platform, over the radio or in the public press. This is liberty, this is America. One right is left us and that is the ballot, outside of Mississippi, Georgia and their sister states, who beacuse of disfranchisement hold all positions of power in congress, with n ither Lehman nor Hanley protesting.

35-4-503

Here in New York, you can vote for peace, provided of course your employer does not know it, and he need not know it. Legally it is none of his bussiness how you vote. Your vote is secret. It may not be tomorrow, but it is today. Only three nights ago, Governor Dewey turned the old Abraham Lincoln stop on this platform and told his audience what must have been real news to them, how he and the republican party had bought and paid for your votes. He told you how he favored the FEPC, but forget to remind you how long he stalled on it and ducked until he had to yield. He rightly charged Truman with failing to keep his civil rights promises but did not mention that Republican leader, Vanderburg was his right-hand-man to clinch

the job. He mentioned housing but not in Styvesant Town. He deplored failure to pass anti-poll tax and anti-lynching legislation by democratic congresses which acted exactly like Repbulican congresses. Indeed any attempt of Republicans or Democrats to assess guilt for anti-Negro bias is merely exercise in the pot calling the kettle black. I ask Harlem to vote overwhelmingly for peace and civil rights against Dewey, Hanley, Lynch and Lehman.

The United States Senate is probably the most powerful legislative body on earth. Senaotrs are elected by the people for six year terms and they represent in theory all the people but in fact the chief interests of certain people. These interests are not equally distributed; business and banking, law and manufacturing, commerce and the learned professions are over represented by trained and talented men: but labor and servants, farmers and women, the poor and unfortunate, have small voice or thought in the body, and 15 million Negroes have no voice at all. In November, New York will choose a Senator from three candidates: one is a respectable citizen, who speaks for property and investment and for the military forces, and who expressed this week his fear of peace. These interests are already over represented in the senate. They do not need more Lehmans. Another candidate is a hack politician who represents your public life at its lowest. He has no business in the United States Senate, where he would stand shoulder to shoulder with war-mongers and profiteers, with Dewey and Dulles.

I am a third candidate: think the matter over carefully, which of these three men would best voice the interest of the people represented here today.

THE AMERICAN WAY OF LIFE

Jamaica Arena, Oct. IO; and St. George Hotel, Nov. I, I950

In theory, the American Way of Life involves wide freedom of individual initiative in work and thought, limited by democratic control of the individual in the interests of the whole community. Such freedom has in the past made for efficiency and resourcefulness, for invention and discovery. On the other hand, democratic control for general welfare has insisted on education for the masses and a rising standard of living. During the Nineteenth Century, our democracy failed because of the spread of Negro slavery which had to be abolished by force. Now again in the Twentieth Century, our democracy is failing because organized industry, through corporations and monopoly, has over wide areas displaced democracic government. Thus lately, our most pressing domestic problem has become the control of Big Business by our ballots and making general welfare instead of private profit our chief aim.

35-4-242

This great national duty has recently been made more difficult of accomplishment because of our foreign relations. The increasing investment of American capital in foreign lands, leads to the attempt to control these nations and their policies and economies by huge appropriations and military power. Domestic industry is thus geared to war and work is planned to aid foreign investment. Thus income from foreign enterprise makes our domestic corporations more and more independent of domestic democratic control.

Our excuse for foreign enterprise has in theory been our desire to encourage the American Way of Life in foreign countries. But in this policy we apparently forgot that our way of life when successful had two aspects: individual freedom and democratic control. What we sought to introduce into China, Greece and Korea was freedom of business enterprise, without democratic control in these lands, capable of controlling either foreign or

domestic business. In lands where the standard of living was and had been wretchedly low and the illiteracy almost total, our policy tended to hand labor and materials into the uncontrolled power of greed both foreign and domestic. To implement this program, for instance we took six billions of money from the pockets of the poorest American taxpayers to bolster the tyranny of Chaing Kai-Shek. Most Americans seem still unable to understand why 400 million Chinese arose in their poverty and ignorance and by years of superhuman effort drove this combination of profit and greed into the sea.

35-4-243

Similarly in Greece where the democratic foundation had never been laid our vast business enterprise, backed by our military and naval power, fastened in control those Greek rulers whose method was tyranny and whose object the exploitation of the poor. There they sit today while the mass o Greek people starve. America brings to backward lands not freedom and democracy, bu exploitation and dictatorship from merchant and soldier.

Consider Korea, instead of planting schools, to educate the people in democracy; or dividing up the land monopoly so that the Koreans might eat, we gave freedom of initiative to Syngman Rhee and his gang of big landholders, and proceeded to let them without any restraint either from a native democracy or from the American army which backed American Big Business, to use Korea as their private property. We knew what we were doing; we publicly accused Rhee of oppression and theft, but continued to pour dollars of our taxpayers into his filthy pockets, and are today restoring his power by order of the Wild Man of Tokyo.

When the lid blew off this unholy alliance, we arose in righteous wrath and sent our sons by thousands to kill and be killed, to ruin a raped and unhappy land, not for democracy but for Big Business. We put the blame on Russia and accused the Soviets of a conspiracy which we were never able to prove. Even when we have entered lands like Germany and Italy to implement democracy what we really br ught and intended to bring was not popular control

of government and work, but American business methods in offensive and defensive alliance with domestic business led increasingly by former Nazis and Fascists. This organization of work was not in the past adequately or properly curbed by democratic methods, was not set to subject individual freedom to the commonweal; and now with even less democracy and with greedy foreign capital joined to native power, we established neither democracy nor freedom, but i cipient revolution.

35-4-2144

What did we want in Puerto Rico? To make money. Why did we seize Puerto Rico? To make money. What did we do in Puerto Rico? We made money. To be sure, out of our loot we took a new dime from every dollar and gave the Puerto Ricans one school where they needed a hundred and one hospital where they needed ten. While we kept on making money out of this starved and ignorant crowded mass of cheap workers and out of the tons of sugar cane they watered with blood. We gave them self-rule in name only, while in truth they were an oppressed and unrepresented colony. From this history what w can we expect? Sweetness and light? No. They that sow the wind reap the whirlwind. This is our harvest in Puerto Rico. This will be the harvest from the seeds we are sowing today in Asia? But vaster--millions instead of thousands; the death of a civilization and not insane and deplorable attempts at assassination.

In Europe, where because of war, curbs of democracy over industry were weak, we have bolstered French capital by huge subsidy so that the nation is split in twain, with the vast majority determined never to enter another war on any terms, least of all terms set by American business. Italy lies landless and starved under our heel.

But why does America want another war? That we do want war and are increasingly preparing to have it, it today apparent to the whole world. We stand today as one great nation of war-mongers, ready to pour into organized destruction a treasure greater than we ever gave to missions, education or

40

health altogether; ready to educate the youth of the nation for murder. Secretary of Defense, Marshall, demands universal military training, before we have established universal learning to read and write.

Meantime, a large part of Europe and Asia has begun to look for liberation from poverty, disease and ignorance to that great body of theoretical doctrine, built in Britain, France and Germany during the 18th century, which from Godwin to Bentham; from Fourier to Bernard Shaw, from Marx to Lenin honestly believed that the whole system of industry built on private property of capit l goods must be changed and a national socialism established with government control of industry for the benefit of the actual people who did the work.

35-4-245

This doctrine of socialism remained chiefly a theory, until the First World War. Then in Russia where the condition of the mass of people had reached unendurable depths of degradation, revolution ensued. An attempt was made to build a communist state, which was socialism with complete government control of industry and ownership of land.

This state did not plan to eliminate all individual freedom, nor to overthrow democracy: it planned eventually to increase freedom by abolition of poverty, disease and ignorance; it wanted to increase the scope of democracy by putting it in control of industry as well as of political life. Most of the world did not believe and does not believe that this can be done.

Western Europe and the United States therefore from 1918 to 1930 used every effort of military might and propaganda to overthrow Soviet Russia. Their motives were first to save the wealth which they had invested in Russia and second to preserve the possibility of future profit in Russia; in the Balkans and in the rest of the world where socialism was spreading in theory. They might have succeeded had not the bottom fallen out of capitalist industry in the world-wide depression of the thirties.

41

Whether this disruption of industry was mainly because of defects in the capitalist system itself as Communist claimed or because of world war and destruction, is not a matter to be discussed in this campaign. What interests us, is the fact that the depression in America and Western Europe gave the Soviet Union the chance to establish communism as a going concern. No one then believed the experiment would succeed and many still doubt if its success will ever prove communism as effective for industry and freedom as the American way of life. Whatever the answer to this debate will be, the astonishing answer in our time, was that the Soviet Government was sufficiently successful to help America and Western Europe to overthrow Hitler, a task which without the Soviets we were utterly unable to accomplish.

35-4-246

What next? Next in the astonishing alembic of time, instead of this fact uniting the world we have turned right about face and after conquering fascism in alliance with Russia, we have announced a national policy of preventing by force the idea of progress by communism to spread and beyond that, we are apparently now ready to smash communism even in the Soviet Union itself, by every means at our disposal.

Our excuse here is that Russian Imperialism is imposing communism on nations and peoples, against their will and that if this spread of communism continues, it may eventually be forced on us against our will.

This grave charge is absolutely unproven and to me illogical. It is idiotic to say that the Soviets forced communism on China, if anyone forced China into communism it was the United States and Chaing Kai-Shek.

The case of the Baltic States is different. They belonged to the Russian empire before the First World War, they were separated from the Soviet Union after the war not to establish democracy, but as was openly said, to form a basr for re-conquering Russia. The Justice of returning these states to the Soviets after the Second World War was not disputed. It was sheer evidence of our good faith. in accepting Russia as our ally in overthrowing Hitler.

42

35-4-247

In the case of Poland and Czechoslovakia and the other Balkan States it is also unfair to say they were forced into communism by the Soviets. In these states an overwhelming majority of the long oppressed workers and peasants were arrayed against a minority of wealthy landholders, nobles and industrialists who for years in conjunction with Western capital had exploited these lands and people. These exploiters represented birth and wealth and thus had the ear of the world. These were the two elements locked in bitter struggle here and also in Greece, and Italy. The Soviet Union did not conquer the Balkans but it did give influence, arms and leadership to the masses, and prevented America and Western Europe from active interference on the side of foreign investors. It was a conquest not of force but of ideas. It could have been opposed only by better ideas and that has not been tried neither in Greece nor Italy; least of all in China or Korea.

But our role is clear; we have no right to take the word of Senator Lehman's Anti-Semite, General Anders against strong testimony of the increasing prosperity of Poland and Czechoslovakia and other states. There are in the United States a number of Poles who recently lost jobs in Poland, which paid them well for doing nothing. They will never happy until they get those jobs back; which means they will never be happy.

To bring home my point may I refer again to Senator Lehman and General Anders. I do not bring this up from a captious desire to criticize what may appear to some as an inadvertent mistake. On the contrary, I regard it as an incident of grave import. I was in Poland in 1893, and 1949. My first visit took place a year after Wladyslaw Anders was born in Latvia in a rich land-holding family. I saw in 1893, not only the wealth and ostentation of the land-holding aristocracy but the degradation and tyranny under which Poland grovelled at the hands of Russia, Austria and Germany. And in 1949, despite the wild destruction of war I saw a nation re-born and infinitely more prosperous than 56 years before. Anders born into this

43

35-4-248

ruling class became a Colonel under the Czars. When the revolution came, he with so many of his class fought the Soviets and then took refuge in Poland which became the center of Western Europe's efforts to reconquer Russia. Anders became a General in the Polish army and spent most of his time on his stable of race horses. Eventually he joined with Pilsudski in an all-out effort to united into a fascist party the reactionary and anti-semitic elements of Poland. Landlords and Militarists joined in every effort against Russia. When Hitler finally attacked Czechoslovakia it was Poland that prevented Russia from coming to the rescue. When Germany and the Soviets made alliance Anders offered his services to the Soviet Union. The Soviets loaned him $250 million without interest. He drove all Jews, socialists, and liberals out of his ranks and equipped an army of 75,000

When the Germans turned and attacked the Soviet Union, Anders without striking a blow for the Soviets deserted just before the seige of Stalingrad and under the protection of the British took his whole army with 40,000 members of their families to Iran. From 1942 to 1944, Anders was in Teheran where he promptly clapped all Jews in a ghetto, confiscated large stocks of goods from America intended for the Persians and sold them in open market. He stopped Jewish children from being sent to Palestine, speculated in Iranian money and acted so outrageously that at last MacDonald, head of the Red Cross resigned in disgust. The powerful Polish lobby in Washington prevented publicity in America

Anders then joined the allied campaign in Italy and sought to enlarge his army and arrange for an attack on Russia. From the allied prison camps he took poles and Nazis, getting a fifth of his army from those who had xxxxx served under Hitler. One estimate was that 30,000 former Nazis were attached to the Polish army. His camp in Italy became a rallying ground for international adventurers and nazi troops who had massacred Poles, Russians

and Jews. The resentment of the Italian people grew because of Anders' army. The NEW YORK TIMES reported that they terrified the Italians , impoverished the countryside, interfered in local politics and were resented a s a genuine curse to the Italian government and to Italy.

35-4-249

In the NEW YORK HERALD TRIBUNE, Anders was denounced as a "dangerous fire-brand if ever there was one." His army transferred to Great Britain from Italy, where again he was cordially hated and every effort made to get rid of him. His army's stay cost the British Government $442,000,000. Next a corps of his army, 10,000 officers and men, came to Palestine where they stirred up trouble between Jews and Arabs. Some of them had to be removed from settlements for killing Jews and finally the corps was forced to be evacuated.

At the same time Anders actively interfered with affairs in Polant while the people were tryint to rebuild their industries, homes, farms and schools. Underground gangs were guilty of terror and sabotage as was proven in public trials in Poland in 1947-48. Arms and spies were smuggled into the country by Anders organization, until by unanimous decision of the Council of Ministers, Anders was deprived of Polish citizenship in 1946, for a long series of activities detrimental to the Polish State. In th t decision Stanislaw Mikolajik, leader of the right wing concorded. But Anders was not through, during the cold war, Anders kept his ear to the ground, and when America seemed set on a war with the Soviets, Anders planned to come to New York to further his internatial intrigue. In New York he was welcomed by the representatives of the ousted landlards of Poland, by Merwin Hart, the professional Anti-Semite, by Americans interested in foreign investment and set on war with the Soviets. The history of this notorious freebooter must have been known to Senator Lehman: he must have known his Anti-Semitism and his determination to plunge the world into a Third World War. But

45

35-4-250

Senator Lehman's l yalty to the investment interests of Wall Street outweighed all this and he joined to welcome Anders to America and reviewed with him a parade down Fifth Avenue, carrying banners to insult Russia and cry for war and atom bombs on Moscow. Lehman sent a letter of warm welcome to the brilliant dinner that night. Thus Senator Lehman put money-making and war ahead of humanity and peace and proved himself unworthy of the support of those who want peace and civil liberty.

We have no basis for denying that the Balkan States are not progressing faster today than in the last ten centuries. Western Europe and America had every opportunity to uplift the Balkans and particularly after the First World War. They only tried to fasten the chains of landlordism and exploitation tighter upon them.

The United States is today using every device, encouraging every spy, financing every traitor to stir up civil war and revolt in every nation which does not obey our will; and using the taxes wrung from our poverty and not from our wealth to accomplish this dirty job. We have no right to prevent China, Korea, Viet-Nam and other nations from choosing without duress from us or Russia, they type of government and system of industry which they prefer.

Above all, it is an international crime to overturn civilization in a vain attempt to overthrow the Soviets by force. We cannot do this, but we can put a blight on human culture for centuries by the attempt. I ask your suffrages to place these ideas on the floor of the Senate of the United States.

WPIX FEATURE

BATTLE PAGE OF THE AIR

What the United States is fighting for is not freedom nor democracy but the profitable expansion of American business. We gave but little attention to the plight of the mass of the Chinese people so long as we had open door to their cheap labor and rich raw materials. We mocked the m sery of the Balkan peasantry so long as their landlords gave us 50% on our investments. When we saw the fall of the British Empire our main ambition was to replace Englishmen in exploitation of the poverty, disease and ignorance of Asia and Africa.

If we were really burning to spread freedom and democracy where could we start better than at home? We could profitably begin with the police in New York and the jails of New Jersey. Then for permanent employment we might concentrate on Georgia, Mississippi and Louisiana. Instead of this we want to send abroad what we do not possess at home. And therefore what we actually send abroad is not freedom and democracy but American capital. We send capital abroad because there our business methods are not hampered by labor laws, or taxes for schools and hospitals. When, then curbs on private profit at home increase the demand for freedom of foreign investment rises Senator Lehman represents foreign investment and st nds wholeheartedly behind its demands even if the cost is world war. Today American capital is chief owner of slave labor in South Africa, of serf-toil in the Belgian Congo and of the poverty and disease beneath the oil of the Near East.

Led by the Wild Man of Tokyo, we are fighting to regain that grip on China which our own greed lost through Chiang Kai-Shek. This program of money-making we are attempting to mask by yelling vigorously"Here come the Russians" Even when the Russians refuse to start, recently Senator Lehman has expressed his fear at the outbreak of peace. He is afraid that after

35-4-257

47

this hysteria the nation may regain its normal sanity despite the most ruthless propaganda ever attempted since Hitler. Mr. Hanley's program so far as he has one is a firm promise to do more anywhere and anyhow of everything which the democrats propose.

The American people do not war war, they do not need war. They are in no danger of foreign attack. We have plenty to do at home. We still have too much poverty, ignorance and disease and too many families homeless to waste billions on war and ruin over the earth. I ask opportunity in the United States Senate to raise my voice against war and in defense of Civil Liberties.

35-4-252

I think that the clearest result of this discussion is that not three parties but only two are presenting programs here. Democrats and Republicans voice one program. It varies in small details but it stands for war and curtailment of civil rights. Moreover the source of this Bi-partisan Program is clear: it is organized industry. Big Business in the United States wants us to believe that our prosperity is dependent on its profitable career. But surely any intelligent man would admit that the private profit made by any particular transaction does not necessarily measure the good accruing to the mass of people. Profit is not an invariable measure of progress and private profit may often be public disaster. When then organized business dominates both major parties and candidates follow unquestioningly this Bi-partisan program, these parties become in fact one party.

A Third Party is not only logical but absolutely necessary if democracy survives. The Republican Party under Governor Dewey and his mouth-piece, Joe Hanley represents Big Business fighting for foreign markets at ruinous cost to our economy. If unrestrained, this program is bound to lead to the same sort of disaster which brought on the depression of the thirties. The Democratic Party under Franklin Roosevelt overthrew this program and began to build a party of social progress and control of private property.

War and death overthrew this new party building and Harry Truman has allowed the almost complete overthrow of the Roosevelt Program and today agrees in every important particular with the reactionary Republicans. Senator Lehman follows the lead of Truman even to Truman's voicing a liberal measure and then conniving at its defeat. If then a citizen wants peace and not war, wants freedom of discussion and not a slave state, he has no choice but turning to a Third Party, the American Labor Party.

35-4-253

PEACE

by

W. E. B. DU BOIS

I have consented to be a candidate for public office for the first time in a long life because I believe that the people of New York are entitled to an opportunity to vote against war and for Peace. Neither of my opponents provides that opportunity. Both Herbert Lahman and Joe Hanley agree with the Truman -Dulles policy in foreign relations. They both advocate a policy which is daily leading us nearer a Third World War. The Truman policy was bad when it gave aid to reaction in China and Greece. Now yielding to pressure from the republicans, it is making new alliance with Chiang Kai-Shek, helping France conquer Viet-Nam and threatening to make the Korean War the beginning of war with China and the Soviet Union.

35-4-254

Foremost in advocacy of this policy is Governor Dewey and his ally, John Foster Dulles, whom Mr. Lehman a year ago, characterized as a 'bigot an anti-Semite and a Fascist.' This same man Senator Lehman now welcomes to the "Bi-Partisan" alliance of republicans and democrats, not because Mr. Dulles has changed, but because Mr. Lehman has succumbed to the present war hysteris of the nation. He has recently declared that he fears peace;: that he hopes that the present war phychology of the nation will not subside but increase and spread toward preparation for war on a world scale.

It is difficult to follow this reasoning of a man who knows the increasing horror of war and its threat to all civilization. In our own nation nearly every step toward social progress is stopped today because of the supposed necessity for spending more for murder and destruction than we ever spent for education, health, better standards of living. Let any man today propose aid to our collapsing school system: to begin social medicine for a people deprived to a frightful extent of medical care: for a whole system of TVA's to tame

50

the destructive and wasting rivers of our land, and preserve the dwindling treasure of our forests, no sooner are such plans advocated than the proponent is faced by two answers: we have no money for social progress because of all-out preparation for killing men and destroying property all over the world.

And secondly that anyone advocating such social aid and control is a communist or a socialist and a traitor or prospective traitor to his country. Thereupon the advocate of Peace, and social reform; of an expanded educational system; of medical attention for the vast number of sick who are now uncared for of the control of industry in the interest of the public welfare is faced by an almost universal barrage of insult, half-truth and whole lie to prove that we are in imminent danger of attack from bitter enemies from without and must submit to endless taxation and loss of our civil rights in order to start world war in defense of our liberties. And the advocacy of this fantastic thesis has grown to a frightful extent since Senator Lehman has been in the Senate and he has gone along with its chief advocates with small protests; until today he actually says publicly that he is afraid we will prepare for peace instead of wasting our wealth and hopes for increased welfare on war. Yet Mr. Lehman must know that of allsocial tools of progress, war is the least effective. That if this world is going forward to war after war, each greater and more destructive than the last, the end of civilization is in sight. Suppose we follow Mr. Lehman and Mr. Hanley. And suppose that by super-human effort weconquer China and the Soviet Union, smash southeast Asia and Strengthen our hold on Africa and South America--what then?

Have we had such success in administering Germany, Japan, South Korea and the Philippines that we are sure we can successfully rule the world. Our only hope in making our way of life acceptable to the peoples of the world is not by armies and airplanes but by ideas--by example. What have we in the line of civil liberties, decent treatment of the lowly, and lack of prejudice and mob rule, disfranchisement and miscarriage of justice to put before the

35-4-255

dark majority of the worldas proof that weare right and other nations wrong? Just because a Secretary of Defense went insane when he thought he saw the Russians invading Washington: just because a liberal leader like Henry Wallace suddenly announces that we are already fighting Russia, does that prove that the Soviets are att cking or planning to attack us? Have the Soviets ever attacked and invaded our country as we have theirs? Have thay ever helped seize slices of our territory as we have of theirs? Are their armies and airforce today camped on our every border with the openly expressed and reiterated object of stopping our way of life by force? The only hope of peace in the world is not threat and boast: not insult and repeated misrepresentation, but faith and hope and cooperation. We refused the proffered help of the Soviet Union at the outbreak of the Second World War. Later we had to take it. Did the Soviets fail us/ Were they unfaithful to their committments? We helped their effort by giving their arm es materials; but they saved the world from Hitler by giving 12 million of their sons and daughters and none praised their effort more than the United States in 1945. The faith we ha then must be used again if we want to have peace among men.

35-4-250

Moreover, let no American be so simple as to think that when we conquer Russia, we conquer socialism and communism. Com unism did not begin in the Soviet Union and it well not end there. If Russia today were swept from the face of the earth the basic and fundamental roblems which gave birth to communims will remain. If we cannot answer them before war or with war, what hope is there that we c n answer them after war? They will still stand; and the rest of this question: why is it, with the earth's abundance and our mastery of natural forces, and miraculous technique; with our industry belting the earth and goods and services pouring from our shores, why is it that nevertheless in the world most human be ngs are still starving, dying of preventable disease and too ignorant to know what is the matter: while a small m jority are so rich they cannot spend their income?

52

35-4-257

We cannot maintain that the United States has satisfactorily answered this question. Despite all we have done, we still have poverty, ignorance and preventable disease. We might go far toward remedying these faults of our industrial system and it is quite possible that the American Way of Life could teach the world much in social progress if it were geared to such continued progress and not to war. It is not by the destruction of the plans of others but rather by developing our own that our way of life can hope to succeed. But we are misled by a mirage. We want to base our economy not on our efforts in the United States but on our control of the work and industry of certain backward lands in Asia and Africa and until recently, in East Europe and the Balkans.

We want to succeed the British Empire of the 19th century in exploiting the labor and materials of the ignorant and weak. This is back of our foreign policy which is pushing profitable investment abroad under the pretense of preserving our liberties at home. This is back of our bitter determination to dominate China, for cheap Chinese labor has long been a rich source of wealth for American and British investment. Senator Lehman represents the investing interests of America. He fights their battles in the Senate and fights them so whole-heartedly that he is willing in their interest to restore to power in Germany the Nazis who murdered six million Jews. For these reasons and despite his high charater he should not represent this state in the Senate. And so long as Joe Hanley repeats by rote the commands of Dewey and Dulles he is much safer in Albany than in Washington.

CIVIL RIGHTS

Friends: One of the anomalies of this present crisis in our nation is that after we have loudly accused other nations of slavery, repression, totalatarian government and lack of democracy, we then turn around and apparently seek to outdo the world in every sort of repression and tyranny. Today it is no exaggeration to say that the United States stands in grave danger of becoming a slave state. The proof of this is clear in our loss of personal liberty, our wide attempt to control thought; our systematic spy system, our jailing of citizens not for their acts, but for their beliefs; our police tyranny and third degree system: the open injustice in our courts; the frequent refusal in government procedure to let witnesses face tha accused or let the accused know the charges against them: they systamatic discrimination practiced against racial and national minorities; our hounding of the foreign born and our deliberate taxation of the poor and exemption of the rich.

35-4-258

These things naturally do not happen to everybody all the time, but the fact that they can happen to anybody, any time and the growing frequency of such occurrences proves the frightening tendencies in this reputed land of the free.

For instance, nobody believes that it was wrong to raise funds for the relief of the Spanish victims of Franco. Yet men are in jail today not for giving such funds, but for refusing to tell who did give. It is not unlawful for a citizen to refuse to make public his private beliefs, the Bill of Rights was written into the Constitution to protect the right to refuse. Yet today men are in jail for such refusal. Government employees are losing their jobs without being faced by their accusers or informed of the evidence against them, and not for what they do or believe, but for what they are accused of having believed in the past. As Supreme Court Justice Frankfurter commented the

54

other day, the only person who has access to the evidence against these government workers is the man who has power to chop off their heads. Citizens are blacklisted not for their own beliefs, but for what their friends or associates believe.

I saw yesterday a clean cut young, white American teacher, who had gone abroad legally to read papers at a Students Congress at Prague and a History Congress at Amsterdam. At the instigation of our Dtate Department, he was arrested in Holland without accusation, jailed without trial, denied the right to see his wife or consult his lawyer, deprived of his passport, refused the right to study on a scholarship in England, the life of Newton and forcibly sent home. The treatment and threatening and harassing of the foreign-born all over the nation today is a disgrace to a civilized people. You maynot agree with communists, but even the United States Government has never accused communist leaders in the United States of any act or even threat of force or violence to accomplish their objectives. Yet today they are stntenced to long terms in jail, not for what they have done, but solely for what they are said to believe. The FBI's paid array of spies and triators and informers covers the nation. And in the face of all this, Senator Lehman blandly tells us "Our Government and our Nation are looked to by all the freedom-loving world as the hope of all mankind against tyranny and darkness!"

35-4259

The open, crass and deliberate miscarriage of justice in our courts is growing in frequency: six Negro boys in New Jersey are held in prison without trial on the order of a judge who seeks to deny them representation by lawyers of their choice; A Black Man in Mississippi is in jail under the death sentence on the word of a white woman who says she was attacked while her husband was in the next room, but who made no outcry; who says she could not see her assailant in the dark and yet indntified this man as the criminal.

A black woman in Georgia is in jail for life because her teen-age

55

son shot, with the man's own gun, the white man who was beating her. The Truman administration says it can do nothing in these cases but it can raise the roof in the case of a Cardinal in Jugoslavia or confessed spies and saboteurs in Hungary, Poland and Bulgaria.

35-4-260

Herbert Lehman and Joe Hanley repeatedly profess their devotion to the cause of civil rights for the Negro people. But neither of them has raised his voice against the unjust death sentence passed by an all-white court martial against Leon Gilbert, a Negro Lieutenant in Korea.

We refuse to let Pablo Picasso, the greatest living painter in the world, and that venerable British Churchman, The Dean of Canterbury, step on our shores to beg for peace. But the State Department announces that fascists from Franco Spain and Perons Agrentina will continue to be welcome. Senator Lehman greets General Anders and stands beside him in public tribute although Anders is a notorious Anti-Semite, a reactionary and a Fascist, who has made trouble in England, Italy, Palestine and Iran, only to be welcomed and feted in the United States.

Parole is denied to Carl Marzani, World War II, veteran with a brilliant record of dervice in Italy, who was sent to prison by a four-to-four Supreme Court decison convicting him of denying he was a communist. But the United States High Commissioner in Germany pardons Baron Ernst Von Weizsacker, Hitler's Ambassador to the Vatican who was convicted of deporting Jews for slave labor in Poland. And neither Herbert Lehman nor Joe Hanley protests this release of a Nazi butcher, whose first act on regaining his liberty was to kneel in adoration at the graves of Goering and other Nazi war criminals.

What is the reason for the crushing of liberty, miscarriage of justice and deliberate denial of the right to think, hear and choose to American citizens? The reason is that the present elements which rule America, Big Business and Big Brass, fear the truth, which may interfere with their power and income: and secondly, this nation falls the more easily back into the grip

56

35-4-261

of a slave state, because less than a century ago it actually was a state in human slavery was legal and customary. We would rather forget this shameful past, when for 250 years this land of Freedom, of religion, of democracy was the only civilized state in the world where human beings were bought and sold precisely like cattle: where slaves had no right of property, no legal marriage no control of children and no right to learn nor think. That was the actual legal status of black sl ves in the United States of America until only 80 years ago, and vistiges of it are still law and custom in a third of our national territory.

We want to forget this. I want to forget it. But when Governor Dewey (and of Joe Hanley, as soon as he gets word) try to tell me that the republican party freed the slaves, that statement is a lie. The republican party never intended to free the slaves. It won the election of 1860 on a solemn pledge to protect slavery in the South and to return runaway slaves without trial. Abraham Lincoln vowed solemnly that he would not touch slavery if he could save the Union without doing so. But he co ld not save the Union until he used black soldiers to win the war. It was these 200,000 black soldiers and the promise of a million more which brought Lee's surrender.

We distort this truth and pt the distortion into our school books because we are ashamed of the whole sordid disgraceful mess, which still reaches down the ages to give the lie to our unctious pretense of having led civilization.

This defense in only human. What is inhuman and dangerous is the ease with which this past l ts us slip back toward slavery and injustice, lets us lynch without trial 6000 black and white American citizens, since the abolition of slavery and shows the unhealed wound of lawlessness stamped on the soul of America. Yet no anti-lynching law can pass either republican or democratic congresses. This holds just as true for the democrat-controlled 81st

35-4-262

congress as it did for the republican-controlled 80th, on the record, no voter can have the slightest confidence in the promise of either of the old parties or their candidates, Lehman or Joe Hanley.

But even worse than the hypocrisy of the democratic and republican parties and their candidates on the civil rights issue is this: that whenever powerful interests in America feel their rule is threatened, their first impulse is to resort to the same tactics which the slave power once used to stop abolitionists from discussing slavery. Today the power of organized industry is great and growing. Through its control, of both old parties, it can and does tax the nation for a vast army to protect its interests and promote its expansion over the world. The weight of these taxes is borne by the common people working men and women and farmers, while the profits of the big corporations and the personal incomes of their millionaire owners rise to new heights.

In our land, Big Business owns the press, the magazines and newsgathering agencies; it controls radio, stage and platform, gradually Big Business in the United States, to choke off criticism and conceal the facts is building a new slave state. This descent into hell, Joe Hanley and Senator Lehman defend and excuse repeatedly and with enthusiasm. For all of their ties are with the leadership of the republican and democr tic parties and with the Big Business interests that run both. Our first step toward freedom is to repudiate both old parties, their candidates, and this policy that they stand for.

That can only e done by voting for the American Labor Party. The American Labor Party is the Party of Peace, Freedom and the Bill of Rights. We want Paul Robeson to travel where he will and say what he thinks so long as he breaks no law. We want an end to congressional witch-hunts, presidential loyalty orders and FBI police state methods; we want the repeal of the Taft-Hartley Act and the McCarran Act.. We want an anti-lynching law, an anti-Poll tax law and an FEPC with claws. In other words we want this to be a land of the free, not simply in song but in law and truth. We urge all of you who

35-4-203

join us in wanting this to vote for the candidates of the American Labor Party ;

Thank you, and Good Night.

Broadcast--Albany, N. Y. WROW--October 22, 1950

THE CANDIDATES FOR SENATOR

BY

W. E. B. DU BOIS

Friends: As candidate of the American Labor Party for the United States Senate I want to review the records of other candidates for this office. Joe Hanley represents one of the most dangerous tendencies in our political life and that is the use of money. The pattern runs through our politics; large sums from rich men or corporations are given to politicians: and these politicians support the policies of the donors: the distribution of public offices is made as a reward and not for competence: with the net result that our elections cost huge sums and offices tend to go to those backed by the largest election funds. This is government by bribery and graft and not by democracy. Both Hanley and Dewey are too closely connected with this conception of government to make either of them fit candidates for public office.

35-4-762

Senator Lehman's support rests largely on the feeling that if a candidate is respectable and of good character, that is sufficient reason for electing him to an office of power. This is dangerous misapprehension. Men of character cannot ask your vote simply for that reason. You must be assured that the powers of the office which they seek are going to be used for the best interests of the nation. It is no excuse for an official who helps plunge his country into an unjust war, killing and maiming thousands of its most promising youth, that this official was a man of good character and meant well.

Herbert Lehman has had a long public career. Much of this carreer, most of us would praise; but many of use are deeply critical of his present attitudes especially when he tells us that his defeat in this election will be interpreted as a vote of no confidence in our present foreign policy. In other words those of us who do not approve of the present foreign policy of the United States cannot vote for Senator Lehman. In 1942, Herbert Lehman said: "There are some among us who are critical of Russia, they close their

60

eyes to the right of every nation to choose its own form of government." He loudly praided "The stoic courage of the Russians" in the war, which "Amazed the world and won the admiration of America." He became head of UNRRA, but in 1946 resigned because of the unfair and provocative polocy of the United States, Britain and Canada.

Lehman critised our attitude toward Chiang Kai-Shek, as : "Clinging to the dead hand of a regime which has completely lost the confidence of the Chinese people." He said later "People would have us occupy Formosa or send the navy to protect it...by what right could we do that?"

35-4-265

As Senator however, Mr. Lehman changed both words and policy. He became an all-out supporter of Truman and the forces back of Truman. He gave complete assent to war in Korea and preparation for world war.

What brought this about-face on the part of Lehman? Why did he suddenly regard the spread of communism as Russian imperialism? It was clearly because this was the complaint of Big Business and in the Senate the influence of Big Business is supreme.

Here too the long training of Herbert Lehman in the foreign investment field was far more influential than it had been in his role of Governor and social servant. The firm of Lehman Brothers in which the Senator was once a partner, and which gave him his wealth, has wide ramifications. It invests in oil in South America and Arabia; in copper and lead in Africa; in rubber in Asia, sugar and fruit in the Caribbean; it is closely connected with war industry in the United States.

Foreign investment is a form of imperialism. When labor unions and the labor vote begin to grow in power, capital, to increase profits and avoid taxation, seeks escape to countries where labor is half-slave: where there are no unions, few public services, low taxation and no elections. In this way the British and French Empires were built up. Germanys' effort to share the loot brought war. the first World war.

61

When the British Empire fell, France reeled and Germany died, certain Americans wanted to fall heir to this imperialism. They had to let Russia assume chief role in crushing Hitler but were aghast when communism threatened to keep western business methods not only out of Russia, but out of the Balkans, and China. Thereupon they accused the Soviets of an imperialism which threatened the plans of American business in Asia and Africa. To enforce their own imperialism, Big Business drove the United States into war and Lehman consented. He backed Truman, he backed Acheson, he evern backed Dulles. He forgot his brave words of 1942 and 1945, and stands today no only or war but also for suppression of civil liberties.

35-41-2696

He opposed the McCarren bill, because it gave more right of court defense to alleged communists then the Kilgore Bill, which he co-sponsored. He wanted Spain to have American money but from banks instead of the United States treasury. As a result of his support the budget director now proposes to cut $500,000,000 from Federal social services, while congress prepares for the universal draft of your sons for a Third World War.

Senator Lehmans' retreat from his previous high stand has been a calamity It can be explained only by his training and the pressure which Big Business exerts upon him. This cannot be overlooked or forgiven. He stands today for a program which his whole previous career contradicts. As candidate of the American Labor Party, I offer a program of peace and civil rights instead of war and slavery.

PROPAGANDA

Broadcast, Oct. 26, WMCA.

Most Americans are puzzled at the state of mind in this nation today. They try to explain it as the usual case of people coming to know the facts of the world situation and reacting accordingly with symptoms of alarm and determination to repel evil at any cost. Such understandable reaction does not seem to explain our situation adequately. There is no proof that the Soviet Union started the war in Korea, wanted it or furnished substantial aid to north Korea. On the contrary, it is quite possible that Russia did not desire this conflict at this time; that hostilities were precipitated by Syngman Rhee encouraged by American business interests represented by John Foster Dulles. Again there is no proof that active aid of the Soviet Union helped the Chinese drive out Chiang Kai-Chek or caused the war in Viet-Nam. However much we may suspect that these occurences were indirectly chargeable to Russia, nothing that can fairly be called proof has even been adduced.

There can be no doubt but that the Soviet Union wants Communism to spread, just as the United States wants the sysgem of private capital and profit to dominate the world. But the Soviets have forwarded their ideology less by arms and more by ideas than we have done. Certainly it seems a fair conclusion that the Korean adventure was started against Russian advice and against Russ a's immediate interests unless the Soviet Union was ready for world war, which there is every indication that she was not.

Puzzled folk ask then Why are we scared? Who is about to attack us? And why should we arm ourselves to the teeth; set out to convert our economy into the vastest war machine in history? The answer to this is that our present state of mind is not the usual development of truth into action, but the result of a new and unusual situation in human history; calling for new education and new understanding; and a different set of efforts to emancipate our minds and calm our emotions.

What we face today is not Truth, but deliberate distortion of Truth and Feeling and consequent action based on half-truth or deliberate falsehood. The possibility of this situation arises from a relatively new development of Science, the meaning and use of which has not yet sifted down to full public comprehension. All men today know what the science of Physics has done for the world; and how through the machine, it has

35-4530

45-4-32

ged the whole pattern of our culture and the course of our history. So too we are beginning to comprehend what Chemistry is doing to our everyday life and the shape of our future plans. But comparatively few persons comprehend just what the recent scientific study of the processe of our thoughts and emotions can do further to transform our world. After centuries of mystical and metaphysical examination of what we called our souls, we began at the dawn of this centuryto make our minds a subject of observation and measurment. The public began to get some inkling of the results when the Public Relations man began to appear. At first we laughed at psychology in labor relations, in the conduct of education and in publicity. I remember well how I awoke to the signifigance of a nwe profession, when the propaganda organization to which I belonged wanted to meet in Georgia and discuss the Negro question. Everybody objected that we could obtain no publicity in the local press. We hired a "public relations" expert and got on the front page of the Atlanta Constitution.

In the First World War, we used camouflage and propaganda to persuade the public to do things they otherwise would not, or see things differently from normal vision. Here we were trying to reveal Truth or at least distort truth for ultimately truthful ends. Here lay the strength and extraordinary popularity of Franklyn Roosevelt. Speaking s traight to the people and ignoring press and platform, he told the nation what he believed the facts were and what they ought to do about the m. The people believed him and put over the socialism and welfare state of the New Deal despite the screams and curses of Big Business. For this reason Big Business still hates his memory.

But even when Roosevelt was putting over this propaganda for truth direct to the people, in another part of the world, Adolf Hitler, a perverted psychopath , was using propanda not to put over truth, but to make a nation believe lies. He found that by using the same means that Roosevelt used for truth, Hitler could spread lies, if only he control ed public commjnications. By monopoly of radio and press he could make the public either believe his lies or be too scared to deny them.

I knew Germany in my young manhood. I saw it again in

WMCA

PROPERTY

BY

~~W. E. B. DUBOIS~~

The Progressive Party, represented in this state by the American Labor Party, seeks to teach voters the truth and ethics of wealth, property and income, which are among the chief concerns of men and to which men devote most of their time effort and thought. To this end, we want first to dispel certain assumptions concerning the labor movement among those who see it as primarily based on envy of the rich and successful and on a desire to deprive the thifty and foresighted of the just fruit of their efforts: and to do this by law or even in emergency by force. For that reason numbers of respectable folk today instinctively dislike labor unions, regard strikes as wrong and futile and think of laborers ba gaining with employers as unnatural. This thinking is the source of much of the support back of the Taft-Hartley Act.

35-4-267

Our task is all the more imperative because these ideas are based on myth and inherited culture patterns and are not adequately contradicted by the press or ~~colleges~~ in Schools. Most Americans still think of property as something accumulated --a pile of treasure--which an individual has made by his own effort and sacrifice and which he therefore has a right to use in any way he sees fit; to consume it, to waste it, or to save it. ~~Instead~~ On the Contrary income is current use of wealth and services presently produced and available now. It is not a past accumulation but present and actual goods and present right to use labor.

In the same way men think of an industry as something which an individual or a group owns and which they have a right to conduct as they see fit--to set the rate of wage, to hire and fire, to fix price; and that public interference with such powers is fundamentally unjust.

These beliefs are not only wide spread and often honestly held, but our colleges and schools are doing almost nothing to dispel these fundamental

mistakes concerning modern industry. They stem from the earlier centuries of the beginning of industry and from current farming methods in many nations, where the individual worker, producer and owner is the best-known type. But since the Industrial Revolution, this method of work especially in manufacturing, trade and commerce is not typical. Production in these fields, which are today of dominant importance is not an individual adventure but a vast social undertaking. A large number of persons work together in numberless ways, in widely separated places and for periods varying from a week or less to ten years or more to produce a valuable product. The exact proportion of their contributions to the final result by physical or ethical measure; by kind and efficiency of effort, by length and intensity of labor or by money value cannot be determined accurately by any mathmatical method. The product of modern industry is a social product and belongs to society and not to certain individuals. Results should be allocated to individuals by standards of social justice and not in accord with established custom nor by ukase of an oligarchy basing its right on chance or legal fiction.

35-4-268

Property is a legal concept, and legal concepts are made and changed by laws, legislatures and the votes of laborers. Property is the legal control of wealth. Now wealth is not and never was entirely the result of indivudual effort; it always involved some measure of group cooperation. And today more than ever before wealth is the result of social effort added to the bounty of nature. Property is the legal right to use wealth; the wealth may stem from your own effort or from the effort of others; it may come from siezure of natural resources; it may come from inheritance or gift; from cheating or gambling; from theft. There is nothing sacred about property; everything depends on the social welfare involved in its use.

This means that property and its use are proper subjects of political consideration and of election decision. There has been in America too much

71

cheating and theft in the acquisition of property and too much injustice in its use. Where property has been acquired by hard work and sacrifice, its owners right to enjoy it should be recongized and protected and no labor party has asked a ything else. But this has not been the record of American business. Huge properties have been accumulated by highway robbery, monopoly of natural resourses belonging of right to all, and even by transgressing the very law to protect the rights of the public.

35-4-209

Our present economic problem stems from the fact that while production is increasingly a social process, the distribution of its results still remains largely a matter of the individual judgment of persons who happen to have or who seize the power to decide, and on the basis of concepts of property and income which no longer correspond to fact.

The paradox which consequently upsets the labor world is that despite the indispensable cooperation of laborers, managers and capitalists in current industry, when the results and increasingly valuable results are distributed, most of the laborers get less than is necessary for decent life, while many of the capitalists get more than they need or can spend. And particularly capitalists get the power to direct the use of the residue for any purpose which they choose.

The age-long explanation of this is that goods are so scarce that with the best effort some folk must remain in poverty and need. It is this alleged fact that the 20th century laborer is disputing. He maintains that a more just distribution of the results of industry could eleiminate poverty disease and ignorance among the working class. For this purpose he has been organizing labor unions and trying by appeal, bargaining and if necessary by strikes, picketing and legislation to raise his standard of living to decency and comfort. He does not want in this contest to deprive manager or owner of his just reward for saving, planning and direction, but he insists

that he, the l borer as partner in production should have some voice in deciding what is just. He rejects certain age-old excuses for present conditions. When the National Association of Manufacturers advetises that the "more we produce the more we will have," he knows full well that this depends on who does the dividing and who gets the shares.

35-4-270

The conventional answer to this contention of labor is th t the essential capital to employ labor c n only be had if its owners are attracted by large profit to invest the'r wealth instead of consuming it. Once this was true. In the 17th and 18th centuries most of the rich did not save; they spent conspicously and extravagantly; and industry could only secure their cooperation by the gambler's bribe of high profit.

Today the situation is far different; there is capital in so great abundance that it begs opportunity for investment and indeed cannot be used in any other way. Also the risk of loss in legitimate industry is not small and might be reduced nearly to nil by intelligent and scientific planning. Moreover most of the curent capital comes not from the rich but from the comparatively poor who save for old age and a rainly day. But the huge profits of industry to not to them but to the financiers who as middle-men handle their funds, giving the 2% in savings banks while this wealth in forieng trade often reaps 50%. Small wonder Big Business fights and schemes and drafts the 18 year old youth. Profit is thicker than blood. Which makes Senator Lehman representing the foreign investor love Dulles, the Anti-Semite counsel for Lehman Brothers. When both seek the coal, iron, copper and gungston of Korea for American capital.

This has led many a social thinker to point out that capital for all real human want and improvement could e sily be taken from production and leave sufficient income for all consumers, provided of course that individual consumption was so li ited that no man had cake if any man lacked bread:

that mink coats for the rich were not allowed, if the poor had no shoes, and of course here's the rub. This compulsion which socialism proposed long before Lenin as the only way to decent human life, raises shrieks of protest if hinted at today in the United States. Rember what happened when Roosevelt proposed to limit incomes to $25,000.

35-4-2711

What church of the lowly Jesus, who railed against the rich , would for a moment admit or preach such ddnctrine? And yet is it strange that the poor and hardworking laborers of the world, without sufficient food, shelter and clothes; fearing old age and sickness more than the flames of hell-- is it strange that they by overwhelming majority are demanding this regulation of production and consumption and that this is not Russian imperialism but American commonsense?

You cannot stop this line of thought from growing in an intelligent world if you kill all the youth and dye the oceans red with blood. Social control of production and distribution of wealt is coming as sure as the rolling of the stars. The whole concept of property is changing and must change. Not even a Harvard school of business can make greed into a science, nor can the unscrupoulous ambition of a Secretary of State use atomic energy forever, for death instead of life.

The sales tax in Mississippi amounts to 18% on the earnings of the poor; the tax on homes in Georgia has driven hundreds of workers into the street; the withholding of wages for taxes in New York makes the tax burden often unendurable for stenographers and clerks. Great wealth today escapes its just share of the tax burden despite its huge and increasing profit. Yet taxation is being used for securing markets all over the world: for getting cheap oil, rubber, minerals, copper, tin, and lately for threatening world war on any nation which interferes directly or indirectly with our proposal to own and exploit the earth, even if it kills a few hundred thousand of our youth.

35-4-272

Thus taxation falling mainly on the poor furnishes funds which make American investment safe; and then the business man without risk, with cheap native labor, reaps 50 or 100% profit and calls it his. He uses it in elections like this to buy public officials, push legislation which favors him and kill laws which he does not like. Moreover much of the capital used today is taken from public funds through taxation while the returns go to private profiteers. For instance huge profits of the automobile industry are largely due to the vast expenditure for roads paid for by the public. Labor contends that it is therefore but fair to take part of this profit for public use. On the other hand industry in the United States consistently refuses this demand and is reluctant to bear its own share of public taxation. Today for instance, the owners of our commerical shipping, built and sustained in part by public taxation pay less proportionately in taxes than the sailors on their ships pay out of their wage.

Today despite every effort in the United States to conceal and deny the facts, all civilized nations except this have been progressing toward socialism especially since 1900. They own and run the railways, the telephone and telegraph, street cars, buses and subways; they largely conduct housing sanitation, insurance and relief, they guarantee employment; they engage in industry, in manufacturing, foreign trade, mining, forestry and river control in power conversion and control and wide ownership of land. Some nations like Britain go further than this; others like the Scandinavian lands plan less in theory but do evermore in practice; while the Iron Curtain lands attempt complete social and industrial planning and ownership of all capital.

Here then is a world movement which the United States almost alone is attempting to stem. We are attempting to champion private enterprise when no great industrial effort can possibly be private or carried on primarily for private ends; we stress individual initiative which is laudable when it is for social ends and inadmissable when it leads to anarchy.

75

35-4-278

All this is not gossip and spite. The truth, the simple truth about wealth and property; about social control over greed and monopoly is well-known but it is not taught in our schools and colleges. Our teachers of economics instead of teaching the ABC of income and wage go off into higher mathematics and are paid $7000 a year to stay there, not counting income from writing against labor and socialism paid for by Big Business. Our bright young men are driven out of government employ by low salaries and witch hunts and hired by Big Business at high salaries to keep their mouths shut and work for private profit. This throws the burden of teaching economics and the ethics of income and wage on the laborers themselves. For this reason the leaders of the Labor Party in this election are talking not only what is usually called politics but matters of vaster importance which have to do with life itself. They are pledged to work for the repeal of the Taft-Hartley Act and not to be fooled by the Truman run-around, to keep plugging for a real FEPC, so as to give opportunity for ability despite race or faith; for peace so as no longer to sacrifice our sons for private profit from the poor and degraded of the world. And beyond this to demand public housing, social medicine, federal aid to education; and especially higher wage and lower tax on the poor in order to readjust the present unjust distribution of wealth in accord with the highest social welfare of all.

DEMOCRACY

BY

W. E. B. DU BOIS

Democracy is the form of government in which each citizen has a voice in all decisions of policy and action. It contrasts with dictatorships, oligarchies or class rule. In a democracy the citizen must have freedom of opinion, access to the facts and right of expression by voice and vote. The United States has always regarded itself as a democracy and lately has assumed leadership of the democratic forces of the world. The American Labor Party ventures to examine this claim. First of all this country was not at first a democracy even in theory, but successively a monarchy, a theocracy and then an aristocracy of birth and property. Jefferson and the French Revolution turned it toward the democratic ideal and the age of Jackson admitted the workers and farmers into the body politic.

35-4-186

I saw American Democracy in the last quarter of last century, from the point of view of New England, then its best expression. We had freedom of opinion and considerable right of dissent. But in actual political life we were under the pretty strict control of the small landholders, the owners of town real estate and the merchants. They were the only ones who were elected to town office and whose influence was dominant over public opinion. There was no public discussion or voting on such matters as wages, hours of work or income. Slums, poor relief, sewage and health were discussed only as they affected taxation. The wretched slums in my town surrounded the woolen mill, whose owners were the social aristocrats of the town. We never discussed them. In school we did not discuss property nor income. We regarded these as purely private matters. We never had strikes and opposed the idea as futile and unnatural. Poverty was looked on as usually the result of laziness, and good schools were furnished free to those able to attend. Poor relief was a public disgrace distributed gingerly. Private alms-giving was common. This was an

approach to democracy, but it was not complete democracy.

First of all, democracy in the United States has historically excluded from the right to vote, at various times and places: Catholics and dissenters like Jews and Baptists, all women before 1920; the poor, even in some areas today, Negroes or descendants of Negroes, Indians, Asiatics and Foreigners; illiterates, even where there were no schools nor ability to attend.

Meantime there was growing up along side our democracy and increasingly contradicting it, a system of human slavery which was an integral part of our economy and a prime source of our wealth. When we nobly declared "All men equal," every fifth American was a slave, purchasable exactly like cattle. Naturally we saw this fatal contradiction but excused it in various ways and hoped it would disappear without costing us too much. But after hesitation during the period from 1776 to 1820, just as democracy was broadening so as to include white laborers, Negro slavery in the United States became the basis of a cotton kingdom and cotton together with sugar, tobacco and other slave-raised crops processed by a new technique, caused an Industrial Revoltuion which rebuilt the modern world. In the United States the slave power grew until it became the rule of a political oligarchy which not only was not democratic but openly derided democracy in the North and West and expanded the slave aristocracy South and West. However coincident with Southern aristocracy had grown up a Western section of adventurers and pioneers among small landholders and there a new virile democracy began to flourish. If the free land which the nation owned in abundance had in the 30's and 40's been distributed widely among them, augumented by immigration from the South, East and Europe, this region of peasant proprietors would have imposed democratic government and freedom of thought on the whole nation. But the western land was held off the markets as long as possible, then was given to railroads and corporations digging for minerals and oil, as well as to small farmers until the day when the western farmer had to fight the slave power for free land.

35-4-187

In the ensuing Civil War, no one except the despised Negroes and white abolitionists opposed or wanted to attack slavery. The mass of citizens wanted to keep this system of labor off its free soil but was quite willing to protect it in the South so long as it applied only to Negroes.

Northern industry was hand in glove with slavery from which it derived huge income. It swore violently to protect all the rights of slave owners in the South and deny Negroes citizenship or human rights in the whole nation; but it refused to surrender Southern products and markets to Europeans and rather than lose this profitable union was willing to fight, destroy and kill. But victory in war is not always as easy as scrap-happy generals tell us. The Southerners with leaders trained at West Point, weapons stolen from the government and with black labor in the fields to raise their food and clothes, fought the North to a stand-still, invaded the North and nearly captured Washington.

35-4-188

Then the North had sense enough to accept the cooperation of slaves which had been offered to them from the first. Negroes had fled from the plantations by thousands and were used as spies and laborers until finally 200,000 of them became armed soldiers in the armies of the North replacing Northern white men who refused to fight. Southern poor whites began to desert. Victory for the North became simply a matter of arming increasing numbers of the whole mass of a million able-bodied slaves. Facing that prospect, Lee surrendered after a futile attempt to induce Negroes to fight for slavery.

Then suddenly and most unexpectedly, the United States had a chance to fulfill the dreams of its greater founders and become a democracy in fact as well as name. Charles Sumner and Thaddeus Stevens; Frederick Douglass and Wendell Phillips urged the nation to give the emancipated Negro the vote. Sumner said in 1866: "In the fearful tragedy now drawing to a close there is a destiny, stern and irresistible as that of the Greek drama, which seems to master all that is done, hurrying on the death of slavery and its whole brood on sin. There is also a Chrisitian providence which watches this battle

80

81

with erect countenance looking to Heaven, made in the Image of God, and I show you a man who, of whatever country or race, whether darkened by equatorial sun or blanched by Northern cold, is with you a child of the Heavenly Father, and equal with you in title to all the rights of human nature."

35-4-189

The nation was aghast: what, recognize Negroes as men and voters? Impossible. And then Industry realized that the South, although beaten in war, was about to resume its control of national politics by reinslaving the Negro and basing increased political power on white representation of disfranchised b blacks. There was but one way to forestall this and that was to put votes into the hands of the Negroes and let them by democratic methods outvote their former masters. But soon it was evident that the new Negro voters would not confine themselves to serving Northern industry and agreeing to the narrow definition of democracy which was current in the North.

On the contrary they were going to interfere with property, ~~and industry~~. This was from no theory of socialism learned from Karl Marx, but from dire necessity. Thaddeus Stevens said in 1865: "We have turned, or are about to turn loose four million slaves without a hut to shelter them or a cent in their pockets. The infernal laws of slavery have prevented them from acquiring an education, understanding the commonest laws of contract, or of managing the ordinary business of life. This congress is bound to provide for them until they can take care of themselves. If we do not furnish them with homesteads, and hedge them around with protective laws; if we leave them to the legislation of their late masters, we had better have left them in bondage."

Congress however refused to give Negroes land or tools; the freedmen were penniless; they had no clothes nor food; they had no trained social leadership. They began, they had to begin to divide the big plantations into small farms; to provide capital from higher wages and public funds and to open free public schools. This was too much for the nation: they had not emancipated Negroes for a new democratic socialism, but for control of the

35-4-190

cotton crop.

The white ex-masters were equally alarmed to see black folk about to acquire education and capital by democratic methods. North and South united to overthrow democracy in the new South; to disenfranchise the Negro vote: establish a color caste of cheap labor and to get cotton back on the world market. When this overthrow of democracy was accomplished about 1885, Big Business in the guise of oligarchy in American industry began openly to move in. In vain we yelled about reform, trusts and monopoly; the power of capital and wealth in the United States grew frantically in the 90's until a great wave of fear and resentment engulfed the nation in the Nineties.

William Jennings Bryan voiced the revolt of the Populists and was on the way to victory, when Mark Hanna, an Ohio capitalist, threw off all disguise and openly bought the Presidency for William Mckinley; capital slapped and cheated Populism into oblivion, while the rank and file American was appeased by absolutely unnecessary Spanish War and our democratic country became an imperial owner of cheap colonial labor and serf-grown sugar.

We entered the 20th century, not as a democracy ruled by the votes of the people but as a plutocracy ruled by wealth and for wealth. The slave power was replaced by the money power and under neither could democracy flourish. Thus today the heirs of the slave power, adopted by the money power, rule congress through disfranchisement and unlimited debate, so that illiterate chairmen of powerful committees run foreign affairs and domestic policy, while the fabulous resources of an empire like Texas are surrendered to monopoly by manipulation of federal funds.

We openly expressed our disbelief in the possibility of democracy and absolute necessity of manipulationg elections, choosing picked candidates and circumventing the popular will, if such a will existed. Our representation in legislature and congress was notoriously unfair and unequal. Twelve million voters in the Middle Atlantic States send six senators to Washington

82

35-4-191

while 4½ million voters in the South send twenty. In the South 44,000 voters have equal power to 134,000 in the Middle West. Our courts were removed as far as possible from popular choice and juries are often a picked aristocracy, insured conviction of any enemy of the ruling classes. We added to our colonial possessions and influence. We evolved a technique of ~~xxxxxxxxxxxx~~ control which we loudly advertised as American Democracy. It consisted of putting stooges and quislings like Chiang Kai, Shek, Syngman Rhee , Quirino and Munoz in power and letting them run the government and rig the elections while America's business moved in to exploit labor and materials for American profit. When the lid blew off this arrangement, we yelled: "Here come the Russians" and prepared for world war.

This technique could not fool the nation forever so that on the threshold of the second half of the twentieth we are set to curb and suppress that public opinion of the people of the United States which once aware and arcused will sweep away the rule of Big Business like chaff. This happened under Franklin Roosevelt and will happen again when this drugged and frightened nation wakes up.

We fooled the public with lies; we nailed up the real sources of information; we spread fear and fairy tale; we hiked the price of elections until $40,000,000 a year is used to buy results which Big Business wants; and finally we marched the Generals in to put the youth of America into the Goose Step and spent for drilling what we ought to spend for education.

Here we stand today and what can we do about it? We can get out of South America, the Caribbean, Africa and Asia; we can stop war and preparagion for war; we can stop obstinately refusing to negotiate world peace save on our own terms; we can put the military out of public office. And then we can turn our fantistic waste of money on murder and destruction toward education; knowing as our slow-witted president has just discovered that a third of our youth today is illiterate, untrained, sick and unfit. We can support a free press and refuse to take pictures and advertising

35-4-545

PEACE AND CIVIL RIGHTS

BY

W. E. B. DU BOIS

This is the astounding day when the nation which has most loudly boasted of Peace and Freedom; which assumes leadership of the democratic nations of the world, is preparing for war; and not merely for defensive war, but for a war to destroy the Union of Soviet Republics, China and all nations which embrace communism or even extreme socialism. This conquest of the world has started in Korea, is spreading to China and may any day embrace the world.

The United Nations, our hope of peace after the horror of Two World Wars, is being disrupted by deliberate attempt to break that principle of unanimity wisely imbedded in its charter and to surrender it a helpless puppet to a majority dominated by the United States. To finance our proposed dictatorship of mankind we are spending and preparing to spend a sum of money greater than the income of the rest of the world and so vast that we ourselves cannot conceive its size nor the shattering impact it will have on our economy, on our total life and work.

This is the bare truth which confronts us, although many americans stagger in a daze and do not seem to realize our situation or the unprecented crisis which confronts civilization in our day. Nor do they appear to know that the great corrective of sane and informed public opinion, which in crisis like this could hitherto be relied upon to restore sanity and normal reaction, today no longer exists. Organized propaganda on an unprecedented scale and world wide in incidence has denied this nation access to the truth and distorted our every judgment.

Our intellectual leadership today stands cowed, or silenced completely. Our ethical and religious guidance is even more completely shorn than usual of all influence or initiative. We are a lost and leaderless people rushing madly down steep places into a great sea. Our youth in schools are frightened

85

by tha atom bomg; or in colleges headed by merchants, politicians or generals indoctrinated with hate, or in the military forces in steadily increasing number blindly goose stepping to orde s and pe paring to disappear into crippled manhood, insane mentality or be black fate of purposeless death.

The American Labor Party in this day of wrath cries to this great city and Empire State, a last work of warning, muffled though it may be by silence, threat and lack of opportunity to bring our message to a tenth of those who should hear. We say and say again with reiterated emphasis; our plight, our sorry plight in this land today, is due and due mainly to the money power; to the organization for private profit which has bought up our periodicals, throttled our news gathering and paralized our thought.

Our whole concept of life has been altered since the day when after the overthrow of the slave power, Northern merchant and Southern slaveholder united to overthorw democracy before it was born in a new South; to disenfranchise the Freedmen's vote and establish a caste of cheap black labor , which bound white labor in equal chains. When this overthrow of democracy was accomplished, monarchy and oligarchy in American industry beg n openly to reign.

This technique could not fool the nation forever so that on the thres hold of the second half of the 20th century we are set to curb and suppress that public opinion of the people of the United States which once aware and aroused sweeps away the rule of Big Business like chaf . This began to happen under Franklin Roosevelt and will happen again when this drugged and frightened nation wakes up.

65-4-18

RESULTS

BY

W. E. B. DU BOIS

On the whole I enjoyed this unique excursion into political activity. I encountered little open race prejudice, although of course few New Yorkers wanted bo be represented in Washington by a Negro; because of their prejudice and also because they suspected I was more Negro than American. To counteract this at least in part, I made no appeal to the Negro vote as such. I wanted the people of New York to know that as Senator I would represent the interests of the state and not merely those of one minority group. At the same time I knew and Negroes knew that I would regard Negro emancipation as a prime prerequisite to American freedom and possibly from birth, training and bitter experience, I would unconsciously over-emphasize this aspect. The Negro voter of Harlem was in a quandry; he knew that no candidate would defend Negro rights as I would; he also knew I would be defeated and that he must depend on Lehman or Hanley. His path was cloudy.

My age was always mentioned and emphasized; it being apparently assumed that no American had any business to live and think beyond the age of 70, or preferably 40, on account of the wisdom and courage of current youth. Naturally I was not impressed by this argument and was annoyed that age should continually outweigh reason. But above all I was amazed and exasperated by the overwhelming use and influence of money in politics. Millionaires and corporations, not record and logic, defeated Marcantonio. Dewey could afford to spend $35,000 for one day on radio; when friends of mine the nation over sent $600 to further my campaign, it represented more honesty and guts than all the millions spent on Lehman and Hanley. Small wonder the result of this election throughout the land sounded like a "story told by an idiot."

Five million persons voted in this election; of these, four per cent voted for me, which was far more than I expected. More than a million of the

87

voters stayed from the polls, after a great social effort like the election of 1950, one must feel the let-down. Even thevictors gain less than they wish, while the losers wonder if it was worth all the effort, all the worry, all the breathless disappointed hope. Yet there is a sense in which no sound effort is in vain, least of all a struggle with high ideal and personal integrity.

One feels that in the end, all of this can never be lost; that somehow, somewhere, whatever was fine and noble in this campaign will triumph; and what was vicious and low will remain contemptible, no matter what the returns today say. Of course I was disgusted at the re-election of an acknowledged demogogue and opportunist like Thomas Dewey as governor of the Empire State and the continued threat of his elevation to presidency. I was insulted to know that two million New Yorkers wanted a petty grafter like Joe Hanley to be continued in public office. I was sorry to see Herbert Lehman go back to Washington to keep us in war and chains. But most of all I could not understand how a sane and intelligent electorate could reward the brave, lone fight of Vito Marcantonio with defeat. It just did not make sense, but dollars did it--just plain cash to purchase the election of as reactionary and characterless a nonenitity as ever sat in ~~x~~ Congress.

I felt as seldom before the vicious use of money to nullify democracy and the chains of party politics for selfish and dirty ends. As for myself, having never expected anything but defeat I would not have been surprised if no more than 10,000 persons had voted for me. I was astonished by a vote of ~~125,000~~ 205,729 a vote from men and women of courage, without the prejudice against color which I always expect and usually experience; a vote from a tenth of the voters of a state owned, cowed and enslaved by Big Business. This meant that these faced poverty and jail to stand and be counted for Peace and Civil Rights, for this I was happy.

88

I had slapped no backs during the campaign which I had not slapped before; I had begged no man for his vote as a personal favor; I had asked no vote simply because I was black. It was a fine adventure. [redacted]

"BLACK DILEMMA"

Undated
Draft pages and notes for chapter 5 of an unidentified book

Ch 5

~~The~~ Black Dilemma

~~KEEPING BLACKS AND WHITES APART~~

~~By W. E. B. Du Bois~~

Present leadership among American Negroes is in chaos. ~~The reason is not far to seek and~~ may be illustrated by the abridged dialogue of a recent conference. Those present included two white persons,--a social worker, and a lawyer; and four colored folk: the minister of a church, a teacher, an official in the city civil service, and a housewife, whose husband was a professional man. They were discussing racial segregation; that is, the laws and customs of this land which seek rather successfully to put white and black folk in separate ~~spiritual~~ and even physical worlds.

"It's all wrong and thoroughly undemocratic," said the social worker, crisply.

"We must never accept it," said the Civil Servant.

"But we have accepted it and we've got to," replied the minister, meekly.

"That's cowardice; you must fight," said the lawyer.

"How?" asked the troubled teacher.

"By refusing under any and all circumstances to submit tamely to it."

"In which case," said the preacher firmly, "most of our children would go without education, and most of us would lose our jobs."

"Nonsense," snapped the Civil Servant. "I got my job by merit, and I work side by side with white men--"

"Backed by the solid black vote of your ward which is organized in a separate bloc, and held as a threat over the power of the local white boss," interrupted the minister.

"We have mixed schools in our city," retorted the housewife.

"And mixed treatment," said the teacher; "with no voice in the school board and few colored teachers. Most white teachers despise their colored pupils and discourage them so that very few struggle through the course."

"So you want separate schools?" asked the lawyer.

~~"No, I don't. What I want is for this great city to feel that its~~ colored children are as important to the world as its white children. ~~The present~~

fall

Colour Can only find education in separate Schools
then I want separate schools & I would then fight as
long as State regard ~~Coloured Children as less~~
~~entitled than White Children~~

36-11-33

Historically this has often happened with

successive waves of indignation, despair and high hope. This
ing cut
color line cutting across, as it so often has and does, the cultural line, has caused men like Nat Turner to kill every white person in sight or men like Russwurm and Lott Carey to shake the dust of America off their feet or men like Douglas and Lynch to urge the use of political power so as to compel the breakdown of the color bar; or men like Booker Washington to attack that bar by industrial organization and accumulated wealth; or finally by groups of persons, white and black, to show by thuggish agitation and protest, by court case and stinging arraignment, the loss, paradox and frustration that this senseless mixing of culture and race is bound to bring.

But today economic disintegration adds to political and cultural problems. Everywhere one hears the solution discussed & the difference of opinion emphasized

"Don't you know" said the colored housewife passionately that 'colored schools' are always poorer schools, never taught with fewer funds?

"I'm Ga." added the lawyer, Negroes forming 34% of the school population get 13% of the school

And I shall suffer from Negro schools & good White school where Negroes go [illegible] killed mean streets crooked & them heads turned they weren't responsible they're colored but because the world fight men gun & make them killer

30-14-246

(2)

So "You're willing to drop the fight," said the social worker, impatiently.

"No, I want to fight harder but with more power "but how and when?"

"Yes," said the preacher, "How? Would it help this fight against segregate to me to close up my church?"

"It might," muttered the Civil Servant, ~~half beneath his breath.~~ anyway

"I know; at any rate, it wouldn't hurt you because you never come; and I can't say that I blame you. But, after all, there are fifty thousand Negroes in this city who've got to go somewhere; and if they are not welcomed in theaters, settlements, parks, concerts, public meetings, ~~gmes~~, bathing-beaches, camps, and white churches, where in Hell (and I speak advisedly) are they to go, except to churches like mine, poor as such churches may be. Of course, Hell welcomes them at pool narrow and ugly rooms, joints, liquor dives and whorehouses---"

"Mr. Jones!" exclaimed the housewife.

"I don't care," shouted the Civil Servant, reaching for his hat. "Under any circumstances, I say No Segregation."

"It threatens democracy and world peace," added the social worker, rising.

"You must continue to fight it," insisted the lawyer.

"Yes, I know and I agree, but how?" persisted the puzzled ~~teacher~~ preacher.

The housewife turned on him impatiently. "We have been fighting race segregation for fifty years and more," she stormed, "we've got mixed schools in th North; we've got civil rights laws for hotels and theaters; we are often received as social equals in art and literature. And now, because the climb has been hard, you want to retreat, throw it all over, surrender and crawl."

But the teacher's voice ~~got~~ roar thin and bitter. "Yes," she said, "but we've many white still got separate schools for nine-tenths of our children in the land; and schools and colleges make the lives of the other tenth if not miserable, certainly not happy. We've got civil rights laws, loads of them. They are seldom enforced, and over half the time we dare not test them in court. We can perform in music and art for the curious and prurient in Harlems and Beale Streets, but that's a variety of social equality which I do not appreciate. We make the Broadway footlights now and then but only now and then and in starkly limited roles. We must be clowns or commit suicide. I tell you, I don't want to retreat. I want to fight. But

Paul Robeson

30-14-246

Keeping Blacks & Whites Apart

Present leadership among American Negroes is in chaos. The reason is obvious & is best shown by a recent conference. There were present two whites — an author & a lawyer, and four colored folk — a preacher, a teacher, a civil servant & a housewife. They were talking about Segregation — the law, its, laws & customs of the South which keep white & black folk in the more or less separate worlds

"It is wrong & undemocratic" said the author, crushingly

"We must never accept it" said the Civil Servant

"But we've got it" replied the housewife meekly

"I fight it" said the lawyer

"How?" asked the troubled teacher

"By refusing under any circumstances or any where & at any time to submit to it."

"In which case" said the preacher "our children would go without education, their morals & us would lose our jobs, and mixed black workers would starve"

"Nonsense" snorted the Civil Servant "I got my job by merit and effort — "

"Backed by the solid block vote of the South and organized in a separate class

& threatening & from the local boss" interrupted the preacher

"We have mixed schools in our city" said the housewife

"And mixed treatment" said the teacher "with one person on the school board

& one part time colored teacher. Most of the teachers despise their colored pupils & discourage them so the poor struggle through"

"So you want separate schools" asked the lawyer —

"No I don't. I want the city & feel that its colored children are as important

& the world as white children. And as long as it doesn't look as —

"you are willing & dark the fight" said the author indignantly

"No I want to fight & harder — but How?"

"Yes How?" said the preacher "I might & help & close my church."

"It might" groaned the Civil Servant

"I know — it would hurt you. You never come & I'm not complaining. But

There are 5000 Negroes who've got & go somewhere & they are not

welcome in theatres, hotels, restaurants, camps, public meetings, games, bathing beaches

and white churches, where in Hell (and I speak advisedly) are they & go except

& churches like mine poor as they are. Of course Hell welcomes them & pool room

parties, liquor dives & whore houses —"

30-1-48

"Mr Jones" exclaimed the House wife

"I don't care, I say No Segregation" yelled the Earl Edmund "reaching for his hat

"And I say fight it" said the lawyer

"It threatens democracy + peace and the Button man

"Yes" I know, but don't" demanded the puzzled Lieder. The Housewife turned on him unbelievably

"I've been hearing race segregation for forty years" she stormed; "We've got mixed schools in the north, we've got civil rights laws for hotels + theatres, we've achieved several equality in art + literature + now you want to retreat, throw it over raise the white flag + crawl"

But the leaders would get him + killed: "Yes we've got separate schools for 9/10 of our children + hotels + college are under the laws / the older South remains; we've got civil rights laws that are not enforced + we don't dare test them; we can't perform for the citizens + tourists in Harlem + Greenwich villages. I don't want to retreat. I want to fight, But I don't know whom to fight or how + to yell "No Segregation." is not fighting the yelling". But his audience was gone

---

Of course is pulling an age old stone wall with arguments excuses + extenuations just as old. Granted a social cancer suddenly smaller + all its ends in collision, friction is inevitable. But the cost of human friction, a quick amalgamation, national hatred + racial dissension is of tremendous, so appalling, that the work of social betterment demands more serious + continual effort. It cannot excise the fact that in the blood + tissue of American we have in microcosm world wars. We only deny + murmur vain, deny it nevertheless dead bones + poisonous openings + yet the fatal cloud of Suicide Assault + Spleen, the war of hatreds, can be averted by see that a tenth of this nation is allowed human + cultural development

The answer to this demand is a thousand discouragingly by a very uncommonly. Of course — to be sure — certainly. All what has been accomplished already. What is considering? All is well.

All is not well. No more critical moment every faced black America, neither in 1820 or 1861 nor in 1867. Before the Dishonest Negroes of the South were doing "Negro jobs" — This is the kind of the world's work assigned them by common custom, from field and kitchen to brothel, and like - Pushkin

The Crisis, Vol. 8, No. 1, May 1914, p. 30

New techniques, mass production, trade unionism, displaced Negro workers in tobacco, lumbering + mining, and confined them to common labor and domestic service + the worst paid sorts; in textiles, tobacco, and chemical [illegible] they were almost excluded while in farming they sank more + more to landless tenants + farms. The world war + its rapid aftermath opened a door and two million black workers rushed north + west to steel + automobiles and factories rushed. They met hard [illegible] race antipathy + the A.F. of L. unions and the Democratic party + Labor met them

They lost their jobs north + south. They lost their farms + homes they used as their savings. When relief came it reached the white worker first + the black never last or not at all. Now in all this they were much like other workers only more so; their technological disablement was greater + subtler; the Depression struck them sooner + will last longer + go deeper; above all relief was less complete and in all the planned recovery they find no integral place.

All this calls for energetic thought + plan on their part as Americans they are. They are no longer wards nor children. They have been detached by the Great Society and made aware by an interwoven complex and yet they have grown up well educated men + women, they have accumulated some property + acquired some skill and they have had long experience in organizing + fight for their rights + the recognition of their fellow men.

But Negro leaders have not been fighting on the economic front — rather they must persistent effort has gone into education + social recognition as men. Even the Booker Washington [illegible] fight was not completely industrial + economic. It was only economics in so far as it formed a labor complement to the industrial plans of white employers. Freedom and intercaste industrial control sought + provide a reservoir of docile common labor and an army of skilled + semi-skilled artisans outside the unions and able + desirous union demands. The programme was one economic

UNIDENTIFIED BOOK

C. 1920's
Typescript of 3 chapters
"The Shadow of Africa"
"British West Africa"
"French West Africa"

Section II.

The Shadow of Africa

The persistent shadow of Africa over the thought of black and white America from the beginning has been perhaps the central blot of American history. Upon the Europe of that marvelous 15th Century, there bursts suddenly the realization of rich free land beyond the sea. Free land was unknown to the organized Europe of that day. All land was owned and more than owned. It was the basis, not simply of economic organization, but of government, of society, of military defense and aggression, and even of religion. The new land of America first presented itself as a place where wealth might be found and brought back in triumph to be enjoyed in Europe. Then came the realization that the wealth of America was to be had but only in rent and hard labor and this hard labor must be furnished by white indented servants transported from Europe, and then in larger and larger proportion by black men brought from Africa. Out of this rose the problem of slavery in America which in its various aspects and transformations became the central problem of the history of the United States from the signing of the Assiento in 1713, to the Emancipation Proclamation in 1863. And even beyond that to all the insistent Negro problems that arose from the adoption of the 13th Amendment down to our day.

37-10-172

Africa, therefore, has always been in the mind of America. First, as a source of labor. Then, gradually, as the place to which black laborers must eventually be returned if slavery could be abolished. And then, finally, in the minds of the slaves themselves and the freedmen the idea of Africa as the Fatherland toward which they would go or toward which their hearts would determine or on which their interests

must at least to some extent be centered.

The return of the slaves to Africa was an idea that early took root. Before the Revolutionary War, there were some plans started for sending Negro Americans as missionaries to Africa, but the idea of proselyting among the natives and gradually attracting free Negro Americans. In England, the matter took deeper root. Under Wilberforce, Clarkson and Sharpe and stray Negroes, were gathered from the slums of London and recaptured slaves from slave ships and all dumped rather unceremoniously in what is now Sierra Leone. Sixty white prostitutes were considerately added to the band and the wretched little colony struggled and grew. Meantime, after the Revolutionary War, American statesmen began to look about. Jefferson first thought about a Negro colony in the new Northwest, but after the Haitian Revolution began to consider the West Indies. Finally, he turned to Sierra Leone and West Africa, but the pitiful colony there was in such wretched condition that the English did not encourage him. Nevertheless, the Abolition sentiment, after the Revolutionary War, grew, both North and South. In the North, it resulted in the freedom of the slaves; partly as a reward for their fighting in the Revolution; partly as an attempt to make America in reality a free Republic.. But the difficult question was. What was to become of the slaves? No one envisaged the possibility of the mass of these enslaved Negroes becoming a free, intelligent and enfranchised voting class in America. The only hope seem to be to colonized them, and January 1st, 1817, the American Society for Colonizing the Free People of Color of the United States was formed at Washington, with a nephew of George Washington as President, Andrew Jackson as one of the Vice Presidents, and twelve managers, who were all slave holders. Immediately, there arose a grave question. Was this an organization to support or undermine slavery? Was it an organization to get rid of free Negroes under any

37-10-173

circumstances and make all American Negroes slaves or was it a sincere effort to colonize in their Fatherland 1,750,000 Americans of Negro descent, and here was the rock on which the whole colonization movement spread. For a young nation, impoverished by two wars, by internal weaknesses and foreign complications, to undertake to expatriate one-fifth of the nation forming at the time probably two-thirds of its ordinary laborers, was a tremendous undertaking, and the question of the physical and financial possibility of such a thing, even if stretched over a generation, was a grave one. On the other hand, the people of the United States and no considerable part of them, were really in favor of any such action. The South had lost large numbers of their slaves in the Revolutionary War and the War of 1812. They needed not less but more labor. Especially, with the growing importance of the cotton crop. The North, impoverished by the Napoleonic Wars, was not disposed to pay too much for philanthropic effort. They wanted peace and trade. It was, then, very easy for the colonization movement to palliative by which obstreperous and unambitious Negroes would be _____ out of the country and the s_____ of slavery made stronger and more permanent than the rest.

37-10-174

This brought within the ranks of the Negroes themselves and attitude toward Africa that has persisted down to our day. They began to look upon Africa and all suggestions of emmigrations as part of the pro-slavery program. Even those who were disposed to leave America were disillusioned. Paul Cuffee, born near New Bedford in 1759, took at his own expense in 1815, thirty-eight Negroes to Sierra Leone and had larger plans of emmigration. John Russwurm, a graduate of Bowdoin College, and the first American Negro to graduate from college, sent another to the new Liberia to lead in education, and Lott Cary purchased his own freedom and went as one of the first American missionaries to Africa in 1821.

But these were all exceptions. Most Negroes of that day had been born in America, spoke English, were unacquainted with Africa, and considered expatriation as simply an attempt to get rid of them, nor did the experiment of Liberia convince them. The Colonization Society had sent two men to West Africa in less than a year after it had been formed. They recommended Sherbro Island for settlement. Then, the government came to the rescue by authorizing the return of slaves captured on the high seas to Africa. With the help, then, of the Colonization Society, on the one hand, and the government on the other, a permanent settlement was finally made on the Mesurado River, and from that beginning, after many vicissitudes, arose the Republic of Liberia which became an independent government in 1847. Comparatively few American Negroes migrated to Liberia. Perhaps, the total migration amounted to _____. Slowly the interest of America and American Negroes in Africa dwindled, and the idea began to be more and more firmly fixed that for better or worse the American Negro was going to find its future in America. Nevertheless, it was impossible to break the spiritual ties between Africa and black America, and in the 20th Century there has arisen among American Negroes renewed interest in Africa because of the ameri__ of blood and among American white people renewed interest because of the new economic meaning of Africa. Let us, therefore, for a moment consider what Africa is? We may use an expert and old similie. Africa is an averted plateau, with a great plateau in the center, and a raised rim and series of deserts along the coast. But we must distort this plateau a bit, making it long and broad at the upper end and tilted high in the South. It will be seamed and scarred with a great lengthwise crack in the Southern East, veiled by great and deep lakes. There will be vast deserts, North and South, which were once seas, with snow-capped peaks on the equator and hills and ranges of mountains along the plateau's raised edge

37-10-175

Above all, there are rivers. Rivers so mighty that the history of Africa is the story of its rivers. Of Nile and Niger, of Congo and Zambezi, and of others which circle and turn and finally fall bursting through the mountains, fall off the edge of the plateau in rapids and cataracts, down into most of the seven seas. This Africa is too vast to be one country. No one living in Africa or knowing it speaks of it as a whole. They talk of West Africa and of South Africa, of Portuguese Africa and of Egypt, of Algeria and of the Sahara. No one speaks of its races by anyone name. Nor is the word Negro known there, except as a modern importation from abroad.

37-10-176

What has happened in this land? One may tell its human story in this wise:

Once upon a time there lay a land in the southern seas; a dark, grim land, walled well against the world. And in that land rose three rivers and a fourth, all flowing out to seek the sea. One river was born amid the Lakes and Mountains of the Moon, sun-kissed, snow-capped, and fled to the northward silent, swiftly; it clambered over the hills and swam the marshes. It threaded the sands—the narrow, choking sands that grew hotter and narrower as it went; yet the river swept on to wider, greener fields, to a laughing plain until through many mouths it burst like a rocket to the Middle Sea with all its myriads of men.

In the wake of the river came dark men creeping, dancing, marching, building, until their pyramids and temples dotted the land and dared the Heavens, and the Thought of their souls and cities was the Beginning of the World.

Far, far away to westward another river leapt and sang and lightly turned its back upon the Sea, rushing to northward. But the grim desert shrieked in its fastnesses crying "Not here!" So the river whirled southward till the black forests cried in their gloom, "Not here!" So the river whirled southward till the blacks forests cried in their

gloom, "Not here!" The river bowed and circled westward. Sullenly, silently, yet proudly, she swept into the western sea. As she swept she sang low minor melody; as she sang she scattered gold carelessly to the black children. But ere she died in the depth of the sea she gave to her strongest and blackest sons, Iron--the precious gift of Iron. They fashioned it cunningly and welded it in faery forms and sent it to the ends of earth to make all men awake. And men awoke. They awoke on the cunning breast of the river's self and kingdom on kingdom arose until the empire of the Songhay rivaled the empires of the world. The sound of the might of Negro land echoed in Carthage and grew in Numidia and gave fairy tales to the Middle Sea.

37-10-177

Away to the south and eastward and below the Mountains of the Moon the third broad river heard her sisters hurrying seaward. North and westward they had gone but she turned to the eternal east. Golden she lifted up her golden hands and stretched to Ophir, Punt and Tarshish her long, lithe finger. Her voice rose mighty in song until with a million stars in her throat she dropped wild singing in the southern sea and shuddered to the vastness of its silence.

Her black children sat in mine, fortress, temple and flowering field and traded with dark traders beyond the India Sea, till lo: out of the north came a cry, a cry like the anguish of a soul. For back in the bowels of the land men heard the running of three rivers and rushed away madly; for they were those that would not hear and could not see. On they ran, on, on and eastward ringing their spears and crying their great, awful cry of war. As locusts swarming they passed the north of the glooming forest with its dim red faerie; eastward they looked upon the inland oceans and southward they sent their war cry reeling to the Mountains of the Moon.

There came a shouting in the wilderness and again as swarming bees

onward they came, and again the war cry echoed to the stars. Over the ruin of things that were passed that black and human flood until its angry surf dashed into the vast, red Heart of the Land, and knew the haunted spell-crused realm of the Last River. Mighty was this last of rivers—a river of rivers, an endless lacing and swirling and curling and swelling and steaming of wild, weird waters beneath the giant jungle, where the lion, the leopard and the elephant slept with the long, slim snake.

37-10-178

Hand in hand and voice to voice these waters whirled in one vast circle within the bosom of the land saying their incantations. They shouldered past the mountains and sang past all the seas, then shunning the glaring desert and ingathering themselves to one swarming flood they thrilled and thundered on the sea. Snake-like and lion strong they gathered the children, the little dark and weeping children, and lo, beyond on swelling waters rose a hoarse, harsh cry and slim and sail-like fingers beckoned to the westward deeps. The river paused and rose red and reeking in the sunlight—thundered to the sea—thundered through the sea in one long line of blood, with tossing limbs and the echoing cries of death and pain.

On, on! the bloody waters, with those pale ghost fingers of ship and sail, with gold and iron, hurt and hell, rolled, swelled and tumbled, until the laughing islands of the western sea grew dark and dumb with pain and in the world, the great new world a Sorrow was planted and the Sorrow grew.

Today, we have then, the hands of Ethiopia which have been stretched overseas, and the Africa which is left at home. This Africa divides itself into four crucial centers. South Africa, East Africa, the Belgian Congo, and West Africa. In South Africa came first the primitive Bushmen. Then, the Bantu began pushing down from Central Africa. They met the Dutch at Lands End in the 17th Century, and the two races

fought each other to a settlement, and at the end of the 18th Century were likely to drive the Dutchmen into the sea. England came, at the beginning of the 19th Century, and for three-quarters of a century fought six Kaffir Wars until they broke up the terrible military machine at Chaka perfected. This leaves a strange racial mixture in South Africa. The English and Dutch are but imperfectly centered and the Dutch that are seeking for that same domination within the empire which they failed to obtain in the Boer War. There are altogether in the Union of South Africa five million Negroes, a million and a half whites, and a half million Asiatics and mixed races. The whites dominate. They have seized 280,000,000 acres of land and left the natives only 20,000,000. The natives have no right to vote save in Cape Colony and there they must vote only for white candidates. They are the victims of caste restrictions; they have limited rights to work, especially in the higher paid mechanical occupations. Their education is so restricted that at least 90% of them can not read and write. They are seething with unrest, while, on the other hand, the dominate whites declare that South Africa is and must be a white man's land. The basis of that power is the mineral wealth which they have taken from the soil and the agricultural wealth which supports them. In East Africa, we have Uganda, where an organized Negro state of considerable culture was imparted by missionaries under the protection of proseliting and then tremendously seized by England. To this, has been added Kenya and the land that was formerly German East Africa. In Kenya, the British Government has granted 7,500 square miles of the best land to Europeans, 22 square miles to Indians, and to the Negroes whose right to the land is undoubtful, no land at all. In this way, and by poll taxes and various compulsory labor laws, they very nearly reduced the Negro population again to slavery. An aroused conscience in England had medicated this to some extent and England is now hesitating over the demand of 12,000 European

37-10-129

landlords to have complete political and economical domination over 2,750,000 Negroes and 40,000 Asiatics. From this debt of economic and political tyranny, Uganda, on the one hand, Tanganyika and Rhodesia, on the other, rise by various degrees of difference which do not greatly change the essential problem. Portuguese Africa, East and West, is under the economic domination of the English. Abyssinia maintains a Quasi independence, sitting armed upon its hills, and trying slowly to achieve a modern state in the midst of the economic domination of France, England and Italy. In the center of the continent rises the Belgian Congo. It was opened as the Congo Free State, and Henry M. Stanley was charged in 1878.

37-10-185

Farther North, among the Ba-Lolo and the Ba-Songo, the village policy persisted and the cannibals of the northeast pressed down on the more settled tribes. The result was a curious blending of war and industry, artistic tastes and savage customs.

The organized slave trade of the Arabs penetrated the Congo valley in the sixteenth century and soon was aiding all the forces of unrest and turmoil. Industry was deranged and many tribes forced to take refuge in caves and other hiding places.

Here, as on the west coast, disintegration and retrogression followed, for as the American traffic lessened, the Arabian traffic increased. When, therefore, Stanley opened the Congo Valley to modern knowledge, Leopold II of Belgium conceived the idea of founding here a free international state which was to bring civilization to the heart of Africa. Consequently there was formed in 1878 an international committee to study the region. Stanley was finally commissioned to inquire as to the best way of introducing European trade and culture. "I am charged," he said, "to open akd keep open, if possible, all such districts and countries as I may explore, for the benefit of the commercial world. The mission is supported by a philanthropic society, which numbers

nobleminded men of several nations. It is not a religious society but my instructions are entirely of that spirit. No violence must be used, and wherever rejected, the mission must withdraw to seek another field."

The result meant the death of 12,000,000 natives, as Harris says:

"Europe was staggered at the Leopoldian atrocities, and they were terrible indeed; but what we, who were behind the scenes, felt most keenly was the fact that the real catastrophe in the Congo was desolation and murder in the larger sense. The invasion of family life, the ruthless destruction of every social barrier, the shattering of every tribal law, the introduction of criminal practices which struck the chiefs of the people dumb with horror--in a word, a veritable avalanche of filth and immorality overwhelmed the Congo tribes."

37-10-181

Since then, the Free Congo State has become a Belgian Congo. The worse a_____ have been mitigated, but the object of the Congo State is still to produce copper, tin, ivory and rubber, and not to produce men of human culture. There is little real education; there is no self-government. And this, we have on the Western Coast, where the slave trade was _____, and which looks toward America, is the plight of Africa.

The other day, a young white man called upon us. He was an average American, straight-forward, not college-bred but business-like and frank. He said that he had just returned from the Belgian Congo where he had been working with the Ryan Interests. Our attention was held because much was said sometime since of the fine way in which, with Mr. Ryan as leader, United States capital was about to enter Africa and develop things. According to this young man's story, developments in the Congo Diamond Mines of Kasai are proceeding apace. In fact in some respects they went so fast that this young man could not stand them. For instance, he did not think that an unoffending native woman ought to be beaten with the rhinoceros hide whip called chicot. When he saw it, it sickened him so that he resigned. But the consulting engineer, Mr. Charles W. Boise and Mr. R. E. Blosser and others urged him not to leave but Mr. Mulligan insisted and wrote them:

37-10-182

"When I told you that Kirk gave the woman three chicots over the breast, and, when I showed disapproval, then handed the chicot to the capita who slashed her at least twenty times more on all parts of her body, I do not think I exaggerated; to the contrary I think I underestimated the number. Twice or thrice during the chicotting the woman closed in on the capita and dragged the chicot away from him (the most pitiable scene I have ever witnessed in my life). This only tended to infuriate Kirk more, who aided the capita in getting the chicot back, the capita continuing with his noble assignment. I do not care anything about the framed evidence you may now have. My story is exactly as I repeated it at the time, to which no heed was taken.

"Last night you stated that in the sense of the word it was not chicotting, as the woman did not lie down for her brutal punishment. I do not agree with you. If a man dies from a bullet wound inflicted by another person, whether he is sitting, standing or running, I do not

think alters the case...There's no way out of it, he has been shot. Position in life may alter cases, but the position for brutal punishment does not.

"In conclusion I will say that last night I felt humiliated and hurt to think that even you did not see the righteousness of the whole matter and think that Kirk should be reprimanded for his misbehavior. I believe that Moody right under the skin 'knows I am right' but feels indebted to Mrs. Kirk. Perhaps if God had spared his baby, he might be able to see how my ideals and finer sensibilities got the better of me...A mother of a babe in arms being chicotted!...The world is all wrong! I also believe that had Mr. Doyle been acting for the Company in your stead last night he would have tried more tactful and diplomatic methods. I am positive that he would not have attempted a third degree in browbeating fashion. He is all human. I still contend that a native woman should not be chicotted, and regret that I cannot write a letter of the tone you requested."

37-10-183

Thereupon, Mr. Mulligan wrote the following letter of resignation which was accepted by G. D. Mordin, managing engineer, and Mulligan came home:

"In accordance with our conversation of yesterday I hereby resign my position with the Forminière and request to be returned home, due to the following reason:

"I do not agree with the management's viewpoint as regards the chicotting of a native woman. I do not think it should be tolerated and can only consider it an American atrocity.

"I regret that after eighteen months of 'Hell' in Tshikapa I cannot stay the balance of my term, but such an incident, besides the ill feeling towards me that my expressions of sympathy for the native woman has caused, makes it necessary for my own personal reasons that I resign."

All of which goes to show that the "Land of the Free and the Home of the Brave" is"doing" Africa as badly as ever Belgium did.

37-10-184

Section V.

British West Africa

It is thus clear that one of the most interesting social struggles of modern times is being carried on today in West Africa. It signalizes the attempt of the ancient tribal land system of Negro Africa to become an integral part of modern commerce and industry.

During the interval between the abolition of the slave trade and the raising of the new economic imperialism, the Negroes of West Africa were confirmed by law and custom in their tribal rights to the land; so that today in French and British West Africa the tribe holds the land by inalienable tenure. Every member of the tribe has a vested right and allotment which he may cultivate for his own use and the produce belongs to him individually. The tribal chief decides the allotment and the individual's family is recognized as having some vested right in the crop.

37-10-185

In the Belgian Congo this ancient land tenure was overthrown by Leopold and land ownership vested solely in the state. The results for a while shamed civilization and the situation is still most unsatisfactory. In South Africa imperial promises and customs were ignored and the land taken from the Negro despite clear treaty rights.

In Kenya, the Negroes were tricked out of their lands; but in Uganda they hold them as in West Africa. Even in West Africa there have been repeated efforts to displace the Negro tribal owner. One of these efforts is connected with the cocoa trade. For many years the raising of cocoa centered in Portuguese Africa, in the islands of Principe and San Thomé. Some readers will remember that a boycott against cocoa was incited by the English liberals led by the Cadbury Press some years ago, and when the smoke had cleared away from this singular and not easily explainable situation, the center of the cocoa

raising industry had been transferred to British West Africa, centering in the Gold Coast. This was the time of the Empire Development Association and the determination of the British to make their colonies business propositions and exploit them for the mother country more thoroughly than they had been. They planned a large plantation cocoa raising system with white owners and black laborers; but here they ran into the tribal land system and the Negroes had some lawyers and men of education who put up a stern fight. They would have lost, however, had it not been for one singular occurrence; and that was that the chiefs and the tribesmen began to raise cocoa on their own account, on their own initiative and on their own land.

37-10-186

The story of this development reads like a fairy tale. In 1901, the Gold Coast raised less than one thousand tons of cocoa; in five years the amount had increased to five thousand tons; and today, it stands at two hundred and forty thousand tons. It is all raised by Negroes upon their tribal lands; but they have had peculiar difficulties. In the first place, for all African produce, credit facilities were needed upon the West Coast. In the 90's, P. B. Blaze, a colored merchant of Lagos, approached the Lord Sir Alfred Jones, head of the Elder Dempster Line, to ask aid in establishing a bank. In this way, the Bank of British West Africa came into being with a capital of $200,000, half of which was subscribed for by native Africans. However, no native Africans were on the Board of Directors and as soon as the bank began to pay, the white English board proceeded to sell stock in England until the African owners were quite submerged and retained little influence in its direction.

This meant that the bank served the British mercantile houses, especially on the West Coast. These houses, however, did their cocoa business through black buyers who collected the cocoa directly from

the natives and received salaries and commissions. Many of them earned from $5,000 to $20,000 a year in this way. Their commission was from twenty-five to thirty-seven cents for a lot of sixty pounds. Soon, however, the English merchants formed themselves into the Chamber of Commerce and began to cut down the commission of the black buyers. In the meantime, white buyers and contractors began to push in to share this income. The natives began to feel themselves pinched and their product monopolized by the local English business men.

They sent a representative to England in 1915 who got in touch with the man who is now Lord Beaverbrook, and who was at the head of the Colonial Bank. This representative induced Lord Beaverbrook to open branches of his Colonial Bank at Lagos and Accra. These branches granted credit to native traders and the Bank of West Africa had to follow suit. As a result, between 1919 and 1922, native merchants handled from twenty to twenty-five per cent of the cocoa sold abroad.

37-10-187

Then came one of those industrial cataclysms. First, there was a storm in the West Indies which destroyed the cocoa crop and sent prices of cocoa from $100 a ton to $600 a ton and this was immediately followed by the general slump of business by which cocoa fell to $225 a ton. These fluctuations ruined the West African traders and compelled the banks to get more capital. The capitalization of the Bank of British West Africa was increased to twenty million dollars while the Colonial Bank increased to fifty million dollars. Lever Brothers of soap fame, absorbed the Niger Company and controlled the Bank. Both banks refused credit to Negro traders and only backed the white firms so that today the natives are really out of the exporting trade and sell only to white merchants at prices which white English merchants set.

In December, 1926, cocoa was selling for $200 to $210 a ton in Accra, while in the United States, it sold for from $375 to $400 a ton. The freight is only $15 a ton and America consumes two-thirds of the West African cocoa crop. The difference in prices is accounted for by the fact that they represent the monopoly of British merchants.

But the Africans have not given up. They have sent one of their chiefs to this country to get in touch with American bankers and to try to get two things: financial support for a skilled corporative movement, including a co-operative market for the West African cocoa merchants; and capital for the establishment of an American bank in West Africa. One-half the stock of this bank the Negroes themselves proposed to take up and thus insist on being represented in the directorate. Here, the matter stands.

37-10-188

Let us turn from British Africa, in general, to the situation in one specific colony—Sierra Leone.

Africa is always the unexpected. Thus Pedro da Cintra, sailing along the low West African coast in 1462, suddenly saw the Lion Mountain leap and roar to the silver sea. He called these fifty miles of singing headland Sierra Leone, and one sees today that couchant Lion from the ocean, the great twin-humped mountain that comes down close to the waters so contrary to one's preconceived notions of the African coast. All along here, and particularly at Sharbro Island, which lies low, yonder to the right, the slave trade flourished in the eighteenth century until the campaign of Clarkson and Wilberforce, and then in 1787, there began an experiment.

Today still at Sierra Leone the mountain comes down to the sea, looming in curve and peak over the sweep of the harbor. Freetown looks large and wide, built of white and red stone, flinging rows of homes far along the sea, and a gleam of villas up the mountain side. It is a beautiful sight of a sunny morning; hot and dusty at noontide; and always full of folk and puzzling. Puzzling because one senses anomaly here, history built on history, abandoned, built again. Yonder from the low mouth of the wide river sweep in great canoes, with white uptipping rhomboidal sails, long canoes full of black men. Rhythmically, they float across the bay, flashing paddles deftly plied. They somehow speak of Carthaginian triremes with white-swathed figures at prow and stern and lean dark bodies amidships. And sure enough, somewhere here Carthagians and Phoenicians landed 2,500 years ago.

37-10-189

Here, then, on silver sea lie past and present. But in the street one rubs one's eyes. Here is the garb of the West Indies: the wide, loose, gay gown sweeping the instep, the flowing turbaned 'kerchief. In these garments live the memories of maroons and creoles who came along years ago, some by way of Nova Scotia. There is the English black man, sometimes university bred and immaculate; sometimes from the local schools; a man varied in language and outlook and appearance. There are the natives, for native suburbs gird the town—Krootown, Congoland and the like. One sees them with loin cloth and with flowing Arabian robes. A black Mohammedan does his orisons beneath my window. "Allah-il-Allah! —Allah Akbar"—kneeling on his mat. There are always white subalterns in khaki, silent, almost watchful.

I sense unrest in Freetown. This city of forty thousand people has evidently had waves of prosperity and adversity. Curious chapters of economic history could be dug up here, I am sure; for first the colony was a philanthropy, then a trading company, then since 1808 a Crown colony. Today, it falls into two parts, and thereby hangs a long

and curved tale.

It all began with the Industrial Revolution of the nineteenth century, and England's far-sighted vision of coming changes in industrial organization. The slave trade declined and this coast became a refuge for recaptured slaves. Black and poor prowlers from England, Maroons from Jamaica and Nova Scotia, load after load of slaves recaptured on the high seas, not to mention a cargo of white prostitutes from England, were dumped on these shores to stew and strive and live and die. All of these pieces of peoples, intermingled groups of individuals from the West Indies, from all parts of the African interior, from the United States and from Nova Scotia, began to settle down and develop along certain lines. By the middle of the nineteenth century the English mission schools were turning out some fairly well educated young people. The older people were grasping at a more or less stable economic foothold; buying from England, selling some raw products. As time went on some of them sent their sons and daughters to England. Some sent their wives, too, and established their families there for purposes of education

37-10-190

Very slowly, but certainly, there arose in British West Africa a group of Negroes with educated leadership, a few with the best modern university training. England was rather negligently proud of them. They were curiousities when they appeared in London. Queen Victoria's Government promised them eventual autonomy and the chance to set up for themselves, presumably as an independent country. On March 3, 1865, a select committee of the House of Commons resolved "that the object of our policy should be to encourage in the natives the exercise of those qualities which may render it possible for us more and more to transfer to them the administration of all the Governments with a view to our ultimate withdrawal." Pursuing this policy and with the energetic pushing forward of the Negroes the colony was virtually in the hands of black folk by 1890. Sir Samuel Lewis, a colored man, had been Chief

Justice. McCarthy was Queen's Counsel and the people were voting and electing their own officials.

Meantime, matters changed. Africa became a great open land for new raw material. Instead of giving up African colonies, the European nations after the middle of the nineteenth century began to scramble for all the territory they could get there and by 1885 had it definitely divided up. English business began to move out to Africa, and when it moved to West Africa it met the educated Negro leader. What happened? One can best sense this by going to Sierra Leone today.

You see a country of black folk, of black folk of all degrees of wealth and education. At the Governor's garden party I met black men and women of culture and manners. They would have been at home in any cultured assembly. Their dress was not that of the latest London tailors and yet they were well dressed. The women, perhaps, most of all, followed least the latest styles and yet they were soft-voiced, restrained and pleasant. It was interesting to see that garden party. The Governor was conventionally English, tall and slim, with white top hat and morning coat. His wife was the gradious Great Lady. Around them were Englishmen and Negroes, but they did not mingle. Yet their lack of mingling was altogether different from anything I have seen. In the black belt of the Southern United States white and black do not mingle, but the line is definitely and openly defined. There is a place for the blacks, and wander and swagger as they will, they never cross the line. Yet across that definite and mutually recognized line the races talk and banter quite good-naturedly. Here in Sierra Leone there was no such line visible. Now a black man, now a white man would greet the Governor and his lady. But when they stopped for conversation white very seldom spoke with black or black with white. There was a sense of independence, not necessarily hostility. They acted rather as people of the same social status who had not been introduced.

37-10-191

There were other anomalies. Up the side of the Lion Mountain, and reached by a beautiful and costly winding boulevard, were villas, lovely bungalows, high where the ocean breezes struck them. There were tennis courts and golf links, a beautiful English suburb. Automobiles whirled by and well-dressed people lolled on the verandas. If now you assumed that these were the aristocrats and rulers of the colony you were puzzled by meeting in the main street the Mayor and his wife in their rickshaw. The Mayor was a stout black man, educated, well-dressed, well mannered. His wife was intelligent. You met other men—lawyers, teachers, physicians, men of culture and distinction. The great mass of the people were black; the stores were kept largely by black people, although the great emporiums and wholesale houses were in the hands of whites, and even there colored clerks were employed. If you went to the courts the Judges and Government prosecutors were all white, but the lawyers were all black.

37-10-192

There was busy commerce in the port. The ships were English, manned by white Englishmen. The great and dominant commercial houses were white. The Chamber of Commerce, which had its own representative in the Governor's Council, was predominantly white, with only a few black members. Seeing all this you sat down and began to think and wonder what had happened there. Blacks were ruling and yet they were subordinate. Manifestly, here in Africa and in a country with a small but evident black leadership, there was social and residential segregation by race; there was a degree of disfranchisement that left the Negroes almost without political power; there was a peonage of the great mass of natives that kept them at work at low wages with little profit, and there was very little popular education.

I knew how this sort of thing was accomplished elsewhere. In the

country districts of the Southern South in our own land the thing is done by brute force. In the cities of the South, on the other hand, the same thing would be accomplished by the interference of the police and the courts. In the Northern United States the same thing is approximated by the distribution of wealth. A Negro cannot buy in good residential districts because he has not the income, and may not usually get sufficient income. But how is all this accomplished in British West Africa with a predominantly Negro population, with a degree of highly educated Negro leadership and with only a handful of whites?

Sierra Leone proper, with Freetown and some 450 square miles about it, is a settlement dominated by civilized Negroes of all types. When the partition of Africa added 31,000 square miles of hinterland to this, there arose a dilemma. Legally, Freetown would rule the hinterland and if Freetown had been white there would have been no questions raised; it would have been "home rule" by divine right. But Freetown was black and aggressively black and, true to its great principle of divide and conquer, England proceeded to drive a wedge between native and civilized blacks and to back this movement with propaganda; the black West African was all right in a way and capable of some training; rather good as a clerk and small merchant, but he would never do as a ruler. White men must rule.

37-10-193

At a time, then, when blacks were rising in the Government and civil service of Sierra Leone, the professions and trade, and were on the way to dominate colony and protectorate, there came a new dispensation. The power of the blacks was strictly confined to the 450 square miles of Freetown and vicinity, and here their political power was narrowed and curtailed. Around the little Negro republic which centred at Freetown there was built up a great protectorate. This super-government surrounded and choked and overshadowed the original black republic. The republic still has its feebls forms of government operating within the

confines of Freetown. It has a City Council. It elects the Mayor and some other local officers. But its funds and powers of execution and expenditure are strictly curtailed. Practically direct taxation on land and houses is its only form of revenue. Police, sanitation, the harbor, business and commerce in general and all matters to do with the natives and education are all under the protectorate Government. And not only are the courts under the white protectorate, but as jurors must be black, the white court can at its will in criminal cases abolish trial by jury, and in all cases the white Judges sitting as a Court of Appeal pass on their own judgments!

37-10-194

Thus the Government of the Protectorate is white, is overshadowing, is all-powerful. At the head of this Government is the autocratic Governor who is practically a king by divine right. He is in reality responsible only to the Colonial Office and the Colonial Office in London is responsible to God alone. The policy of the white government is to curtail the functions of what remains of the Negro government; to keep the educated and voting Negroes as far as possible from all contact with the natives and the natives from all such leadership. The territory where the natives live is divided into districts, and over each is a District Commissioner responsible to the Governor and with practically unlimited power over the natives.

The civil service in its upper branches is largely confined to white men who receive high salaries with many and valuable perquisites. In a country where the income of the mass of people is very small, and where the average pay of colored civil servants is $350 a year, the Governor gets $20,000 a year, a mansion and Summer bungalow; the Secretary, Treasuere, Controller of Customs, three Commissioners and medical officials get from $5,000 to $6,000 a year each and homes. The Chief Justice and Attorney General get $10,000 and $6,000 and homes, and other white

men receive from $4,000 to $5,000. In all, 203 Europeans receive nearly $550,000 a year in salaries. In addition to this are numerous pensions, paid in England from the local African revenue, ranging from $50 to $2,500 a year. A man who could scarcely earn $2,000 in England comes out to Sierra Leone at a salary of $5,000, with all the witchery of authority over "niggers". As a pensioner with plenty of leisure in England he and other colonials form a vigilant public opinion to teach Englishmen what they should know about Africa and Asia.

The native tribes are ruled by the Governor and his Commissioners through their chiefs; that is, chiefs who accept white rule and behave and send down palm oil, kernels, rice and other articles, receive money and favors from the Government and its Commissioners and are held in power. Those who do not soon lose their influence and are driven from power. In return, the Government builds roads, makes crop experiments and furnishes a little education for the chiefs' sons through elementary schools superintended by white men. The Governor and his appointees raise by indirect taxation a revenue of about $4,000,000 a year. Nearly all the white people in the colony are officials and merchants. The officials have a special status made for them because they are officials. The most beautiful and salubrious residential district in the colony is officially assigned to these persons for residence. The Government makes their roads, builds their houses, lays out their tennis courts and golf links. The officials ride on a special car on the trains, thus practically inaugurating a "Jim Crow" car system. The sanitary and medical systems are announced as inaugurated "to make Sierra Leone habitable by white folk."

The white merchants are united in a Chamber of Commerce, which has representation upon the Governor's Council, and consequently the right to present its views. Moreover, since it represents the chief source of revenue upon which the Government is based, and since through its English

commercial connections it exerts strong influence in the Colonial Office in London, its views must be received with attention. There is no evident color line to the membership in this Chamber of Commerce and there are a few colored members (one was President in 1929); but the membership fee is high—$125 a year—and there is no restriction upon the number of memberships which any commercial organization may take. The great Elder-Dempster shipping monopoly and similar companies may easily take out a dozen or more memberships should that be necessary in order to dominate the chamber. On the other hand, most small black merchants will not join at all. Why should they waste $125?

37-10-196

Education hitherto has been almost entirely missionary. Sometimes the missionaries have done good work, as in the case of Fourah Bay College, the only effective institution of higher learning today in all West Africa. In other cases the work has been fragmentary and of little account. The Governor has begun to aid education. The system is incomplete and the appropriations amount to about $50,000.

The whole administration of the natives in the interior has to have for its paramount object revenue—revenue to the State, profit to the trader and cheap raw materials for the English manufacturers. The best method of increasing trade revenue is to maintain peace and quiet, which is achieved through using the chiefs, bribing them, cajoling them, displacing them. Although some Commissioners and some Governors try to develop advance movements and reorganization and uplift of native life, most of them, of necessity, are content if they can secure a peaceful flow of palm oil and other native products from the interiorto the coast.

Here, then, is the problem: One is astonished at the ingenuity of its solution. One wonders how much might not have been accomplished if half the ingenuity used here had been used really to build up and develop the African in Africa. As it is, there is inevitably race conflict in West Africa. On the one hand, one hears of impudent and half-educated

Negro leaders in silk hats and long coats who want to rule and exploit the natives for their own aggrandizement; and, on the other hand, one hears of English officials living in luxury at high salaries, pensioned for life at the expense of the black taxpayer after a comparatively few years' service, responsible to nobody for their actions, and desiring only self-aggrandizement and profit for English merchants and investors.

Out of this situation has grown agitation. This agitation has naturally thrown the black community into warring conflicts. There are colored people who gain by the present arrangement. Always the Government has something in its gift for colored men. There are few but possible imperial honors to be distributed Neighboring Nigeria, where blacks are more tractable, has had three black Chiefs knighted recently. But no educated West African can now get more than an "M.B.E." Then there is a large class who say: "What's the use? What can we do against the might of England? After all England does do things well. She brings out English experts who can give us better sanitation than Africans can. She brings out trained administrators with whom we cannot compete. She administers our finances. Why not bear it and hope for adjustment in the future?" Then there are the radicals with wild criticism, with personal grievance, with personal failures.

Despite all this there were always strong Negroes in Sierra Leone who declared that West Africa belonged to West Africans and demanded the abolition of color discrimination in the civil service and color discrimination in residence. Such men were marked, naturally, for governmental disapprobation, and against them were pushed forward puppets, "white folks' niggers," who pretended that all was well when one considered the shortcomings of the black folk.

The first reaction of black West Africa was to win the battle by individual ability; to push their young men forward; to give them the best

university training, particularly in the professions, and thus gradually to work colored men into the civil service and into power. This path of advance was pretty effectually stopped by governmental action. Whereas in 1892 a black man, Sir Samuel Lewis, was acting Chief Justice of Sierra Leone, Maxwell, Chief Magistrate of Gambia and Frans Smith, Acting Chief Justice of the Gold Coast, lately no black man has been appointed Judge or held any judicial office under the Government. For a while it was impossible for competent black men with first-class university degrees in medicine to secure appointment in the African Medical Service, and when finally, by continued agitation, some were appointed, they were put in a special African department at lower salaries than the white men who had pursued exactly the same courses and passed the same examination.

37-10-198

The black people began to see that their fight for individual advancement was not only systematically blocked by the white Governors and their appointees, but that they were losing in their battle the support and sympathy of the natives.

Now the natives of Sierra Leone and its hinterland are men with a mighty history back of them, a history of organization, education, State building, literature and art. They are a part of that great development of human culture in Western Africa which lately has been brought to the attention of the civilized world. They come within the history of the coast reaching from the mouth of the Gambia to the mouth of the Niger, 3,000 miles, where a marvelous drama of world history has been enacted. Here, as Frobenius thinks, was the fabled Atlantis; here came Phoenicians and Carthaginians; and from the interior came the Yoruba-Benin-Dahomey peoples. Behind them came the Mossi, and upon the high plateau toward the Central Sudan arose, in the past, the great empires of the Mellestine and the Songhay.

War, conquest and the slave trade have swept over these peoples and left them disintegrated and bewildered, but they have still the material of great nations. Gradually, then, the new and Europeanized blacks leading Sierra Leone began to get in touch with the chiefs and thinkers of the remaining groups of these native States. This was easier as time went on because some of the sons of the chiefs and of the great families had been among the young men educated in the missionary schools and sent to Europe.

Finally, this whole agitation and fight came to a head in a National Congress of British West Africa, which met at Accra on the Gold Coast in 1920. There were present representatives from Gambia, Sierra Leone, the Gold Coast and Nigeria. The meeting had been projected in 1915 and pushed further in 1916, but came to a head finally only in 1920. The object, as stated by F. W. Dove, a colored man, of Sierra Leone, was:

32-10-199

Firstly, to effect a union between the four colonies; secondly, to stimulate public interest in matters affecting public welfare; thirdly, to give greater weight to West African opinion. * * * We believe we have passed the days of childhood which have been associated for years past with the black man. In other words, we believe the days have passed when it was commonly supposed that the African is like a child and must be forced against his will. The time has passed when the African peoples should be coerced against their will to do things that are not in accordance with their best interests or for their benefit.

The conference sat for a week, debated the situation thoroughly, drew up a splendid set of documents and sent a deputation to England. Official England refused to receive the deputation. English newspapers were dumb. The door of the Colonial Office was slammed in their faces. But all this was in vain. The congress became a permanent body. It met again in Bathurst in January, 1922, and is preparing for a third meeting. A

permanent office under a General Secretary is maintained at Secondee, Gold Coast. One of the speakers who opened the discussion at the meeting said:

Each one of these delebates is an African belonging to a distinctive African family and thereby commanding the right of property and other interests either in his own right or in the right of the family to which he belongs. It follows from this that, apart from the fact of the delegates to the conference being the natural leaders of the people of their several communities, they have in themselves the right to appeal to his Majesty's Government for such constitutional reforms as in their judgment are necessary. But over and above the foregoing circumstances indicating the status of the delegates, they carry with them the support of the people who, whether educated or uneducated, are sufficiently alive to the importamce at this hour of seeking for the amelioration of British West African political conditions.

37-10-200

I need hardly remind you that our empire has just emerged from a great war, in the course of which all its members have more or less made sacrifices of some sort. In this the several British West African communities have not been behindhand and the official records show the extent of their efforts. I believe I speak your minds when I say that British West Africa is entitled to and expects some consideration at the hands hands of his Majesty's Government. We know that India has been recognized and given a constitution which to a large extent will meet some of her most crying wants. Egypt is also about to receive a constitution, and Malta has already been accorded self-government. Is it too much to ask and to expect that British West Africa should also receive due consideration?

Resolutions were adopted demanding self-government, education suited to African conditions, opportunities for commercial development, trial by jury and the reform of land abuses which favored private companies.

Despite the official attitude which the British Government at first assumed, it was compelled to give way. In 1922, Nigeria was granted a Legislative Council with a minority of elected members, the majority still being appointed by the autocratic Governor. In 1923, the Gold Coast was given a similar grant, and in 1924, Sierra Leone, and, later, Gambia.

To gauge the meaning of this we must remember that in Sierra Leone the former Legislative Council consisted of twelve persons, eight white colonial officials and four "unofficial" members (three black and one white). All these were appointed by the Governor. The new system has twenty-one members of Council, eleven official and ten unofficial. Of the unofficial members three are elected by the people, two nominated by commercial interests and five appointed by the Governor. Of these five, three are to be native chiefs, and two others colored men. It is a muddled and indefinite step, but it is a step toward democracy in West Africa.

37-10-201

Natually the Africans are not placated with this sop and they are protesting and pushing. The Congress of British West Africa meets regularly, the fourth session occurring at Lagos in 1930. Consessions in the civil service are being made. In the West African Medical Service, established "for the health of the whites", seven of the twenty physicians are now Negroes. Certain "African" assistants in the Treasury and Colonial offices are being appointed, junior to the white Secretaries and with less pay. This slow and grudging and illiberal yielding is in vain. Black British West Africa is out for self rule and in our day it is going to get it.

§5 British West Africa

It is thus clear that

One of the most interesting social struggles of modern times is being carried on today in West Africa. It [redacted] attempt of the ancient tribal land system of Negro Africa to become an integral part of modern commerce and industry.

During the interval between the abolition of the slave trade and the raising of the new economic imperialism, the Negroes of West Africa were confirmed by law and custom in their tribal rights to the land; so that today in French and British West Africa the bribe holds the land by inalienable tenure, and every member of the tribe has a vested right and allotment which he may cultivate for his own use and the produce ~~of which~~ belongs to him individually. The tribal chief decides the allotment and the individual's family is recognized as having some vested right in the crop.

37-10-212

In the Belgian Congo this ancient land tenure was overthrown by Leopold and land ownership vested solely in the state. The results for a while shamed civilization and the situation is still most unsatisfactory. In South Africa imperial promises and customs were ignored and the land taken from the Negro despite clear treaty rights.

In Kenya the Negroes were tricked out of their lands; but in Uganda they hold them as in West Africa. Even in West Africa ther have been repeated efforts to displace the Negro tribal owner. One of these efforts is connected with the cocoa trade. For many years the raising of cocoa centered in Portuguese Africa, in the islands of Principe and San Thomé. Some readers will remember that a boycott against cocoa was incited by the English liberals led by the Cadbury Press some years ago, and when the smoke had cleared away from this singular and not easily explainable situation the center of the cocoa raising industry had been

transferred to British West Africa centering in the Gold Coast. This was the time of the Empire Development Association and the determination of the British to make their colonies business propositions and exploit them for the mother country more thoroughly than they had been. They planned a large plantation cocoa raising system with white owners and black laborers; but here they ran into the tribal land system and the Negroes had some lawyers and men of education who put up a stern fight. They would have lost, however, had it not been for one singular occurrence: and that was that the chiefs and the tribesmen began to raise cocoa on their own account, on their own initiative and on their own land.

37-10-213

The story of this development reads like a fairy tale. In 1901 the Gold Coast raised less than one thousand tons of cocoa; in five years the amount had increased to five thousand tons; and today it stands at two hundred and forty thousand tons. It is all raised by Negroes upon their tribal lands; but they have had peculiar difficulties. In the first place, for all African produce, credit facilities were needed upon the West Coast. In the 90's, P. B. Blaze, a colored merchant of Lagos, approached the Lord Sir Alfred Jones, head of the Elder Dempster Line, to ask aid in establishing a bank. In this way the Bank of British West Africa came into being with a capital of $200,000, half of which was subscribed for by native Africans. However, no native Africans were on the Board of Directors and as soon as the bank began to pay, the white English board proceeded to sell stock in England until the African owners were quietly submerged and retained little influence in its direction. This meant that the bank served the British mercantile houses, especially on the West Coast. These houses, however, did their cocoa business through black buyers who collected the cocoa directly from the natives and received salaries and commissions.

Many of them earned from $5000 to $20,000 a year in this way. Their commission was from twenty-five to thirty-seven cents for a lot of sixty pounds. Soon, however, the English merchants formed themselves into the Chamber of Commerce and began to cut down the commission of the black buyers. In the meantime white buyers and contractors began to push in to share this income. The natives began to feel themselves pinched and their product monopolized by the local English business men. They sent a representative to England in 1915 who got in touch with the man who is now Lord Beaverbrook, and who was at the head of the Colonial Bank. This representative induced Lord Beaverbrook to open branches of his Colonial Bank at Lagos and Accra. These branches granted credit to native traders and the Bank of West Africa had to follow suit. As a result between 1919 and 1922, native merchants ~~captured~~ handled from twenty to twenty-five per cent of the cocoa sold abroad.

Then came one of those industrial cataclysms. First there was a storm in the West Indies which destroyed the cocoa crop and sent prices of cocoa from $100 a ton to $600 a ton and this was immediately followed by the general slump of business by which cocoa fell to $225 a ton. These fluctuations ruined the West African traders and compelled the banks to get more capital. The capitalization of the Bank of British West Africa was increased to twenty million dollars while the Colonial Bank increased to fifty million dollars. Lever Brothers of soap fame, absorbed the Niger Company and controlled the Bank. Both banks refused credit to Negro traders and only backed the white firms so that today the natives are really out of the exporting trade and sell only to white merchants at prices which white English merchants set.

37-10-215

In December 1926, cocoa was selling for $200 to $210 a ton in Accra while in the United States, it sold for from $375 to $400 a ton. The freight is only $15 a ton and America consumes two thirds of the West African cocoa crop. The difference in prices is accounted for by the fact that they represent the monopoly of British merchants.

But the Africans have not given up. They have sent one of their chiefs to this country to get in touch with American bankers and to try to get two things: financial support for a skilled corporative movement including a co~~rporative~~operative market for the West African cocoa merchants; and capital for the establishment of an American bank in West Africa. One half the stock of this bank the Negroes themselves proposed to take up and thus insist on being represented in the directorate. Here the matter stands.

Let us turn from British Africa in general to the Education of one specific colony — Sierra Leone.

Section V.

French West Africa

The situation in French West Africa today is one of surpassing interest as one phase of the vast colonial enterprise which has divided Africa up among a half-dozen white powers of greater or lesser magnitude. France, following her usual policy, has drawn no absolute color line in her colonies, and, in refreshing contrast with the other powers, has even admitted a few of her black colonials to citizenship; she has laid the foundation at least of an educational system which may yet prove the nucleus of a great mulatto empire in the heart of Africa. Nevertheless the germs of race conflict are here as they are elsewhere in Africa; and only enlightened policy and educated Negro leadership can ultimately solve the problem for both sides.

37-10-202

The world at large scarcely realizes the loveliness and dreamy charm of this part of Africa. French Guinea contains cities that hold the memory of the wayfarer from beyond the seas. Conakry, the capital, is French, which means that it is beautiful, quiet, complete. The city lies low along the sea—mango and palm and yellow Government House—encompassed by beautiful guardian islands. The streets are shaded by mighty mango trees planted regularly; in one avenue they stand four abreast and the shade there at tropical noontide is sweet and thick and cool. I passed a school with a fine large yard and heard the low hum of busy black and white teachers and black pupils. I saw the Bellay monument, a fine and noble thing in its sculpturization of different Negro types; a French Governor stands with his hand on a straight, naked, black boy; a Sudanese chief sits proudly below, looking toward the rising sun; a black mother lies at ease nursing her baby with dreaming eyes.

Conakry is a young settlement, only twenty-five years old; and yet it already possesses roads, a railroad and commerce. It is the gateway

to ancient Timbuktu, which lies a thousand miles deep in the interior. The best hospital of all the black West Coast is here and open to all; the native quarter of the city looks neat and not unattractive.

Five hundred miles northward, is French Senegal, Dakar is impressive from the sea, a modern port with its public buildings, its shipping and its coal-loading machinery. One descries the stately palace of the Governor, the well-built City Hall, the business blocks and homes. On land, however, there is disappointment; the city is hardly beautiful, for Dakar fights with the desert sands. It is a dusty place, busy but with little real charm. It has an artificial made-to-order air, which is dispersed only when one penetrates the miles of native suburbs with their mass of huts and compounds, and beholds strange clothing, dark jeweled hands and burdened heads.

37-10-203

St. Louis, on the other hand, a hundred miles north, is far more charming and individual. The journey there from Dakar is fascinating. I went on a cool, sunshiny morning, when fleecy clouds hung over low, flat, sandy land covered with palm trees and huts. The depot swarmed with natives; there was a group of beautiful mulattoes; the husband, evidently a civil servant was departing; a tall black nurse held a pretty, red-haired baby. A black man came down to speed the going; he was tall and finely dressed and wore a white helmet and the ribbon of an order in his buttonhole. An old black man, adorned with the croix-de-guerre and chevrons, hobbled by. The black natives, gaily kerchiefed, with burdens on their heads, paraded past; brown Moors stalked on and little black boys scurried about as porters.

The women of Senegal, I found, were quite different from those further south. I did not see here the lovely brown nakedness and perfect physique of Liberia and Sierra Leone; these Senegal women were clothed from neck to instep with white flowing overdress and embroidered chemisette; nearly all wore a concealed ceinture which tended to bulk and deform their

figure, though the African beauty of body often made itself perceptible despite this handicap. Their hair was usually twisted about quills and strings and hung in clicking ringlets. One passed Morrish women , veiled in one long blue or black garment, and looking like dusky ghosts. Usually, they carried no burdens and their faces, veiled and unveiled, were high-bred, black, brown or yellow. One sensed in this passing north a mingling of races and racial traditions going back hundreds of years; an assembling of many kinds of people, who seemed to be alike in that their skin was dark, but who were fundamentally as different as the white peoples of Europe. One saw superior and inferior classes; men slouching and dirty; men clothed in flowing white, taller than usual and striding finely. They were not laborers and they had traditions. I walked by a mosque in St. Louis: the sun was setting; the wild chant was rising and swinging within. In the street a mass of men kneeled and cried, facing Mecca.

37-10-204

St. Louis sits on the broad, swift flood of Senegal. It is old French and Spanish, with blank walled streets, tiny shops and courtyards; it is Moorish and North African in its customs. Across the broad river and in Mauritania one finds daily the great native market along the Avenue Dodds, named after the mulatto General of France. All day long the market is full of natives trading meat and bread and cloth, matting and shoes, fish and jewelry. To trade effectively one would best speak Woloff, for knowledge of French is rare.

There lies a little island in the seas, yellow, old; with rocky shore and ancient frowning forts above. There are palms and old buildings, with here and there a new white wall. Opposite is new Dakar; beyond, Rufisque, and far northward St. Louis. But Goree is the oldest of them all: Goree, isle of the slave trade, once centre of teeming marts of stolen black men. There are narrow, winding streets in Goree and its edge is threaded by the winding, changing shore. On the site of the slave mart was built the ancient Spanish-like town, yellow and cream and red,

which the palace of the Governor and the great stone and moss-covered fortification. All about lies the beautiful blue sea.

In the former palace of the Governor-General is the Government printing office, fitted up electrically, with two linotypes, great presses and apprentices and other typesetters. In the left wing is the black Mayor; an old man, simple, dignified, but without assumption, probably possessing only elementary training, but courteous and kindly; and a methodical black secretary.

Goree today is an island of schools, providing for some two or three hundred students, young black men dressed in overalls of blue and buff khaki, and wearing coats and cloth caps. In the great square beneath the forts, facing the sea and backing Dakar—in the curve of the inlet where the slave ships stood and sailed—are schools; an industrial school working in copper tin, iron, steel and wood; a school conducted with French completeness and precision, where the students learn some mathematics and the art of careful writing; the planning of roads and ditches; the building of walls and wagons and wheels and machines. This school offers a three years' course of study after eight primary years; a hundred and twenty black boys are training here to be mechanics. Next is a normal school with a hundred good-looking young black men; then there is a hospital near by in the quiet old town with pre-medical students and nurses. Some day a great university of West Africa may rise here. It is a fine, a tickling dream.

37-10-205

In a sense there is no racial problem in French West Africa; but there are germs of one. Most of the rulers and the large merchants, most of the rich, are white. All the servants and laborers, all the poor, are black. On the other hand, the Deputy who represents Senegal and, in a sense, all black French Africa, in the Parliament at Paris, is black. The Mayor of St. Louis and the Vice Mayor of Dakar

are black. The overwhelming majority of the voters in the four small enfranchised communes, Dakar, St. Louis, Rufisque and Goree, are black; but the overwhelming mass of 10,000,000 black French West Africans have no vote. There are black and white and yellow children in the same schools and black and white and brown folk in the Civil Service. Most of the clerks in all the stores and all the small stores are black. A few of the large merchants are black; most of them are white.

The relations between the blacks and the whites seem pleasant; one sees individuals of different races talking together much more often than in Freetown. In social circles, cafés and hotels one usually sees only white people; yet now and then a mulatto or a black man appears and this causes no comment. The white Portuguese Consul gave me a dinner in the centre of the leading restaurant. Some, I presume, asked who the brown stranger was, otherwise there was no ripple of excitement at an occurrence which would have caused a flurry in New York, a riot in New Orleans and a murder in Johannesburg. As our great ship drew up to the dock in Dakar, a mulatto health officer, followed by a white assisting customs clerk, boarded us. There was no comment on the fact; no one seemed to notice it. In other words, there is nothing here in French West Africa like the open race repulsion, the studied separation that one sees in British West Africa. The French are careful even of their illegitimate colored offspring. There are special schools for them, if they are abandoned; and there are cases like that of the West African white official who married a Frenchwoman and brought his mulatto baby into the family with the wife's consent. On the other hand, there is no large number of mulattoes and those there range almost entirely with the whites; but here again for tribal, not for racial reasons.

37-10-206

From all this one might conclude that racial difficulties have no place in French West Africa. This is not true. Today the French feel an unusual sense of gratitude to the blacks. These great black

masses unselfishly rescued France. Today they protect her; in a sense they are a vast life insurance for her national future. Two beautiful war memorials to the black soldiers have been dedicated, one at Dakar on the coast and another 700 miles upland on the Niger at Bamako. The statue to a former Governor at Conakry is a magnificent memorial of a kind that one sees nowhere else in the world where black and white folk mingle. All this astonishes the American Negro.

On the other hand, a modern African colony is, first of all, an economic development. The French are pushing the cultural and semtimental element in the colony to the fore more thamm other nations, but their ability and to some extent their will to do this is dominated by economic motives. French colonies, in the long run, must pay as investments; and though at present France is willing to take part of this pay in protection and military preparedness, yet sooner or later the amount of money which the thrifty French peasant and the shrewd French business man can make out of Africa seems bound to be set up as the criterion of the success of this African empire. This means, as the Negro writer René Maran has shown us in his sensational novel, "Batouala", which won the Goncourt Prize, that in some parts of French Africa the exploitation of the natives has already rivaled that of Belgium, and though Maran's novel is a picture of equatorial Africa, 1,200 miles from the outposts of Dakar, yet even in French West Africa, in Senegal and Guinea and the ivory coast, profit is the raison d'être of this little world. French Africa must be made to pay. Do not British Africa and Belgian Africa pay? Is notthis the ultimate meaning of colonial imperialism?

There is, however, in French Africa, one important development to counteract the very materialistic ideal of economic profit, namely, the birth of a system of native education. Today black French West Africa stands out from the other European colonies of Africa chiefly because of its educational program. This educational system is not complete;

37-10-207

it is not even well-established; but it has been begun and it is a system. There is here a population of between ten and twelve million; and of these perhaps 1,200,000 are of school age. Only one in every fifty-seven of these youth, not counting the mission and Koranic schools, is in school. And yet there is growth; in 1902 there were only seventy schools in the State system; in 1920 there were 500.

The whole educational system is capped by the schools of the Government at Dakar and on the Island of Goree. Here are five superior schools whose students are selected from the superior primary schools of the whole colony. These schools train teachers, higher artisans and medical assistants. Two high schools in St. Louis and Dakar fit for higher training. Two secondary schools, with 100 students, have courses of study similar to schools in France leading to the French university and professional courses. There are several small technical schools. Schools of agriculture and forestry are planned.

37-10-208

Over this system is an instructor-general holding a French license as university professor and assisted by an inspector of primary education. There are also at least two inspectors in each colony chosen by competitive examination. There are sixty-six white men and fifty-four white women in the system. Native teachers trained at the normal school at Goree are, in the case of the most promising, granted scholarships to enter the normal school at Aix-en-Provence, France, where they study for diplomas which make them eligible on the general list for appointments on the same basis as Europeans.

It must be remembered, however, that though French Africa has an educational program, it has as yet very few educated Negroes. British Africa has almost no educational program, but it has educated Negroes; and they are the source of protest, trouble and revolt. Belgian Africa has in practice almost no educational program and very few educated natives. South Africa has a carefully restricted educational program

and a small educated class of blacks. These trained blacks are beginning to writhe and protest.

What will happen in black France when its educationa program begins to pour black university men into Dakar and St. Louis? We do not know. But we do know that the crisis and test will come then; for this class will make itself felt first by obstructing the golden stream of profit flowing from Africa to France. Afterward, if Negroes are modern men and education educates, France may face the world with a new black democracy in industry and politics, as an integral part of a great French empire. But in this case France herself must tend to become mulatto; certainly in thought, to some extent in blood.

37-10-209

At the present time the blacks have no educated leadership. There is no racial feeling agginst them; they have no real racial consciousness, no esprit de corps, no ideals of advancement. Mohammedan fatalism holds most of them apart from modern progress. In British West Africa the black man is born a black man in a black country, where whites are usurping the power and using him and the land for their own profit; and where he is more and more determined to win back control over himself and his country. But in French West Africa the colored man is born French. The educated Frenchmen there consist of numbers of whites, a few mulattoes and West Indians and a very few natives and blacks. They meet and mix according to their education and interests; and those interests are French. The attitude of these educated people toward the black millions beneath is the ordinary European attitude of the classes toward the masses. They lead them in the sense that they employ them and care in certain ways for their well-being. They care for their health, for instance, with sanitary laws and hospitals, and they draw no color line.

When Mr. Curtis, a colored United States Minister to Liberia was stricken fatally and rushed from Monrovia to Freetown, he was not allowed

a bed in the perfectly equipped nursing home; and only after prolonged negotiations was he brought in from the native sheds in the yard and laid in the general hospital, where he died soon after. In French West Africa such an occurrence would be unthinkable. If a colored man or native enters the French Colonial Civil Service his treatment and chance of promotion are usually quite independent of color. Very few natives, however, have the slightest chance to enter the civil service.

All this means that the raising and civilizing of the natives is being left to the chance of modern economic development, assisted and somewhat hastened by French public opinion, by military considerations and by some education. This is a dangerously slow set of forces and liable to fatal haltings; and especially is this true when the public opinion of the world—and, above all, the public opinion of the white voters of Europe—tend wholly to the view that an African colony is merely a means of enriching an European mother country.

37-10-210

The best solution would be enlightened leadership of the Negroes. This is not only lacking in French Africa, but, if mentioned, the reaction is instant; and one can sympathize with this point of view. A young black editor in Dakar discussed this subject with me. Speaking as a Frenchman, he said that there was no organization of black Frenchmen, because black Frenchmen were just as much French as white Frenchmen; and yet, he said, something was needed. Modern economic forces in colonial lands do not tend to raise the masses. With grudging bits of education the mass raises itself, fighting against the politically powerful bourgeoisie in the home land. Any such fight in French Africa would be, in the main, a color-line fight.

How can this raising of the issue of color by colored folk be avoided? It can be avoided only by a social uplift that outruns consideration of profits and this today seems scarcely probable. French Africa is organized

for profit. Great corporations, great banks, great shipping agencies, great railroads, all unite in well-known and stereotyped ways to overthrow native industry, to prostitute native art, to make economic development in French West Africa mechanical and methodical, and, above all, profitable. The great excesses of the past in "land grabbing" and serfdom are guarded against, but the retail profiteer and the wholesale price-manipulator is here in his glory. This modern Assyrian "has come down like a wolf on the fold," and he is underbidding and displacing the native merchants by methods which the natives cannot meet. The native, to live, must raise what the world makes him raise and raise it at the world's price; and white world business too determines the native's share of the profit.

37-10-211

Black France, that conscious, educated Black France living in Paris, the provinces, the islands, and elsewhere, is curiously unconscious of all this; and apathetic. As yet France has no political solution for West Africa. Colonial representation in Paris is confusing and contradicto Devolution of power to the colonies is a serious step and weakens military concentration and economic profit.

Yet Black France is the most hopeful meeting place of black and white in the world. If education quickly supplies black leadership; if that leadership, unseduced by the present economic organization of Europe and in close union with white French idealism, reorganizes Black Africa along the magnificent vista of ancient African lines; if political power commensurate with this task comes down from Paris and checks that domination of the vote by moneyed interests which is common in France and a byword in the tiny enfranchised communes of Senegal—if all this happens, the salvation of Black Africa will yet be the gift of France.

§ 5 - French West Africa

The situation in French West Africa today is one of surpassing interest as one phase of the vast colonial enterprise which has divided Africa up among a half dozen white powers of greater or lesser magnitude. France, following her ~~special~~ usual policy, has drawn no color line and, in refreshing contrast with the other powers, has admitted a few of her black colonials to citizenship, and has laid the foundation at least of an educational system which may yet prove the nucleus of a great mulatto empire in the heart of Africa. Remember the germs of race conflict are here as they are elsewhere in Africa; and only enlightened policy and educated Negro leadership can ultimately solve the problem for both sides.

37-10-216

The world at large scarcely realizes the loveliness and dreamy charm of this part of Africa, ~~which I recently visited.~~ French Guinea contains cities that hold the memory of the wayfarer from beyond the seas. Conakry, the capital, is French, which means that it is beautiful, quiet, complete. The streets are shaded by mighty mango trees planted regularly; in one avenue they stand four abreast and the shade there at tropical noontide is sweet and thick and cool. I passed a school with a fine large yard and heard the low hum of busy black and white teachers and black pupils. I saw the Bellay monument, a fine and noble thing in its sculpturization of different Negro types; a French Governor stands with his hand on a straight, naked, black boy; a Sudanese chief sits proudly below, looking toward the rising sun; a black mother lies at ease nursing her baby with dreaming eyes. Conakry is a young settlement, only twenty-five years old; and yet it already possesses [redacted] roads, a railroad and commerce. It is the gateway to ancient Timbuktu, which lies a thousand miles deep in the interior. The best hospital of all the black West Coast is here and open to all; the native quarter of the city looks neat and not unattractive. The city lies low along the sea—mango and palm

and yellow Government House—encompassed by beautiful guardian islands.

Five hundred miles northward, in French Senegal, Dakar is impressive from the sea, a modern port with its public buildings, its shipping and its coal-loading machinery. One descries the stately palace of the Governor, the well-built City Hall, the business blocks and homes. On land, however, there is disappointment; the city is hardly beautiful, for Dakar fights with the desert sands. It is a dusty place, busy, but with little real charm. It has an artificial made-to-order air, which is dispersed only when one penetrates the miles of native suburbs with their mass of huts and compounds, and beholds strange clothing, dark, jeweled hands and burdened heads.

37-10-217

St. Louis, on the other hand, a hundred miles north, is far more charming and individual. The journey there from Dakar is fascinating. I went on a cool, sunshiny morning, when fleecy clouds hung over low, flat, sandy land covered with palm trees and huts. The depot swarmed with natives; there was a group of beautiful mulattoes; the husband, evidently a civil servant was departing; a tall black nurse held a pretty, red-haired baby. A black man came down to speed the going; he was tall and finely dressed and wore a white helmet and the ribbon of an order in his buttonhole. An old black man, adorned with the croix-de-guerre and chevrons, hobbled by. The black natives, gaily kerchiefed, with burdens on their heads, paraded past; brown Moors stalked on and little black boys scurried about as porters.

The women of Senegal, I found, were quite different from those further south. I did not see here the lovely brown nakedness and perfect physique of Liberia and Sierra Leone; these Senegal women were clothed from neck to instep with white flowing overdress and embroidered chemisette; nearly all wore a concealed ceinture which tended to bulk and deform their figure, though the African beauty of body often made itself perceptible despite this handicap. Their

hair was usually twisted about quills and strings and hung in clicking ringlets. One passed Moorish women, veiled in one long blue or black garment, and looking like dusky ghosts. Usually they carried no burdens and their faces, veiled and unveiled, were high-bred, black, brown or yellow. One sensed in this passing north a mingling of races and racial traditions going back hundreds of years; an assembling of many kinds of people, who seemed to be alike in that their skin was dark, but who were fundamentally as different as the white peoples of Europe. One saw superior and inferior classes; men slouching and dirty; men clothed in flowing white, taller than usual and striding finely. They were not laborers and they had traditions. I walked by a mosque in St. Louis: the sun was setting; the wild chant was rising and swinging within. In the street a mass of men kneeled and cried, facing Mecca.

St. Louis sits on the broad, swift flood of Senegal. It is old French and Spanish, with blank walled streets, tiny shops and courtyards; it is Moorish and North African in its customs. Across the broad river and in Mauritania one finds daily the great native market along the Avenue Dodds, named after the mulatto General of France. All day long the market is full of natives trading meat and bread and cloth, matting and shoes, fish and jewelry. To trade effectively one would best speak Woloff, for knowledge of French is rare.

37-10-218

~~The Old Town of Goree~~

There lies a little island in the seas, yellow, old; with rocky shore and ancient frowning forts above. There are palms and old buildings, with here and there a new white wall. Opposite is new Dakar; beyond, Rufisque, and far northward St. Louis. But Goree is the oldest of them all: Goree, isle of the slave trade, once centre of teeming marts of stolen black men. There are narrow, winding

streets in Goree and its edge is threaded by the winding, changing shore. On the site of the slave mart was built the ancient Spanish-like town, yellow and cream and red, with the palace of the Governor and the great stone and moss-covered fortification. All about lies the beautiful blue sea.

In the former palace of the Governor-General is the Government printing office, fitted up electrically, with two linotypes, great presses and apprentices and other typesetters. In the left wing is the black Mayor; an old man, simple, dignified, but without assumption, probably possessing only elementary training, but courteous and kindly; and a methodical black secretary.

Goree today is an island of schools, providing for some two or three hundred students, young black men dressed in overalls of blue and buff khaki, and wearing coats and cloth caps. In the great square beneath the forts, facing the sea and backing Dakar—in the curve of the inlet where the slave ships stood and sailed—are schools; an industrial school working in copper tin, iron, steel and wood; a school conducted with French completeness and precision, where the students learn some mathematics and the art of careful writing; the planning of roads and ditches; the building of walls and wagons and wheels and machines. This school offers a three years' course of study after eight primary years; a hundred and twenty black boys are training here to be mechanics. Next is a normal school with a hundred good-looking young black men; then there is a hospital near by in the quiet old town, with pre-medical students and nurses. Some day a great university of West Africa may rise here. It is a fine, a tickling dream.

37-10-219

In a sense there is no racial problem in French West Africa; but there are germs of one. Most of the rulers and the large merchants, most of the rich, are white. All the servants and laborers, all the poor, are black. On the other hand, the Deputy who represents

Senegal and, in a sense, all black French Africa, in the Parliament at Paris, is black. The Mayor of St. Louis and the Vice Mayor of Dakar are black. The overwhelming majority of the voters in the four small enfranchised communes, Dakar, St. Louis, Rufisque and Goree, are black; but the overwhelming mass of 10,000,000 black French West Africans have no vote. There are black and white and yellow children in the same schools and black and white and brown folk in the Civil Service. Most of the clerks in all the stores and all the small stores are black. A few of the large merchants are black; most of them are white.

~~Race Prejudice Not Apparent~~

37-10-220

The relations between the blacks and the whites seem pleasant; one sees individuals of different races talking together much more often than in Freetown. In social circles, cafés and hotels one usually sees only white people; yet now and then a mulatto or a black man appears and this causes no comment. The white Portuguese Consul gave me a dinner in the centre of the leading restaurant. Some, I presume, asked who the brown stranger was, otherwise there was no ripple of excitement at an occurence which would have caused a flurry in New York, a riot in New Orleans and a murder in Johannesburg. As our great ship drew up to the dock in Dakar, a mulatto health officer, followed by a white assisting customs clerk, boarded us. There was no comment on the fact; no one seemed to notice it. In other words, there is nothing here in French West Africa like the open race repulsion, the studied separation that one sees in British West Africa. The French are careful even of their illegitimate colored offspring. There are special schools for them, if they are abandoned; and there are cases like that of the West African white official who married a Frenchwoman and brought his mulatto baby into the family with the wife's consent. On the other hand, there is no large number of

mulattoes and those there range almost entirely with the whites; but here again for tribal, not for racial reasons.

From all this one might conclude that racial difficulties have no place in French West Africa. This is not true. Today the French feel an unusual sense of gratitude to the blacks. These great black masses unselfishly rescued France. Today they protect her; in a sense they are a vast life insurance for her national future. Two beautiful war memorials to the black soldiers have been dedicated, one at Dakar on the coast and another 700 miles upland on the Niger at Bamako. The statue to a former Governor at Conakry is a magnificent memorial of a kind that one sees nowhere else in the world where black and white folk mingle. All this astonishes the American Negro.

37-10-221

On the other hand, a modern African colony is, first of all, an economic development. The French are pushing the cultural and sentimental element in the colony to the fore more than other nations, but their ability and to some extent their will to do this is dominated by economic motives. French colonies, in the long run, must pay; and though at present France is willing to take part of this pay in protection and military preparedness, yet sooner or later the amount of money which the thrifty French peasant and the shrewd French business man can make out of Africa seems bound to be set up as the criterion of the success of this African empire. This means, as the Negro writer René Maran has shown us in his sensational novel, "Batouala", which won the Goncourt Prize, that in some parts of French Africa the exploitation of the natives has already rivaled that of Belgium, and though Maran's novel is a picture of equatorial Africa, 1,200 miles from the outposts of Dakar, yet even in French West Africa, in Senegal and Guinea and the ivory coast, profit is the raison d'être of this little world. French Africa must be made to pay. Do not British Africa and Belgian Africa pay? Is not

~~ritis~~h

this the ultimate meaning of colonial imperialism?

~~French Educating the Negroes~~

There is, however, in French Africa, one important development to counteract the very materialistic ideal of economic profit, namely, the birth of a system of native education. Today black French West Africa stands out from the other European colonies of Africa chiefly because of its educational program. This educational system is not complete; it is not even well-established; but it has been begun and it is a system. There is here a population of between ten and twelve million; and of these perhaps 1,200,000 are of school age. Only one in every fifty-seven of these youth, not counting the mission and Koranic schools, is in school. And yet there is growth; in 1902 there were only seventy schools in the State system; in 1920 there were 500. There are 225 village schools with about 10,000 pupils, ranging from 6 to 12 years of age. The teachers are natives and give instruction in reading, writing and speaking French, in arithmetic and other elementary subjects. Among the nomad tribes there are camping or nomad schools which follow the tribes about.

From these primary schools the most intelligent and progressive of the pupils are directed to the regional schools. Each of the six divisions composing French West Africa is subdivided into regions; and in each region there is planned a school with a white European instructor and native assistants. About fifty of these schools have been established so far and they have 1,500 pupils. At the end of two years' study these students, by examination, may pass to the superior primary town school, while those who do not pass are sent back to their parents. There are ten primary town schools with about 300 students.

In important centres where there is a demand there are also

schools for adults; of these there were in 1922, 186, with 7,400 pupils, and with classes held three times a week. There are superior primary schools in the towns, with students recruited from the regional schools; their expenses are paid by the colony if they come from a distance. There are some 400 students in schools like this. These schools train students for the Government higher schools, for the lower ranks of the Civil Service and for commerce and industry.

37-10-223

The whole educational system is capped by the schools of the Government at Dakar and on the Island of Goree. Here are five superior schools whose students are selected from the superior primary schools of the whole colony. These schools train teachers, higher artisans and medical assistants. Two high schools in St. Louis and Dakar fit for higher training. Two secondary schools, with 100 students, have courses of study similar to schools in France leading to the French university and professional courses. There are several small technical schools. Schools of agriculture and forestry are planned.

Over this system is an instructor-general holding a French license as university professor and assisted by an inspector of primary education. There are also at least two inspectors in each colony chosen by competitive examination. There are sixty-six white men and fifty-four white women in the system. Native teachers trained at the normal school at Goree are, in the case of the most promising, granted scholarships to enter the normal school at Aix-en-Provence, France, where they study for diplomas which make them eligible on the general list for appointments on the same basis as Europeans.

Nearly all the schools mentioned are attended by boys. There are, however, 10 special schools for girls, with a registration of

300 in 1922; and 4 prphanages caring for about 200 children. To sum up, there are 314 schools for young people in French West Africa with 21,000 pupils and 186 schools for adults.

In addition to this there is some work by Catholic missions, social rather than educational in nature, on account of French legal restrictions. There are, however, a large number of Koranic schools conducted by the Mohammedans. In all there are some 600 of these schools with 40,000 pupils. They are under State control, and the teachers must be licensed, but they do little besides teaching the Koran by heart and studying a little Arabic. Some 200 students are enrolled in Mohammedan high schools; for the most part these are sons of chiefs. They are trained to serve as interpreters, Judges and secretaries in the Mohammedan courts. The professors in these schools must hold diplomas from the High School of Letters in Algiers.

It must be remembered, however, that though French Africa has an educational program, it has as yet very few educated Negroes. British Africa has almost no educational program, but it has educated Negroes; and they are the source of protest, trouble and revolt. Belgian Africa has in practice almost no educational program and very few educated natives. South Africa has a carefully restricted educational program and a small educated class of blacks. These trained blacks are beginning to writhe and protest.

What will happen in black France when its educational program begins to pour black university men into Dakar and St. Louis? We do not know. But we do know that the crisis and test will come then; for this class will make itself felt first by obstructing the golden stream of profit flowing from Africa to France. Afterward, if Negroes are modern men and education educates, France may face the world with a new black democracy in industry and politics, as an

27-10-224

integral part of a great French empire. But in this case France herself must tend to become mulatto; certainly in thought, to some extent in blood.

~~Hopeless Without Educated Leaders~~

At the present time the blacks have no educated leadership. There is no racial feeling against them; they have no real racial consciousness, no esprit de corps, no ideals of advancement. Mohammedan fatalism holds most of them apart from modern progress. In British West Africa the black man is born a black man in a black country, where whites are usurping the power and using him and the land for their own profit; and where he is more and more determined to win back control over himself and his country. But in French West Africa the colored man is born French. The educated Frenchmen there consist of numbers of whites, a few mulattoes and West Indians and very few natives and blacks. They meet and mix according to their education and interests; and those interests are French. The attitude of these educated people toward the black millions beneath is the ordinary European attitude of the classes toward the masses. They lead them in the sense that they employ them and care in certain ways for their well-being. They care for their health, for instance, with sanitary laws and hospitals, and they draw no color line. When Mr. Curtis a colored United States Minister to Liberia was stricken fatally and rushed from Monrovia to Freetown, he was not allowed a bed in the perfectly equipped nursing home; and only after prolonged negotiations was he brought in from the native sheds in the yard and laid in the general hospital, where he died soon after. In French West Africa such an occurrence would be unthinkable. If a colored man or native enters the French Colonial Civil Service his treatment and chance of promotion are usually quite independent of color. Very few natives, however, have the slightest chance to enter the civil service.

37-10-225

All this means that the raising and civilizing of the natives is being left to the chance of modern economic development, assisted and somewhat hastened by French public opinion, by military considerations and by some education. This is a dangerously slow set of forces and liable to fatal haltings; and especially is this true when the public opinion of the world—and, above all, the public opinion of the white voters of Europe—tend wholly to the view that an African colony is merely a means of enriching a European mother country.

37-10-226

~~Big Business Runs Negro's Rise~~

The best solution would be enlightened leadership of the Negroes. This is not only lacking in French Africa, but, if mentioned, the reaction is instant; and one can sympathize with this point of view. A young black editor in Dakar discussed this subject with me. Speaking as a Frenchman, he said that there was no organization of black Frenchmen, because black Frenchmen were just as much French as white Frenchmen; and yet, he said, something was needed. Modern economic forces in colonial lands do not tend to raise the masses. With grudging bits of education the mass raises itself, fighting against the politically powerful bourgeoisie in the home land. Any such fight in French Africa would be, in the main, a color-line fight.

How can this raising of the issue of color by colored folk be avoided? It can be avoided only by a social uplift that outruns consideration of profits and this today seems scarcely probable. French Africa is organized for profit. Great corporations, great banks, great shipping agencies, great railroads, all unite in well-known and stereotyped ways to overthrow native industry, to prostitute native art, to make economic development in French West Africa mechanical and methodical, and, above all, profitable. The great excesses of the past in "land grabbing" and serfdom are guarded against, but the retail profiteer and the wholesale price-manipulator is here in his

glory. This modern Assyrian ~~also~~ "has come down like a wolf on the fold," and he is underbidding and displacing the native merchants by methods which the natives cannot meet. The native, to live, must raise what the world makes him raise and raise it at the world's price; and white world business, too, determines the native's share of the profit.

37-10-227

Black France, that conscious, educated Black France living in Paris, the provinces, the islands, and elsewhere, is curiously unconscious of all this; and apathetic. As yet France has no political solution for West Africa. Colonial representation in Paris is confusing and contradictory. Devolution of power to the colonies is a serious step and weakens military concentration and economic profit.

Yet Black France is the most hopeful meeting place of black and white in the world. If education quickly supplies black leadership; if that leadership, unseduced by the present economic organization of Europe and in close union with white French idealism, reorganizes Black Africa along the magnificent vista of ancient African lines; if political power commensurate with this task comes down from Paris and checks that domination of the vote by moneyed interests which is common in France and a byword in the tiny enfranchised communes of Senegal—if all this happens, the salvation of Black Africa will yet be the gift of France.

RESEARCH NOTES - AFRICA

A HISTORY OF THE BANTU

Pheal thought that the Bantu came from the West Coast of Africa, migrating across the South Central tribes on their journey down the Central Plateau. In the 15th century there was a great eruption from the Northwest into the lower valley of the Zambesi, the largest of the invading bands were the Amazimba, and they drove before them remnants of many tribes destroyed on the way from the Atlantic Ocean and known as the Ovambo. The Ovambo first appeared on the lower Zambesi in 1570. By 1600 many of these Ovambo had come to Natal. The Zulus may have descended from the Ovambo.

About A.D. 900 the Southern Bantu had become separated into three Branches in Central Africa: the Nguni, the Karanga, and the Thonga. The Thonga moved down the East coast, the Karanga down the center into Rhodesia, while the Nguni worked west. They crossed the Zambesi near its sources, dropping off a section who became the Herero. From here they swung round into the area between Lake Ngami and the upper Zambesi. They came to rest on the head Limpopo. The Nguni went southeast, stopping awhile in the Transvaal, and from them the Zulu are descended.

40-8R-4

The Karanga came from the north and mixed somewhat with the Nguni. One section of the Nguni drove south, and settled for a time south of Delagoa Bay. Here they became known as the Azambo and the Portugese met them at the end of the 16th century.

The Xosa moved after the Tembu, and into Kaffraria. In 1589 the Vamba lived south of Delagoa Bay. About 1700 Natal was occupied by the three great branches of the Nguni fa mily. The Zulus were related in blood and customs to the other inhabitants of Natal. At the close of the 18th century somewhere between 1785 and 1795 a quarrel broke out as a result of which Dingiswayo in 1806 occupied the throne and opened trade with Delagoa Bay. He invented the Zulu regimental system and set out to build an empire overcoming the chieftains around him, 1806-1808. Chaka, son of a neighboring Zulu king by the mother Nandi, became the

favorite of Dingiswayo. Chaka came to the throne in 1816 and became the most powerful and ingenious of the Zulu kings. His army was a tremendous organization. He defeated the neighboring tribes and broke their power. Umzilikazi submitted to Chaka for a while and then fled into the Transvaal, founding the Matabele kingdom. From the Transvaal this tribe scattered all other tribes as far south as the Orange River, until in 1836 being defeated by the Boers, they emigrated to Rhodesia, where they founded the Matabele kingdom. Others of the fleeing tribes went north and by 1840 had reached Lake Nyasa; and still others the shores of Lake Victoria Nyanza.

Chaka threw Natal, and between 1820 and 1823 swept over Natal. Some of the tribes fleeing before Chaka went westward across the Drakansburg mountains. Umzilikazi, raiding down from the north, drove numbers of tribes into Basutoland where Moshesh became their king. Nandi, his mother, died in 1827. Chaka himself died soon after and was succeeded by his brother Dingaan.

40-8R-5

Dingaan, in 1837 murdered Reties, a Boer leader who was asking permission for the Boers to settle in Natal. Dingaan tried to destroy the Boers in their camp, but at the battle of Blood River he was defeated. He turned north and established a capital on the Ivuma River. His brother, Umpanda, made alliance with the Boers and defeated Dingarn, whom he succeeded. He was a weaker man than Dingarn, and in 1856 was overthrown by Cetewayo, His son, Umpandi died in 1872 and Cetewayo became king in name as well as in fact. He was the last of the independent Zulu kings, and in 1879 under him the Zulu was withthe English broke out. The British ..... were routed at the Battle of Isandlewana. But finally Cetewayo was defeated at Ulundi. For some time he remained hidden and no Zulu would tell where. Finally he was taken prisoner and was sent to Capetown where he was imprisoned. Zulu was divided into 13 districts under chiefs appointed by the British. Cetewayo went to England to put his case before the Queen, who restored him, but he could not hold his position and finally died in 1884. H is son, Dinizulu, became his successor and was helped by the Boers, to whom he gave a portion of Zululand. In 1886 the British interfered and established a protectorate over Zululand. Dinizulu was banished to St. Helena in 1889. He returned in 1898 to become a local chief, and in 1906 thelast Zulu rebellion took place. Dinizulu was banished to the Transvaal where he died in 1913.

40-8-8-6

The Bechuana crossed the Zambesi in the 14th or 15th century. They used stone in building and were traders. They seemed to echo the builders of the Zymbabwe. These tribes coming southward occupied the east central part of South Africa. Apparently they had started from the central lake country and by the middle of the 18th century one of their great chiefs, Tao, met the Hottentots.

A newer and fiercer element of the Bantu tribes, the Xosa, also called the Kaffirs, were descended from Zuide, a chief of the 15th century in the lake country.

They laid waste to the coast regions, and in 1779 came in contact with the Dutch. Between 1779 and 1795 Dutch Kaffir wars ensued in which the Dutch were hard pressed.

In the latter part of the 18th century there were three main groups of Bantu in the interond of Cape Colony. To the north were the Herero and the Damars. Behind them the Ovamba and other tribes, the Bekuana. To the northeast were the highlanders, the Beraksi and Bazenda, and to the east were the coast tribes in contact with the Europeans at Fishura? The Ovamba, known as the Xosa, the Tembu and the Pando and other names, pushed down the coast toward Cape Colony. The Xosa crossed the Kei River in 1702. In 1775 they crossed the Fish River. The question of land ownership became a problem of frontiers between white and black cattle farmers.

40-8R-7

War broke out in 1779 and the Xosas were driven back across the Fish River. Another Kaffir war broke out in 1791 and in 1795 at the beginning of the Napoleonic wars British warships landed in South Africa. In 1795 there were 16,000Europeans, 17,000 slaves in South Africa. In 1805 there were 25,000 Boers, 25,000 Hottentots, pure and mixed, and 25,000 slaves. British settlers began to come in.

Between 1811 and 1877 there were six Kaffir-Englishwars. There was a terrible war between 1834 and 1835 which ended in annexation of all the country as far as the Kei River. The English parliament voted money and 5,000 British came in between 1820 and 1821. From 1823 to 1837 Great Britain took more interest in the colony. There forme d the in 1832 and slave emancipation decreed in 1833. Meantime, between 1824 and 1834 there was internal trouble among the Bantu. Chaka, succeeded Dingaswae and with his new army fell on tribe after tribe. He drove some northward through the eastern coastland as far as Lake Nyassa. He then rushed southward through Natal, and Umzelekasi, leader of one of his regiments, laid waste to the southwestern Transvaal. The Bekuanas fled to the Kalihara desert. By the time the English came to Natal, Chaka was ruling over the whole southeastern seaboard from the Limpopo to Cape Colony, including the Orange and Transvaal states and the whole of Natal. He was killed in 1828 and succeeded by his brother Dingarn who reigned 12 years.

The Xosa became restless because of the pressure of Zulus. Some moved into Cape Colon y and were driven back. War ensued in 1834, leaving 7,000 white farmers destitute. The loss was put at 300,000 pounds sterling.

Dissatisfaction ensued, and finally in 1837 the Boers sold their farms and 2,000 of them crossed the Orange River on the great trek. Dingarn, alarmed

40-8R-8

at this invasion, killed the main Dutch leader, Retief in 1838. He was attacked in December of that year and 3000 dead were left on the field, since known as Blood River. The Boers, now established in Natal, began to push northward to Zululand. This ended in fighting among the Zulus and the death of Dingarn in 1840. In 1846 the War of the Axe broke out on the eastern frontier between English and Kaffirs, lasted three months and cost a million pounds. In 1856 the Amazola were in despair and followed their prophets to suicide. A third of a nation perished.

In that year demands of labor in Natal brought in Indian labor. By 1865 there were 6,500 Indians in Natal. In 1858 the Boers declared war on the Basutos and seized much of their territory and cattle. The next year the British interfered and the Boundaries of Basutoland were defined.

40-8R-9

British aggression led to the Gun War in 1880, and the British again withdrew while the Boers and Basutos fought, but by 1884 the Boers were driven away and Basuto became a British protectorate.

The famous diamond, the Star of Ethiopia, was found in Grequaland in 1869 and sold first for $55,000 and then for $125,000.

Dingarn was succeeded by Panda. There was peace for 16 years but in 1856 Civil war broke out between his sons, one of whom, Cetewayo, succeeded his father in 1868. He fell into border disputes with the English, with the result was one of the fiercest clashes in modern days between Europe and Africa. The Zulus fought desperately, annihilating a whole detachment and killing the young prince Napoleon. But the Zulus were finally defeated at Ulundi, July 4th 1879. Zululand was divided among 13 sem-independent chiefs and became a British protectorate.

North
~~East~~ of the Zambesi, a British territory, the Bekuana ..... the Bantu to return ~~in~~ northward after the South African migration, played the

chief role. Today there rules directly and indirectly over 50,000 square miles between one and 2½ million people. In the north part of Bekuana land are the Bamangwato and the Batwana. The former long ruled by Kahma.

Umsilikatsi, driven north by Chaka in 1828 and defeated by the Duthh in 1837, established his headquarters in Rhodesia in 1838. Lobengula succeeded Umsilikatsi in 1870 and began to retreat toward the Zambesi.

40-8R-10

Insert 6

The European scramble for Africa was now on. In the ..... and in the valley of the Nile were Italy, France and Britain. Isolated in the highlands of the Northeast were the Ethiopians. In the center of the continent Henry M. Stanley, an American had explored the great valley of the Congo and engineered its annexation to Belgium. In the South center lay Portugese Africa split in two pieces and practically belonging to GReat Britain. In South Africa stood three giants: the Dutchman, Paul Kruger, president of the Republic of South Africa, the Englishman, Cecil Rhodes, and the black chief of the Zulus, Lobengula.

40-812-15

Dingaan, great chief of the Zulus, who had fought the Boers, died in 1840. He was succeeded eventually by Cetewayo and then the Matebele chieftain, Lobengula ruled over black South Africa. Lobengula was a tall, black giant, the last great king of the Matebele, who came to the throne in 1868. Rhodes was outflanking the Boers who held the gold fields and he hastened to make treaty with Lobengula for the mineral wealth of Matabeleland.

Date 4,

The movement of the African peoples from the region of the Great Lakes to the south began in prehistoric times, but was accelerated a thousand years after Christ by the development in North Africa of a new civilization in the Sudan, started by the Arabic Mohammedans and carried on by the Negroes of the West Coast. It was this push which in the 11th and 12th centuries formed a succession of kingdoms: the kingdom of Congo, the realm of Muata Yanzo, and finally the empire of the Monomopapa which the Portugese found. Of this we have the cultural remains Zimbabwe, and over the ruin of these marched the Bechuana people who crossed the Zambes i River before the end of the 15th century and as people we know how as Zulus came into Central South Africa late in the 16th century.

40-8R-16

The Dutch had settled at the Cape in the middle of this century, and soon were fighting with the Hottentots who had entered the Cape region in prehistoric times. The Dutch and the Hottentots mingled partially into the group now known as "colored people", and this group began to move north. Meantime, from the northeast had come the Zulus, who crossed the Fish River 500 miles east of Capetown at the beginning of the 18th century.

Soon the Dutch and the Zulus were at war over cattle and territory. and between 1779 and 1791 they were fighting intermittently with the Mulattos and the Hottentots often on the side of the Dutch. And the Dutch, hard-pressed by this spearhead of the great Bantu peoples coming down the east coast.

Then came the English, in 1805, and intervened between the Dutch and the Zulus so that between 1811 and 1877 there were six wars between the English and the Zulus, until finally after the costly war of 1834-5 the English succeeded in pushing the Zulus back beyond the Fish River, although later they surged again 200 miles west.

A period of between black and white occurred from 1823 to 34 and the colored peoples began to gain civil rights and finally the

slaves were emancipated. Incensed, the Dutch began their great trek across the Orgnge River, marching a thousand miles to the northeast, circling the English and coming into new contact with the Zulu about Natal. Meantime the various Zulu tribes had broken into war. The great Dsyudingiswayo was ruler in ~~1802~~ 1806 and succeeded in 1816 by the terrible Chaka, the military genius of the Zulu. Chaka drove the Matabele west where they attacked the oncoming Boers who defeated them at the Battle of Blood River, and they re-treated and founded the Matabele Kingdom in what is now Rhodesia. Chaka, on the other hand, set south over Natal and drove the Basutu south. Dingaan in 1937

40-8R-17

A deputation was sent to England and the verdict of the cabinet was reversed.

There followed a Loyal Commission in 1924, but this was dissolved the following year without action. That year a Commission under Ormsby-Gore was sent to report. This report reiterated the policy of the government as to the natives, ~~but at the same time refused to hear natives who had been chosen and sent at great cost and sacrifice by the Africans themselves.~~

In 1927 a new commission under Hilton Young was sent out which made an exhaustive report, again the Kenya white settlers did not like. Finally, under a Labor Government and under the Colonial Secretary Sidney Webb, other reports were issued, but the delegations of Africans, ~~Indians and Europeans~~ brought from Africa were refused hearing.

In 1930 there was a government White Paper, which tried to redress

"It is quite the contrary with regard to small sculptures in stone, wood, ivory, or modeling in wax, clay or metals. In these arts, often called minor ones, the Negroes have shown themselves and still show themselves to be ingenious workers, powerfully helped by a high inspiration, a sharp sense of detail and a very profound conception of the form to be given to their ideas. It is to be remarked that their productions in this domain are generally so much the more original and of surer taste the more we have to do with populations that have been little influenced by exterior forces, whether of Oriental or European origin. In this category, Negro art appears the more perfect in the measure that it is more purely Negro. Indeed it cannot be contested that the funeral statuettes, the sacred masks, the carved seats, the vases, the knick-knacks of bronze or copper, the gold and silver jewelry made in the northern region of the Sudan and in the Europeanized centers are very inferior to the productions of the same order of the tribes of Guinea, of Dahomey, of the Congo and of the Great Lakes.

"On the other hand, it is sufficient to examine a collection of the bronzes of Benin in order to be convinced that the inspiration of the artists was frankly Negro: in the manner of arranging the characters, in designing or modeling the contours and the proportions, as well as in the whole of the composition and the choice of the most ordinary motifs of decoration, one finds the same technique, the same conventional stylization, the same conceptions of the picture, the same ornamental processes as in the whole of the productions of Negro art of all times and all parts of tropical Africa. The metal coverings of the doors of the old city of Benin present to us, with more

taste and finish, the same scenes as the coffin tops of the Ivory Coast and the Gold Coast and the high-reliefs on the walls of the royal palace of Abomey; the bronze statuettes and masks coming from early Benin are exactly in the same style, although of markedly superior execution, as the majority of wooden statuettes and masks of the Sudan, Guinea, the Congo, and especially the region of the Great Lakes. The four-petaled rose and the disk of turning flames, which ornaments the spaces having no figures in relief, on the door-plates and the metal vases incollections from Benin are found again in identical form in the objects made at different epochs in the various countries of Negro Africa. The ancient art of Benin is only an episode, to be sure the most remarkable, in the history of Negro art.

"At the side of religious art or art for art's sake, there is another domain in which the Negroes are past-masters: it is that of the industrial arts, represented by work in clay, wood, iron, copper, gold, leather, and textiles. Ornamented and glazed pottery of all forms and dimensions, finely carved spoons, gongs, staffs of command, low or high stools each one of which is a masterpiece of patience and elegant execution; harmoniously slender paddles, straight or curved knives having handles of wood incrusted with metal, lances with multiple blades of graceful contours, axes for war or parade, small objects in molded or hammered copper; golden jewelry of filigree or made in a mold, rings and bracelets with delicately wrought openwork, cushions, saddles, boots and sheaths in supple leather diversely colored; curious boxes of oryx skin, trays and mats of colored reeds, fabrics of cotton, wool or raffia that are veritable tapestries with motifs as sober as they are varied and of a very sure taste in coloring; silk or cotton embroideries of a singular richness and happy design.

"The same observation can be made with regard to architecture. It is very certain that this art, which is almost unknown to the populations of the Gulf of Guinea or Equatorial Africa, except in its ornamental branch, has reached a remarkable development in the Sudanese zone. Nevertheless, it does not show its full richness except among Islamized populations and, as we have seen above, the architectural style of the Sudan, although in the course of time it has taken on a distinctly local

49-32-56

character, is of Arabo-Berber origin. It does not on this account furnish a less striking proof of the artistic faculties of the Negroes, since they have been able to produce such brilliant results after seeing only a few models in a field for which their traditions had in nowise prepared them.

"In this brief review of the arts having a place of honor among the Negroes we must not forget music.

"The real instruments of African Negro music are the xylophone, called 'balafon' by the French, sometimes with, sometimes without resonance boxes made of calabashes, a whole series of violins, guitars, zithers and harps, and various sorts of flutes and flageolets. The most universally used is the xylophone, giving two or three octaves of sounds which are not at all disagreeable. Many xylophone players are real virtuosos. Sometimes they are associated in groups, one of them improvising the recitative and the others taking up the refrain or the leit-motif, each doing his own part. The harpists, too, obtain very harmonious effects.

"It would not be rigorously exact to say that the Negroes possess only an oral literature and that this literature is necessarily of the so-called popular type. Without doubt it is the popular oral literature that has the dominating place in Negro Africa, but we also find there a learned oral literature and a written literature.

"I have spoken above of the intellectual flowering that distinguished Timbuktu in the sixteenth century, but this epoch and this city did not have the monopoly of such literature. Even in our days, the 'marabouts,' as the educated Mussulmans are commonly called in Africa, edit. chronicles of local history that are often highly interesting, treatises on exegesis and learned works that constitute a veritable literature, some examples of which would not detract from Arabic literature as a whole.

"Finally, there is another category of written literature, most interesting perhaps from the point of view of the information it can furnish regarding the congenital aptitudes of the Negroes, because it is native in its expression. In certain regions of Africa, the signs of the Arabic alphabet, adapted sometimes, by means of

49-32-57

added diacritical marks and new conventions, to the representation of vowel or consonant sounds that do not exist in Arabic, are employed for writing such and such an African Negro language.

"Far more widespread and representative of the native civilisation is the unwritten learned literature. Perhaps the epithet of 'professional' would be a more suitable designation than 'learned.' It is, in fact, the appanage of the people belonging to one of the castes or corporations of intellectual workers that we generally include under the term of 'griots'. There are all categories of griots: some are musicians, singers, poets, story-tellers, mimes, dancers, mountebanks; others have the task of learning by memory the genealogies of noble families, the important facts relating to great personages, the annals of States or of tribes, political, juridical or social customs, religious beliefs, and their transmission to the next generation. This is the oral literature in its learned form."
(Negroes of Africa, Maurice Delafosse, pp. 254, 255, 260, 261, 263, 265, 266, 267 and 268.

"African sculptures, no longer considered as hideous idols, have taken their place with Assyrian, Roman and Indian Art, and competent critics have not hesitated to declare the finest examples so rich in artistic qualities as to make them worthy to be placed beside the capital achievements of the greatest schools. African influence on Modern Art has been far reaching and the recognition of its value has given an impetus to the work of distinguished contemporaries in Europe and America that is well-nigh incalculable." (p. 5, Arthur Spingarn...Introduction, The African Saga, Blaise Cendrars.)

"And so in this anthology we have not only a record of the wit and wisdom of Africa but the soul of a people, which may be judged by the criteria of pure letters. In this translation, which has attempted throughout to capture the spirit of Cendrars' book rather than to present an erudite rendition oforiginal sources, English readers have their first opportunity to appriase Africa's contribution to the literature of the world. I venture to believe that they will find it not unworthy to stand beside American Negro Spirituals and African Sculpture. (p. 6, Arthur Spingarn...Introduction, The African Saga, Blaise Cendrars.)

419-32-58

"Appleyard, Krapf and Steere are unanimous in praising the beauty and the plastic power of these languages, and Wilson observes in particular that 'they are soft, supple, fexible to an almost limitless degree; their grammatical principles are founded on a systematic and philosophic basis, and the number of their words can be augmented to infinity; they can express the most delicate shades of thought and sentiment, and there are perhaps no other languages in the world that have more definite character or greater precision in expression." (p. 8. Blaise Cendrars, Foreword, The African Saga.)

The Zulu war came in 1879. The Boer war in 1880. The Matabele war and Boer war in 1900. The Herero rebellion in 1903. The Boer war 1899-1902.

Chaka was born 1787

Sara, the Boer woman, was Lobengula's foster mother. Moselikatze, father of Lobengula, died in 1868. His body was sewn in the hides of two black bulls, guarded by 12 of his widows, placed on a tented wagon, and dragged to the heart of the mountains of the Matapos Hills and into a cave. Six of the warriors and witch doctors followed the wagon which was drawn by 16 black oxen, a second wagon with all of his property. Thousands of mourners and a herd of 50 black oxen to be sacrificed The dead king was seated on a thrown of rocks, his possessions placed in an adjourning cave, and the caves walled up. Then the feast and slaughter of the oxen began.

40-7E-1

In the Rhodes family there were 12 children. Cecil John Rhodes was born July 5, 1853. At 18 Rhodes was in the diamond mines at Kimberley. ....the scum of all races who had gathered here, of the colored prostitutes; of the gambling, the lawlessness, the drinking, the occasional shootings. How could he tell his mother that girls here auctioned themselves off for the night?

Rhodes bought anything he wanted. He bought the Irish members of the English parliament. He bought Boer families and Zulu kings.

Diamonds were discovered in Griqualand West, which belonged to the Bastaards. When diamonds were discovered, England took the land despite the claim of the Boers.

Under the "Ridge of White Waters" on the wide high veld of Africa, 6,000 feet above the sea level, gold was found.

In 1888 Rhodes amalgamated the Kimberley mines and obtained the concession from Lobengula. In 1893 Rhodes took Matabele land. In 1896 Jameson raided the Transvaal and in 1902, a month before the Boer war ended, Rhodes died.

7--WEST AFRICAN ART

42-9C-4

West African art is being exhibited in Europe and West Africa on occasions far more numerous than ever before, the need for an introduction to the subject will be appreciated. This need is met, so far as wood figures are concerned, by Leon Underwood's FIGURES IN WOOD OF WEST AFRICA (John Tiranti Ltd., 6/-) Published with both French and English texts, this book also includes some fifty illustrations of West African figures which have been preserved in museums or private collections.

42-9C-1

4. In his reply, Mr. Rees-Williams said: "at the moment, it is out of the question to think of a United States of Africa even if, which is not the case, most of the African territory were British territory. The difficulty in the economic and political development of Africa is that the Colonies of the west grew out of very small trading stations. These particular stations became Crown Colonies and, finally, mainly for reasons of protection, the vast hinterlands behind them put themselves under the protection of the little Crown Colonies. That is the case in the Gold Coast and Nigeria, for examply. In East Africa, their origin was the pursuit of the slave traders. So in both areas there is nothing which is really an economic whole. They are part of a vast area of Africa, some of which is under British control, some under French, Portuguese or Belgian, as the case may be. There is no hope--and I believe thereis no desire for it by the Africans themselves--of anything in the nature of a political United States of Africa."

42-9c-2

4. NO HOPE OF UNITED STATES OF AFRICA

"The United States of Africa" was the title of a short debate initiated by Squadron-Leader Kinghorn in the House of Commons on February 25. He hoped "that our great plans for this country include further exploitation of these territories and planned emigration, sending people there who will produce goods there which can be sold by this country and earn dollars." He hoped that the Colonial Under-Secretary could "give us a reply which will fit into the steps we have taken on t is side of the House already---with the Groundnuts Scheme, the Overseas Food Corporation and so on, and show that the birth of the Labour Party as a Parliamentary Government was also the birth of a third Empire."

4. We want to say, at the very beginning, that we are not going to create, in other parts of Africa, any more South Africas; that if there is to be a United States of Africa, then black and white must live on terms of greater equality than are prevalent in South Africa at the moment. When we think also of a United States of Africa we are not going to think of it in terms of the United States of America where, again, political equality is denied to the black peoples in the Southern States.

5. FOCUS ON NIGERIA

Mr. Hughes argues that the transfer to Cocoa Marketing Boards in the Gold Coast and Nigeria of surplus funds acquired by the West African Produce Control Board, marks the end of "one form of economic abuse;" he clearly favours the diversion, for local use, of surpluses arising from the difference between world prices and prices paid to producers over the whole field of commodity trade.

42-9c-8

With the aid of a grant of £15,250 under the Colonial Development and Welfare Acts, a rice station has been established at Genoi, where experiments in merchanized cultivation are being carried out with the aim of making the territory self-supporting in rice. The Report emphasizes the importance of substituting machinery for the primitive and uneconomical African hoe, if improved yields are to be obtained and already over £-44,000 has been granted under the Colonial Development and Welfare Acts for the purchase of machinery to be used in experiments in mechanized cultivation.

42-9c-3 8

LIFE AND DEATH

A series of tables in the Report on the Gold Coast Medical Department for 1946 give interesting and vital statistics of the local population. Of a total estimated population of 3,962,692 it is estimated that 335,780 live in Registration areas. Of 14,454 registered, a birth rate is computed of 39.7 per 1,000 persons living. Of 9,294 registered, a death rate is computed of 25.5 per 1,000 persons. Infant mortality rate has decreased by nine, since 1945, and is computed to be 110 for 1,589 registered persons.

In May, ~~xx~~ unprecedented efforts were reported from London to increase Colonial productivity and a record sum equivalent to more than one billion dollars was ear-marked for a long term program of colonial developments by Great Britain. ~~(copy--2--3)~~

West Africa said : ~~(Paste--4)~~

42-9c-7

5. THE STAGE IS SET

There seems to be a new note of emphasis since Sir Stafford t the African Governors, last November: "it is to your contribution to the righting of the world unbalance, that we must look; and in order give you the chance of success, we must put behind you all that we can in the way of capital goods supplies."

To many Europeans and Africans, these words of Sir Stafford seemed at the time to be placing too much reliance on Africa as a solution for what was, in effect, a European problem. To-day, in view of the European Recovery Programme under the Marshall Plan, the axis, has changed and the emphasis is once more on Europe.

The Colonies had been used during and since the war to increase the imports from all sources and to England, they were asked to limit ~~xxxrx~~ their demands for goods to t ose which could be sold for dollars of hard currancy, or which are made wholly or largely of dollar materials. In other words, the colonies already are ~~x~~ being used to boost the recovery of Great Britain. Criticism of this policy has come from Africa and as relaxation from austerity has become common, Africa has asked to be relieved of this policy of "calamitous restriction".

42-9c-23

colonialism provided for in the present set-up of the United Nations.

Today the dependent areas of the world center overwhelmingly in Africa. Africa is therefore the center of colonial imperialism. As Franklin D. Roosevelt said: "The colonial system means war." When therefore the Atlantic Charter was first published saying that the representatives of Great Britain and the United States "respect the right of all peoples to choose the form of government under which they live " the colonial peoples throughout the world became excited . When a few days after its publication Mr. Attlee spoke at a meeting of the West African Students Union in London a member asked if the Atlantic Charter would in reality apply to the coloured peoples of the Empire --Mr. Churchill's Deputy replied that there was not to be found " in the declaration which have been made on behalf of the government in this country on the war, any suggestion that the freedom and social security for which we are fighting should be denied to any of the races of mankind. We are fighting this war not for ourselves but for all peoples." That was specific, but it was too specific for Mr. Churchill. Almost immediately, on his return from the Atlantic Meeting , he pointed out in the House of Commons, September 9, that "at the Atlantic meeting we had in mind primarily the restoration of the Soverignty self-government in national life of the states and nations of Europe now under the Nazi yoke. So that it is quite a separate problem from the progressive evolution of self-governing institutions in the regions and among the people which owe alligance to the British Crown.

At San Francisco, effort was made to get a strong plank on Trusteeship (paste 48)

The resultant parts of the Charter ~~x~~ referring to the Trusteeship council were unfortunate and the fact stands out in reviewing the decisions on colonial matters at the first and second regular meeting of the United Nations General Assembly was that the colonial powers were able to dictate most of the decisions. The fifty-seven members of the Trusteeship Committee which is not to be confused with the smaller Trusteeship Council

2. AFRICA AND MIGRATION

Migration within the British Commonwealth and Empire has been mainly considered in terms of the export of individuals from Great Britain to the great Commonwealth countries of Canada, Auatralia, New Zealand and South Africa. "I believe," said Lord Tweedsmuir in the House of Lords recently, "that upon the successful redistribution of the British race depends the whole future of the British Commonwealth."

Inevitably, the potentialities of Africa come under scrutiny. The subject is approached with apologetic hesitation and there is much vagueness of expression. The reason for hesitation, so far as West Africa is concerned, is obvious. Those West Africans who are already suspicious of British intentions in those territories do not welcome any suggestion for European settlers who live at a standard far in excess of the general standard prevalent throughout West Africa.

Amongst the educated classes, however, fear of European colonization would be almost univeraal if colonization were ever put forward as a serious proposal.

If a redistribution of the British race is considered necessary for the future of the British Commonwealth, we must be told what part is to be played by the more than sixty million Colonials who are, in varying degrees, individual members of the British Commonwealth and Empire. The continuation of Pakistan and India in membership of the Commonwealth and Empire inevitably will depend on the satisfactory solution which Great Britain and the white self-governing communities of the Empire make of this vital problem. A Great Britain which decided, like South Africa, in favour of a policy of racial privilege and segregation could not hope to retain any single self-governing non-white unit within the Commonwealth for long.

42-9c-10

To most Englishmen this development has brought hope. But to some it spells warning. The London Times says:in a leading editorial:

> The principle which inspired colonial government during the nineteenth century was that, in return for the real blessings of internal peace and impartial justice, colonial peoples should settle down to the steady work of producing foodstuffs or raw materials for the European, and particularly the British market. This principle served the needs of an age that was opening up the world's dark places and familiarizing undeveloped or savage peoples with the circumstances of civilized life. But it carried with it the corollary that, in the process of adapting itself to the new conditions, a colony should live of its own. Two consequences followed. The first was that colonial advances in civilization had to conform to the pace of economic development; the second that commercial enterprise, accepting or slightly ameliorating native standards of life, distributed its profits to its European shareholders. The Colonial Development and Welfare Act with its promise of substantial grants for general betterment, was framed to meet the first of these drawbacks. The second led to charges of capitalistic exploitation which, in some notorious cases at least, were well enough founded to make the whole system of unrestricted commercial development of colonial territories obnoxious to modern thought. The new corporation will work on commercial principles and will rightly seek a return on its capital, but its operations are to be brought within the framework of the general welfare.

42-9c-11

The Fabian planners for the Labor Government blue print their ideas:

> "One of the most far-reaching effects of Western European co-operation, which may be anticipated in the 1950/55 period, is the extension of our own work in colonial development, so well begun since 1945, to a joint British-French-Belgian-South African-Egyptian planning and development of the greater part of Africa, the first steps having already been agreed between the French and ourselves. Such joint action could, in twenty years, change the face of Africa, and its place in world economy, as the Russians have changed the face of Soviet Asia; and such joint action could reproduce T.V.A.s in the valleys of the Nile, the Congo, the Niger and the Zambesi.
>
> "A twenty-year development programme would create simultaneously an enormous source of supply of primary products and a large new market for manufactured goods. The first requirement is the provision of basic services: power supplies, ports, roads, railways, river transport installations, and homes and communal services for the workers transferred to the new areas of development. . . .
>
> Second Five Years, we can replace the former higgledy-piggledy capitalist exploitation of the colonies by a planned development of their resources based on sharply-rising living-standards for their peoples and the effective participation of these peoples in the organization and administration of these developments.
>
> "That participation is vital: if Africa is to be re-created, we must stop doing things *for* the Africans and start doing things *with* them."
>
> * The Second Five Years: A Labour Programme for 1950, by Ian Mikardo, M.P. (Fabian Publications Ltd. Price 6d.)

In all this discussion and planning, some overtones appear. A member of Parliament from Leominster said in June, 1948,

, that one-third of the agricultural land in Great Britain is still classed as rough grazing. "If," he said, "we tackled a few million acres of that marginal land and rough grazing land and brought it into production, we should be doing a great deal more good for this country than by the millions of pounds which we are now pouring into Central Africa on what is a very problematical venture."

5. ~~Said Mr.~~ George Brown, Joint Parliamentary Secretary to the Ministry of Agriculture, ~~during his reply:~~ ~~The hon. gentleman... rather suggested that we were putting money into Colonial food production schemes rather than the development of marginal land at home. But~~ "this country depends more than any other on imported supplies of oils and fats; we depend on imports for 95 per cent of our supplies. The groundnut scheme will make a contribution, when it is really going, of about 250,000 tons a year to our great need for oils and fats. It is not being done, as he so lightly said, to help Africa or Australia, but to get much needed additional supplies of these things for this country."

one, two and three hundred per cent and the employers were disposed to pay no attention to the demands of the laborers.

They were forgetting what Palmerston said to his Tiverton constituants in 1848: "The crimes committed in regard to African slavery and the African slave trade, if they could be put together, are I am sure were greater in amount than all of the crimes that ever were committed by the human race from the beginning of the world to the present time." On the other hand,

In the meantime it was pointed out that the taxable capacity of most colonials is very low, that they have limited production and comparatively poor revenue and that their resources for maintaining considerable social, and economic services are restricted. During the war they had a certain prosperity, their actual revenues showed a large expansion, although this was due in part, to the fall in the value of money. In Nigeria for instance the total public revenue for 1939 was six million pounds, and for 1948 thirteen million.

42-90-15

Even off-setting the fall in the value of money, these changes indicated a real improvement in the financial position of colonial governments on account of sustained demands for colonial products and also on account of war time, military activities including remittances of black men serving in the British army. The increase of revenue was accompanied by an increase in expenditure, partly due to inflation, but reflecting also increased services and increased costs of existing services. Many colonies had to incur considerable expenditure in subsidizing the costs of living.

In spite of the growth of expenditure, Colonial Government revenue has enabled most governments to accumulate increase surplus blaances and with these they are planning programs of development; including health and education. That the colonial peoples are suspicious of some of these plans goes without saying. A member of Parliament, Mr. Rankin of Glasgow said January 20, 1948, that the government ought to be reminded that for every twelve pounds of wealth created in Africa in the past, we took out eleven pounds and left one pound. A great deal of the present psychological difficulty has its origin in the savage maltreatment which

American Capital is increasing in Africa , our State Department says that Britains overseas dependencys will be the primary source from which the United States can make good for stock piling raw materials and deficiencys in other resources. United States capital in South Africa has doubled since 1939.

Sir Arthur Salter ~~xxxxxxxxxxxxxxxxxxxx~~ points out that America must encourage productive foreign investment on a large scale, and that the greatest countries offering opportunities--China, India and Russia- do not fulfil the political condition of foreign investment, which is assurance against confiscation.

42-9c-16

Where, then, can American investment (in the form of capital equipment) go? Sir Arthur suggests the Colonial Empires of Great Britain France , Belgium and Holland.

From the Congo the United States bought three thousand six hundred and fifty tons of Uranium in 1946, for which it paid over five million dollars . Two thousand, six hundred tons went to Britain for four and a quarter million dollars . Up until 1946, the United States had been the only buyer. The total Uranium export from the Congo in 1945 was nearly ten thousand tons as compared with fifteen hundred tons in 1939.

Diamond Mines aredeveloping in Tanganyika, Phosphate in Uganda. The Sinclair Oil Company is prospecting in Somaliland; Italian factorys are to be transferred bodily to South Africa to make machine tools, feuls bricks, electrical apparatus and textiles. French and Swiss bankers are behind the scheme.

The United African Company has large plans--(paste 34)

~~Great Britain~~ - On 29 Nov., 1946, Mr. Geoffrey Heyworth announced that the United Africa Co. has development plans of over ~~£ million~~, covering projects in Nigeria, the Gold Coast, the Congo, French Equatorial Africa, French Ivory Coast, Uganda, Egypt, Natal, and the Cape. 55% of the sum will go for opening up natural resources, 10% for commerce, 3% for transport, and 31% for industry. In addition the Company will manage the Government's East African Groundnut Scheme for 18 months, until the Government has formed and trained its Public Corporation to take over. Timber products, reforestration , palm oil, rubber and cocoa plantations, road building, training schools, motor agencies, hardware and clothing merchandizing, mechanical and electrical engineering, trade bulletins cargo hauling facilities and piers, a brewery, soap and margarine factories, water boring, and similar activities are already approved, showing the very wide spread and inclusive scope of the Company's interests. T[illegible]

-$36,000,000

(paste 74)

42-26-17

It is especially to be noted that there is a rise in the union activity and organization in Africa. In the great majority of colonial territories there is satisfactory lagislation and a good many efforts have been made to bring this legislation up to the modern legislation of England. But this is not always true.

No African, in Northern Rhodesia are at present members of trade unions and in the Union of South Africa, although not officially recognized , there are about 120 native trade unions claiming 160,000 members. The West African labor movement is growing in stature and power . In French West Africathe labor movement has taken on strength and force . There was a world federation of trade unions which met in Dakar, French West Africa in April 1947. Eighteen delegations of Negroes attended. Recommendations were made to be considered in Prague in June.

The Nigerian labor movement is young, dating from the general strike in 1945 but is growing and developing. It secured a harrigan commission report and also that of the Tudor-Davis commission making a basis for further argument for the increase of wages and better conditions of living.

The most significent occurence in the African labor world was a representative character of the African at the World Trade Union Conference in February 1945. Colonial delegates came from Nigeria, The Gold Coast, Serre-Leone , and Gambia in West Africa; beside from various parts of America.

4. Sir Ralph Furse (Director of Recruitment at the Colonial Office since 1919) said in London last week that he had firm confidence in the capacity of the Colonial Service to tackle the extremely difficult job that it has got ahead of it provided its tail is kept up. "The first and most important thing, if we want to get a first class Colonial Service," he said, "is that the country should recover confidence in itself as a Colonial Power.

"The Service had been exposed to a great deal of attack and there was so much defeatism and cynicism spread around that it needed help urgently in dealing with the criticism that it gets from the outside. If there was a backwash," he said, "the effect on recruitment would be so bad that it would take us years to recover the standard we have got."

4. TWO TYPES OF ASSURANCES

Candidates for the Service today asked for two types of assurances: that the progress of self-government would not mean that they were likely to be put into the street half-way through their career; and that they would have an adequate chance of working for the ideals which led them to go into the Service.

4. YEAR'S SUPPLY IN FOUR MONTHS

The first thing to remember, said Sir Raplh, with regard to the department of recruitment, was that it was dealing with the tremendous concentration of demand arising out of the war. This demand was not much shorter than the to-tal demand of the inter-war period of 1919/38. Post-war recruitment, which began in June, 1945, was not over yet. It had now reached a point where the boom of the "demobilization kennel" had been followed by lean periods due to the inability of the Universities to turn out their normal peace-time complement. The position should improve by the summer of 1949.

4. (Continued)

Comparative figures of applications for the Service were 9,150 from June, 1945 to June, 1946; and 4, 576 from June, 1946 to June, 1947. But in the last four months (excluding engineers(the Service had taken in very little short of an average year's supply. The first tow years of recruitment since June, 1945, had doubled the Crown Agents' average rate of recruitment for the last five pre-war years.

In these two years, the Medical Service had got the equivalent of five years' recruitment; the Legal Service, the equivalent of nine years ; Education, the equivalent of ten years; Administration (including appointments on contract), the equivalent of eleven years. The overall intake of two years was roughly equivalent to seven years or more. Considerable progress had been made in face of a very heavy demand.

42-9c-18 42-9c-24

4.FROM SHIP'S COOK TO DISTRICT OFFICER

Nearly all professional and technical appointments went to people from the Universities. But for administrative appointments, "we deliberately never tie ourselves down even to the degree." So elastic was the wualification for administrative appointments that, on one occasion, a man who had been a ship's cook and had travelled widely was given a job as District Officer.

8. At Westminster

Statement on Gold Coast Riots

Five questions were asked in the House of Commons last week about the Gold Coast riots. A statement was made by Mr. Rees-Williams, at the end of question time. After stating that a satisfactory measure of law and order had been restored, he continued: "I am very glad to say that the attitude of the Chiefs and Native Authorities in the Gold Coast has throughout been most helpful. They have publicly expressed their authority to urge restraint on their people and co-operation with the Government in the measures which it has taken to restore order. The senior unofficial member of the Legislative Council, on behalf of his colleagues on that body, and several Native Authorities have telegraphed to me pledging their support to the Gold Coast Government."

8. The total casualties reported, on March 8, were 26 Africans dead and 227 injured. Fifteen non-Africans were injured.

8. "The Governor," he said, "has asked for the appointment of a Commission of Inquiry from outside the Gold Coast."

-5- LABOR (6)

Dar-es-Salaam dock strike arbitration awards 40% wage increases. The strike was illegal, without warning in midst of negotiations; it disrupted urgently needed deliveries to groundnut area, was spread up the railway by agitators and intimidators, and for a time threatened to be ugly. Basic causes remain - shortage of consumer goods, squalid living conditions, Black Market, and exorbitant prices.

Uganda reports short strike at Kakira sugar factory, with stone throwing.

Juba, Southern Sudan, had widespread strike of Government workers when false rumor circulated that grain prices were to be raised 40%; it took over a week to return to normal. Special committees are examining grievances and possible pay increases.

Domestic Servants Union claims 4000 members, and drafts Resolution calling for increased pay, minimum wage, 8 hr. day, "bicycle allowance", house rent and payment by officials rather than by individual employers.

Gold Coast gold miners struck for a month, demanding more pay, shorter hours, vacation with pay, etc. Arbitration granted most demands.

Government Railway Workers struck and tied up all rail transport for nearly a month.

French West African Government railways tied up over a month by strike of 12,000 African employees, who claim their strike is biggest and best since Nigeria's general strike of 1945. According to the last report, Government had not yet been successful in attempts to arbitrate.

Jan. 1948

02-Pb-24

(1) the claim that the Legislative Council has an African majority whilst true, is misleading, since Chiefs and Native Authorities comprise majority membership and they are appointees of and subject to removal from office by the Governor
(2) the classification of Chiefs and Native Authorities as Unofficial Members is inconsistent with Government policy because they are officially recognised as "an integral part of the machinery of Government";
(3) the vesting of power in the Governor to nominate Unofficial Members to represent the interests of tax-payers is autocratic;
(4) the new Constitution discriminates against tax-payers on the grounds of sex, economic status, and residence;

The statement that the new Constitution has an African majority is true, but definitely misleading. Chiefs and Native Authorities constitute the bulk of the unofficial membership of the Legislative Council. Under the Appointment and Deposition of Chiefs Ordinance, the appointment and deposition of Chiefs rest upon the discretion of the Governor, who can appoint, recognise, or remove them from office. Under the Native Authority Ordinance, the Governor has the power to appoint Native Authorities and to remove them from office. According to His Majesty's Order-in-Council, the Governor has absolute power to unseat any Nominated Official Member and any Nominated Unofficial Member, if, in his absolute opinion, such a person is unfit to discharge his functions as a member of the legislature.

It is, therefore, obvious that the 18 Chiefs and Native Authorities who are Nominated Unofficial Members(Africans) can be removed at the sole pleasure of a Governor, in whose appointment and tenure of office, the tax-payers of Nigeria and the Cameroons have no voice. The NCNC submits that it is impossible for these official nominees to exercise freedom of speech in the interest of the tax-payers, especially in matters in which the Government is interested. Moreover, of the remaining seven Unofficial Members, three non-Africans also hold office and can be removed therefrom, at the pleasure of the Governor. The remaining four Unofficial Members are elected. Thus, all the Nominated Unofficial Members can be Government puppets and "yes-men."

The classification of Chiefs and Native Authorities as "Unofficial Members" is inconsistent with Government policy. According to a Government memorandum elucidating the principles and practice of the "Indirect Rule", Chiefs and Native Authorities are said to "form an integral part of the machinery of Government." In the opinion of the NCNC, this view is correct. They are officials in the governi of Nigeria and the Cameroons, being the elected and appointed rul In his Dual Mandate, Lord Lugard said that "they are the trusted delegates of the Governor... andrecognising the King's representa ives as their acknowledged suzerain." Elsewhere, he said that although they are "an integral part of the machinery of the admin istration," yet there are not two sets of rulers, British and nat working either seperately or in cooperation, but a single Governm in which the native Chiefs have well-defined duties and an acknow ledged status equally with British officials. Their duties shou never conflict, and should overlap as little as possible. They should be complementary to each other...."

Any political system which encourages one man to nominate pe who are expected to exercise law-making powers, and to remove the at will is absolutely autocratic, because it is an arbitrary weap for manacling public opinion, which is the means for expressing t will of the people at legislative assemblies. The fact that the are 40 Nominated Members in a legislature of 44, and that these official nominees hold office at the pleasure of the Governor.,a that they are neither amenable nor answerable to the tax-payers f their legislative expressions and actions, makes this aspect of new Constitution a mockery of democracy. As far back as 1868, Buckingham, then Secretary of State for the Colonies, propounded doctrine to the effect that, whilst Nominated Unofficial Members could exercise freedom of conscience, yet they are expected to support measures in which the Crown is interested, in order to vindicate the confidence reposed in them by their nomination. Chief Secretary of Nigeria made a statement in support of this

It has been repeatedly said by the British that Nigeria now has a Negro majority in its Legislative Council — is there for self-government What can it teach? The N.C. of N.C Boys!

Mailed Jan. 19.

Jan. 16, 1948

MEMORANDUM SUBMITTED BY THE DELEGATION OF THE NATIONAL COUNCIL OF NIGERIA AND THE CAMEROONS TO THE SECRETARY OF STATE FOR THE COLONIES ON THE 11TH. AUGUST, 1947.

The National Council of Nigeria and the Cameroons is a federation of 183 political parties, trade unions, professional and business associations, farmers' and peasants' organisations, tribal unions, youth leagues, students' and other cultural organisations scattered all over Nigeria and the British Cameroons.

The NCNC Delegation has been authorised and commissioned by the various communities referred to in Appendix 1 to make certain representations to the Colonial Office in order to promote better relations thereby cementing ties of friendship to the mutual advantage of the peoples of Great Britain and Nigeria and the Cameroons. Our people feel that there is no need for making the future relations of Great Britain and Nigeria a subject of conflict. Rather, it is a question of adjustment of the political and administrative organisation.

Contrary to opinions generally expressed in official and other circles, neither the communities of our country nor the officers and members of the NCNC are victims of chauvinism or xenophobia. However, we are convinced that after many years of Anglo-Nigerian relations, we have had no opportunity in the effective management of the government of our country because the Crown Colony system is despotic and obsolete; being opposed to democracy, it should be abrogated.

It is the desire of our people that we should be granted more political responsibility because the country is ready and prepared for it. The administration of Nigeria and the Cameroons under a Crown Colony system is static, unprogressive, and not in accordance with the democratic ideals for which our country contributed her share in man-power, money, and materials in World War II. By granting this request, Great Britain has the privilege and honour of helping our people to make a contribution to the larger life of mankind.

The representations which we have been authorised to make are based on the following categories:

(1) Richards' Constitution. To object to the principle involved in the new Constitution which subverts the democratic condition of the Colony and Protectorate of Nigeria and the Cameroons and derogates the status of the Paramount Rulers of the country.

(2) Four Legislations. To demand the repeal of certain sections of (a) Public Lands Acquisition Ordinance and amendment (1945), (b) Crown Lands Ordinance and Amendment (1945), (c) Minerals Ordinance, 1945, (d) Appointment and Deposition of Chiefs Ordinance and Amendment (1945).

(3) Basic Human Rights. To request the repeal of certain laws or sections of laws which deny the people of Nigeria and the Cameroons basic human rights.

(4) Acts of Maladministration. To spotlight certain acts of maladministration with a view to their immediate amelioration.

(5) Protectorate Status. To protest against the present official policy of governing Nigeria and the Cameroons (which, in parts, are a Crown Colony, a Protectorate, and Trust Territory) as if they are an exclusive colonial possession of Great Britain; and to ask for a clarification of Anglo-Nigerian relations (a) in the light of treaty obligations, and (b) in accordance with Protectorate status.

(6) Self-Government. To demand that immediate steps be taken now towards self-government for Nigeria and the Cameroons.

THE RICHARDS CONSTITUTION

The new Constitution which was imposed upon the people of Nigeria and the Cameroons without their knowledge andconsent, provides for a Legislative Council of 44 members, as follows: 16 nominated Official Members, 24 Nominated Unofficial Members, and 4 Elected Unofficial Members. The Nominated Members are official nominees and hold office at the pleasure of the Governor; they are not answerable to the taxpayers. The NCNC is opposed to this legislative set up ~~because~~

strongly against it they may send representations to the Colonial Office. Although it has been passed into law the Governor will not operate it as yet, and so what you might call "a constitutional crisis" arises.

N :—How are representations made to the Colonial Office ?

P :—They cannot be sent direct ; and although the conflict is with the Governor they have to be sent through the Governor. It is a good thing to forward a copy to an English M.P. at the same time. The Governor adds his own marginal notes, and the Secretary of State, on receiving the grievance, takes the advice of the Under-Secretary of the department concerned (a permanent official qualified as an expert), and a reply is drafted. This comes to the Governor, who reports it back to the Legislative Council. That is the way it works. Like appealing from Caesar to Caesar.

So once more you see that if the Legislature were in the hands of the people's epresentatives and controlled by them such legislation would not come up. The fundamental question is, therefore, control of legislation.

N :—One of the arguments against this is that in many Colonies "the natives are not yet ripe for it."

P :—It is quite true that in the Colonial Empire as a whole there are sections which are much more advanced than others. The West Indies have reached a higher degree of civilisation because of their longer contact with Western culture and its assimilation. The people there, as a whole, are Christians, their mother tongue to-day is English ; ways and customs, virtues and vices of Europe have become their own. These people are Westernised Africans.

On the African continent the process of assimilation has not reached the same stage. However, in certain parts, especially in Sierra Leone, and in the Gold Coast, Nigeria, Gambia, there are Europeanised African communities. What applies in general to the West Indies is also applicable to Ceylon, Mauritius, British Guiana, British Honduras, the Bahamas. In all of these exists an intellectual elite, the native bourgeoisie, which is the class constituting the vanguard of the progressive political movements. It is nonsense to say that such people are incapable of managing the affairs of their respective countries. For they and their sons have studied at American and European Universities and represent, in the main, several generations of culture and political consciousness.

In the less advanced areas, such as the hinterland territories of Africa, generally known as Protectorates, in the Fiji Islands, Malaya, and other parts where tribal or semi-feudal social institutions still persist, thanks to Imperialism, which does everything to foster and maintain them, there are not such large Europeanised communities. However, despite all the obstacles and difficulties put in their way, the inexorable laws of human progress are taking shape, and from the younger elements emerges a class of natives which is dissatisfied with the *status quo* and which is demanding access to wider and fuller social conditions. The advent of these could be hastened by democratising the political institutions which exist there—a policy which British Imperialism shows no desire to follow, war or no war.

N :—The policy of keeping people backward, and without educati
is a conscious one. For the last 150 years Im
Colonie

were schools in every Indian village; in sweeping away the village system we have simultaneously swept away the schools. John Bright complained, in 1853, that while our Government had almost wholly overthrown the universally existing native education, it had done nothing to supply the deficiency. Ten years ago only one penny per head was spent on education in British-ruled India, whereas Russia was spending between sevenpence and eightpence." He then quotes G. T. Garratt's *An Indian Commentary*. "One cannot fail to deplore the rapid decadence, probably more rapid than the official figures show of independent educational institutions."

This book was published first in 1928, so the "ten years ago" was 1918—yet even then Russia in her first year of liberation from the Tsarist regime and in the midst of the struggle was spending seven and eight times as much on education as British-ruled India ! ! ! Imperialism is nothing if not well thought-out ! Incidentally, as we are on the subject of India—I have just re-read two admirable books : Leonard Woolf's *The Village in the Jungle*, about Ceylon, published in 1913, and E. M. Forster's *A Passage to India*, which appeared in 1924, both of which have gone into innumerable editions. When you have read these you feel you have learned a good deal, that is, you have a start on the whole Indian question. I have never been to India, but knowing the West Indian Colonies and something of the poor Indians of Trinidad I can see it all well. Both these authors were in the administration for years, so they know what they are writing about, and as each is very honest besides being a fine artist the reader is confronted with a whole new world of truth.

One puts down Woolf's beautiful tragic book with a feeling not short of abysmal despair—that is, if things are to go on like this for ever. And Forster's remarkable ironic tragedy one ends with a sense of the utter futility, sadness, and ridicule, too, of race relations as here depicted. I mean, once more, if none of this is ever to change.

I should like to know just how the difficulties the Russians encountered at first in the adjustment of their great new social system among their so-numerous race groups compare with the monumental scale of the racial complexities of India. Or are these not really so inherently great, but built up by us ? I would bet on the latter. And I am sure the Russians would tackle all this very well. Don't imagine for a moment that I think the British *incapable* of that. Oh, no. I have a great belief in the British. But *which* British ? Let me tell you. The kind I have in mind are like the young engineer I know, and his fiancee, who is a schoolmistress ; both are about twenty-four years old : studious, thoughtful, constructive, specialised in their own vocations, hating all race complexes, full of initiative—and also full of fun. We cannot do much that is good without putting a bit of love into things (as the French say), and a bit of humour. You will notice that these are qualities one may call those of "human values." There are many people like these, mainly but not only young people, in Great Britain, the Dominions and the Colonies—everywhere. They don't get much of a hearing as yet. But what is "After the War" for if not for people like this ? People like this are very concerned indeed about our Colonies ; they want, [illegible] to go and study there, some of them to work there [illegible] All of them say that we

INTERNATIONAL AFFAIRS

Trusteeships

The Trusteeship Committee of the United Nations shows a disquieting tendency to re-write the Charter (2,3) at the expense of the Colonial Powers, saysthe correspondent and editor of the London Times. The Indian resolution advocating trusteeship for all the world's colonies passed (4) the Committee, though by only a scanty majority. The General Assembly, acting on another Indian resolution (5,6)(modified) has again (7) called on the Union of South Africa to submit South West Africa for trusteeship, "hoping" that the draft agreement will be ready for consideration at the next session. The Union's delegate reiterated the Union's stand that the United Nations have no jurisdiction over South West Africa, and that the Union will continue to administer the territory as a mandate, with representation in the Union Parliament, and will submit periodically (8,3) to the United Nations for its information the usual reports of its mandate.

EDITORIAL ROUNDUP

COVER—Beauteous Joan Adams, an avid student of history, is a recent graduate of the International Finishing School in San Francisco. She plans to enter San Francisco State College next semester to continue her studies in her favorite subject.

•

THEODORE H. HAAS is chief counsel of the Bureau of Indian Affairs, Department of the Interior, Washington, D. C. It might be remarked here that the present Indian population of the United States according to the 1940 census is 329,478, divided into 96 tribes and 41 linguistic stocks. Only about 45 percent of them are estimated to be full-blood Indians.

•

WILLIAM C. (BILL) LANE though born in Rosedale, Miss., prefers to say he is from New Orleans—for a number of reasons which he refuses to divulgé. He was trained in journalism at the University of Iowa and has written stories and articles for a number of national magazines including *Cornet*, *The Woman*, and *Pageant*. He lives in Detroit, Mich.

•

CHESTER HIMES is already well known to our readers. He has authored two novels and his third, *Immortal Mammy*, is scheduled for fall publication.

•

GEORGE PADMORE, whose articles have already given testimony to his broad knowledge of foreign affairs, is an old contributor. He lives in London dividing his time between writing and editing the *Colonial Parliamentary Bulletin*, a monthly record of the colonies in Westminster.

•

LAYLE SILBERT recently spent eight months in Shanghai. She was formerly an editorial assistant at the American Council on Race Relations but now lives in Chicago, Ill.

•

CEDRIC DOVER, formerly of London, now teaches at Fisk university, Nashville, Tenn. He is best known in this country as author of the provocatively brilliant *Half-Caste*. His autobiography, *One Khaki*, is now in the hands of his publisher.

•

ARTHUR B. SPINGARN (who reviews *Negro Voices in American Fiction*, page 216) is president of the NAACP. For thirty-five years Mr. Spingarn made a systematic collection of Negro books. This library of more than 5,000 items and related curios was recently sold to Howard university.

British Africa Colony Asks Self-Rule

LONDON, March 4 (AP) — Two West African groups demanded today that Britain's Gold Coast colony be granted immediate self government. During the past few days the colony has been swept by riots in which 25 persons were reported killed.

A joint statement issued to a news conference by the West African Student's Union and the West African National Secretariat contained the demand for self government. The secretariat is made up of West African nationals in London.

Referring to the disorders which began last Saturday the statement accused police of firing on "unarmed and defenseless men."

"In view of these circumstances," the statement continued, "the people of the Gold Coast rightly demand immediate self government, convening of a constituent assembly to formulate plans for effecting transfer of power and the recall of the Governor."

The British sloops Actaeon and Nereide are steaming toward Accra, the Gold Coast capital, from Simonstown, South Africa.

A British government statement in the House of Commons Monday attributed the rioting to Communist incitement.

According to the Colonial Office, the disorders were touched off when the Ex-Servicemen's Union, a minority group of veterans, left a prescribed route of march in Accra and converged on the residence of the Governor, Sir Gerald Creasy, to present a petition. The nature of the petition has not been disclosed.

(United Press said the demonstrations were against the high cost of living and unemployment and that British authorities at Accra imposed censorship on news dispatches. An announcement said the territorial Governor henceforth will "supervise the press." Private sources in Accra said that a form of censorship had been going on for several days, causing an undue delay in press messages.)

Shots were fired, the Colonial Office here in London said, after police attempted to divert or stop the rioters.

AFRICANS HELD PRO-SOVIET

Report Suggests British Build Confidence Between Races

WASHINGTON, June 27 (UP)—The Foreign Policy Association said today in a report on British rule in West Africa that "more and more" Africans would show increasing interest in Russia as they became better educated.

The report was prepared by Dr. Vernon McKay, who visited West Africa under a grant from the Carnegie Corporation. He found many natives complaining that British progress toward Africanization of the colonies was too slow.

"Africans are likely to show growing interest in the methods by which the Soviet Union has developed its backward areas," he said. "In Freetown, capital of Sierra Leone, a number of newspaper editors are pro-Russian in their attitude toward the present Soviet-American world conflict."

Dr. McKay concluded that what British West Africa needed was faster Africanization of the civil service, more vigorous efforts to improve industry and agriculture "and great emphasis of the psychological problem of building mutual confidence between races."

Velebit Gets Welfare Post

BELGRADE, Yugoslavia, June

institutions in their respective countries. There are glaring contradictions in so many of the statements made.

For instance: Mr. Eden talks of ameliorating the conditions of the subject peoples. The Foreign Secretary, however, envisages a post-war world still in the terms of Empire and Imperialism. This constitutes the fundamental conflict with our point of view. We want not only the end of Nazism and of Fascism, but also the end of Empire and "democratic" Imperialism. The Colonial peoples have clearly demonstrated their antagonism and their resentment against the Empire by their attitude in Burma, Malaya, etc. Furthermore, we consider that there can be no solution of the economic and social problems of the world, nor any permanent and lasting peace, while the system of Imperialism continues to function—even within the most democratic political structure.

N :—This is the very thing I have come to hear you talk about. Could you formulate some of the reforms that you think the different native peoples would themselves choose ?

P :—What we envisage as an ideal solution of post-war reconstruction is the *application of Clause* 3 *of the Atlantic Charter to all peoples, regardless of the stage of their social development. The organisation of the economies of all Colonial territories should be made for the benefit of the peoples there under their own direction and control.* Furthermore, we would like to see the collaboration and co-operation of all the lands which now comprise the British Empire put on a Federal basis, evolving towards a Socialist Commonwealth. Such a Federation should have as one of its aims co-operation with the peoples of Europe, of the Americas, and other countries of the world.

N :—Give me a concrete example of how this should work in one of the Colonial territories.

P :—We'll take the West Indies first. There is no fundamental racial or religious antagonism which stands in the way of any immediate advance there. *Politically* the West Indies have reached the stage where reforms could be instituted at once. Democratic institutions, based upon universal adult suffrage, including fully representative institutions and *responsible* administration should be set up. This is the form of administration which should be the basis for local self-government in the different islands. The islands should then be federated to form the United West Indies. The Federal administration would assume responsibility for governmental services applicable to all the territories concerned. *Economically* the natural resources of all the various territories should be nationalised so as to provide a basis for carrying out needed social reforms to be evolved by the respective self-governing units. Such a programme can be applied during the course of the war without impeding the war effort. Rather would it serve as a stimulus to the population by giving them something concrete to fight for as the first step towards the realisation of the New Order in their territories.

N :—Anyone who has been to the West Indies realises at once that the coloured people, who form an overwhelming "national majority" over the whites there, are indeed "Europeanised" or "Westernised Africans" as they have been called. How could it be otherwise after the three centuries of their transplantation from Africa, and because of their constant contact and mingling with the white Antillians ? But what of Africa ? Would you institute the same kind of reforms there immediately ?

P :—With respect to West Africa, a similar approach could be made. The various political institutions should be democratised as speedily as possible. The principle of self-government, territorially as well as municipally and in the villages, should be based on elected councils reflecting the interests of the people in place of so-called Indirect Rule, which is a form of administration imposed upon the African communities from *above*. As soon as this foundation had been consolidated, the four units—Sierra Leone, Gambia, the Gold Coast,

42/901247

Nigeria, which now constitute West Africa—should be federated along the lines suggested for the West Indies.

The apparatus of government, both locally and at the centre, should be transferred to Africans, because they can learn the art of government only by practising it. As it is, while the executive and directive authority in the Colonies is in the hands of white men, as heads of government departments, the actual performing of the routine work of administration and the running of daily life are already done by native Africans. This applies to all branches : judiciary, constabulary, civil service, post office and communications, press, transport, education, church, food-distribution, medical service and nursing, health and municipal services, and all the learned professions. In every walk of life Africans constitute the representative elements.

N :—As do coloured West Indians in the British Antilles. Now I should like to hear about the opposition to these reforms.

P :—I would say, briefly, that it is this : The ruling class in Britain, especially those with Colonial interests, is afraid that if the political machinery of government is transferred to the natives, even to the middle-class section of the indigenous population, the way will be open for the more progressive political elements, who are the champions and defenders of the working class, to get control and introduce legislation furthering its economic and social interests. It is this fear which is at the base of Crown Colony government.

N :—I have seen some of that fear myself, a very ugly thing besides causing at times quite ridiculous situations. How does the Crown Colony system operate.

P :—It reserves to itself the right to a majority in the legislature. This majority preserves the economic and imperial interests of the rulers and can hamstring legislation to which they object. In the words of Lord Moyne : "The supreme authority of the Governor must be preserved, and it is essential that he should have the necessary powers of 'certification' and 'veto'. . . . It is an essential feature of non-self-governing Colonies that the Executive Committee is purely advisory to the Governor and that matters which come before the Governor in Council are not settled by vote, and that the Governor is not bound to accept the Council's advice." Here, then, is the reason for all opposition to reforms, and particularly to any reform leading to *responsible* self-government.

N :—What is the feeling in the Colonies about the present forms of Government ?

P :—At the present moment there is widespread agitation throughout the Empire, or, to use a Whitehall expression, "the non-self-governing sections of the Empire," for constitutional reforms. This should be welcomed, for it indicates political maturity on the part of the subject peoples. You see, *political* self-government is the necessary pre-requisite for bringing about *social* and *economic* amelioration.

N :—That is very interesting. Many people hold that the first reforms should be along economic lines. They lay emphasis on the progressive economic measures symbolised by the new Colonial Welfare Development Scheme put forward by the Colonial Office, which has the support of those concerned with the welfare of Colonial peoples.

P :—*No; we want constitutional, that is, political, reforms first.* Because unless we have control of the machinery of government in our own hands we shall never be able to institute the necessary new social and economic measures, and, what is more, see that they are carried out. Just so long as the carrying out of such reforms as are promulgated is left in the hands of others there is no guarantee that they will be implemented.

In our next talk I will make some comparisons between the government of Ceylon, which has the most advanced form of Colonial government, and that of the other Colonies.

Leone and *The West African Pilot* of Nigeria have made representations to the authorities through their columns and the intermediary of their editors. Over here, Negro organisations like the International African Service Bureau, and others, have held well-attended protest meetings, and from reports and enquiries I have had from the large Negro population in Cardiff, I understand that they are most resentful and indignant over the business and besides calling protest meetings, are raising questions with the local parliamentary member.

N :—I am glad you have raised this matter in some detail, because it goes down to the very foundations of the whole Colonial system. But where did we leave off last ?

P :—I was saying that I am in favour of full self-government and complete autonomy for the Colonies in their internal administration This would take the form of fully elected representative Councils based upon universal adult suffrage free from any restrictions by way of income or property qualifications. Candidates for Membership should likewise not be subject to property qualifications. The veto powers of Government should be completely abolished. The elected members of the Councils should be not only *representatives of* the people, but also *responsible to* them. This is what I am advocating for all the Colonies. But all are not yet themselves asking for this ; they have not all reached this stage as yet.

N :—What about Ceylon, the most advanced form of Colonial government ?

P :—There the form of government is fully *representative*, but it is not yet *responsible*. Ceylon is now asking for the latter form, and that the veto powers of the Governor be abolished.

Jamaica, which we may call "the second type of Colony," has been asking for both *representative* and *responsible* government. The Colonial Office is prepared to grant one form only—*representative*. It says it will give Jamaica what Ceylon has. But Ceylon and also Jamaica, to my mind, should be granted both forms. Looking back—the Donoughmore Commission, which was sent out to Ceylon in 1927, made certain recommendations in connection with the new Constitution ; these were watered down by the Labour Government, that is, by Lord Passfield, when it was promulgated in 1929.

N :—And how does West Africa, which is the most advanced section of the British Colonies in Africa, compare with Ceylon and Jamaica ?

P :—What West Africa is asking for is not even representative government. All that is asked for is universal adult suffrage, a majority of elected members on the Councils ; the introduction of municipal government, and the abolition of Indirect Rule. Let me quote a recent discussion in the House of Commons in which Mr. Reginald Sorensen embodied the demands and aspirations of West Africa :

> Mr. Sorensen asked : "Whether the Under-Secretary of State for the Colonies will, in view of the relevant clauses in the Atlantic Charter, announce plans for the more rapid democratisation of West African institutions including the native authorities ; whether he will frame proposals to establish adult franchise, to eliminate official majorities on legislative councils, to appoint at least six Africans to the Governor's Executive Council in each Colony and ensure that a majority on municipal councils should be Africans ; and whether African democratic organisations and personalities will be consulted to this end ?"

This is the answer that Mr. Harold Macmillan, Under-Secretary for the Colonies, gave him :

> "It continues to be the policy to introduce representative institutions in West Africa as the local populations become ready for them. But His Majesty's Government could not lend themselves to the pretence of framing proposals for establishing adult franchise in communities where that system can have no reality." There were already nominated

African members representing local communities on the Legislative Councils "well qualified to advise the Governors on constitutional questions."

Mr Sorensen then said "Does the right Hon. Gentleman appreciate that his reply will not give satisfaction to West Africans ?" The proposals which had been put forward for West Africa had the support of representative Africans, and was it not necessary that the Government "make some great endeavour to impress West Africans with our determination to assist their political progress ?"

But Mr. Macmillan replied that it was "very difficult to deal with the matter by question and answer," and "it requires much more general discussion of the large number of important problems which arise from the question."

This is the kind of thing that goes on in the supreme forum of the British Empire ! West Africans are denied adult suffrage because it is felt that this would have *no reality* in their communities ! However, Lord Moyne, whom I have already quoted, is less ambiguous : "*The supreme authority of the Governor must be preserved, and it is essential that he should have the necessary powers of 'certificate' and 'veto'* "—these are his words.

N :—What is the difference between the Governments of Ceylon and of Jamaica—the two most advanced Colonial methods of administration ?

P :—The Legislature of Ceylon is called the State Council and is composed of 53 members. Forty-three are elected by universal adult suffrage and the other 10 are nominated by the Governor and are either government officials or representatives of vested interests.

Jamaica has at present a Council of 14 elected members and 14 nominated by the Governor ; some are officials, some unofficial, or business men. The proposed reforms would increase the 14 elected members to 28 ; the nominated ones would be reduced from 14 to 1 .*

Other Colonies such as Trinidad, Gold Coast, Nigeria, etc., have constitutions which provide for three types of members :—

(1) Councils composed of official members nominated by the Governor as heads of various Government departments, known as "nominated official members."

(2) Nominated unofficial members.

(3) Elected members.

N :—What sort of people are they generally ?

P :—Club associates of the Governor. You see, the Governor comprises in his person a kind of trinity. As representative of the King, he is Viceroy ; as head of the Executive, he is Prime Minister ; when he sits in the Legislature, he is the Speaker. He is, as it were, omnipotent, and his right to nominate members is unquestioned. So in the Legislature you will find the Planters' Association, the Bankers' Association, the Merchants' Association, and the Shipping Association. If, within the territory, there is a minority of any importance, its representatives are also there. Now, in the Council the members sit round a horseshoe-shaped table. The official members face the Governor ; on his right sit the unofficial members, and on his left are the elected members, mandated on a restricted franchise.

In Africa a certain number of native chiefs sits among the Europeanised African members. However, of the four West African Colonies, Gambia has no elected members. In the East African Colonies there are neither elected or nominated Africans in the Legislatures. The Governor usually nominates some missionary or retired official to represent the Africans.†

In Malaya, until the British were "run out," as General Stillwell put it, the British ruled through native Sultans. This was a form of Indirect Rule, a

* See *Chapter IV—West Indian Constitutions*

† See *Chapter V—Political Reforms in Africa*

In 1900, the Royal Niger Company, an organisation of merchant adventurers, relinquished the charter it had been granted in 1885. The Foreign Office took over and sent Colonel Lugard to develop British power in the hinterland as a means of stopping French and German encroachments on the northern parts of Nigeria. With a native army recruited from the Hausa people, Lugard marched northward and completed the conquest of the Mohammedan sultanates of Kano and Sokoto. This was at the beginning of the century, when the Home Government was busy with the Boer War and in no position to send him reinforcements to quell hostile tribes and guerilla bands. Faced with the immediate problem of establishing some form of administration to maintain "law and order," Lugard was obliged to improvise. It had been the British custom to banish chiefs once they had surrendered, but Lugard was forced to make use of them. He invested them with administrative powers, promised to respect their religion and customs, but made it clear that they were responsible to their British over-lords—who, in the words of Margery Perham (lecturer at Oxford on Colonial administration), were now "over all."

So, making a virtue of necessity, Lugard introduced "Indirect Rule" which, with many amendments, has become the favoured means of British rule in Colonial territories. In practice, a diffuse native bureaucracy has been superimposed upon the old feudal and tribal systems. The chiefs are no longer subject to the democratic control of their people, but derive their powers direct from the Government by whom they are controlled and supervised.

Indirect Rule was soon discovered by British officials in Nigeria to be a cheap method of governing wide stretches inhabited by primitive peoples. The experience and views of the earlier political officers were collected and later rationalised into a new philosophy of Colonial government. The present complex machinery of administration has been elaborated out of the first crude makeshift. Native administration has political powers of a most limited kind, but powers of function which make it the catspaw of the Imperialist rulers, and the scapegoat for all forms of mis-rule and despotism. To "maintain law and order," administer "justice," collect taxes, and supply forced labour, are its principal functions. The native administration is presided over by a Paramount Chief, who is assisted by a Council of sub-chiefs and headmen whose composition is subject to the approval of the Central Government. Connecting-links between African administration and Central Government are the British officials, the Residents, Provincial and District Commissioners. Directed by the advice of these men, the chief is in a position to exercise the greatest despotism.

N :—Would it be correct to think that, of the two, Crown Colony and Indirect Rule, the former system contains more scope for Democracy ?

exactly describes the growing attitude towards [illegible]

N :—Then, obviously, a change of governmental form is necessary ?

P :—Most certainly. But apart from the necessity of having a Council and responsible government in order to institute plans for the amelioration of the conditions of the peoples generally, *constitutional* control of the apparatus of government would enable us to revoke and rescind all obnoxious legislation of a semi-Fascist kind, such as : Colour Bar, Pass Laws, Forced Labour Regulations, Child Labour, Direct Taxation in the form of Hut and Poll Levies, etc. All of these have come into being as legal forms following legislation. Quite lately there has been introduced into Kenya the regulation making forced labour compulsory for all males from 16 to 65. This has been provided by enactment of the Governor-in-Council, in order to afford a plentiful supply of the cheapest kind of labour for the planters of the Colony.

N :—There are Colonies, Protectorates, and Mandated Territories—What is the difference between Colony and Protectorate ?

P :—The names are arbitrary divisions only.

N :—And what about Mandates ?

P :—They are the same as Colonies ; they have Governors and Councils. The only difference is that when the Governor writes his annual report for the Colonial Office, he makes an extra copy which is sent to a Committee sitting in Geneva. That is all it amounts to in the way of difference. For instance, for government purposes the Cameroons is incorporated in Nigeria and subject to exactly the same legislation.

N :—Are Governors subject to revision from London ?

P :—In theory, the Governor and his Council can legislate for the territory under his jurisdiction. Legally-enacted legislation may be rejected by the Secretary of State for the Colonies in London, who has over-riding powers to throw out any Bill which the Colonial Legislature may pass.

N :—Have all measures to be submitted to Whitehall ?

P —No. Only when opposition in the Colony is reflected through the Council and they appeal to the Colonial Secretary, who is called in to arbitrate the issue. Let us presume that a quarrel has arisen between some of the Council and the Governor. The Secretary of State may then say : "Your Excellency, I think this measure should not be passed." But normally, when the Governor intends to introduce a new law, it is usually discussed in the Executive (not the Legislative) Council ; all Bills must be proposed by the Governor. The Executive Council is the Governor's Cabinet, as it were, but is advisory only and he need not accept its advice. When the Bill has been agreed upon in the Executive, the Governor has the text of it drawn up by the Attorney-General, who then reads it in the Legislative Council ; there may be three meetings to discuss it there, but members have no power to throw it out. If they feel

A Program for NCNC

It will be remembered that Dr. Azikiwe and his delegation from the National Council of Nigeria and the Cameroons ("NCNC" - see Transcripts, No. 12, p. 192) in the course of their journies abroad, were received by the Secretary of State for Colonies. They presented their 15-year plan (African Transcripts, No. 12, p. 193), and were advised by Mr. Creech Jones to return home and help to give the "Richards Constitution" a fair trial.

In connection with this incident, the "News Letter", which is published in London by the League of Colored Peoples, interviewed Mr. George Padmore, and published his remarks in its issue of October (1947, pp. 190-192). Mr. Padmore is quoted by the "News Letter" are saying that this rebuff is no more than could be expected, as Mr. Creech Jones was one of the fathers of the Richard's Constitution. "Freedom" observes Mr. Padmore, "is not a gift to be handed out by those who deny you freedom. It must be fought for and dearly won...The important thing is that the Delegation has not been ignored in politics".

After these reassurances, Mr. Padmore outlined the procedure that should be followed: "The National Council of Nigeria and the Cameroons", he advises, "should convene a National Convention... to ratify the Delegation's draft Constitution", and "adopt, as the Nation's Programme of Action, the 15-year transitional plan..... In this situation the country should be called upon to support all boycott measures adopted by the NCNC to make ineffective the working of the Richard's Constitution and the British Government-sponsored economic plans, and at the same time adopt ways and means to implement the NCNC's Constitution and positive economic programme!"

It will be interesting to see how much of this advice "Zik" and his followers will accept. If "Zik's" daily articles in the West African Pilot are any criterion, he is prepared to give it a try.

I Politics

69 3 Jan. 1948

Politics S.A.

Discussing the future of "settlement colonies" on a recent BBC broadcast, Sir Philip Mitchell warned against "the interpretation of democracy which says that two fat heads have a right to prevail over one long one". In African settlement colonies he says, exclusively Negro or British or Indian states or societies are impossible, and "all are committed to a joint enterprise, an entirely new society and polity,... which stretch, in the broadest sense, from Cape Town to the borders of Ethiopia". The standards and values are to be those of Britain, and everyone, whatever his origins, has an interest and a part. Its working out, he says, is a long range purpose, requiring adjustment, modification and unlimited patience, within the framework of the law. Mr. Graham Hough, writing in the "New Statesman and Nation", says the only Colonial policy that Britain can pursue is "simply the old trusteeship slightly gingered up"; but it must be put in force energetically and quickly, and with stern determination to brook no sabotage from Right or Left.

POLITICS

Headline Summary

1. Empire Politics, affecting Africa

(a) General: - So much of Africa is ruled by the Colonial Ministries at "home" and the Colonial Empires are so wide-spread, that the political vicissitudes of a homeland may be expected to be reflected all over Africa to some degree. Every colonial territory, however, has enough local representation or articulate public opinion to keep local administration very fully occupied with local problems. It is the exceptional Colonial Minister that has the energy and drive effectively to bridge the distance between his office and the remote dependencies. Rarer still is the one who can or dares spare the time to go and see and learn for himself. Thus new homeland philosophies are often quite attenuated by the time they have percolated to the levels of application in the field - where they are sometimes found impracticable anyway.

Under such circumstances "politics" in all dependencies conform to a pattern which varies from territory to territory only as to the relative importance of the following factors: (White settlers work for self-rule with White supremacy, economic as well as political; (2) Big business works for monopolistic concessions, complete with labor; (3) other alien racial groups demand equality in all ways with the Whites; (4) a handful of Native "intelligentsia", smoldering, frustrated, resentful and vociferous, agitate for "Africa for the Africans", "Down with the color bar", etc., at the same time demanding increased free services while (5) Government, with its indirect rule, its co-operative schemes, its marketing boards, its Durbars etc., tries to hold down the lid.

One more factor must not be overlooked - the vast mass of the people, the "ignorant man and his wife with a hoe". Protected from their neighbors and themselves with modern medical aids, education, sanitation, machinery, cash crops, world markets, etc. these people have multiplied, and will perhaps double in 30 years. So far they pay little attention in general to the agitators, wanting only to be left undisturbed to plod their accustomed way. But some how, some day, some fire brand will touch them off.

8

Nigeria's NCNC has internal strife, said to arise from traditional antagonism between Yoruba and Ibo peoples. Acting President, Magnus Williams, expelled, but refuses to resign until NCNC accounts for the £13,000 collected for "Zik's" delegation. A section of the Press professes to see great political implications in case of Mr. W.T. Fox, (ex-chief censor given 18 months at hard labor for stealing money orders), since he publically supports the self-government movement.

3/48 March - 1948

Nigeria's Political Triangle

Nigerian politics shape up as a three-way contest between "Zik" nationalism, the anti "Zik" nationalists, and the Nigerian Government. "West African Review" in its February (1948, pp. 146-6) issue carries an article by "Scrutator", who is a Nigerian resident and well known commentator on the ramifications of Nigeria's politics and prospects for the future.

"Zik" embodies the extremely aggressive, near-violent, explosive type of nationalism, ruthless, and intolerant of any opposition. He is idolized, almost deified by a great body of young Nigerians. Through his chain of the "West African Pilot" and four other newspapers he is in constant contact with his followers all over the country, and keeps his propaganda continuously before the public. The Government and, in-

All West African National Congress

In his New Year message from London to all colonial peoples of West Africa and "freedom lovers the world over", Mr. Bankole Awooner-Renner, Chairman of the West African National Secretariat, called for the support of a planned conference to be held on African soil in 1948.

Mr. Awooner-Renner opened his message with a reminder that the West African National Secretariat had been formed in London a little over two years ago by representatives of West Africa in answer to a long-felt need for unity, freedom, and independence for West Africa.

> Speaking specifically of the proposed 1948 Congress, Mr. Awooner-Renner said:
> This Congress is not the first of its kind to be called by the West African people; it is a continuation, however, in a wider sphere and activity, of a similar congress called some twenty years ago.
>
> ...We are determined in our task of National liberation, and your support financially and morally, will aid the struggle further than it is today. We will welcome your donations, large or small. (West African Pilot, Jan. 13, 1948)

The news of the All-West African National Congress was greeted with enthusiasm in some sections; and some organisations such as the National Council of Nigeria and the Cameroons, the Gold Coast United Convention, the Sierra Leone Youth League, and certain national leaders of Gambia indicate an intention of giving active co-operation to the West African National Secretariat in making this 1948 Congress a reality.

In an editorial referring to the West African National Congress, the West African Pilot states:

> In the realms of politics, economics, education, and other social services, there is certainly enough similarity, and in some cases identity, among the problems facing British West Africa as a whole-and enough fully to engage an All-West African Congress in its primary task of tightening the strands of destiny that bind the West African peoples together. The impassioned appeal from London is therefore, more than worthy of the spirited response of all West Africans. (West African Pilot, Jan. 14, 1948)

According to present plan, the All-West African National Congress will be held at Lagos, Nigeria, from October tenth to twentieth, 1948. The main objective will be the formulation of a plan for the unity and National independence of all West African peoples, leading eventually to the Democratic Federation of All West African Territories, and the furtherance of immediate political economic and social demands. The peoples of West Africa will be represented at this Congress by their political, cultural, or educational organisations, Trades Unions, co-operatives or Farmers' organisations, by their natural rulers, and any group of individuals who desire to attend.

In Gambia, the people are being encouraged to "get-together" with every organisation and Native Authority in their territories to discuss their own demands and

42/90/114

3. Politics

the objects of the coming Congress. Also, it is being suggested that Congress Committees be formed in Gambia as in Senegal, Ivory Coast, Sierra Leone, Portuguese Guinea, French Sudan, Liberia, Equatorial Africa, Belgian Congo, Cameroons, Gold Coast, Nigeria, Togoland, and Dahomey with the purpose of drawing together all the organisations and Native Authorities to discuss the aims and organisation of the Congress, to give it publicity, and to solicit and collect money needed for its organisation.

In preparation for October 10th to 20th, a Congress Reception Committee is being set up in Lagos, Nigeria to organise accommodations, technical arrangements, and social activities for the Congress.

The first actions to be taken by the Congress are as follows:

> Immediately before the first Congress the Reception Committee will call a meeting of at least one delegate from each territory to decide the arrangements and to form a Praesidium for the Congress.
>
> The first Congress will consist of delegates from all organisations, from Native Authorities and of individuals. But it will aim to set up immediately National Councils. These will be asked to elect a Supreme Council consisting of representatives from each National Council. This will be mandated to guide the work between Congresses to take any necessary decisions and to call an emergency Congress if necessary. The Supreme Council will elect a Secretary General and and also a Secretariat consisting of such Officers as may be needed, to carry on the day to day administration. The Supreme Council may delegate such of its powers as it may choose to the Secretariat which may not, however, take decisions affecting the policy of the Congress. In all these bodies delegates must be democratically elected by the members of their organisations. (The Gamiba Echo, Feb. 2, 1948)

The above is considered a suggested framework for the West African National Congress to accept, alter, or reject. The people's task is to be prepared for long and careful discussions and to take a responsible part in the Congress.

West Africa and the World will probably be hearing more of the West African National Congress in the fairly near future.

42/90/115

deed, the Nigerian peoples in general do not yet seem to realize what power Zik can wield.

The anti-"Zik"ists are somewhat scattered, individuals and organizations who see in Zik nationalism a danger - and an obstacle to t. their own ambitions. The foremost of this group is the Nigerian Youth Movement, once active and progressive, but now seemingly lacking any plan except opposition to Zik, through the pages of its organ, "The Daily Service". If the waning Youth Movement were to cooperate with the Government, it might make considerable headway among the moderates and stable elements of the country, but its leader, Dr. Maja, a respected, successful business man, is by himself no political match for Zik.

The Government was slow in awakening to Zik's potentialities, and handled the situation so ineptly that Zik's press could hold him up as a martyr. The Governments own newspaper, "The Nigerian Review", took up the cudgels, the Law Courts prosecuted Zik's publications for libel and sedition, and the Government withdrew its advertisements from his papers. The (former) Governor himself referred to Zik publically as "the Apostle of Disunity", the "Oracle of Onitsha", etc., - all of which direct opposition gave Zik's Press the golden opportunities by which they quickly profited. Thus Zik and his NCNC continue their work of spreading confusion and discrediting the Government at every turn, making political hay in their nationalist sunshine.

Actually the large majority of the Nigerian peoples of varied races and cultures have no political awareness at all. They remain outisde the political arena, generally unconcerned, usually co-operative with the Government, properly critical on occasion, but interested in Development Plans and such which seem worthwhile to them. Most of all, they are genuinely interested in the welfare of their country..

This amenable body of the people is so much in the majority that the Government, it is feared, grossly underrates the situation. Zik is a firebrand, his nationalsim is dynamite, and Nigerian youth can be the fuse. The Government must somehow win Zik's cooperation; must present to the people plans of action, acceptable to them , that are patently realistic, practicable and constructively far-reaching. The future depends on mutual goodwill, confidence and cooperation amongst all races, cultures and creeds.

(2) recommends that the Administering Authorities concerned foster association and co-operation of the Ewe people, and assist them to develop their capacity for self-government through free discussion among themselves and through progressively increasing opportunities for primary and secondary education;

(3) invites the Administering Authorities concerned to present to the Council a more precise statement of the proposed measures to be undertaken with regard to the problem of co-ordination in political, economic, social and educational fields, and to submit to the Trusteeship Council at appropriate times special reports on progress made....

(4) Invites the Administering Authorities concerned to consult with each other and whenever appropriate with the Ewe leaders with a view toward evolving further measures for fulfilling the wishes of the Ewe people as expressed in the petitions, and to include in the reports to the Council the developments in this regard;

(5) decides that the first visiting mission to the Trust Territories ...shall devote special attention to the problem set forth in the petitions and to implement measures designed to cope with the problem;

(6) agrees to re-examine the problem stated in the Ewe petitions at the session at which the report of the visiting mission to the Trust Territories of Togoland under British administration and Togoland under French administration shall be considered.... (United Nations Trusteeship Council, T/19, December 12, 1947)

42/90/104

On the threshold of her second century, Liberia faces a brighter economic future, and politically and socially a more progressive one. Education has, in recent years, been made compulsory, but lack of funds and personnel has precluded a determined enforcement of this regulation. Nevertheless, the number of schools is gradually growing, and it is hoped that with an increase in teachers and school buildings that obligatory attendance will be gradually implemented. Adult suffrage has been introduced, and the vote has now been extended also to women.

Fortunately, too, for Liberia at this turning point in her fortunes, she enjoys the leadership of a progressive President, in the person of William V. S. Tubman, who, anxious to give the 3,000,000 indigenous inhabitants an honest Government, is making every attempt to weed out corruption, even from the highest ranks of Americo-Liberian officials who administrate the country.

Small in importance, Liberia's centenary has not been overlooked by the larger Powers. The British Government sent H.M.S. "NIGERIA" to Monrovia to greet the Republic and have also presented it with reproductions of Magna Carta and the Habeous Corpus Act of 1679, to commemmorate the occasion. As a token of the fraternity of Africans and people of African descent in London, the Pan-African Federation marked the occasion by a meeting of celebration at Friends House on July 31st, at which the Liberian Minister in London, **Baron de Linden,** gave an outline of the country's history. **Dr. Nnamdi Azikiwe,** who is the author of a recognised work on Liberia, also addressed the meeting. Other members of the Pan-Nigerian delegation were present, as well as members of the diplomatic corps of several States. The meeting sent greetings to the Republic of Liberia.

BRITAIN'S PROBLEM CHILDREN.

(Copied from "Mother and Child," November 1947).

Among the many problems to be faced in Britain as a result of the second world war, is that of illegitimacy among its population. Most pressing, however, is that of the illegitimate child whose mother is white and whose father is coloured—especially so in cases where the fathers are among the coloured American troops stationed in Britain during the war.

The present trend of public opinion in countries predominately inhabited by white people is definitely against coloured peoples, and the somewhat large increase in Britain's coloured population creates a problem which is bound to tax the patience and genius of sociologists, educationists

and social workers. The main consideration is, of course, that so many people are disinclined to face the question of intermarriage squarely and they show a definite objection to association between Negro and White peoples; more than ever they resent marriages between the two peoples.

This article does not set out to present a case for or against intermarriage but it accepts that it is a question which is always discussed in an atmosphere of prejudice and ignorance. In any event the supporters of intermarriage and those against intermarriage—particularly Negro-White marriages—appear to have numerous instances to prove their own case, even though they may be adequately informed on the material and urgent aspects. Too little is of course known to enable the presentation of a strong case on either side and therefore the antagonists should seek for some extensive research on this increasingly important social aspect, especially with a view to finding out how far results of these racial inter-breedings have proved the case either way.

The general view is that mixed marriages can and do hold a great risk when considerations are given to personal happiness and it is even suggested that race-mixture is biologically harmful. It will be well to bear in mind, however, that every marriage is a risk and that many risks are worth taking. The most important consideration is that of the children which result from the relationships, and in this matter attention should be given to the type produced. The general remark is that the children of mixed marriages are never of the best type; but this observation is made without having regard to the circumstances of the parents themselves. Intelligence tests conducted in South Africa and in Australia have indicated that there is little difference between the intelligence of black and white children. Quick sight and hearing helps intelligence in children no matter what their colour. On the other hand stupidity is often the result of disease, insufficient food and poor upbringing. Consequently to find the cause for inferior development of coloured children—or in fact of coloured peoples—one should rather look at the conditions under which they live. The probability is that these children may then be found to be more gifted as well as more unstable; but the instability may be more the result of social environment than a matter of heredity. There are many well known instances of great ability among the offsprings of mixed marriages and of mixed peoples and the offsprings constitute a somewhat considerable portion of the world's inhabitants.

Children of Negro Troops.

The problem now engaging attention is that of the children born of white mothers and the American Negro troops

who were stationed in England during the war. No conclusive figure can be given but it is reassuring to find that the figure is much lower than was first imagined. A report published by the League of Coloured Peoples, which does not by any means boast of being comprehensive, reveals that the total figure is in the region of 550. This report is the result of an enquiry made in a number of counties and country boroughs throughout England and Wales where coloured American troops were known to have been stationed. It was found that some 544 children were born to 536 mothers, 89 of whom were known to have been married, 95 unmarried and the marital status of the remaining 352 unrevealed. The great difficulty in obtaining authentic figures both of the number of children and the parents has been to get the women to supply the information, so that these figures represent only those women who reported to Welfare Workers and assistance boards because of straightened circumstances. The reticence of women, particularly of married women, whose husbands were at the time in the British Forces, to come forward and draw attention to any lapse on their part makes it difficult for the actual figures to be brought up-to-date. Further, a good many women who found it possible to do so changed the districts in which they were known because they feared the publicity about the time of the delivery of the child, hence the figures representing certain areas appears small compared with the number of cases which are known to exist.

A

42/90/245

The main point, however, is what is to be done to assist these mothers to look after their children and what methods should be adopted to integrate this new coloured population into the community in such a way as would remove from the minds of the children the handicap of illegitimacy which is sure to act as a hindrance to their progress.

B

We are already convinced that so far as school life is concerned, little difficulty is ever experienced because children mix quite freely. The problem arises when they leave school and have to enter industry. Colour is already a recognised hindrance to most of the educated people in Britain so we can well imagine what colour plus the unfortunate cloud of illegitimacy coupled with the conspicuous reflection of having been brought up in a home exclusively set up for such cases, would mean psychologically to the children themselves.

The present state of public opinion in the countries predominantly white is such that these children are subject to social disadvantages which illegitimate children of pure white parents will never experience. The child of mixed parents in any community is always in an ambiguous position for it is only the more kindly disposed and more liberal minded citizen who shows any unwillingness to ignore the minority characteristic and give such children a place in the com-

C

munity which is parallel to that given to white children born in similar circumstances.

Alternative Suggestions.

What then is to be the future of the coloured illegitimate whose mother is English and whose father is among the coloured American servicemen now back in their homes in the United States? Some suggest that the child should be sent to its coloured parent others suggest that as far as possible the child should be adopted into the coloured communities in the West Indies and other parts. In any event, one point which must be faced is that these children are British and with Great Britain directing a strong eye to her population it would be easy to carry out a large programme of immigration. On the other hand, helpful as the American Authorities in Britain might be in granting visas and permits to these children, it is not easy to secure the necessary guardians to take the children to the United States and deliver them to foster parents. Again, the process of enquiry which is necessary to enable a willing foster-parent to take a child must be very stringent to ensure that the child is being accepted into a proper home. Whichever course is adopted a great deal of time and money would be required to develop such a plan.

The next course open would be to establish a home to house such children. The point arises, however, that since the patterns of colour segregation are so obvious, bringing up such a mixed population, with the misfortune of illegitimacy as a hindrance, under such plan would be against the best principles of later integration. It has already been the experience of many welfare workers and parents that recognised homes have refused to take coloured children because of "colour."

The only reasonable solution therefore is to develop a foster parent plan in Britain and subsidise those persons who are willing to adopt a coloured child into their homes. The subsidy should provide ample financial assistance to enable those children who show an aptitude for school work to proceed further, and there is no doubt that a good many of them would, with such opportunity, be a credit to the community in which they are brought up.

The problems which are to be faced in an effort to re-make home life among the mothers of some of these illegitimate children are threefold—(a) some married women have been able to bring about reciprocity with their husbands on the condition that the coloured child is taken away from the family circle, (b) some of the single women find Englishmen willing and ready to marry them on the condition that they get rid of the coloured child, (c) some of the single women are living in such poor conditions that it is impossible to bring up the child properly.

WEST AFRICA

No. 1611. Vol. XXXI. SATURDAY, JANUARY 3, 1948 Registered at G.P.O. as a Newspaper.

Points of View . . . . Question and Answer . . . . Mass-Education

"COLONIZATION has a bad Press in some quarters today; but I would ask those who criticize it, often in sharply worded phrases, what would have happened in Africa, for instance, had the European nations abstained from intervening? Ought the Natives to have been left in the condition in which we found them, and which your great LIVINGSTONE and STANLEY have so eloquently described? Could the improvement of their conditions have been achieved without the establishment of European rule, without the assistance and supervision of Europeans? The experiment of leaving the Natives to administer themselves has been made in two African countries; they are in many respects the most backward countries in Africa. Can any men of good faith, comparing the position in Africa only half a century ago with the position today, fail to admit that, while all is not yet perfect, at least an immense improvement has been obtained?"

Verdict of History

These questions were put to a London audience just over one year ago by the then-Belgian Minister for the Colonies, Monsieur ROBERT GODDING. He ventured to say: "there can be only one reply to these questions; and although a great and heavy task still awaits us in what used to be called the Dark Continent, yet that which has been achieved in most African Colonies, within less than a century—and in the Belgian Congo in little more than a quarter of a century—must command respect and may confidently await the verdict of history, even though we take into account all the shortcomings inherent in every human undertaking."

Almost one year later, last November, a West African organization at a meeting in London adopted among its resolutions: "that the continuation of the Colonial system is a menace to world peace; and that complete independence for Colonial peoples everywhere is the only approach to ensure world peace." This first resolution is somewhat weakened by the last that "if any decision is taken to establish a trusteeship over the former Italian colonies, the claim of the Soviet Union to trusteeship in this area be considered, since other nations, such as the United States of America and the United Kingdom, already attach claims to trust territories."

There are perhaps better instances of the confused "African-nationalist" approach to political realities than the two latter quotations, but they will serve well enough to illustrate the conflicting points of view which distinguish certain Africans and certain Europeans when these approaches are made. We may dismiss the little puff about the Soviet Union as an indication of from what direction certain self-styled West African nationalists are hoping for support, should their particular dreams come true. Since "trusteeship" is a lower rung on the ladder of political progress than "Colony" it is impossible to reconcile the sweeping generalization about the Colonial system being a menace to world peace with the expression of partisanship for yet another candidate in Colonial areas.

But we cannot so lightly dismiss the first resolution, because it is symptomatic of the "loose thinking" which must be cleared away if 1948 is to be a year of healthy colonial development. Overlooking the fact that the words: "Colonial system" cannot be applied without precise definition (for instance, it is historically accurate to say that Liberia was "colonized" by Coloured peoples of mixed African descent), it is wholly impossible to account for the splendid contribution made to the Allied victory by Colonial troops from all Allied countries, by suggesting that such a "system" was a menace to world peace. To say that the complete independence of Colonial peoples (who are by far a minority of the world's population) would solve the problems of war-shattered Europe is the veriest nonsense.

Indeed, we can understand the point of view of an impatient reader who asks: "why notice this kind of talk? Surely you don't take that sort of thing seriously!" We would reply that there is no question of taking these arguments seriously or not. We record these quotations because they are symptomatic of an African *malaise* which hinders healthy development.

* * *

The *malaise* lies in the fact that for every ten vocal individual Africans or organizations that disseminate extreme propaganda, there is less than one responsible African who feels either responsibility or inclination to counteract such propaganda by means of spoken or written truth. The importance of the year 1948 for British West Africa will depend largely on this unknown quantity. Will responsible West Africans, leaders of opinion, hereditary rulers, cultured and educated, realize that it is up to them to see that their interests are not damaged by half-truths and distortion of facts which may impress partially-educated Europeans, but which has no chance of convincing the hard core of well-informed Colonial opinion in the European countries.

African Initiative

However tempting it may be, for these Europeans, to subscribe to MR. GODDING'S frank expression, in the form of question and answer, it is not enough. If there is to be a continuation of development in West Africa, whether economic, social or in any other sphere, it can be done only by West Africans themselves taking the lead and insisting that on every possible occasion, where mis-representation of the facts is being practised it is their responsibility as good citizens to contribute to the dissemination of truth. There are, of course, many Africans who, to their credit, have so acted in the past and will do so in the future, but the voices have been disproportionate.

The question which we would borrow from Monsieur GODDING and ask Africans, particularly West Africans, to answer in this new year is: "Can any men of good faith, comparing the position in Africa only half a century ago with the position today, fail to admit that, while all is not yet perfect, at least an immense improvement has been obtained?" Because on the sincere answer to that question depends whether West Africans are prepared to accept the proferred European assistance on their road to development, or whether they want to return to the idyllic patriarchal Arcadian life which some West Africans would have us believe pre-European West Africa to have been.

* * *

The departure of a Mass Education Officer from the United Kingdom to the Gold Coast precisely at the end of 1947 is worthy of particular comment in the first issue of WEST AFRICA for 1948. It was nearly four years ago, in the

issue of January 22, 1944, that WEST AFRICA summarized a report on *Mass Education in African Society*. After listing all the varied duties of Mass Education Officers, attention is drawn to what would be the essential qualifications: "They should be genuinely interested in the welfare of the community they were selected to serve; they should be able, by tact and by their general bearing, to gain the community's confidence at the outset; and they should have a bent for teaching and for sociological and kindred studies." Since the publication of *Mass Education in African Society*, it is understood that the views of officialdom on the subject have been modified—understandably, since conditions change with the passage of years. But it is doubtful whether the qualifications of Mass Education Officers will be different in 1948 from what were considered to be necessary in 1943, the date of the report.

Agents for Africa

It is pleasant to record, therefore, that so far as personal observation in these matters can be taken into account, MR. A. G. DICKSON certainly appears to be possessed of the essential qualification—"a genuine interest in the welfare of the community" he has been selected to serve. Omitting the mention of his experience in Europe, MR. DICKSON'S work during the war in connexion with the education of East African soldiers has resulted in the fact that he is going to the Gold Coast, fully prepared to meet with obstacles. He does not expect to carry all before him and suddenly to produce, out of a hat as it were, the solutions to all the problems of mass-education. On the contrary, he has availed himself of every opportunity prior to his departure, of consultations, in order to begin his task with a mind open to suggestions.

Like many others before him, who are pioneers in an undertaking, he has been careful to point out that he must, by the very nature of the newness of his appointment, be a learner first of all. He realizes that he does not know all the answers, but he believes that the answers can be found. He is fully conscious of the development already made with education in West Africa; and he is prepared to cooperate at all stages with those who have, in spite of facile criticisms, prepared the very ground on which it is now possible for a Mass Education Officer to stand. There is always a danger of expecting too much from small beginnings. There might be a tendency for some of us to say: "After four years, the beginning. Let us hurry forward to the work of mass education."

It would be unfortunate if MR. DICKSON'S appointment should be associated with any such form of wishful thinking. Mass-education is in no way synonymous with mechanization. It is not an "open sesame" to a new Africa, where every village has its own schoolroom, playing-fields, hospital and social centre. It is only one stage on such a road. Nor can it be primarily concerned with the mass production of literates. Its first aim must be to work in with existing African ways of life in an effort to restore, where it has been lost, the higher meaning of citizenship, and to inspire in "less-developed" and "primitive" peoples an appreciation of what is perhaps best described as a "fuller life."

Because of the emphasis which is still popularly laid on "literacy," as a fundamental of "mass-education," the task of the Mass Education Officer is likely to undergo, in this respect, its greatest period of tension. As soon as any attempt is made to lay the emphasis on "education," rather than on literacy, someone is sure to raise the cry that "Africans are to be kept in their places. They are not fitted for the white man's education." It will be just here then that Africans will be able most to assist "Mass Education Officers." "Africans themselves must be the main agents in improving African life." The high reputation that Africans from the Gold Coast enjoy in the world today, should be an encouragement to MR. DICKSON. The rest of West Africa, and the larger world outside, will wish him every success in his important task, as his achievements will certainly be watched with expectancy and hope.

42/90/221

NEW YEAR MESSAGES

From West African Governors and Governors-Designate

NIGERIA

I gladly accede to the Editor's request that I should send a message to WEST AFRICA for its New Year number. It would not be wise or prudent for one whose knowledge at first hand of West Africa is so slight, and so remote in time, to express at this stage any views about present conditions or future prospects. I will only say that my wife and I became so attached to Nigeria and its peoples, during our brief sojourn there from 1937 to 1939, that we were very reluctant to leave the country. And now we are very happy to be returning. We send to WEST AFRICA our best wishes for its continued success, and to its readers our friendly greetings and our good wishes for happiness and progress in the New Year.

JOHN MACPHERSON.

GOLD COAST

I am glad to send, through the New Year issue of WEST AFRICA, a short message of greetings to all its readers, and particularly to those in the Gold Coast. I am greatly looking forward to taking up my new duties in the Gold Coast early in the New Year. The responsibilities that will rest on me will be heavy, but the foundations of progress have been well laid by my predecessor, Sir Alan Burns, and I know that in building on them I can always rely on the help and support of all those who have the welfare of the Colony at heart.

GERALD CREASY.

SIERRA LEONE

1948 dawns on a world confused, a world which, so far from having recovered from the effects of the war, seems to have fallen still further into chaos. But it is an ill wind that blows nobody any good; and the war has served to show the people of the United Kingdom how closely their interests are joined with those of the Colonial peoples. Further, the great dislocations which have occurred in the markets for primary produce offer the Colonial territories an opportunity which they have never had before of establishing their economic position on a sound and progressive basis.

In conveying to the people of Sierra Leone my best wishes for the coming year, I do so in the sincere hope that 1948 will bring to them increasing prosperity and well-being.

G. BERESFORD STOOKE.

GAMBIA

The Gambia starts the New Year with a new Constitution. The Legislative Council now has its first elected member and an unofficial majority. The Executive Council will include, for the first time, an unofficial element. This notable reinforcement of representative government is matched by the problems with which the territory will be confronted.

In the economic sphere, the Colony has expectations, as yet unconfirmed, of the inception of measures designed to increase the productivity of the Protectorate by mechanical means. Such measures, if found practicable, are likely in the first place to be applied to the long-established cultivation of oil seeds on which the country so largely depends. If, however, outstanding problems of water control and salinity can be overcome, the richest hope of extending cutivation would seem to lie with the production of rice and other crops in the marsh lands of the middle and upper river belts.

1948 should thus be a year of investigation and experiment in the extension of agriculture; and it is with eager anticipation of promising developments, both in the economic and political fields, that the good wishes of the Gambia are addressed to WEST AFRICA.

VERNON CAMERON'S Page

BRITISH WEST AFRICA IN 1948

Retrospect and Prospect

THAT vast area of a Continent called British West Africa has in its long history known many episodes which to dim thousands and tens of thousands and perhaps millions of its people must have seemed enigmas to which they could guess no answer. But it may be that most of those enigmas did not present themselves to the whole community at one time. This is not to say that some of the enigmas were anything but piercing. Who, in our day, can begin to imagine what a slave-dealing raid must have meant to the people of the district selected as victim!

At this time, the position is different (mercifully so, as regards that central point). The people are now faced with problems the nature of which would have been outside the comprehension of those in that earlier time—as indeed it would have been to the people of most parts of Europe. The West Africans are now within the orbit of world commerce and world prices. There are probably 30 millions of West Africans. (The accent of slight doubt derives from the fact that most of the census-taking has been quite unreliable. In one area, as was shown by Mr. Kuczinsky, whose death is a sore loss to science, it became a farce which, in other circumstances, would have been exhilarating).

Old and New Struggles

My acquaintance with them goes back something more than a year for each of these possible millions. In that period, they have played in two terrible wars a part which won for them the warm admiration of British commanders. It would be difficult to mention one who, after working with them, omitted to praise and thank them. Now they are engaged in a fight which, though of a different kind and with another objective, is also stern and long. It is a struggle to produce the last ounce possible to contribute to the stock of raw material and food which will enable manufacturing communities outside Africa to make, and send to Africa, goods of the kinds which Africans greatly need.

There must be an end of that state of things which the Purcell report laid bare half a dozen years ago, with communities (in the Northern Territories of the Gold Coast in that particular instance) living (or existing) on 500 to 600 calories, compared or contrasted with the 2,500 or 3,000 described today as much too little for people in Europe. It is to be hoped that leading members of the unofficial majorities now in parts of West Africa are alive to the need for presenting their views on this vital aspect.

Only those who prefer to pass through life with eyes shut can have failed to note the extent to which the success and the lasting usefulness of an enterprise, whatever its size, can be fined down, not perhaps wholly but decisively, to the work, character and personality of one man or (in an increasing number of cases) one woman. That holds good of West Africa as of every other human community. There are tribal individualities, to which insufficient attention has so far been paid. Such individualities are not peculiar to West Africa. The institution is found virtually everywhere.

Recognition of this local individuality has in West Africa scarcely begun. Some of the older readers of this paper, at all events African readers, will recollect that, until quite recently, the people of the four Colonies (like Africans in other parts of British Africa) were just lumped together by the Colonial Office and by the politicians speaking for it in Parliament, as "the Natives". The paper nagged at the Department until in course of years the word "African" began to be used, which is at least a little better; and the tendency to use the newer and more accurate style was greatly strengthened when Mr. Ormsby-Gore (now Lord Harlech) took up the matter and did much to drive home consciousness of the fact that these many races are all individual, and all different from one another.

Now, one believes that it is not merely desirable but, if the Colonial effort is to be a success, absolutely vital that this recognition of individual characteristics shall be carried further—a great deal further, and this without delay. In what way? By accepting the fact that the members of each great section prefer to work with their fellows of the same part of the family, and will not have the best drawn out of them except in so far as this principle is honoured. It is not the simplest thing in the world, for many of the races—the fine Yoruba stock, for example—fare further afield; but the main part of the stock is almost always found sticking fairly close together and, given real recognition of their idiosyncrasies and real conviction that, in official quarters, each section has something fine and honourable to contribute, there need be no hesitation whatever to believe that widespread benefit will result.

Five Informative Expressions

At any rate there is this to be added in reflection: It is high time, and more, that some new method of approach to the people be made; for the failure—over a century and a half in one part, over an average of about a century taking the area as a whole—of existing methods is plain to all who use their eyes and their intelligence. The other day, one read in the London Press the report of a presentation of books to the new Government of Burma, a pleasant gesture gracefully acknowledged by spokesmen of that Government. British West Africa's has been the opposite method. It has recently presented to Britain, by way of people very well qualified, several books the teaching of which Britain cannot ignore except to her great and continuing loss, moral and material.

First we had from Professor Daryll Forde, Dr. Richenda Scott and Miss Perham: *The Native Economies of Nigeria* (Faber & Faber), a careful, accurate, helpful account of conditions, revealing incidentally lowness of life and income since fully confirmed in a striking article in *The West African Review* (December, 1947) by Mr. Claude Barnett (Director of the Associated Negro Press of the U.S.A.) whose appreciation of the courtesies of the authorities in Nigeria has not inhibited him from making the blunt avowal that, dismal as he had found conditions in some of the U.S.A. back blocks, he had seen nothing anywhere which for dire poverty and low standard of life compared with what he saw in Nigeria.

Dr. Miller is Frank

Next we had the book: *Have we failed in Nigeria?* (Lutterworth Press) by Dr. Walter Miller, most of whose life has been passed in Nigeria; a book one of the saddest I have read, because of its evidence that it is pain and grief to the author to have to say "yes" to his own question. About the same time, came Lieut.-Colonel W. R. Crocker's *On Governing Colonies* (Allen & Unwin), with its memorable statement, by an author himself an ex-political officer of Nigeria, that from what he had learned first-hand, half the political (so-called administrative) men would leave tomorrow if they could get their pensions. Finally—for the present—came Mr. Awolowo's *Path to Nigerian Freedom* (Faber & Faber), which has evoked from the Governor of the country, Sir Bernard Bourdillon, a tribute so distinguished.

If anybody can study those five expressions of testimony, each the outcome of experience and none of them anti-British, his heart doesn't seem to be of the right make. If his sense of what they have to teach him isn't quickened by reflection on the part for which great African areas and their people will be cast by the contrivers of international mischief, his weakness of heart must be a slight matter compared with the weakness of that part of him supposed to contain brains.

WEST AFRICA AT WESTMINSTER

Transport Bottlenecks

WEST African groundnuts were again discussed in the House of Commons before Parliament adjourned on December 19; Mr. Dodds-Parker asking the Secretary of State for the Colonies how many tons of groundnuts were estimated to be stored up-country in West Africa? and what was the reason for the delay in bringing them to this country? The Secretary of State for the Colonies replied: "On December 4, there were 70,642 tons of groundnuts from the 1946/47 crop stored up-country in Nigeria; and a further 46,625 tons of the new crop, making a total of 117,267 tons. Difficulties on the Nigerian railways are responsible for the delay in clearing these crops and much attention has been given to the problem. In this connexion, I would refer the hon. Member to the reply given on December 10 to the hon. Member for Abingdon (Sir Ralph Glyn).

Mr. Dodds-Parker: May I ask the Secretary of State to point out, to those responsible for Colonial development, the need to concentrate on transport to move those commodities already produced before producing more of them?

Mr. Creech Jones: Transport bottlenecks are pretty common in many Colonial territories just now; but we are concentrating on that matter and trying to get all necessary material in order that these difficulties are removed.

Mrs. Jean Mann: Is there any truth in the statement that the crops are likely to be endangered by locusts?

Mr. Creech Jones: That hardly arises out of this Question.

Major Legge-Bourke: Is there likely to be, or has there already been, any deterioration of the 1946/47 crop?

Mr. Creech Jones: From my information, no!

Discipline Among African Troops

Mr. Sorensen asked the Secretary of State for War whether discipline has or has not deteriorated among African Colonial troops, since corporal punishment has been abolished? and what punishments are inflicted for offences, that formerly would have involved corporal punishment?

Mr. Shinwell: I have called for a report on this matter from the military authorities overseas and I will write to my hon. Friend when it has been received.

Mr. Sorensen: Does that include the latter part of the Question as well as the former part?

Mr. Shinwell: Certainly, Sir.

Harbour Facilities in Cameroons

Dr. Segal asked the Secretary of State for the Colonies whether any improved harbour facilities are projected for the British Cameroons? and when these are likely to be completed?

Mr. Creech Jones: The existing harbour facilities in the British Cameroons, which comprise a deep water wharf at Tiko (the property of the Cameroons Development Corporation) and a deep sea anchorage at Victoria, are considered ample for the existing volume of trade. Consideration has been given to a proposal to extend a wharf at Bota (owned by the Cameroons Development Corporation) to permit coastal vessels to berth alongside, but I am advised that the present volume of trade would not justify expenditure on the scale which would be involved by such an extension.

Appointments in West Africa

Mr. Skinnard asked the Secretary of State for the Colonies how many administrative appointments have been made in West African Colonies during the past year? how many appointments have been made in the technical departments during the same period? and what steps are being taken to increase the numbers and improve the status of civil servants in the technical departments?

Mr. Creech Jones: Since January 1, 358 appointments have been made by the Colonial Office to the West African territories, of which 108 were to the Colonial administrative service. It is, of course, for the Colonial Governments to decide the relative numbers of officers required. The establishments of the technical departments have in most cases been considerably increased since the war. As regards the last part of the Question, my hon. Friend will be aware that the salaries of all officers in West Africa have recently been substantially improved, and the salary scales of engineering, educational, agricultural, forestry, veterinary and other technical departments are the same as those of the administrative services.

Gold Coast Students

Mr. Erroll asked the Secretary of State for the Colonies how many Gold Coast students are at present in this country? and how many are studying law or allied subjects?

Mr. Rees-Williams: According to records in the Colonial Office, there are at present 283 Gold Coast students in the United Kingdom, of whom 30 are following legal studies. It may also interest the hon. Member to know that, of these students, 180 hold scholarships and 103 are private students. Of the law students, three are scholars and the other 27 are being maintained from private sources.

French Colonial Difficulties

IN an article in the July/September number of *Economie Contemporaine* M. Paul Devinat discusses the economic problems of the *Union Française*. He says that the main failing of Governments of the Third Republic can be summed up in the inability to create, in the country, a conception of the Empire which would have roused public opinion; and to establish, on a wider basis, the development of French Overseas territories by attracting capital to Africa and Asia and by winning the enthusiasm of the young generation.

The *Union Française*, he writes, is not a formula. It is the only means left to France of preserving her place in the concert of nations, and to guarantee not only her own independence, but also the independence of the people for whom she has taken responsibility. If France abandoned her task, if she only carried it out imperfectly, other nations were ready to step in for her ruin and to the great chagrin of the populations whom she will have let down. Speaking of the disorder and slowness of the administration, M. Devinat says that lack of unity in the Government was not helpful in assisting the task of the high Colonial officials.

The immediate dispatch to the Colonies of consumer goods the buying of which can alone give incentive to the Native to increase his production, the setting up of decent but efficient labour rules, the awakening of an administration which seems to have fallen asleep, are cited as indispensable conditions for rebuilding French economy overseas. It had to be admitted, says M. Devinat, that, so far as simple technical skill was concerned, France had been left behind by the majority of other Colonial nations. She never lacked professors nor research workers, but these have never been given means by which any appreciable result could be expected.

Lack of Finance

Results would not only depend on the independence and goodwill of scientists, but on the importance and regularity of support that they would receive. Unfortunately, France was impoverished. It was only by borrowing that the money necessary for overseas development could be found. This borrowing could be subscribed by local Colonial enterprises. Foreign capital might also be attracted, provided precautions were taken to safeguard French sovereignty.

Finally, what was the will of France? "From the depth of the rice plantations of Indo-China or from the forests of Gabon," concludes M. Devinat, "one voice is heard above the lamentations and complaints. It is, what is the will of France?" France, or rather her successive Governments, has never answered, except in vague and generalized dissertations. It is time that she spoke clearly, concisely and to the point, and that she finds once more, among her children overseas, the treasure which she is in danger of losing—her authority. She will find it only by putting it to the test.

WEST AFRICA

No. 1612. Vol. XXXII. SATURDAY, JANUARY 10, 1948 Registered at G.P.O. as a Newspaper.

Another Minister for Colonial Office . . . . Cherchez "La France"

THE fact that a Minister of State for Colonial Affairs was appointed at the beginning of this week is primarily significant because of the strengthening it brings to the Government Department responsible for Colonies. The selection of LORD LISTOWEL to fill the post is noteworthy for another reason. Ever since he left the appointment of Postmaster-General to become Secretary of State for India and for Burma in April, 1947, LORD LISTOWEL has been associated with the arrival of hundreds of millions of peoples dependent on the British Government to a state of independence. For LORD LISTOWEL was connected with the negotiations which preceded the granting of Dominion status to India and Pakistan and he remained Secretary of State for Burma until the termination of that office.

More Power for Cinderella

When MR. CREECH JONES told a London audience, just over a year ago, that he had not been appointed Secretary of State to preside over the liquidation of the British Colonial Empire, he could hardly have envisaged how nearly that "liquidation" was in process of being carried out. It would be unkind to suggest to Colonials, as a whole, and to Africans in particular, that the new task of LORD LISTOWEL may well be to take part in the gradual severance of Colonial entities from the position of dependence on the Home Government. We might arouse hopes which are not likely of fulfilment during the term of office of that noble gentleman, although there will almost certainly be further grants of independence to Colonial territories during his lifetime. He is only forty-one.

We have preferred to comment on LORD LISTOWEL'S appointment in a rather whimsical way, because the significance of the office is the important factor of the news. As recently as our issue of December 13, we commented on the suggestion made in Parliament that the Prime Minister should appoint an Under-Secretary of State for Africa. We gave our reasons then for not approving departmentalization at the Colonial Office. It would be illogical, therefore, to do anything else but congratulate the responsible authorities for giving to the Colonial Office the means of greater bargaining power in British high-level deliberations, which are bound to have repercussions on Colonial inhabitants, so long as they are dependent on the United Kingdom for the conduct of their affairs.

The subsidiary result that the addition of one Minister will permit of greater contact between Colonies and Church House is also important. The growth of regionalism, in East and West Africa, in the Pacific and in the Caribbean (where it originated), will mean that one of the three Ministers at the Colonial Office will almost always have the opportunity of attending discussions in the areas for which they are to be responsible. Since it would seem that the evolution of British Colonial policy is directed to geographical decentralization through centralized regionalism, rather than towards metropolitan representation at home after the French pattern, it is well that Ministers of the Colonial Office who, for constitutional reasons, are responsible to the Home Parliament, should be frequently present at regional Colonial conferences. We are confident that the Colonial populations will welcome the innovation.

* * *

The creation of an Assembly of the Union Française will probably go unnoticed in British Colonial circles until its working is more clearly shown. It is certainly worth watching however. The French Colonial system is always worth watching, if only for the example of the late Governor-General FELIX EBOUE and the representation in Paris that has, for so many years, been accorded to deputies from French Colonial territories. The British have preferred their own approach to the Colonial question and it remains for events to prove whether or not their decisions have always been as wise or well-advised as they might have been. Recent events have, however, tended to modify Britain's traditional approach of governing by persuasion through individual local governments.

The development of regionalism in the Caribbean, the South Pacific and, to a lesser extent, in East and West Africa, was followed last year by the African Governors' Conference, when Governors of Colonies met together for the first time on a large scale, to discuss common problems with the Colonial Office. But the first indication of any approximation to the French system is the conference which will include Unofficial Members of the Legislative Councils of the ten British African territories, which is being planned for October this year. How far this conference will, in effect, give representative Colonial politicians an opportunity to voice their opinions on the home-ground, will of course largely depend on the manner in which the members are selected and the degrees of freedom of open discussion permitted by the Colonial Office.

The fact that France has not achieved complete success by her system of allowing Colonial delegates representation in the French Parliament, is indicative that we should approach any comparison between Britain's and France's Colonial policies with caution. We should certainly not overlook the psychological effect that Colonial representation on the banks of the Seine has meant to Africans in all parts of the world. For them, it has been a vindication of African potentiality. But the very reason that France should have created a new political experiment with the foundation of the Assembly of the Union Française shows that there was room for improvement on French progress in the past. The two main features of the new French Assembly are that representation to it is half-metropolitan and half-overseas; its powers are consultative.

New Political Experiment

In an editorial of July 26, we drew attention to the fact that, within the framework of the British Parliament, there existed what was, in fact, a miniature Colonial Parliament—consisting of the "relative small number of M.P.s who have that necessary knowledge of Colonial affairs which enables them to take part in discussions of vital interest to the Colonies." If the British do think of copying the French model, it would be from these Members of the Home Parliament that delegates to a Colonial Council would be mainly chosen. Similarly, the representatives from the British Colonies to a Colonial Council would naturally be elected by local Colonial governments. Simplified in this way, the new Assembly of the Union Française contains (although it also exceeds) the ideas suggested in our editorial: TALKING SHOP of July 26.

We wrote then: "Since the mere existence of Colonies postulates the responsibility of Parliament for Colonies, there would be no objection to such a Colonial Council being itself responsible to the Home Parliament. The important

thing would have been achieved. Colonials, impatient of delay, would have their 'safety-valve' within the 'talking-shop'. They would be free of the feeling that the shop is still virtually closed on their home-ground and in the distant capital. If they modified some of the feelings of frustration, that alone would be the most significant development which has occurred in Colonial affairs within a decade."

It looks as if the French, who have already earned high praise in Colonial circles for certain aspects of their Colonial policy, have forced the pace on a way which was already made. It will be interesting to see how far the new French development will succeed in arousing Colonial opinion to the extent where even the British realize that they are still out of phase, although they may be in step, with the constitutional development of Colonial territories. British traditional policy which has, in the past, been successful in many ways has also been mistaken on many occasions. It will be little satisfaction for those who champion the ideal of the preservation of the British Commonwealth if for every Ceylon there is one Burma.

THOUGHTS ON AFRICANIZATION

Privileged Minorities

By COLONIAL

BOTH Africans and Europeans are privately prepared to agree that one of the fundamental difficulties which must be removed if Afro-British cooperation is to continue, is the need for responsible Africans to speak freely on all subjects affecting themselves and their countries. From the European point of view, it is greatly desired that Africans should speak fearlessly and with authority on topics which are sometimes likely to bring unpopularity to those who ventilate them. From an African point of view it is more than the fear of unpopularity amongst Africans; it is the unfortunate position in which they find themselves in relation to their local Governments.

Having in a previous issue called for what virtually amounts to heroism on the part of those Africans who are prepared to risk unpopularity in the search for truth, let us try to impress on Europeans some of the difficulties facing Africans in Colonial territories generally and in West African Colonies in particular. The very fact that Africanization is being pursued (slowly, or not, matters little to the present argument) means that a large number of Africans, by virtue of their official position as British Civil Servants, are debarred from speaking on subjects affecting themselves as Africans.

It is this sense of frustration which has led so many Africans to give up all hope in British intentions. It is a very real sense of frustration, which is known only to Africans themselves and to the comparatively small number of Europeans to whom Africans are prepared to speak freely. In fairness to the British Government, it should be realized by Africans that the frustration is not confined to Africans. It is part of the British Colonial Service organization.

Military Organization

It was a distinguished British Colonial Civil Servant who, not long ago, likened the governing of the British Colonies to the organization of an army, with its corps and divisional commanders as Governors, and the Colonial Office as an Army Council. It was the man on the spot working through his lieutenants and heads of services who did the governing. The question of Africanization is not, therefore, as simple as its mere pronouncement would make it out to be. The African who becomes a part of the Colonial Civil Service, at the District Officer level and above, immediately becomes a part of the "military" organization; he owes allegiance to his superior officer all along the line. He is theoretically equal to the European and there is nothing, on paper, preventing him from rising to the position of Governor and even Under-Secretary of State.

In practical experience nothing of the kind occurs. African and other Colonials who have risen to high office in the Colonial Service have mainly begun with jobs far inferior to that of District Officer. This system has been praised, in Colonial Service circles, as an example of what can be done by men of good will, who are prepared to begin the hard way. Unfortunately it has led to great wastage of talent and, not infrequently, has engendered resentment among disappointed Colonials. It is small consolation to remember the comparatively few instances of those who have achieved success by a humble beginning, when we have to record a far greater number of those who have been lost by the wayside, because of the system.

Colonials are proud, sometimes exaggeratedly proud, of their fellow-countrymen who have succeeded in establishing themselves in professions and careers of high distinction in the United Kingdom, in Canada, the United States of America and in many other parts of the world. They have reason to be proud, since these successes prove, beyond all reasonable doubt, that the Colonial, given reasonable opportunities, is capable of holding his own on equal terms with any other product of modern civilization. In the same way, the Colonial Office has reason to be proud of the fact that the Colonial system has allowed certain Colonials the opportunity of proving their merits in their own countries.

Good Self-Government

But it would be shortsighted and unfair to leave the matter there in a small pæan of praise; because so long as this policy continues, it will continue to make nonsense of Colonial progress to good self-government. For every Colonial who succeeds in establishing a reputation for himself outside his own country, there are hundreds with equal potentialities but less opportunities.

Is there room for wonder then, that Colonials, who are always being asked to contribute to the development of their country, should not feel a sense of frustration, indifference or incapacity to combat forces which are too strong for them? Let us examine the case of West Africa in particular.

The reasons advanced by officialdom when surprise is expressed at the relatively small number of West African students recruited for "career" posts in the Colonial Service of the Colonies is that there are better qualified British applicants. The argument, although theoretically sound, is invalid if Africanization of the Service is to be pursued as a first objective. From a purely British point of view—from purely British criteria—Africans can only equal British candidates if they have themselves been born in the United Kingdom and enjoyed the same advantages.

Priority for Africans

The only sure way to ensure Africanization of the Service in the African territories is to give priority to Africans over Europeans. In other words, Africans in the schools should be given the opportunity of choosing their own Civil Service as a career in the same way that they choose professions of the law or medicine. Training could be largely carried out in local West African Universities in the future, but a beginning could be made now, with many hundreds of Africans who have acquitted themselves creditably at British Universities in the United Kingdom and elsewhere.

Since the Colonial Service of each African territory constitutes the machinery of local government, it is only when sufficient Africans are employed in a majority of all positions in the African Colonial Service that Africans and local government can be associated together as responsible parts of a whole. When that stage is reached, it will be worth investigating how far "Non-Governmental" and "Governmental" Africans will be able to contribute freely towards the discussion of their own problems. Any other policy is bound sooner or later, to lead to an increase of disunity amongst Africans and the growth of special privileged minorities who, willy-nilly, must be yes-men of the present administration.

LAND AND FORESTS

Increase in Use of Gold Coast Timbers

HOW the position of forestry in the Gold Coast was, and still is, largely affected by the prevailing conditions of land tenure is clearly stated in a recent Gold Coast publication *Empire Forests and The War* which says that the land belongs to the Stools representing the tribes; and that use of the land within the tribe is governed by Native customary law. Private ownership in land is not recognized in this, only rights to the usufruct. But at the time when Native customs in land tenure developed, since there existed only subsistence food farming for a small population with ample land available for long forest fallows, the tenure of land was of relatively little importance and no clear rules governing it are known.

Few Accepted Boundaries

The boundaries between the land owned by the various tribes are rarely known or fixed. Up till comparatively recent times, migration of tribes due to war, slave raiding and pestilence was common and, as the population was so low, unoccupied areas were available for these migrations. Only on stretches where a large or well-known river such as the Pra, Tano or Offin came between tribes and formed a natural boundary were there any accepted boundaries. Over the rest, the boundary was generally a wide belt of uninhabited forest, over which both parties claimed ownership and, as it was only entered by occasional hunters, the necessity for a settled boundary never arose.

That the land remains entirely in the hands of the people has always been the policy of the British and Colonial Governments; but so jealously has this been guarded by the Natives that the only Bill to determine boundaries and settle a land code ever proposed raised such an outcry that no legislative action has since been taken. All disputes are, therefore, only referable to the law courts and are appealable up to the Privy Council.

Frozen Forest Reserves

With the increase in population, the development of mining and the introduction of cocoa, a semi-permanent cash crop, land has come to have a value. The Stools extend their claims to land to the utmost as a potential source of mineral wealth and to satisfy the increasing numbers of their tribes, especially as the areas open to food farming have been greatly reduced by cocoa farms. Few intertribal boundaries are yet settled and disputes increased greatly in frequency in the pre-war years. As a great deal of the reservation of forest was in the uninhabited areas between the tribes, the Forest Reserves are specially affected; many large areas are "frozen" from all exploitation and development, as they are declared and protected as Forest Reserves under the Ordinance but, their ownership being in dispute, they cannot be settled, finally constituted and managed.

As ownership is not altered by reservation, all income derived from Reserves returns to the Stools though, in certain cases under the Forest Ordinance, where the Reserve is managed by the Forest Department, one-third of the revenue can be retained by the Colonial Government, to cover management costs. As there was no appreciable demand on the Reserves, and none were being exploited, this did not matter greatly at the time.

Dominance of Cocoa Crop

The introduction of cocoa as a crop in the Gold Coast has had a manifold effect on the forest, which was fully operative in the period 1934/38. The spread of cocoa farming greatly increased the rate at which the forest was being destroyed to give place to farming throughout the Closed Forest zone. The whole farming population planted this cash crop in their food farms. Food farming methods, however, based on shifting cultivation and a forest fallow, did not alter; but as the areas which formerly would have been fallow were now under cocoa, the primary or very old secondary forest was constantly being encroached upon where available.

Where it was not available, as in the more densely populated areas of the Eastern Province of the Colony, this led to shortening of the fallows, soil degradation, the invasion of grass and savannah conditions, and the deterioration of the cocoa accelerated by the appearance of the Swollen Shoot disease. It also led to migration of the population, mainly Krobos and Akwapims, to the less densely populated and more heavily forested areas of the country to the north and west. In these areas, they purchased land, thus upsetting the bases of land ownership within the tribe in the Akan system of land tenure as given above.

The dominance of the cocoa crop, which requires a high relative humidity, did lead, however, to more extensive reservation of forest to ensure climatic stability. In the Krobo and Akwapim lands, however, cocoa cultivation had reached such an extent that reservation of forest on a sufficient scale was impossible, whilst in the surrounding areas reservation was hotly opposed; and in certain reserves, constituted under the Ordinance, difficulties were met in settlement, as considerable areas were found to have been purchased for future cocoa farming by Natives foreign to the tribe holding the land.

Loss to Forests

The alienation of land under forest to farming, with the destruction of the existing crops by cutting and burning, was the most serious loss the forests had to face during the pre-war years. The general position was anomalous, in that a heavily forested country with a great variety of potentially useful trees had an extremely low *per capita* consumption of converted timber, restricted almost entirely to one species, odum (*Chlorophora excelsa*), a comparatively low *per capita* consumption of firewood, and an export trade restricted almost entirely to another single species, mahogany (*Khaya ivorensis*). The selective demand for these two species made practically no impression on the forest as a whole, and only in certain restricted areas round the mines was there any forest destruction through direct demand for firewood. All supplies were drawn from outside the Forest Reserves, which could not be developed through lack of effective demand.

Rise in Local Demands

The working of forest areas rendered accessible during the war is likely to be permanent, except in the event of a catastrophic fall in world timber values. A much larger area than before the war will always be exploited to meet local demands, which have risen considerably and are likely to rise still further in the future. Timbers for which there was only a restricted pre-war demand and which are almost certain to remain in general demand are cedar, kusia, baku, kaku, danta, scented guarea, avodire, nyankom, emeri, dahoma, African walnut and aprono.

Wawa is one of the woods which may be developed with the introduction of veneer mills, whilst esa which may form up to 30 per cent. of the forest crop has been tested for plywood at the Forest Products Research Laboratory, Princes Risborough, and found to be excellent. Of minor forest products, sibri mats and local twines are the most likely to remain on the local market. It is not known whether the rattan cane, now being exported, will be able in the future to compete with supplies from Singapore.

Wooden Houses will Increase

The standard of housing is improving, involving the use of much larger quantities of sawn timber. It is anticipated that when the extra sawmill production now under plan comes on to the market, prices will drop and wooden houses progressively increase in number. The partial use of wooden sleepers, to replace the former metal ones, by the Railway seems likely to be permanent, especially in view of a proposal to install a pressure treatment plant.

42961/53

One of the main features of wartime developments has been the use of a much wider variety of species; and it may be anticipated that a use will be found for other species, at present unmarketable, particularly in the plywood industry. This will have a profound effect upon silvicultural practice, inasmuch as regeneration of many species formerly regarded as "weeds" will be acceptable for incorporation in the main crop. Previous to the war, the Forest Department had very little experience of direct supply work, attention having been directed almost entirely to conservation and related work. At the outbreak of war, the production of pitsawn timber was largely uncoordinated and in the hands of very small units, with the exception of the recently organized cooperative society in Ashanti. The services of the Department were required to bring to the maximum and canalize this production.

Sawmill Development

Except towards the end of the war, millsawn lumber was of comparatively little importance. The emphasis has already changed; and sawmills are likely soon to make pitsawing of minor importance, especially as trees of the desirable species become less accessible, thus making pitsawing uneconomic through excessive carrying charges. The production and supply of sawn timber is thus passing more and more into commercial hands and the Department is not likely to be called on again to deal directly in this material.

The war is not said to have taught any lessons about the need for adequate reserves of forest produce. Production facilities and transport, and at times labour, were the only limiting factors; and at no time during the war was anything but a small fraction of the potential annual yield of any item of forest produce utilized with the possible exception of mahogany and wild rubber. Forestry in the Gold Coast has no direct connexion with any reconstruction programme, though the increasing mechanization of the timber industry is bound to absorb many trained ex-Servicemen.

"FRANCE OVERSEAS"

To be Represented in French Government

M. P. O. LAPIE in *France* (December 5) writes:—"A new political Assembly opens its doors. They are imposing doors. They are those of the Palace of Versailles. This famous place, witness of so many memories, has been destined to welcome the Assembly of the Union Française. What is this institution? Must it not be considerable, in view of the fact that the most magnificent palace of the Kings of France should be provided for its purpose?

"This institution has been created by the new constitution of France; its appearance in the régime is a novelty. It marks a new chapter in the history of constitutional laws. It is the representation in the government of France of all the overseas possessions. It was, in fact, one of the characteristics of this Constitution to deal with the colonial problem. It sets out the principles which must exist between what was formerly called metropolis and colony; it anticipates the existence of a Council of the Union Française; it is this Council which today addresses itself to its tasks.

"France comprises, with the peoples of its overseas territories, a Union founded on equality of rights and duties, without distinction of race and religion." So expresses the preamble. It concludes with two paragraphs underlining the French wish to guide the peoples towards their own government, within the Union Française, and rejects every system of colonization founded on arbitrariness or force.

The organs of the Union, according to Clause 63, are: The President of the Republic, the High Council of the Union Française and the Assembly of the Union Française. With regard to the first two organizations, let us say in passing that the High Council is a Council of Government which assists the President of the Republic on colonial questions. Let us examine in greater detail particulars of the Assembly of the Union Française as it actually exists.

Composition of Assembly

This Assembly is composed half of members representing metropolitan France and half of representatives of departments and territories overseas. These overseas members will be elected by the regional assemblies of their territories. The metropolitan representation is guaranteed by delegates chosen, as to two-thirds, by the National Assembly; and as to one-third, by the Council of the Republic. By virtue of Article 71, its powers are consultative.

Power of legislation, in the matter of penal law, civil liberties, political and administrative organization, remains always in the hands of Parliament. As may be seen, it is a considerable innovation that has just been introduced in French institutions. And it will be judged precisely to the extent in which France succeeds in the future in associating with its political life its overseas territories. Once more, therefore, France is carrying out her mission of political experiment. But this experience is likely to prove this year particularly delicate. In fact, the foundation of the Assembly of the Union Française rests with the local assemblies. Now these local assemblies have hardly been formed. They are not yet mature enough to administer their own regions.

From now on, they must select men who will have to be in the spotlight of the general political world of the country, that is to say, of France and the whole of the Union Française. It is asking very much of men still new to public life and quite newcomers to international life. But France places confidence in these new men, in these new assemblies, in these young forces that it has liberated from slavery. It thinks that the apprenticeship of liberty will be difficult; that sometimes, perhaps, it will suffer therefrom; but that the hope of this liberty is the finest ideal that it can offer to men of all races and all colours who live throughout the territories of the Union.

COLONIAL "JIG-SAW" PUZZLE

Most "Colonies" Outside Africa

By a Special Correspondent.

THE appointment of a Minister of State for Colonial Affairs presents an opportunity for reviewing the present organization of the Colonial Office. The office of Secretary of State for the Colonies properly dates from 1854, less than one hundred years ago. It was not until 1925 that a new Secretaryship for Dominion Affairs was set up, thus leaving the office of Secretary of State for Colonies concerned with the dependent territories. So the present office of Secretary of State for the Colonies will have existed, as it is today, precisely 23 years in July of this year. The office of Minister of State for Colonial Affairs was inaugurated on January 4, 1948. The office of Permanent Under-Secretary of State for the Colonies is recorded in the Colonial Office List as far back as 1825; and Parliamentary Under-Secretaries can be traced, in the same publication, to the year 1830. A Deputy Under-Secretary of State is first recorded in 1931.

Assistant Under-Secretaries

These main offices today comprise the existing executive machinery for the ultimate conduct of British Colonial affairs. The Secretary of State also has principal advisers on most subjects such as development, education, medicine, etc.; and new advisers on special subjects are still being appointed at intervals. But responsibility for detailed administration rests mainly on the Assistant Under-Secretaries of State who are individually responsible for departments. The Colonial Office List for 1946 is again very helpful. One Under-Secretary is responsible for Appointments, Ceylon and Pacific, Colonial Service, Establistment. Another is responsible for Commercial Relations and Supplies, Communications, Marketing. Another had been seconded that year and his duties were not given. Another was responsible for Eastern, West African; one for Finance, Production, Research; one for Information, Mediterranean, Middle East; and another for East and Central African, General and West Indian.

The information is also given that the International Relations, Social Service and Welfare Departments are under the supervision of a Superintending Assistant-Secretary. There have been changes since the 1946 Colonial List was published. There are today two Deputy Under-Secretaries of State and there has been re-allocation of the responsibilities of Assistant Under-Secretaries. One is now responsible for Africa. Two are individually responsible for Economics and Production, but the functions overlap. One is responsible for the Mediterranean; one for the West Indies and the Far East; one for Social Services and International Relations; and there is a Superintending Assistant-Secretary for Colonial Service, Ceylon and Pacific.

Towards Regionalism

In recent years, therefore, there has been a noticeable direction towards regionalism as a basis for allotting the responsibilities of Assistant Under-Secretaries. There are also geographical heads of departments and principal officers responsible for one or more of the individual dependent territories. What of the territories themselves, which are administered by the Colonial Office? Mr. Oliver Stanley told a London audience recently that, when addressing his compatriots on the subject of Colonies, he always offered them an alternative. They could listen to him or they could spend the time writing on a piece of paper the names of all the British Colonies. It was not often that he got accurate lists, he said; although the latter offer had often been accepted by certain members of his audience.

How difficult it is to write a complete list of British Colonies is illustrated by a note in a recent document from official sources on dependent territories administered through the Colonial Office. The note says that the list "is not comprehensive, as there are a number of islands and rocks, throughout the world, which are British or British protected territories but are not included in any Colony or Protectorate. Many of such islands have no permanent inhabitants."

Using this list as reference, we find nine geographical groupings. Including Bermuda, British Honduras and British Guiana (none of which are, strictly-speaking, West Indian territories) we find that the oldest and most numerical of the British Colonies are in the American area. There are twelve individual Colonies in this area, with their own forms of government; none of them being exactly similar. The twelve Colonies have nine Governors between them. One Colony has four presidencies and small dependencies; one Colony has two dependencies; and four Colonies share one Governor.

Included in the American Hemisphere is the Colony of the Falkland Islands and its dependencies. In the Atlantic, St. Helena is a Colony and has two dependencies: Ascension and Tristan da Cunha. In the Far East, four Colonies are listed and one Protectorate. In the Indian Ocean, there are the Colonies of Mauritius and Seychelles; and the Colony and Protectorate of Aden. In the Mediterranean, there are three Colonies: Cyprus, Gibraltar and Malta; and the mandate of Palestine now in process of termination.

In the West Pacific, Pitcairn is a Colony (with an estimated population of 126 and a land area of two square miles!) and so are Fiji and the Gilbert and Ellice Islands. There are two Protectorates in this area and an Anglo-French Condominium. In British West Africa, there is the Colony of Gold Coast, the Colonies and Protectorates of Gambia, Sierra Leone and Nigeria, and the two trusteeships of British Togoland and the British Cameroons. In East Africa, there is the Colony and Protectorate of Kenya. Tanganyika is a trusteeship. British Somaliland is a Protectorate under military administration since 1941. Uganda is a Protectorate, and so are Zanzibar and Pemba.

Five African Colonies

Speaking strictly, therefore, there are only five Colonies in the whole of Africa; and yet Africa is undoubtedly the major part of the Colonial Empire. The appointment of an Assistant Under-Secretary of State for Africa was a step in the right direction of straightening out the tangle of the Colonial Office loose threads. The mere classification of the thirty-two British Colonies is sufficient indication to show how much of a "jig-saw" puzzle the British Colonial Empire has been in relation to London and how far it still so remains.

Anyone who thinks that the Colonial Office has now reached the final stage where its organization has finally been arranged to meet the needs of the "Colonies" will be disappointed with the thought. Not until a thorough process of decentralization has been carried out, and a distinction made on the basis of individual stages on the road to self-government will that clarity of vision be realized without which the pace of progress of one Colony is likely to interfere with that of another. Palestine should have been taken from the Colonial Office long ago: Cyprus, Gibraltar and Malta are hardly concerned with the main activities of the Colonial Office now. They could be administered through the Commonwealth Relations Office and Gibraltar through the War Office, more profitably.

The West Indies, too, would be more wisely administered through the Commonwealth Relations Office. The argument could be pushed further; but enough has been said to show that the problems of Africa deserve special treatment by the Colonial Office and that the office should be reorganized to deal adequately with these problems. It is not so much an African Office that is wanted as a Colonial Office free to deal with Africa. Nor is Africa the only part of the dependent Empire to suffer. What is suitable for Africa has not always been suitable for the dependent territories. And yet certain Colonial Officials with previous African experience have not always appreciated this fact.

PEOPLE AND GOVERNMENT IN SIERRA LEONE

Is Planning Divorced from Realities?

By R. B. Wellesley Cole

A GRAVE situation is developing in Sierra Leone. There is every sign of an impending threat to friendly relations between people and government in this "ancient and loyal" Colony. Progressive Africans believe in cooperation between the races. We are not Anglophobes. We realize that our future largely depends on our own efforts—hard work, constructive thinking, unity, and broad enlightenment. Above all, we must be able, as a race, to produce a steady stream of well-equipped youth of sterling quality to man the various departments of government and public life.

But to do this, we must be guaranteed political, economic, and educational freedom of development. On the other hand, we have in the present Secretary of State a man who is generally acclaimed as a friend of Africans, who has made a special study of Colonial affairs, and who has surrounded himself with a band of keen and efficient young officials. How is it, then, that the present serious situation in Sierra Leone has developed? Have we here the spectre of Planning divorced from realities, namely the wishes, background and stage of development of the people concerned?

Whatever the views of a powerful section of opinion in London may be, on such subjects as ownership of land and minerals in the Colonies; whatever may be the economic and military position of the Empire now that Asia with its reservoir of cheap labour and supplies is gone, the fact remains that, in the present stage of West African development and world opinion, physical or political force is out of the question. Only cooperation, free and equal, between British and African can yield results.

Instance of Fourah Bay Fundamental

The particular instance of Fourah Bay College is fundamental to all that is happening in Sierra Leone. Readers of this paper hardly need be reminded that Fourah Bay is the oldest and perhaps the best example of cooperation between Missions and people in West Africa. It is not always realized that, in addition to student fees, West Africans have so far contributed in bequests endowments and scholarships some £30,000 to it. Today, Sierra Leoneans of both Colony and Protectorate have inaugurated an Endowment Fund with a first target of £100,000.

The Freetown Municipality has given £1,000 to this fund. The Paramount Chiefs in the Protectorate Assembly have moved that Fourah Bay be made a National College supported by public funds. They ask that a special tax or levy throughout the country be raised for the purpose, and that allocations to it be made out of the Protectorate Benevolent Fund from the pool contributed by the mining firms.

Government Reasons Seem Fair

What is the Government's reaction to this example of democratic self-help? Mr. Creech Jones was a member of the Elliot Commission on Higher Education in West Africa. As such he signed the Minority Report. In the event as Secretary of State, he abandoned both the Majority and Minority Reports and decreed for Sierra Leone a Regional College (a sort of super-technical school). His reasons sound fair enough: 1. Available funds for Sierra Leone are limited, and should preferably be spent on lower grades of education which will benefit the masses. This can best be done by a Regional College. 2. The actual and probable supply of university students from the secondary schools of Sierra Leone is too small to warrant support for a university college. 3. In any case, Fourah Bay is quite free to continue as an independent institution.

In actual fact, however, Fourah cannot so continue under present conditions, as the Government has requisitioned the college site and buildings for a deep water quay, and has neither offered an alternative permanent site nor helped in securing one. In the present stringency of post-war Sierra Leone, any available site is likely to be Government controlled.

Furthermore, in the memorable interview which a delegation of the Fourah Bay College Committee had with Acting Governor Ramage on December 9/10 last, and which I commend to the careful study of the leaders of the other West African territories, Mr. Ramage admitted that the Chiefs, the Native Administrations and Senior Civil Servants, were debarred from contributing to Fourah College Fund "because such action would be contrary to the declared policy of the Secretary of State." He went further to admit "that certain firms and combines, like the Seirra Leone Selection Trust, may not think it politic to subscribe to a fund of which the Sierra Leone Government did not approve because the aims of the fund conflicted with the Secretary of State's policy."

One School Per Million

On the other hand, not a single new secondary school in the whole Protectorate and Colony of Sierra Leone is proposed in the Development Plan for the country. Be it noted that at present in the Protectorate, with a population of about two million, there is only one secondary school for boys (at Bo) and one post primary school for girls which, under the development scheme, is to aim at the Cambridge Junior standard in ten years. Compare the Colony with nine secondary schools (four for girls and five for boys) for a population of 75,000. Note also that, although it was only three years ago that Bo school began to enter candidates for the Cambridge school certificate, already seventy-five per cent. of the successes are entered for university courses at Fourah Bay.

Unwise to Abandon Fourah Bay

My considered view is that Sierra Leoneans would be unwise to abandon Fourah Bay in the absence of positive measures to improve the quality and "quantum" of secondary education in that country. In any case, there have already been two technical schools there in the past: the first, an African endowment; the second, a para-governmental institution. They were not successful, the second one even less so. The reason is simple. *In Sierra Leone, unlike Nigeria and the Gold Coast, practical and technical training is not given in the schools.* This is an urgent need which should first be tackled.

Atmosphere of Complete Equality Real Need

The real trouble is that though in West Africa, and even in England, token appointments to various *Advisory* Committees are made from time to time, yet Policy still seems far removed from a free and full discussion at all levels with informed African opinion, in an atmosphere of complete equality and friendliness. Only thus can the problems of West Africa be solved.

The time has come when we must face facts on both sides. For a Colonial people, Sierra Leoneans have a long history of achievement and service; from which, in times of stress, they derive strength and cohesion. They cannot be bullied; but they will return ready warmth for a manly approach based on realities.

Colonial P.T. Experts

To give prominence to British physical educational developments in schools, colleges and among adults and to rehabilitation in the Services and Industry, the Government has invited physical educational experts of a hundred countries, including the Colonies and Dominions, to attend an International Congress in London on July 23/26, immediately before the Olympic Games. The countries have been asked to send three delegates, preferably a physical educationist of each sex and a doctor interested in the subject.

WEST AFRICA

No. 1615. Vol. XXXII. SATURDAY, JANUARY 31, 1948 Registered at G.P.O. as a Newspaper.

Hook or Crook . . . . Choice of Vans

THE most cynical comment on the Colonial Office and Ministry of Food battle for development in Colonial areas is that of a Gold Coast newspaper. "There is not much to choose," says a leader writer, "between the two Ministries; whatever either does, African opinion does not count." Later, he comments: "all that we want to see is that the job is well and effectively done with dispatch." It is unlikely that the Government was in any way influenced by the particular article under reference, although the writer might be encouraged to know that African opinion does in fact count very much in assessing policies. What has happened is that the Ministry of Food has got its way and intends to lend a hand in Colonial development, at least wherever the growing of food is concerned. MR. STRACHEY'S own remark that the Food Corporation will become a large organization with expert staff and a fund of expert knowledge should suggest much to those accustomed to think of Colonial development in terms of special reservations, for a select clique, with permanent season tickets.

What Price Victory?

Some Members of Parliament seem to think that every department of the British Government should be mixed up in Colonial development to counteract this latter tendency—the more the merrier—and, of course, the Colonial people are sick of seeing the Colonial Office representatives all the time. Opinion on these matters is free, but this form of argument needs careful examination. What is wrong with the Food Corporation? asks MR. STRACHEY. Why should it be selected for special discrimination and kept out of Colonial territories? when there is no such discrimination against private corporations.

Why? indeed, if that were all! But is it all? No! MR. STANLEY'S tale of asparagus illustrates the point. The Colonial Secretary may not want the Minister of Food to grow asparagus in Mauritius. But although the Minister of Food cannot grow asparagus in Mauritius without the consent of the Colonial Secretary, he need not be put off by the Colonial Secretary's refusal to grant that consent. He can take the matter to the Cabinet and, as MR. STANLEY puts it: "two Ministers will be disagreeing on a point which will have to be settled by the Cabinet, and not necessarily at all in accordance with the views of the Colonial Secretary."

The division of power, as DR. MORGAN stressed, is quite wrong, unless one department is subservient to the other; and the Colonial Secretary could hardly be under orders of the Ministry of Food. MR. STRACHEY was getting much warmer when he asked: "Do they pay good wages? Do they give good conditions? and are their medical services good?" "That," he said, "is how every inhabitant of the area will judge these schemes. That is the real issue;" and, of course, these remarks are substantiated by the Gold Coast writer who says: "all that we want to see is that the job is well and effectively done with dispatch."

But again, it will be worth while examining these remarks more closely. Could not the words of the African writer be applied just as well to an operation under private enterprise, African or otherwise? Could not MR. STRACHEY'S words no less be applied? But is that all that we can say about the relations of Europeans and Africans? after so many years of association. Is there, if MR. STRACHEY'S words be the only one's necessary, any real need for a Colonial Office?

African opinion does not count, says the Gold Coast leader writer, but does he really mean that? Would he really like to see the end of the Colonial Office tomorrow? before Africans have attained full self-government. Or was he speaking without realizing the full implication of what are the real functions of the Colonial Office—as a buffer in the interests of Colonial inhabitants.

"The Secretary of State," said MR. CREECH JONES, moving the third reading of the Bill, "answerable to Parliament, will still carry a general responsibility in regard to the whole of the economic development of the territories under his immediate control. It will be his duty and his responsibility to see that, whether it is the Colonial Development Corporation or the Overseas Food Corporation which is functioning in these territories, reasonable and proper standards are maintained, and that their activities fit in with the general economic plan of development of the territory concerned. It will be his special responsibility to see that reasonable standards are maintained and, also, that the Corporation only functions with the understanding and consent of the local government and of the people involved."

The buffer is still there apparently. But what of the tale of asparagus? And what of MR. STRACHEY? who said that "our national position is really too grave to warrant any indulgence in our particular opinions on the methods of overseas development?" Is that not the real approach to the question? By hook or by crook, said MR. STRACHEY, the development of primary production of all sorts, in the Colonial areas, Colonial territories and dependent areas in the Commonwealth, as well as generally throughout the world, in far more abundant quantities than exist today is, it is hardly too much to say, a life and death matter for the economy of this country.

Against such stark realism, what can any Colonial Secretary do? what can any African opinion do? Development is on!—unless this country and its dependent territories alike are to die of inanition. In which case, what price victory?

* * *

MR. BEVIN'S reference to the development of overseas territories in connexion with the organization of a Western Union is of far greater importance for West Africa than the third reading of the Overseas Resources Development Bill. As MR. STRACHEY told the House of Commons, this Bill cannot do more than make a contribution to the vitally important end of saving the economy of this country. MR. BEVIN'S conception of the overseas territories as an integral part of a Western Union raises the matter of Colonial development for beyond the narrow confines of the particular interests of one nation. The European nations with overseas territories comprise those nations which have inherited the legacies of Roman Law and Christian civilization. All were not included by MR. BEVIN but the exceptions should be temporary only, as invitations are still open.

The overseas territories, British, French, Dutch, Belgian and Portuguese, he said, are large primary producers, and their standard of life is evolving rapidly and is capable of great development. "They have raw materials, food and resources, which can be turned to very great common advantage, to the people of the territories them-

selves, to Europe and to the world as a whole. The other two great world Powers, the United States and Soviet Russia, have tremendous resources. There is no need of conflict with them in this matter at all. If Western Europe is to achieve its balance of payments and to get a world equilibrium, it is essential that those resources should be developed and made available, and the exchange between them carried out in a correct and proper manner. There is no conflict between the social and economic development of these overseas territories to the advantage of the people, and the development as a source of supplies for Western Europe, as a contribution, as I have indicated, so essential to the balance of payments."

For or Against?

MR. BEVIN is not thinking in terms of West Africa alone. He talks of tremendous resources which stretch through Europe, the Middle East and Africa to the Far East. But West Africa and undeveloped Africa generally will benefit if the plan for a Western Union goes through. It is quite impossible to consider this aspect of the development of overseas territories without reference to MR. BEVIN'S other statement that the object of the Cominform and the Soviet and Communist policy is to prevent the European recovery programme succeeding.

It may be tempting, for Africans, to see themselves only as helpless pawns in a game of Western survival. They will not be well advised to take this short term view. The collapse of Western civilization, the collapse of a Western Union, will not mean the triumph of African nationalism. It will not be the emergence of the African Utopia from the corpse of the European Overlord. It will be the collapse of African efforts towards democracy and the beginning of the police state.

"In the field of human rights today," said MR. ATTLEE, "Russia and Eastern Europe were at the back of the queue." Those who denied the recognition of human rights had no right to claim to be in the van of human progress. They were only in the police van. It is fitting that these words, and words like them, should have been spoken by the representatives of the great majority of British people, the same week that Parliament discussed the Overseas Development Bill; because African critics of British administration (and British critics no less on occasions) tend to talk of exploitation and imperialism in the happy consciousness of living protected by the settled order of government which has progressed steadily throughout the ages in the interests of human freedom and progress.

The cynic may say that Africans are pawns in power politics. The cynic is entitled to his opinion. But even cynics are not deprived entirely of human wisdom and should remember the adage: "Better the devil you know." The clear-cut statements which have been made last week at Westminister have now penetrated every inhabited portion of the globe. There is no room for personal isolation. There is no escape and one choice—Is it Western civilization? or the police van?

FORMER RESIDENT MINISTER ON COLOSSAL LOSS

Nigerian Government Forbidden to Make Agreement

DURING a debate on Civil Aviation in the House of Lords, last week, Viscount Swinton (former Resident Minister of West Africa) asked why the Nigerian Service of B.O.A.C. was forced upon the Government of Nigeria and why an additional loss was forced upon the taxpayer. The loss on the United Kingdom/West Africa service was, according to Lord Nathan (Minister of Civil Aviation), approximately £9,500 a week operational. Viscount Swinton said that Skyways, a Charter Company, made an offer to the Nigerian Government and to the Gold Coast (the Nigerian Government were the principals in the matter) that they would charter a weekly service in a Skymaster and the service could be started within a month.

That service would have flown once a week to Kano, on from Kano to Lagos and Accra; and back the same way. The aircraft could carry thirty-six passengers. The fares were to be similar to the fares which foreign lines were charging. The Nigerian Government was willing to guarantee this venture and was anxious to close with the offer. His Majesty's Government forbade it to to so and said: "Instead of this, we will put in a service run by Halton aircraft and we will run three of these a week."

Viscount Swinton said he was informed that the Halton aircraft can carry only ten passengers across the Sahara—if so many—and that therefore every trip involves a heavy loss. Lord Nathan, in his reply, said that at the time Skyways approached the Nigerian Government to operate a service between West Africa and the United Kingdom, B.O.A.C. was already operating a coastal service with Dakotas and was also planning to replace the service with Haltons. "We have always held the view," said Lord Nathan, "that it is uneconomic to duplicate services unnecessarily. The main responsibility for providing Imperial air services devolves on the United Kingdom, and it was an understanding with the Colonies, which has since been formally confirmed, that they would not normally seek to establish services competing with services provided by the Corporations. It was in pursuance of this policy and of the fact that B.O.A.C. was planning a trans-Saharan service, that the agreement with Nigeria and Skyways, as a long-term venture, was discouraged. Nevertheless, a contract was placed with Skyways during the interim period, until the Halton service came into operation."

Unavoidable Acquisition

When the war ended, B.O.A.C., in accordance with a policy of using British aircraft, had unavoidably to acquire Haltons, in order to obtain sufficient capacity to develop its network of services. There was a limited number of routes for which these aircraft were suitable, and it was was decided to use them on the United Kingdom/West African service, as well as to some extent on other routes.

Lord Nathan said he thought it would be clear, on reflection, that if the principle were admitted that for every private company which foresaw the possibilities of running a particular route more economically than the Corporation was able to do, the position of the Corporation, charged with the responsibility of developing all the Imperial communications, would have been undermined. The companies would skim off the cream and leave the Corporation with the inherently uneconomic services."

Taxpayer Pays

Lord Balfour of Inchrye said: "You cannot call a service requiring a journey of three or four days on a Dakota round the coast of West Africa a duplication in any sense of a direct service across Africa in eighteen hours. The real fact is that, in order to protect the Government's monopoly policy—I do not think I have put it unfairly—the Government felt it necessary to refuse facilities which would have brought many white men and women back from West Africa to this country for well-earned, much wanted leave."

Viscount Swinton said he regarded the explanation as unconvincing as the result was disastrous. "It was perfectly possible," he said, "within the Act, for the Governor of Nigeria to have made the very business-like arrangement which he wished to make to have this service, and it was the duty of the Minister to save this country £500,000. Today the taxpayer of this country is paying £500,000 more in this colossal loss, because the Minister of Civil Aviation decided that he would force one of his companies to run this unremunerative service."

COLONIAL DEVELOPMENT AND TRAINING OF LOCAL PEOPLES

Regional Surveys Advocated

By W. Tudor Davies

COLONIAL development is certainly to the fore in the news these days; but there are major obstacles still to be overcome, and these will not be solved by the fact that the State has assumed many of the functions of that development, which fell to the lot of private enterprise in the earlier days. In both instances, it must be the investment of British capital effecting an adjustment between the old world, with its scarcity, and the new and expanding Colonial Empire. The stark fact must be remembered that you cannot get more out of a pint pot than has been put in it, and that, in like manner, we will get out of the Colonies only as much as we have, and will, put into them.

For example, higher production cannot be expected from the African, unless he, too, is properly fed and clothed and enjoys some of the amenities of life. The Colonial Office recently announced a let-up in the restriction of imports of consumer goods into the territories; but there is still lee-way to be made up. Sir Stafford Cripps recently gave the cue to the African Governors' Conference when he said: "We are to increase out of all recognition, the tempo of African development; we must be prepared to change our outlook and habits of Colonial development, and force the pace so that, within the next two to five years, we can get a really marked increase of production." Neither tempo nor pace can be forced, nor production increased, without the cooperation of the indigenous peoples.

Operation Production

Charles H. Beard (the eminent American historian) said that he has learnt a few lessons from history, one of which is that the bee fertilizes the flower it extracts from. This fundamental discovery is true of Colonial development; the tempo of this fertilization can be accentuated by Native cooperation—how that cooperation can best and quickly be obtained is the immediate root problem of Colonial development. The Native peoples are not able to say: "Give us the tools and we will do the job," because many of them are not yet trained. The first task, therefore, is to ascertain what jobs they can do without much training; the second, what quick training facilities can be instituted for "Operation Production" just as plans were made for D-Day in the days of the world war.

From my own observations in the workshops in Nigeria, I am quite well aware that sometimes the matrix for training is not of a high standard; and I talked to boys who were being trained as electricians in the Power House, about their difficulties. The real cause of the trouble, said a Director of Public Works to me in Lagos, is the same old story as in Great Britain—too much emphasis, in education, has been placed upon training for administrative and clerical work, to the detriment of technical training. Are we not trying to make up for lost time at home by the more rapid development of Modern Technical schools? Further, I would like to see more emphasis on the heuristic method of teaching in Native schools in the Colonies. Of course, I am well aware here of the difficulties, as is the Colonial Office, of shortage of men and women power in the teaching profession.

Jobs for Africans

The next step is a survey of what posts Natives can fill without training—these must, in the very nature of things, be posts of a labouring character. The most important aspect is the up-grading of Natives to more responsible posts in industry, and what scheme of training has been or is being devised to effect continuity of training for these higher grade posts. Is there a feed? and how is it being accomplished? I discussed this aspect of the matter with responsible officials of The United Africa Company, in West Africa and in London, particularly when I discovered that a few highly-paid administrative and responsible posts were being "held down" by Africans in West Africa. I heard of splendid success in that direction in French Dahomey.

I am not concerned just now with the wage structure, which is interlocked with such schemes of training, although I am perfectly aware of its importance. What it is desired to emphasize is that no scheme of development can be a success unless such regional surveys are carried out through every Colonial territory. I am not advocating this approach in any sense of criticism; but I do not hold the view, held by some Europeans, that the Native is incapable of being trained for posts of higher responsibility. Evidently, too, the Gold Coast Cocoa Marketing Board share my view because, in the Advertisement Columns of a leading London Newspaper, I find that "their Board is prepared to consider applications from Gold Coast Africans to undergo training in London in the marketing of cocoa; applicants are required to have a degree in Economics, or one of similar status, or extensive business experience. Age limits between 24 and 35 years. Salary to be paid will be at the rate of £525 per annum, plus a cost-of-living allowance of £150 per annum while resident in London."

New Attitude

This is proof positive of the new attitude. I am passing a copy of this advertisement to my friend, Claude Barnett (Director of the Associated Negro Press of America) who discussed this very problem with me last summer when he returned to London after his visit to Liberia, Gambia, Sierra Leone, Gold Coast and Nigeria. In the Broadcast Discussion on "Colonial Development," in which I had the honour to occupy the Chair, Mr. Barnett emphasized this approach to the problem of training. In private conversation afterwards, Mr. Barnett wondered whether American negro technicians could be utilized in West Africa in order to speed up development—another attempt of the New World in assistance to redress the balance of the Old.

Who knows but that, one day, the development of Africa may have and need a Marshall Plan? My keenness for British Colonial development does not exclude cooperation of the United States—if we have such cooperation at home and in Western Europe, why not the Colonies? Naturally, through the eyes of an American, my friend Barnett had a wider sweep. Anyhow, the problem of the training of Natives is brought into high relief with Sir Stafford Cripps's desire to "increase out of all recognition, the tempo of African development." Horace Greeley, that great American journalist, told the early pioneers in the United States—"Young Man! Go West!" Hence the greatest self-sufficient entity of States the world has ever known. Why not a similar self-sufficient entity of the British Colonies? It can be done.

Go To It

I have just been reading a book, published in 1917, called "The Staple Trades of the Empire"—Oils and Fats, Sugar Supply, Cotton Resources, Metals, Wheat Supplies, and the importance of Imperial Wool. Such an examination, undertaken over thirty years ago, of the potentialities of the British Empire would stir the mind and heart of any young man. How true is the following quotation from that book, of the state of affairs today: "The purely economic historian, like the doctrinaire economist, has a tendency to take the view that, throughout the ages, material interests have held a preponderant place in the march of civilization. But the war has opened men's eyes to the partial nature of the view. We now realize that, though material interests set things running and are exceedingly potent owing to the continuous nature of their

action, yet when they tend to become predominant, they bring into play other and more deeply seated forces that are usually forgotten or minimized, because they are quiescent. At great crises, the more powerful spiritual motives of nationality are set free. They deflect the line of action of national interests with tremendous effect; men and nations cease to be swayed solely by the desire for gain, and the resultant action is in a profoundly different direction from what would have been anticipated if the economic forces alone had been taken into account. The surface appearance of things changes, but the great abiding facts of human nature remain. Today, as centuries ago, the great organized peoples employ their activity in the exploitation of regions that are abandoned or undeveloped, obeying their hereditary tendencies that urge on the human race to take possession in its entirety of the domain that nature has assigned to it."

Young Man! Go to it!—whether through State activity or private enterprise, for the potentialities of the British Empire are enormous for the development of ordinary peaceful trading, provided always that there is an understanding that cooperation between governors and governed must be accomplished and that this cooperation demands an ability to see welfare in terms of the group, rather than in terms of the individual, and an ability to see the other fellow's point of view. That is the spirit for a new world, which is moving so rapidly that it will not brook delay in its practical application.

SIR DONALD CAMERON

A FORMER Colonial Governor writes: The passing of Sir Donald Charles Cameron, G.C.M.G., K.B.E., on January 8, will be greatly regretted by all West Africans, and especially by those in Nigeria who realized his sincere interest in the African population and the stand he always took on their behalf whenever that was necessary. The career of Sir Donald should be an incentive to those in the Colonial Service, as it is an example of a man who rose from the lowest rank in the Service to be Governor of one of the most important of British Colonies.

Cameron was born in British Guiana in 1872 and was educated at Rathmines School, Dublin. He joined the Colonial Service of British Guiana in 1890. In 1902, he was seconded for duty as Private Secretary to Sir Cavendish Boyle (at that time Governor of Newfoundland) and from 1904 to 1907, he served in Mauritius. During this period, he acted at Colonial Secretary more than once, and his blunt speaking in the Legislature of the Island made him unpopular with the local politicians.

In 1908, he was transferred to Southern Nigeria, where his outstanding ability and capacity for hard work soon brought him to the front, in spite of some opposition from the 'Old Brigade.' He acted in several important posts, including those of Provincial Commissioner and Colonial Secretary of Southern Nigeria. In 1914, Northern and Southern Nigeria were amalgamated under Sir Frederick Lugard into a single territory, and Cameron was appointed Secretary to the Central Government.

When Sir Hugh Clifford became Governor, he reorganized the machinery of administration; and Cameron was promoted Chief Secretary to the Government. In 1924, he went to Tanganyika, as Governor; and there he introduced the system of Indirect Rule of which he had had experience in Nigeria.

In 1931 Cameron returned to Nigeria, as Governor, one of the most popular appointments made to that Colony in recent times. His service there coincided with the world-wide depression, which reduced the price of Nigerian products and compelled him to adopt a policy of retrenchment and economy which cramped his administration.

He retired in 1935 and, thereafter, served on the Education Advisory Committee of the Colonial Office and as Vice-Chairman of the Governing Body of the Imperial College of Agriculture. He continued, until his death, to take the keenest interest in the fortunes of Tanganyika and Nigeria. His last years were saddened by the illness of his wife and the death of his only son.

It was inevitable that a man of Cameron's strong personality and uncompromising manner should have enemies; but the best tribute to his memory is the warm regard felt for him by those who knew him best, by his former subordinates of all races, and by Africans of all classes.

He was a great Civil Servant and a great Governor, who combined with remarkable intellectual qualities the ability to treat the people whom he governed as human beings and not as machines. As such, he will be remembered.

British Negro Theatre

LONDON audiences have recently had several opportunities of seeing American Negroes in their theatres. *Anna Lucasta* is still showing at His Majesty's and *Deep are the Roots* has only been taken off a short time ago. Black-and-white scenes were features of the musical *Finian's Rainbow;* and Miss Lena Horne appeared for a short season in London. The *Ballets Négres* made a reappearance in Brighton not long ago and, after a short Continental tour, were scheduled to open with four new ballets by Berto Pasuka early this year.

Next month Robert Adams (of British Guiana and star of *Men of Two Worlds*) will have fulfilled one of his long-cherished ambitions to appear with a large Negro cast in a London theatre. He and seven other coloured artists will appear at the Bolton's Theatre in South Kensington in *Native Son,* by Richard Wright. The opening performance will be February 12, and the play will be produced by Colin Chandler (a South African). Twelve members of the cast are white. Miss Vi Thompson (of West Africa) who played with Robert Adams in *Men of Two Worlds* is appearing in the new production.

Other coloured players are Miss Pearl Grant (Bahamas), Augustus Newton and Frank Sanguineau (Trinidad), Mrs. Carmen Manley (daughter-in-law of Mr. Norman Manley, K.C., of Jamaica), Sam Morris (former secretary of the League of Coloured Peoples, from Grenada) and Harry Scott (son of the well-known comedian of British music-hall fame).

WHAT IS BEING SAID In West Africa . . . .

. . . . ABOUT AFRICANIZATION

We know that, for a long time, we shall need the services of the European Civil Servants and others in private enterprise, more especially as experts in some branches of knowledge. It would be unreasonable not to admit that Nigeria is yet young in many respects. But what we do say and urge is that as many responsibilities as the local people can creditably discharge should not be denied them in favour of foreigners. Such denial, by itself, does serious violence to the economy of the country. Nigeria's revenue, like that of any country in the world, is not inexhaustible; and we would like to see that the running cost does not prejudice the actual development of which we stand in dire need.

Where is the evidence that Government is keen on Africanizing the service and, consequently, on giving Africans increased responsibility in the administration? Let us take one Department as an hypothetical case. We have in mind the Treasury, known in these days as the Accountant-General's Department. The importance of this Department cannot be too much emphasized in the governmental scheme. It is the financial clearing house, upon which a lot depends for the general financial position and administration. If there are departments that need be constantly equipped, it probably comes first. Surprisingly enough, in this very Department, we are given to understand that about six vacancies for accountants exist and that has been so for some time now. The impression is general that but for the accident of colour, the posts should have been filled.—*Daily Service* (Lagos).

FIFTY PIONEER YEARS

Only British Suzerainty Made Nigeria One

LORD MILVERTON told a London audience recently that he had no doubts of the great future which lay before Nigeria. "When the stresses and strains of economic readjustment have eased," he said, "when the new political consciousness and the clamant nationalism have turned from sterile assertion into productive effort, when the speed of desire has been modulated to the pace of possible performance, when growing responsibility has brought deeper reflection, the end for which ultimately all of us, European and African alike, have been working, will become clearer and so more quickly attainable."

The verdict of history could not be in doubt. "The pioneer work of 50 years, the burden carried so splendidly by all branches of the Nigerian Government Service through all the weary years of the war and the succeeding peace will then be publicly acclaimed, as it is tacitly admitted today in the innermost hearts of 99 out of every hundred of the people of Nigeria." Lord Milverton said that British effective government of the country dated back only 60 years and that the Colony and Protectorate of Nigeria were inaugurated as recently as January 1, 1914.

Reason for Pride

"If," he said, "you further deduct ten years during which two world wars not only impeded progress but actually set the country back, and then consider the physical and moral achievements of virtually less than fifty years in the face of slumps and the economic disturbances following upon war, I suggest that there is every reason for pride in what has actually been accomplished." Nigeria was a potential Empire rather than a Colony in the ordinary sense.

"There are today 20,000 miles of roads; 2,000 miles of railway; and many hundreds of miles where rivers, chief amongst which are the Niger and the Benue, and creeks form the main means of transport. It contains a wide range of climate, from the humid tropical forest areas of the South, to the open savannah regions of the North. It also contains a great diversity of people who fall into four main linguistic groups—Hausa, Ibo and Yoruba with three to four million each and Fulani about two million, and four minor groups of about one million each: Kanuri, Ibibio, Tiv and Edo. A large number of lesser linguistic groups make up the remaining four to five million people."

Nigeria fell naturally into four main divisions: the Northern Provinces, the Western Provinces, the Eastern Provinces, and the small Colony of Lagos with its immediate surroundings. "I wish to emphasize," said Lord Milverton, "that it is only the accident of British suzerainty which has made Nigeria one country. It is still far from being one country, or one nation, socially or even economically.

Deep Differences Between Tribal Groups

The facts of being under British guidance and of having the back-bone of administration provided by a British Civil Service have naturally given great encouragement to the conception of Nigeria as one country. The economic integration of the whole area has steadily progressed but, socially and politically, there are deep differences between the major tribal groups. They do not speak the same language, they have highly divergent customs and ways of life, and they represent different stages of culture.

The people of the Northern Provinces, highly conservative in their outlook, predominantly Mohamedan, with all that that means in respect for tradition and authority, have a very different outlook from the people of the Eastern Provinces, where individualism is the predominant characteristic and where the craving for Western education and individual advancement is most marked. The people of the Western Provinces, on the other hand, though they have, like the Northern Provinces, a more developed system of Native Administration than the Eastern Provinces, have still a different outlook from the people of the other two sections. A longer and closer contact with the European and a greater general prosperity have naturally had their effect upon the outlook and mode of life."

The influence of Lagos, the capital city, seat of Government, and main seaport of the whole of Nigeria was naturally disproportionate to its population, amongst whom were numbered members of all the tribal groups in Nigeria. There was a growing volume of wage-earning employment in Nigeria but the bulk of its revenue and the maintenance of its people, the improvement of their standard of living, must come from the soil.

Shadow of Inflation

"Over the past eight years, Nigeria has seen its revenue more than doubled; and its expenditure constantly rising. Expanding trade and higher prices for its products have enabled the taxpayer to meet heavily increased taxation, and the country has not only balanced its budget, since 1941, but has been able to strengthen its position by placing substantial sums to reserve. The cost of living has also steadily risen and has given rise to successive Commissions of Inquiry whose recommendations have been largely adopted by the Government.

"In common with the rest of the world, the shadow of inflation haunts the country. The currency circulation shows a rise from £5 million in 1939 to £18 million in 1946. The difficulty of getting staff, the scarcity of consumer goods and the impossibility of getting adequate supplies of capital goods have made progress very slow, at a time when speed is vital. So the general impatience of the public is apt to focus on Government and to blame it for local difficulties which, in fact, are the result of world conditions. There is a general background of constructive effort held back and, to some extent frustrated, by lack of men and materials. All the aspects of welfare covered by the phrase 'social services' are being studied and organized, the interests of labour and of the peasant farmer are being guarded as never before, the prices of produce have steadily risen."

Jumping the Generations

Why then, was the impression given by most of the Press in Nigeria that of a country struggling for political and economic freedom and held back by alien hands? "The picture painted by the Press," said Lord Milverton, "is a very distorted one and represents the views and feelings of a very small but highly vocal group of dissatisfied persons. But these views are being sedulously preached and it would be idle to deny the effect of daily insistence on the guilt of Government for every discomfort, every economic stress, in fact, everything short of complete prosperity and happiness for all.

"Many of the younger Africans, who have had some education abroad, find that the economic success and power which they crave to have does not follow automatically upon a greater or less degree of Western education. The factors of hard work and personal capacity and character still remain the major ingredients of success in Nigeria as in this country. The opportunities in Nigeria for real ability are increasingly wide in business, agriculture, in Government service and in the professions. But it has a long and hard road to travel before it can reach the stage of development of, say, Western Europe. The young African wants to jump the generations of effort which have made the older nations; and he ignores the difficulties which have to be surmounted, or is apt to bury them in a flood of unsound assertions. He is not alone in that attitude towards life. It is a common feature of adolescence."

When he went to Nigeria, in 1943, Lord Milverton found a "Constitution which was obviously out of date. The Legislative Council did not legislate for the Northern Provinces—that was done by the Governor—so that half

the population of Nigeria lay outside of its range. The people of the Western and Eastern Provinces, who were within its range, were not adequately represented. It was also clear that the influence of Lagos was altogether disproportionate to its size and even to its importance.

"As I have said, the people of the North, West and East differ widely in way of life, in customs and in their traditional systems of government. The leading personalities rarely if ever met and there was no constitutional provision for the joint discussion of all-Nigerian problems which were and are many and insistent. It seemed clear to me that some system must be devised whereby the different sections could be brought into collaboration and also whereby a link would be established between the Native Authorities and the Central Government. I felt that if early steps were not taken to encourage and made possible the growth of a feeling for Nigeria as one country, then all hopes of Nigerian unity and the growth of a Nigerian nation were doomed to failure."

In his own view, the only way to have an effective consultation with the people of Nigeria about their own political system was the trial of the New Constitution. "Major Chiefs and members of the old Legislative Council and other leading citizens were consulted; and the trial met with general approval from responsible citizens best qualified to express an opinion on such complex issues." The procedure of the Legislative Council of Nigeria, meeting in successive years for the Budget Session at Lagos, Kaduna, Ibadan and Enugu, brought home to the people of each Region a sense of wider interest than the regional one—a vision of Nigeria as one country.

Ample Room for African

"I have already had evidence," said Lord Milverton, "of the good which has been done in breaking down tribal or group prejudices by such opportunities for friendly intercourse, officially and privately, as are afforded by such meetings. I think there is a growing appreciation, amongst responsible Africans of what has been done for Nigeria by European capital and enterprise, as well as by the Government Service. I think they begin to see that there is ample room for the African in all fields and that there is every desire to help him to succeed.

"It must be obvious that the great dreams of Development and Welfare will come to naught unless the African himself regards them as his own schemes and determines to work with and for them. There is no prospect and no desire of obtaining the large numbers of trained personnel from abroad. They must be supplied in increasing numbers by Nigerians. We have good reason to hope that the growing experience of public affairs, for which the new Constitution gives opportunities, will encourage the idea of public service, as a means of serving one's country and not as a means of personal aggrandisement."

How Much to be Done

During his period of office, the policy of Africanization of the services had been steadily proceeding. The fact that it had not proceeded faster had been due to the lack of trained and suitable personnel, and for no other reason. The Nigerian Government had taken a strong stand against all forms of racial discrimination and had eliminated all cause for complaint on that score in its own institutions.

"I appreciate," said Lord Milverton, "as well as anyone else, how much remains to be done. To take the vexed question of education alone, out of a school population of over seven million, to have only 400,000 at school with only 30,000 from the North is a startling position, if one forgets the background which I sketched in starting. The conservative Northern Provinces are now wakening to the benefits of education and, unquestionably, their demands will have to be given first priority. It is a curious fact that the most politically-minded and those most clamant for more and more education, more and more development of every kind—to wit, the people of the Eastern Provinces—are precisely those most reluctant to pay taxes and most unwilling to face the burdens which such benefits impose."

New "Look" Promised

THE stranded groundnuts of Kano are still news in the United Kingdom. Speakers for the Government are pointing out that the Nigerian and Tanganyika railways operate on different gauges and that the groundnuts scheme in East Africa has had no effect on the supply of railway material in Nigeria. A different point was made by Viscount Swinton, in the House of Lords last week. He said that he knew the Nigerian railway "every mile of it, very well. Is it not a fact," he asked, "that in 1944 and 1945, the most meticulous estimates were put in for what the railways would need, and that in this country, in 1945 and 1946, full consideration was given by the locomotive makers and the wagon makers as to where wagons and locomotives were needed? Yet, for some extraordinary reason, the one place which does not seem to have got any is the one place which supplied fats and groundnuts?" Lord Listowel replied, "I will look into that."

Another groundnut point was made by Lord Lloyd. He said, if the franc devaluation takes place, "the very large number of groundnuts which are produced in West Africa will inevitably, as a result of that devaluation, be produced a great deal more cheaply than they can be produced in our Colonial Empire." Lord Lloyd also raised the question of the Havana Charter. He could not help feeling that it might have a most damaging effect on the Overseas Resources Development Bill.

Lord Altrincham supported this view. He said: "I believe, in some ways, that the undertakings which we have been pressed to make at Havana and elsewhere are absolutely incompatible with the welfare of the Colonies. It means that we should be compelled either to give up these projects or to try and grind the Natives down to the lowest rate for production in the world, which is not the object of these schemes."

PULSOMETER PUMPS & NATIONAL ENGINES

FOR ALL DUTIES

The Portable Pumping Set illustrated is a Type largely used in the Tin Mining area of N. Nigeria

"Pulsometer" Pump driven by a "National" Oil Engine

List No. 3149

Both pump and engine made by well known firms are of robust construction.

Characteristics:

Easy to start.

Inexpensive to maintain.

Requires no special skill to operate.

The pumps will lift water heavily charged with deposits.

Agents:

Messrs. JOHN HOLT & CO. LTD.

ROYAL LIVER BUILDING, LIVERPOOL

Also LAGOS and ACCRA

PULSOMETER ENGINEERING CO., LTD.

NINE ELMS IRONWORKS, READING

THE NATIONAL GAS & OIL ENGINE CO., LTD.

ASHTON-UNDER-LYNE

WEST AFRICA

No. 1620. Vol. XXXII. SATURDAY, MARCH 6, 1948 Registered at G.P.O. as a Newspaper.

African Salvation? . . . . "Colonial Cream"

THE suggestion made by SQUADRON-LEADER KINGHORN in the Commons last week that there should be further exploitation of African territories and planned emigration "sending people there who will produce goods there which can be sold by this country and earn dollars" will not be welcomed by Africans. That it could be made by a Member of Parliament is merely an indication of the crying need for educating the British public as to the real issues which have to be faced if there is to be permanent cooperation between the metropolitan and Colonial territories of the British Commonwealth. All too recently, another Labour Member of Parliament seriously advocated the sale of the British West Indian territories to the United States of America, for dollars. There is no question therefore of "raising hares" by giving prominence to this suggestion of SQUADRON-LEADER KINGHORN. It deserves full publicity, not because it will be taken seriously, but because it could be made at all in the Parliament of a Government whose declared Colonial policy is the ultimate self-government of Colonial peoples within the British Commonwealth.

Questions of Intelligence

If there are any qualms in African circles, they can be assured that there is no intention nor likelihood of this Colonial policy being changed by this or any subsequent British Government. At the same time, it is difficult to see how such ventilations of a private Member's opinion can improve either the tension between Africans and Europeans, or the spate of malicious anti-British abuse which distinguishes certain meetings of the United Nations Assemblies when Colonial affairs are discussed. In a world where the fate of Czecho-Slovakia shows the red light for all but the colour-blind to see, is there really any need for spoon-feeding the enemies of British democracy with verbal gobbets to sustain them in their task? There is no lack of balanced well-informed opinion in this country as to what is, or is not, likely to add fuel underneath the seething cauldron of Colonial discontent. Such opinion can be found within the ranks of every British political Party or it can be provided without difficulty from Colonials resident here.

Why, then, is it not consulted? Surely the blame must be laid squarely on the British Government, which persists in treating Colonial affairs as the province of the expert and not the intimate concern of "those who cherish the illusion of prosperity, the full wage packet, and the easy profit." No better illustration of this could be provided than in the suggestion of a writer in the British Press who took it for granted that, in the event of a Conservative victory at the next general election, MR. OLIVER STANLEY would fill a ministerial appointment *higher* than that of Secretary of State for the Colonies.

Even MR. REES-WILLIAMS (whose post as Parliamentary Under-Secretary of State for the Colonies makes it impossible for him not to be fully aware of the existence of extreme anti-British Colonial opinion, and of the tissue of perverted half-truths which some foreign Powers employ to vilify British Colonial administration) makes a speech at West Croydon on February 16, in which "better bullocks from Africa" "more pork from Africa" "large supplies of eggs and dairy produce from Africa" and "fats in the kitchen" from groundnuts, are recorded by an official reporter of his speech.

MR. AIDAN CRAWLEY, whose resignation from the post of Parliamentary Private Secretary to MR. CREECH JONES has recently been announced, seems to have a far more realistic approach when he said, in London last week, that on the success of African development by the West European Powers (as many as would join) would depend the effort of Africans themselves to achieve African self-government. Surely it is an underestimate of the British electors' intelligence to offer baits of better times to come when the British elector is quite capable of understanding his or her responsibility for African development, if only the motive of mutual interest to be gained thereby is put forward for attention?

Africans grow weary of hearing of British advancement when compared to African backwardness. They ask: "if the British are really so well-advanced, so well-educated as Europeans constantly reiterate, why then does the British Government underestimate their intelligence by offering them more food from Africa instead of instructing them in the advantages to be gained from full intelligent cooperation with Africans?" "There are two nations today:" said *The Economist* (February 28) under the title: *Cost of Ignorance,* "those who realize the plight of Britain and the looming catastrophe which threatens the British economy and the British way of life; and those who cherish the illusion of prosperity, the full wage packet, and the easy profit."

Intelligent Colonials are quite capable of membership of the first nation. It is to them that the British Government must look for support in this hour of crisis. Such support will not be forthcoming if suggestions like those made by SQUADRON-LEADER KINGHORN continue to be made by Members of the British Parliament. The much-maligned British Colonial administration of the past (whose chief fault "stolidity" is with us still) has built up a store of goodwill among Colonial peoples which must *not* be dissipated if the British Commonwealth is to remain a real political concept. It will be dissipated if the British people as a whole are not better informed as to African and other Colonials' susceptibilities.

* * *

On many occasions recently, articles have been written in this newspaper advising societies and institutions with interests in Colonial affairs to include Colonial representatives in their deliberations. Whether there is any connexion between these articles and the adoption of such a policy is debatable, since there are other agencies which have been stressing this same need. But it is certainly a source of satisfaction to be able to record in these columns that, on several occasions recently, it has been most noticeable how much more was being said by Colonials attending meetings of such societies and institutions from the floor and also, on special occasions, from the platform. Those who heard LORD MILVERTON speak on Nigeria at The Royal Empire Society, not long ago, could not fail to be impressed by the barrage of questions and comment which came from African listeners in the audience. Nor should they have failed to notice the comparative ease and lucidity of expression of African speakers in the presence

Crumbling Walls

of an audience almost entirely composed of men and women with an expert knowledge and first hand acquaintance of, and with, the country under discussion.

Timidity and shyness certainly do not appear to cramp the style of these African speakers in the way that it silences many Europeans in the presence of the experts. But if African eloquence was particularly noticeable, at the meeting addressed by LORD MILVERTON and presided over by LORD HAILEY, it was even more remarkable last week when Mr. DAVIDSON NICOL (an African from Sierra Leone) took part on equal terms in a discussion with two Members of the British Parliament. Again, the audience was composed mainly of men and women whose names are well-known to the student of Colonial affairs. This point needs special emphasis because although, in the past (certainly during the last ten years and probably over a much longer period) Africans and Colonials of all colours and many countries have addressed public audiences in the United Kingdom, these audiences have seldom been composed of what may be called the "cream of Colonial opinion" in this country.

Colonial Opinion

The audience which heard MR. DAVIDSON NICOL expound his views on the African Problem and World Affairs may well qualify for membership of that "cream." Something new, then, happened in London last week, just as something new will happen in London this autumn when elected representatives of British African legislatures will speak their views for the first time in a kind of miniature Colonial Assembly. Something new happened and due praise must be given to The Royal African Society and the Royal Empire Society for their cooperation in this new deal. But the process is incomplete. There has been progress and, maybe, there will be those who will say "enough."

There is such a temptation but it must be resisted; because it has never been difficult to find isolated instances of individual Africans who, like MR. NICOL, in the words of one of his co-speakers in the discussion, have "broad vision." However broad the vision of a medical student from Sierra Leone (and there can be no doubt of MR. NICOL'S keen appreciation of the vast subject on which he spoke) it was a handicap for him to be the only African to speak against three widely-travelled and experienced Europeans (two of whom are holders of the Military Cross).

When it is also remembered that, in the audience of some two hundred, there were less than twenty Africans present, the achievement of MR. NICOL is the more remarkable. But spotlighting the personal ability of one African contains elements of danger for other Africans, since it often confirms one of the most strongly entrenched ideas held by Europeans with African experience. This opinion is that Africans like MR. DAVIDSON NICOL are hard to find. Opinion in this particular instance is vital because, as is well-known, British Colonial policy is a matter of personal interest to a minimum number of British electors.

The Royal African and Royal Empire Societies have provided a forum of the first importance by making it possible for MR. NICOL to speak before the policy-forming body of these electors. They can extend the forum firstly, to include equivalent status of African to European speakers; and secondly, for Africans who hold differing views to discuss Africa's future amongst themselves. But these are suggestions which the Societies may already have considered. Meanwhile, for what they have so far done towards better understanding, through discussion, between European and African, they deserve no small tribute.

* * *

The "deplorable and disgraceful rioting" which broke out in Accra last Saturday will be viewed by all responsible Africans and Europeans as a blot on the fair name which the Gold Coast has hitherto enjoyed as the most progressive and most developed of the British West African territories. Africans, no less than Europeans, have in the past pointed with pride to the long association on friendly terms and the harmony between "black and white," which has characterized the relations between the peoples of the Gold Coast and Europeans, from the earliest days of their meeting. In the United Kingdom, students from the Gold Coast have long enjoyed and still enjoy a reputation for moderation and clear thinking which has distinguished them from certain other African students who have been infected by the anarchistic tendencies of revolutionary ideologies which have been tolerated in a *democratic* country.

Destroying a Work

Now these students from the Gold Coast have been exposed to the inevitable suspicion, which will follow from the regrettable disorders which have brought their country under a cloud, so far as ordinary British public opinion is concerned. The freedom of discussion, the sympathy, with which African grievances have been heard so often in this country, will not unnaturally now be endangered and lessened by reflection on the events which have occurred in Accra. Thousands of Africans, who enjoy the highest educational privileges which the universities, technical colleges and other institutions of learning extend to them (by the exclusion only of large numbers of English, Scotch, Welsh and Irish young men and women) will bear the brunt of suspicion and the charges of ingratitude which will undoubtedly be entertained by millions of Europeans in this Kingdom.

Passengers in underground trains, where African employees of British railways are paid the same wages as are given to white workers, will now be filled with feelings of resentment instead of feelings of toleration and indifference. All the good work which has been built up by years of disinterested endeavour on the part of British men and women to bring home to the British public the essential "humanity" of their African brothers, is now threatened by the wanton anti-social irresponsible acts of violence which have taken place in the Gold Coast.

There will be no encouragement in the United Kingdom from any but the small number of the enemies of democracy, whose only hope is that, by the triumph of the Slave State, they will be rewarded by jobs as slave drivers. The fair name of Africans, of millions of Africans and of peoples of African descent, is once more besmirched by the actions of a "small clique of ambitious men."

The strong language of SIR GERALD CREASY and the condemnation of the Chiefs of the Joint Provisional Council, will be welcomed by law abiding citizens throughout the democratic world. Those who trespass against the privileges extended by democratic systems of government to further their own schemes of individual aggrandisement can hope for support only from the criminally-minded; not from those to whom the world "civilization" is more than an orator's trump-card. The objective and graphic account of the riots from our correspondent in Accra shows how far removed from genuine aspirations to self-government are the hooliganism and unbridled crime which mark these deplorable events.

The following Nigerian Colonial Service promotions are announced: Lieut.-Commander R. S. Oakley as Principal Engineer, Marine Department; Mr. J. D. Bunkall as Senior Sanitary Superintendent, Medical Department; Mr. W. B. Hewett as Assistant Commissioner of Lands; Mr. T. O. Lambourn as Assistant Works Manager, P.W.D.; Mr. G. Little as Chief Permanent Way Inspector, Nigerian Railway; Mr. W. P. Gaskell as Senior Inspector of Mines; Mr. D. W. Baker as Principal of Schools, Agriculture Department; Lieut.-Commander H. L. Cole as Principal Marine Officer; Mr. L. V. Fields as Senior Storekeeper, P. & T.; Mr. G. E. Hoile as Chief Inspector of Works, Nigerian Railway; Mr. J. W. Hallam as Labour Relations Officer, P.W.D.; Mr. C. Whittington as District Traffic Superintendent; and Lieut.-Commander A. Skinner as Assistant Director of Marine.

EXPLOITATION OF AFRICA

No Hope of United States of Africa

"THE United States of Africa" was the title of a short debate initiated by Squadron-Leader Kinghorn in the House of Commons on February 25. He hoped "that our great plans for this country include further exploitation of these territories and planned emigration, sending people there who will produce goods there which can be sold by this country and earn dollars." He hoped that the Colonial Under-Secretary could "give us a reply which will fit into the steps we have taken on this side of the House already—with the Groundnuts Scheme, the Overseas Food Corporation and so on, and show that the birth of the Labour Party as a Parliamentary Government was also the birth of a third Empire."

Mr. Rankin, who expressed the indebtedness of the House to Squadron-Leader Kinghorn for raising the subject, said: "When we look at the tragic fate of Europe today, we realize what an enormous power in shaping the economic outlook of this country today a United States of Europe would have been. There is no argument about the need. Europe proclaims that need every hour of the day. But we have to be careful when we talk about a United States of Africa in the political sense. We want to say, at the very beginning, that we are not going to create, in other parts of Africa, any more South Africas; that if there is to be a United States of Africa, then black and white must live on terms of greater equality than are prevalent in South Africa at the moment. When we think also of a United States of Africa we are not going to think of it in terms of the United States of America where, again, political equality is denied to the black peoples in the Southern States. We have to be careful how we use the phrase 'United States of Africa.' If it has to have any meaning to the indigenous peoples of Africa, it has not only to bring them higher economic standards, but higher political ways of living and all that follows from that."

Song and Dance

Mr. Baldwin expressed surprise at hearing a suggestion about exploiting Colonies coming from that side of the House. He said: "Because we in this country are getting a bit afraid we are going to starve, a great interest is being shown in Africa. We are trying to make our people believe that there are vast resources of food to come out of Africa to help this country. If the Natives of Africa are fed properly, there will be no surplus to come out of Africa, and the sooner the Government let the people of this country know that fact the better. The Natives are increasing to a tremendous extent, and they are unable to provide food for themselves at the present time.

"The hon. and gallant Member cannot have been in Africa, else he would not have said that we had neglected our Colonies. In the short space of 60 years, we have gone to Kenya, done away with the slave trade, stopped tribal warfare, taught the Natives hygiene and, in the last 25 years, have seen the Native population doubled. If that is not something of which to be proud I do not know what is. When," he continued, "we begin to make a song and dance about the small sum of £150 million which it is now suggested we should spend in the Colonial Empire, when we have spent hundreds and thousands of millions in developing it in the past, it is time to remember what has been done already."

In his reply, Mr. Rees-Wiliams said: "at the moment, it is out of the question to think of a United States of Africa even if, which is not the case, most of the African territory were British territory. The difficulty in the economic and political development of Africa is that the Colonies of the west grew out of very small trading stations. These particular stations became Crown Colonies and, finally, mainly for reasons of protection, the vast hinterlands behind them themselves under the protection of the little Crown Colonies. That is the case in the Gold Coast and Nigeria, for example. In East Africa, their origin was the pursuit of the slave traders. So in both areas there is nothing which is really an economic whole. They are part of a vast area of Africa, some of which is under British control, some under French, Portuguese or Belgian, as the case may be. There is no hope—and I believe there is no desire for it by the Africans themselves—of anything in the nature of a political United States of Africa."

Three Vital Needs

Regional cooperation, he said, was essential "but a greater grouping of regions, some sort of super-region consisting of a number of these regions, possibly two or even three, is in our opinion undesirable. It would lead to the setting up of an administrative body with a vast horde of officials, which would result in large expenditure with very little return. Therefore, at the present moment, we do not propose to go in for any super-regional organization, and intend to stick to the three regions we have."

Dealing with the development possibilities in Africa, it seemed to him that there are now three vital and urgent needs: "The first is to provide skilled technical assistance from this country and elsewhere; the second, to provide capital goods, mainly steel; and the third, consumer goods. It is no good exhorting the African to work harder and for more hours unless we give him something for which to work. I should say that, of all these things, the most urgently wanted is steel. When any African Governor dies the word 'steel' is found written across his heart, because he realizes that without steel nothing can be accomplished in Africa."

AFRICA FORUM

Opportunity for Failure

BY A SPECIAL CORRESPONDENT.

OPENING a discussion on "The African Problem and World Affairs," in Africa Forum at The Royal Empire Society, London, last week, Mr. Aidan Crawley (former Parliamentary Private Secretary to Mr. Creech Jones) said there were two world forces exerting pressure on Africa today. The first of these was due to a world shortage of food. This was nothing new, but the war had made more people determined to get a greater share of the food of the world. "I do not believe," said Mr. Crawley, "that from now onwards, Africa can remain immune from the determination of the countries of the world which are determined to get more food."

Even if Europe made no drastic changes in Africa, pressure on Africa might still exist and might come from Eastern countries. People everywhere will be pushed into growing more food. The alternative to the kind of thing that Western Europe and the United Kingdom is "trying to create is a much more ruthless one."

The second force was that pulling more immediately from Western Europe. Mr. Crawley took the view that the union of those countries in Western Europe "we can persuade" to join is important for survival, looked at from the European point of view. Can Africa be developed in the shortest possible time? he asked. Because he thought that only if Western Europe can be reorganized on a democratic basis that the evolution of Africa can continue on a democratic basis. "African self-government," he said, "depends on our effort."

Things Shared in Common

Mr. Davidson Nicol (a biochemist from Sierra Leone) who is finishing his medical course at London Hospital, spoke of two invasions of Africa: one, ten centuries ago, by Mahomet reaching down into Nigeria, the Northern Territories of the Gold Coast, Sierra Leone and the Gambia; the other, more recent, had come from the south, from South Africa with developments due to Rhodes. He defined Africa as South of the Sahara and north of the Kalahari desert.

Inhabitants of this area shared one thing in common: "they are very backward compared with the rest of the

world." Their destinies, continued Mr. Nicol, are controlled by Western Europe. The rest of the world outside Western Europe had very vague notions about Africa as a whole. He thought that the best way to develop this huge area in Africa would be "to train, as quickly as possible, a large number of very skilled technicians and able administrators amongst the people themselves and to give them a very much greater part in determining their own destinies."

The people should be given the opportunity to fail over and over again. "It is only by the presence of failure that people can see success," he said. When it was suggested by Mr. Crawley that "failure might be disastrous," Mr. Nicol conceded that failure should not be crippling. This could be avoided by ensuring that the people were well-trained.

Mr. Baldwin said that Africa will have great difficulty in maintaining its own population, which had doubled during the last 25 years, since the advent of the Europeans. There was no reason why it should not double in the next 25 years.

DISGRACEFUL RIOTS IN ACCRA

"Criminal Instigation of the People"

FROM OUR SPECIAL CORRESPONDENT (Accra, March 2).

RIOTING broke out in Accra following an attempt by ex-Servicemen to march on Government House last Saturday. Police attempted to disperse the marchers with tear-gas, but the latter retaliated with sticks and stones; and two police officers were wounded, when an attempt was made to rush the barriers. The police opened fire. Two people were killed and twenty-five injured.

According to a Government statement, marchers violated a promise given when approval for a petition was granted. The ex-Servicemen's Union was given permission to parade in certain prescribed streets in Accra, whilst three representatives were to present a petition to the Colonial Secretary at the Secretariat Buildings. While the representatives were on their way to the Secretariat, the marchers left the prescribed route. As a result, shooting, rioting and looting broke out throughout Accra immediately.

Cars belonging to Europeans and Asiatics were overturned and several Europeans were severely beaten. Shops were forced open and goods and money looted. Disturbances continued all night and were intensified on Sunday, when warehouses were broken open and emptied. U.A.C. and U.T.C. stores were gutted by fire.

The military were called in, and shooting occurred during the day. There were casualties, some fatal. Hundreds of Europeans and Africans took refuge at the airport. The dusk and dawn curfew imposed on Sunday is still in force. Looted and burning areas have been cordoned off to prevent further outbreaks, and the situation is in hand for the present.

Accra Threatened with Food Shortage

There is a big business in looted goods. Cigarettes are being sold for sixpence a tin and whisky from five to ten shillings a bottle. Accra is threatened with a grave shortage of food as markets are deserted, and sellers and fishermen are joining the looters. Cars are gradually coming off the roads, as petrol sales are stopped. All shops are closed.

On Sunday, members of the United Gold Coast Convention sought an interview with the Chief Commissioner of the Colony, allegedly to discuss measures to restore control in Accra. They were: Doctor Danquah and Messrs. Akufo-Addo, Blay, Lamptey, Quist-Therson, William Ofori Atta, and Annan.

The reply from the Government was that it saw no reason for the interview, since it was their duty as citizens to give assistance. Moreover, the "Government was determined to take all steps to restore law and order and assign responsibility for criminal instigation of the people of Accra leading to the present deplorable, disgraceful rioting and see lawful retribution exacted." The delegation denied it was officially representing the Convention. It claimed to speak on behalf of the Ga Native Authority. Immediate inquiries revealed no mandate was given by the authority.

Small Clique of Ambitious Men

In a broadcast on Monday, the Governor stated that a telegram had been sent to the Secretary of State for the Colonies in London presenting themselves as the Convention and pretending to speak on behalf of the Chiefs of the country which "makes it abundantly clear that the purpose of a small clique of ambitious men is to do all in its power to assume into its own hands and in its own interests administration of the country. The connexion of this intention with the recent and existing disorders cannot be overlooked."

The Governor disproved the Convention's claim by reading a resolution of the Standing Committee of the Chiefs of the joint provincial Council condemning the outbreaks as "totally unconstitutional and inconsistent with our own principles of justice and right." The Chiefs reaffirmed their loyalty to the King and their unstinted support of the Gold Coast Government.

The Governor stated he would make it his duty to see a thorough investigation was undertaken, without the least possible delay not only of the disturbances but of the underlying causes. He said that all proper constitutional channels were always open to redress the grievances of ex-Servicemen and others, but he would not tolerate unlawful means of drawing attention to these grievances.

A demonstration threatened by students of Achimota against the shooting was called off after intervention by the Council of the College.

On Monday night a woman was shot dead for contravening the curfew. Unconfirmed reports say that seven men were also shot.

Two sloops left Simonstown on March 3, under Admiralty orders for the Gold Coast.

LORDS DISCUSS PROSPECTS OF COLONIAL SERVICE

"WE are spending millions and tens of millions of pounds in the Colonial Empire, but unless we make a wise and judicious investment of our human capital those millions will count for nothing." This was the main theme of the motion on conditions in the Colonial Service which was introduced by Lord Tweedsmuir in the House of Lords last week. He addressed himself principally to the administrative service. This numbered about 1,700 out of a total number of 300,000 employees in all the territories which come within the sphere of the Secretary of State.

Lord Tweedsmuir believed that "we have come to a turning point and, unless we can offer to the Colonial Service of the future some prospects, some security and some really reasonable terms of service, we shall not get the people who built the Colonial Empire to what it is and who maintained it to this day."

We are Getting the Best

Lord Milverton said that the new recruits to the Colonial Service give great cause for hope for the future to anybody who has the welfare of the Service at heart. There never has been a time like the present, when we need and must have the best, and for the moment we are getting the best. The method of training which has been instituted by the Colonial Office is now of a far higher grade, far more carefully thought out, more carefully prepared and followed up than has ever been the case before. The Colonial Civil Servant of to-day goes to meet the difficulties of his task a far better trained man.

The natural corollary of our policy is that the Colonial Administrative Service, recruited from this country, should be a diminishing body because, as they train the people of the Colonial countries to administer their own affairs, it is obvious that the need for so many will slowly diminish.

Future More Brilliant than Past

"Personally," continued Lord Milverton, "I regard the future of the Colonial Empire as likely to be an even more brilliant one than it has ever been in the past. Anyone who has known it will realize the immense possibilities which are still left, and the great work which there is to be done in increasing collaboration with the various inhabitants of those countries. May I say, too, that that collaboration is being freely given.

"One is apt to get too coloured an impression by the stress which is laid upon occasional difficulties and troubles which occur in the Colonies, but the moment the Colonial Civil Servant goes out to a Colony, wherever it may be, the first thing that he learns—if he ever had any doubt about it before—is that his presence there is welcome and that he belongs to a body of men who are deeply respected by ninety-nine out of every hundred of the community in which he works. I hope that the day will never come when he will cease to be regarded as their friend."

Encouraging the Recruit

"I remember . . . . taking an American Consul-General across the middle of Nigeria on one occasion. Even he, representing a type of man who was well informed in every respect, was amazed at what he saw. He turned to me at the end of a fortnight of this journeying and said: 'Do you know, it has occurred to me that if your presence was not welcomed in this country, it would be quite impossible for a handful of Englishmen to carry on this work as they do.' That is the impression on every honest observer who goes about our Colonies.

"I stress these points because I want to encourage the recruit to the Colonial Service, in every way I can, to realize that he has a great prospect before him. One has, of course, to realize that the aim in the distant future is that his presence will not be required; but that is not at present. No person who knows anything of the subject can believe that, in the lifetime of anybody joining the service to-day, that service will not provide an ample career; there is a long way to go before these Colonies will be able to do without the advice, help and support of the British services."

Liaison Between Colonial and Foreign Service

Lord Rennell said that, in spite of having the largest Colonial Empire in the world, we in this country have little in the way of institutional organization in the study of the Colonies. "The schools in France and Belgium are both of longer standing and far more elaborate than anything we have in England. A scheme for training and refresher courses is long overdue and I hope very much that that will be instituted as soon as possible even if it requires additional personnel."

Lord Rennell found there is a great deal lacking in the knowledge possessed by the Foreign Service of administrative and Colonial matters. Has the time not come, he asked, to institute, within a limited number of people, an interchange of personnel between our Foreign Service and the Colonial Service?

Losing Touch

Lord Altrincham said: "It is little use our saying in this House and elsewhere that, in setting up these great schemes of development in the Colonial Empire, we count upon the co-operation of the Colonial peoples, if, in fact, we are moving into a method of administration which prevents the district officers from keeping touch as they should."

Many officers, he said, are most anxious about the schemes of development. "They think we are losing touch; that we are getting divided in our purpose as to these countries; and that while we say that we intend to develop the Colonial Empire entirely in the interests of their own peoples, there is a growing note in all our argument as to the tremendous advantage it is going to be to ourselves."

The Vast Majority

During the course of his reply, the Earl of Listowel said: "the vast majority of those employed by Colonial Governments are of local origin. It is estimated that the figure is about 96 per cent. of the total which, to all those who continue to think of the Colonial Service in terms of the young men who go out from the United Kingdom to the Colonies, is a striking proportion. It is extremely satisfactory . . . . that so many of the indigenous population of the Colonies are now engaged in Government service. Of course, there is no bar, in whatever Colony they may work, to their promotion to the highest Government appointments in their own communities. It is true that, at this moment, the remaining 4 per cent. are people from this country and the Dominions and, of course, they occupy most of the leading positions.

"Nevertheless, no effort is being spared to promote the advancement of locally born people in every grade to their technical and administrative services; and in the next few years we hope to see an even larger number of responsible posts held by men and women of local origin. As a practical contribution to the achievement of this aim, we have set aside £1,000,000 of Colonial Development and Welfare money to provide scholarships for Colonial people who wish to obtain the academic or professional qualifications required for the higher branches of the Colonial Service. So far, nearly 200 of these scholarships have been awarded to candidates from a wide range of Colonies. This scheme will ensure that the public services of the Colonies in the next ten years will be reinforced by at least several hundred fully qualified men and women, drawn from the Colonial communities themselves."

Aspects of Common Law—1

Basic Legislation in West Africa

By A Legal Correspondent

THE Limited Company, whether public or private, will play an increasingly important part in the economic development of West Africa during the coming years. As secondary industries are introduced, West Africans may invest more and more of their capital in the companies created to organize and manage those industries.

Company Law in West Africa, apart from the Gambia, where Companies are still incorporated by separate Ordinances, is closely based upon the Company Law of England, where important amendments to the law were passed in 1947 as a result of the Cohen Report. These amendments have yet to be introduced into the Companies Ordinances, but it is anticipated that they will be within the next twelve months.

It is proposed, therefore, to study in this column the 1947 amendments, all of which will be in force in England by July of this year (final consolidating legislation will also be introduced this year); to show how English Company Law now differs from that of West Africa as a result of these enactments, and to review current leading cases in Company Law.

In England, Company Law has its roots in the seventeenth century in the Companies incorporated by Royal Charter and those incorporated by special Act of Parliament. The idea is, however, to be found as far back as the era of Roman supremacy, and can be traced in the Gild organization which flourished in Mediæval England.

The Russia Company, The East India Company, the Bank of England, the British South Africa Company and, of course, the Royal Niger Company were all products of the Royal Charter system. This system is rarely used nowadays, both because of the unwillingness of the Crown to exercise its prerogative, and also because of the delay and expense in the proceedings. Incorporation by special Act of Parliament was evolved, largely to assist in the provision of the finance and powers necessary for the construction of canals in England, and was later used in the development of public utility undertakings.

These two methods of incorporation were clearly too cumbersome for adaptation for everyday business, whilst the general law dealing with incorporation was insufficient to protect the public from unscrupulous company promoters. Legislation designed to meet this problem, and to enable a much wider public to carry on business with limited liability, is now contained in the series of Companies Acts of 1862/1947, and it is upon this legislation that the Company Law of West Africa is based.

In Nigeria, the main Ordinance is the Companies Ordinance No. 54 of 1922. This was a consolidating measure introduced to standardize the procedure for the incorporation, regulation and winding up of trading companies and other associations. It repealed the Companies Ordinance (No. 8 of 1912 of Southern Nigeria) and the Companies (Amendment and Extension) Ordinance (No. 66 to 1917).

Divided into eight parts, the lay-out of the Ordinance is as follows:—Constitution and Incorporation; Distribution and Reduction of Share Capital; Management and Administration; Winding Up; Registration Office and Fees; Winding Up of Unregistered Companies; Companies Established outside Nigeria; and Supplemental.

Following upon the legislation introduced in England in 1928, after three years of investigation by a Committee, set up by Parliament, Ordinance No. 20 of 1929, came into existence in Nigeria. It introduced the more important changes effected by the English 1928 Act, relating to the issue of shares, the hawking of shares, and the issue of prospectuses by foreign companies inviting subscriptions for schemes or offering shares for sale.

In 1939, the Companies Income Tax Ordinance No. 14 was passed for the purpose of levying income tax on chargeable income of any Company by a Commission appointed for the purpose. This Ordinance was repealed by the Income Tax Ordinance, No. 3, of 1940, which was re-enacted and amended in 1943 by Ordinance No. 29.

In the Gold Coast, the principal Ordinance is Cap 156 in the 1936 Revised Edition of the Laws of the Gold Coast. It is modelled upon similar principles as the Nigerian Ordinance, but no special provision has been made in it for Private Companies.

In Sierra Leone, the Companies Ordinance of 1924, which had adapted for the Colony the Company Law of England as it was in 1906, was repealed by Ordinance No. 18 of 1937. The new Ordinance conforms with more modern legislation, especially the English Companies Act of 1929.

BARCLAYS OVERSEAS DEVELOPMENT CORPORATION LIMITED

(Incorporated in the United Kingdom with Limited Liability)

A Subsidiary Company formed by Barclays Bank (Dominion, Colonial and Overseas) primarily for the purpose of assisting in the economic development of certain Colonies and territories overseas in which the Bank is established. The function of the Corporation is to provide finance of a medium or long term character, such as is not normally obtainable from a commercial bank, for well-grounded schemes of agricultural and industrial development.

Enquiries and Applications for Finance should be made through local Branch Managers of Barclays Bank (Dominion, Colonial and Overseas) as Agents for the Corporation.

HEAD OFFICE: 54 LOMBARD STREET, LONDON, E.C.3

LABELS FOR BRITISH NATIONALS

THE words: "Citizen of the United Kingdom and Colonies" provided much subject matter for discussion during the recent reading of the British Nationality Bill in the House of Lords last week. Lord Altrincham said he was not in love with the term "British subject." "If," he said, "we are thinking of the Commonwealth as a whole, we must enter into the sentiments of all the peoples composing it. We must find a term for membership of the Commonwealth which will be agreeable to them and to their sentiments.

"It is no use choosing one which is merely agreeable to our sentiment or to our tradition. There is no doubt that the term: 'British subject' is not agreeable to many peoples of the Commonwealth. The French Canadian, for instance, does not feel that he is British. Nor does a Dutch South African. Indeed, a Canadian of any kind may not feel that he is British in the sense which we mean by the term. The word 'subject' is also bound up with British, and is rather liable to misinterpretation. It gives a sense of being subject to Britain and, of course, that is the last kind of thing we would wish to perpetuate. For my part, therefore, I am glad that we are not going to insist upon 'British subject' as a world-wide description of the lieges of the King. I think we need another term at the present time. I should like to see the term 'British subject,' and certainly the term 'British citizen,' confined to those who are really inhabitants by nature, by adoption, or by naturalization, of the British Isles."

Citizenship of New Entity

"The United Kingdom," he continued, "has a problem peculiar to itself in regard to this Bill and Bills of a similar character, in that it is closely linked to a great Colonial Empire. The Bill, therefore, establishes citizenship of a new entity, a new legal entity of 'the United Kingdom and Colonies,' so that all residing in that entity have the same citizenship. This is quite unlike any other national citizenships, which bind together members of a homogeneous geographical, social, political and economic whole. What we are trying to do in the Bill is to give a common citizenship to what is geographically, socially and politically a most heterogeneous community at many different stages of development."

Colonial Citizenship "Will Not Endure"

He thought "the fact that this great United Kingdom citizenship, or citizenship of a single entity which includes the United Kingdom and the Colonies is to be conferred at one sweep upon millions of subjects of the King who may not understand that it is really a matter of legal convenience, without direct political significance—and who may, indeed not unnaturally, assume that it confers a right to political equality, whatever the constitution of the Colony to which they belong—may create needless trouble and embarrassment in the present stage of Colonial development."

Citizenship Gateway to Nationality

During his reply, the Lord Chancellor said: "The principle upon which we are now proceeding is that British nationality shall be acquired only through citizenship. It is for each constituent part of the Commonwealth to lay down rules determining its own citizenship. Citizenship is the gateway, and the only gateway there is, through which one enters to reach nationality. Once we admit that conception, it follows that, in order to carry it out, we must also have our citizenship. With regard to the phrase: 'British subject,' I agree with the wise words of the noble Lord (Lord Altrincham) when he said: 'If that is a source of offence to anybody, let us call it something else.' But for the moment, I prefer the phrase 'British subject' as a title which, in view of our past history, I am proud to bear. If we have a conception that the genus of 'British subject' is made up of the various species of citizen—and that is how we arrive at it—then we must have a species of our own citizenship.

"Then we come to a question which I agree is much more debatable. Are we to have that species of citizenship applying to this country alone? or are we to have it applying to those territories over which this Parliament has the right to legislate? If we say that it is for the Parliament of any particular country to define the test of citizenship, is it not right that we, in this Parliament, should be able to deal both with the citizenship of the United Kingdom and also with the citizenship of the Colonies?"

One for All

He agreed that the Colonial Office and those who know about the Colonies attach great importance to the fact "that in this matter we should go in with our Colonial territories as part of the one scheme. If we do not do that, the noble Lord will see the difficulty. If he accepts the principle that citizenship is the only gateway through which one can attain nationality, then if we do not have a citizenship of the United Kingdom and the Colonies, but only a citizenship of the United Kingdom, we still have to deal with the Colonies. Are we to deal with the Colonies as one? Are we to have one citizenship for all the Colonies or are we going to have a separate citizenship for each particular Colony and island? Thinking this matter over, and discussing it at very great length, we have come to the conclusion that this is the best scheme to adopt.

"I am prepared to consider what the noble Lord has to say in answer when we get to a more detailed study of the Bill. I should like to add here that I am not in the least proud of the cumbrous phrase 'citizenship of the United Kingdom and Colonies'—nobody could be—but I have not been able to think of a better one. If any of your Lordships has an inspiration between now and Committee stage, perhaps he will give me advance notice of it. I will gladly consider whether we can produce a better phrase. That is the position at the present moment."

Port of London Authority, London, E.C.3, England.

For centuries, Merchandise reaching London River moved along the main trackways radiating West and East, South and North. To-day the goods Britain needs STILL travel the same routes—by rail and wide arterial roads—London is STILL the Gateway to Britain.

A PRODUCT OF TRINIDAD

Sole Distributors

ANGOSTURA BITTERS (LONDON) LTD.,
61, CHEAPSIDE, E.C.2. LONDON, ENGLAND.

Witch doctors and dances are shown; and the skill of the fishermen casting their nets is superbly caught by the camera. Young and old are seen mouthing "B's" in an open air class for "mass education." The growth of co-operatives, exports of cotton and palm oil, progress in the tinfields point to the way which development is taking. But the challenges are harsh, as the commentator says. Only one in thirty can read, and Nigeria must depend on its own resources to pay for a higher standard of living.

How soon will it be a free country? In the opinion of the commentator, work which had been estimated to need one hundred years may have to be done in one or two generations. It was a happy thought of the producers to show *Challenge in Nigeria* in the same programme as the new Edgar Wallace racing film: *The Calendar*. Nigeria's millions are likely to find a large audience in this country and, of course, that is what the challenge is all about.

* * *

Commonwealth Citizens

CITIZENSHIP, introduced into the British Constitution for the first time by the British Nationality Bill, is to be the gateway to nationality. The peoples of each self-governing country within the Commonwealth are to enjoy a particular status as citizens in their own country and, in addition, they are to have a common status as members of the association of peoples forming the British Commonwealth.

For Colonial people, the change is mainly one of status. Their common citizenship with the people of the United Kingdom *within* the United Kingdom will now be clearly defined.

Arising from consultations with the Dominions, referred to during the second reading of the Bill in the House of Lords, the Government has set down an amendment so that those who qualify for nationality may have the status of either a "British subject" or a "Commonwealth citizen," the two expressions bearing the same meaning.

The idea of common citizenship for the United Kingdom and the Colonies, rather than separate kinds of citizenship, has been followed because the British Government is ultimately responsible for the government of all these territories. The only exception to be noted is that the children of an alien father resident in a Mandated Territory do not acquire British nationality.

Common citizenship is a conception which may have far-reaching effects. It could facilitate the idea, now being propagated as part of a Commonwealth emigration policy, that the individual's social security rights should accompany him anywhere within the Empire.

IAL SERVICE MARKET

fidence in Colonial Power

the equivalent of nine years; Education, the equivalent of ten years; Administration (including appointments on contract), the equivalent of eleven years. The overall intake of two years was roughly equivalent to seven years or more. Considerable progress had been made in face of a very heavy demand.

From Ship's Cook to District Officer

Nearly all professional and technical appointments went to people from the Universities. But for administrative appointments, "we deliberately never tie ourselves down even to the degree." So elastic was the qualification for administrative appointments that, on one occasion, a man who had been a ship's cook and had travelled widely was given a job as District Officer.

Over a period of ten years, between 300 and 400 applicants were accepted from the Dominions, where special selection boards operated. Sir Ralph expressed the opinion that the recruitment made ten years before the war was a very good vintage. While agreeing that the standard of applicants being accepted for the Services today was very high, he thought that some of the best men were being lost because the salaries offered were insufficiently tempting.

Anthropology Past and Present

IN its speculative enthusiasm, evolutionary anthropology developed weaknesses. Western views, skills and institutions were tacitly assumed to be the culminating point to which human evolution had been moving through millenia. Western Europe was the point of reference for the world.

Thus the anthropologists of the later 19th century cast their theories about social institutions and culture in a pseudo-historical form. Features of custom and belief among modern savages were sometimes projected backwards into the past as the origin of western institutions, while explanations of the customs of savages themselves were sought not in the constitution of their own society or in its actual history, but in some hypothetical pre-existing condition.

For some writers, the widespread rule of exogamy of kin groups pointed to an earlier condition in which such groups had first captured wives from one another and later arranged a regular system of exchange. Even Tylor saw the origin of religion in a belief in spirits and the soul

Opinion

One Man can Clear a Town

IT makes me thoroughly ashamed when I see boys and girls with yaws on their bodies. However careful you are, you will have children with yaws, as long as some people fail to complete their courses of injections for it. I know you wish you could help; you'd love to have £2,000 to £3,000 and become a doctor. But you can help; you don't need to be a doctor. You can take the children to the doctor when they have yaws in their skin. The important thing is to find out when the doctor wants to give the next injection, and to make sure the child goes again.

The injections must go on long after the skin yaws heal up. If not, the yaws will break out again and may infect someone else and, as you know, yaws remaining in the body cause joint pains and other trouble throughout life. One man or woman who really tries to encourage the people with yaws to go to hospital as often as the doctor says, can clear a town of the disease. Think of the improvement in health that that one man can produce. Now you see why I'm ashamed when I see children with yaws. We have the power to wipe it out but we have not done so. We need your help so that yaws will cease to spoil West Africa's health as it now does.—Dr. K. W. Todd in "Calling West Africa."

* * *

Making your Mark

THERE is one thing that I should like to stress for the benefit of any young man looking towards tropical Africa as his land of opportunity; and that is that, in spite of all that has been done to improve conditions, the West Coast of Africa is not a white man's country. I know it isn't the "white man's grave" any longer, but you can't settle down there to live the rest of your life, and if you marry and raise a family, well you're in for a lot of painful separations.

However, there it is, and if you get a kick out of the idea of making your mark on the map of building roads and bridges where none have been before; hacking an aerodrome or two, out of bush; and generally helping to bring the somewhat doubtful benefits of civilization to the undeveloped areas of the earth, well I say "Go to it young man." Good luck to you—but don't blame me.—(Geoffrey Stubbs in the Commonwealth and Empire Programme of the B.B.C. Home Service).

* * *

Waiting

THERE is a great deal of unrest everywhere. Racial consciousness is more pronounced, and people are loud in their demands. The problem Nigeria is presenting at this time may serve as an illustration. That country is passing through what I consider to be one of the most difficult periods in the stages of her development. I refer to the period of waiting. In her request for a more direct training for self-rule, the abrogation of certain ordinances, facilities of school education for all her children of school age, the industrialization of her country, and facilities for free market, Nigeria is loud.

The typical answer to most of her requests amounts to —"Wait, everything that can be done will be done in due course, grievances will be seen to, but you've got to wait." The Church (in Nigeria) has been loud in her request for the privilege and responsibility of a Province. The Church has failed to understand why the Christians from the South should be denied the freedom of preaching the Gospel in the areas of their Moslem brothers of the North.

She thinks it will be in the best interest of the Christian religion if the system of running Colonial Churches (i.e., Churches set apart for Europeans) is abolished in Nigeria; and both races worship side by side. I am afraid she will have to continue to wait until the authorities concerned can sort things out. How trying is this period of suspense! —(Canon I. O. Okusamya, of Nigeria, as quoted in *The Record*, May 7).

* * *

Planned Investment

IT must always be remembered that a thousand tractors may produce five times as much food if they are employed in Europe; and the repair of the Mohne dam in Germany may be more important to the world than the building of a new dam in Uganda. What one can say with conviction is that, since the war, the right beginnings have been made. The petty Colonial rivalries are disappearing and, instead of old-fashioned Colonial exploitation, a programme of planned investment has been undertaken.

If war breaks out, Africa will not of itself make a great contribution, but all that is now going on will render it much more of an asset to the forces which are to defend democracy. If peace is maintained, it is at least possible that, within the next 50 years, the cause of democracy will have been strengthened by the accession of a great group of states in Africa.—(From an article by Aidan Crawley, M.P., in the *Liverpool Evening Express*).

* * *

Africanization

WE would like to draw the attention of all Honourable Unofficial members to the fact that the first step to be taken to assure us of Government intention to really Africanize the Senior Service is for the present African holders of posts previously held by Europeans in the pre-Harragin days to be automatically promoted to the Senior Service *honoris causa*. A case in point is that of African Paymasters of Departments like the Railway and Public Works who handle vast sums of money daily. Yet some of these hard-working officials are First Class Clerks.—*The Nigerian Daily Times* (May 8).

THE world's stations are at your command with the universally acclaimed G.E.C. All-Wave Superhet series. For reliability, performance and quality, these fine receivers have already made a name for themselves the world over. There are models housed in well-designed plastic cases and fitted with push-button wave change and on-off switch; available for A.C. or D.C. mains operation. Your complete assurance is that each receiver is backed by a name as famous as Radio is familiar—G.E.C.

The Overseas 7, a de luxe All-Wave Superhet Receiver embodying the latest techniques in radio engineering. In handsome mahogany cabinet, available for A.C., DC/AC mains; or 6-volt battery operation.

COLONIES AND THE BRITISH NATIONALITY BILL

By Lord Milverton

THE British Nationality Bill is of the greatest importance in that it gives legal recognition to a new principle and marks a new advance in the relationship of the component members of the British Commonwealth of Nations. The conception of citizenship and nationality embodied in the Bill has been slowly forming for many years. In that respect, the Bill merely recognizes a situation that is already a fact, although to the ordinary citizen the provisions of the Bill will appear to be novel and perhaps startling.

The simple principle underlying this Bill is that each of the member States of the British Commonwealth is equally entitled, under its own laws, to create citizens, just as the Metropolitan Dominion (which is the United Kingdom) does, and that the sum total of all citizens so created will be British subjects. In other words, citizenship is to be the gateway through which nationality is achieved. In the past, the United Kingdom has not had a separate citizenship of its own; but it is clear that if each of the other self-governing States of the Commonwealth makes legal provision for its own citizenship, by virtue of which the wider status of British or Commonwealth subject is achieved, then the United Kingdom must herself fall into line or claim for herself a separate and superior status which she expressly does not claim. The new conception of citizenship is the species; nationality is the genus.

The Canadian Citizenship Act of 1946 was framed on the basis that Canada should enact her own laws in regard to her own citizenship, and that a person admitted to citizenship of Canada should be entitled to British nationality.

Each other member State will now, it is anticipated, decide for itself according to its own laws what constitutes citizenship; and when that has been decided, nationality will follow citizenship. That being so, it becomes necessary to provide for a citizenship of the United Kingdom through which each citizen attains to British nationality.

The qualifications for citizenship may vary widely in the different component States, but the one constant result is the attainment of British nationality.

Common nationality does not necessarily confer rights in other member States, but the fact of possessing British nationality will obviously stand a man in good stead throughout the Commonwealth; and throughout the foreign world, it will entitle him to full diplomatic "protection" and consular help from British representatives.

In the United Kingdom, the Lord Chancellor has explained, rights and privileges will not derive from being a citizen of the U.K., but from being a British subject, so that the citizens of any of member States will meet in England on equal terms with citizens of the U.K., by virtue of their common British nationality. This arrangement arises because we choose to have it so, as part of our Imperial policy. It does not follow that the same position will apply in all the member States, which are free to legislate for themselves as to whom they shall admit into their territory as settlers.

Let us look now at the position of the Colonies under the new principle in this Bill. The existing position derives from the 1914 British Nationality Act, which was based upon the idea of a common code and a common test of nationality throughout the Commonwealth. It was expected that part of the Act would be adopted by the various member States. As it turned out, each State preferred to enact its own legislation and, although this was in substantially similar terms and substantial uniformity was achieved, anomalies did arise and discrepancies tended to increase.

One of the many difficulties of the common code basis was that any alteration required the previous consent of all member States and was only possible, if at all, after interminable delays. In any case, the Canadian Citizenship Act of 1946 introduced the new principle, outlined above, and represented the result of long consideration and extensive discussion between the different Governments of the Commonwealth.

His Majesty's Government in the U.K. was immediately confronted with the question of the position of the Colonies in new legislation, based on the principle of citizenship as the gateway to nationality. Should the Colonies be included with the United Kingdom or left out and dealt with as one group? Or should there be a separate citizenship for each particular Colony? It was felt that as H.M. Government is responsible for the peace, order and good government of the Colonial territories and, in a sense, are trustees for their people, it would be wrong to differentiate between their own people and the people for whom they are trustees. So the new citizenship of the U.K. assumed the composite form of "citizenship of the United Kingdom and Colonies". Presumably, as and when a Colony advances to responsible self-governing status, it will also pass to a new species of citizenship.

I am sure that when its provisions are understood in the Colonies, the British Nationality Bill will be strongly welcomed as conferring on all Colonies the honourable position of equal citizenship with the United Kingdom and British nationality with all its privileges.

The Bill also makes careful provision for British protected persons and makes their naturalization as citizens and British subjects a matter of little more than registration.

I should like to quote the words of the Lord Chancellor in moving the second reading of the Bill—"I believe that of all the remarkable contributions which our race has made to the art of government, the conception of our Empire and Commonwealth is the greatest. Of course, it may be said, and said with truth, that it lacks a logical foundation and that it is difficult to expound or explain it. But, though it is difficult to expound and explain, I believe it to be a noble institution. I believe that we have managed to combine a sense of unity with a sense of individual freedom, so that it may fairly be said of our conception of the British Empire and Commonwealth that its service is perfect freedom. Now the link, the bond which binds us together, is, of course, primarily the fact that we are all proud to be subjects of H.M. the King. There are other things which bind us: there is the sense of perils shared together and overcome in the past; there are the hopes for the future. But those things are not in any sense limited to members of the family, they are things which we share, I hope, with the Countries of Western Europe. But there is something about the family which to my mind depends upon there being a common status and a common nationality."

The Bill attempts to give legislative sanction to a common status and a common nationality.

Proper Standard of Comparison

PERHAPS the most important point we can make in these international gatherings, where our administration is the victim of these ill-informed attacks, is to secure a proper standard of comparison. The real comparison is not between oversea territories and metropolitan territories—naturally in this case the comparison is disadvantageous, as oversea territories cannot be expected to achieve in a few decades what the metropolitan countries have taken centuries to win. The real comparison is between oversea territories and adjoining sovereign states.

(Mr. Ivor Thomas at the recent Amsterdam Conference on Overseas Territories).

The Way Out

FOOD is politics. Years of austerity and the prospect of continuing shortage have taught the British people some of the hard facts about population pressure and soil erosion. Now, under the tutorship of Lord Bruce and Sir John Boyd-Orr, they are learning the long way out—world co-operation to produce more food and to distribute it with a wiser equity.

Sir John's latest contribution to the education of the public and the politicians is the idea of a Commonwealth and Colonial Food Production Plan to be devised by the United Kingdom and put up to the World Food Council. To influence all nations to combine in the Food and Agricultural Organization and other United Nations agencies, Sir John suggests, should be the main objective of British foreign policy.

Details of the proposed Plan are still lacking; but any plan which did no more than make the African continent self-sufficient in essential foodstuffs would ease mightily the whole world problem.

* * *

Fighting the Tsetse

SCIENTISTS are wise to refuse to rush into print with reports of their discoveries. Success in this, as in other spheres, is a long-term operation. All the same, it seems that a so-far unnamed chemist on the staff of Imperial Chemical Industries has marched across a new frontier of knowledge. According to Dr. D. G. Davey, the brilliant young biologist, a new drug found and perfected in the I.C.I.'s English laboratories, will immunize cattle against the ravages of the tsetse fly.

The report comes from Khartoum, where field tests with the drug are now being carried out. In London, the I.C.I. chemists are not prepared to claim success until the fullest possible tests have been completed.

But Dr. Davey is not the man to talk idly. He is one of the three-man team—the others are Dr. F. H. S. Curd and Dr. F. L. Rose—who discovered paludrine, the most potent weapon yet known in the war against malaria.

When Dr. Davey and the chemist who leads his new team can release details, we may find we have made a rapid advance in the search for more, better and cheaper food.

* * *

Pan African Railway

NOT less vital is an African plan for transport. When, recently, he asked the Tanganyika Legislative Council to approve amalgamation of the East African Railway systems, Mr. J. R. Farquharson (general manager of the Tanganyika Railways and Harbours) forecast that East African Railways will be linked up with the Rhodesian system. He described the conversion of the lines from metre guage to 3 ft. 6 ins. as a problem that must be tackled within the next ten years.

Meantime, with recent developments in the Union of South Africa dimming hopes that Walvis Bay in the west might be opened up, there is a revival of Southern Rhodesian interest in a British Central Africa Authority running a line from Salisbury northwards to Tukuyu, thence eastward to the new groundnut port of Mikindani.

West Africa ought to have a voice in all such projects. Although exports from Nigeria, the Gold Coast and Sierra Leone to Southern Rhodesia amounted to only £1,300 in 1946, imports were over £100,000, the bulk of them being manufactured Virginian tobacco. A few years ago, imports from Southern Rhodesia were £170,000. They are drying up, probably because of a lack of reciprocity which an all-African railway system might cure.

* * *

Form-Filling

EXPORTERS to West Africa are introduced to Form "C" in the June issue of the *British Trade Journal and Export World*. This "Combined Certificate of Value and of Origin and Invoice of Goods for Exportation to British West Africa" consists of a declaration to be given by an authorized official of the exporting or shipping firm as to the correctness and truth of the items set out in the form of invoice on reverse and as to the fixed nature of the prices quoted.

Then follows a full declaration as to the country of complete origin of the goods, or alternatively the countries in which the goods have been wholly or partly manufactured or whence certain component parts or material or ingredients of the goods have been obtained. These declarations are signed by the official concerned and his signature must be fully witnessed. Then follows the lists of items in connexion with the packing, cartage, freightage and insurance of the goods and any commissions or duties payable and the approximate cost of each of these items must be shown, together with a statement as to whether or not they are included in the price charged to the buyer.

On the reverse of the form is printed a blank commercial invoice, which must be completed in the ordinary way. One of these documents must accompany any parcel sent to British West Africa by parcels post, while all drafts drawn against goods forwarded either by parcels post or sea or air freight must have four copies of these documents attached.

* * *

Textile Shortage ?

"THERE is a strong impression," writes a correspondent in *The Textile Mercury and Argus*, last month, "that there is a glut of textiles at the Coast. It is true that imports during 1947 were roughly 30 per cent. higher than in 1946. As a result, stocks rose and the buyers' strike in the Gold Coast did not help matters. But since then, there has been relatively good trading in the Gold Coast as well as Nigeria; and retail sales have been good though at reduced prices.

"The present appearance of adequate stocks in West Africa can be misleading. By the autumn, when the new produce season starts, stocks will have been reduced considerably; and imports from all sources will in 1948 not equal those of 1947. If produce prices, particularly that of cocoa, again rise (as seems likely) then there may even be a shortage of textiles since the Colonial markets are the most sensitive to an excess of purchasing power over supplies of consumer goods."

* * *

Colonial Law

IT is strange, writes Miss Margery Perham in the preface to C. K. Meek's Bibliography of *Colonial Law*,* that a people so proud of their achievement in the sphere of law as the British should have given so little serious attention to the wider significance of their imperial responsibilities. This volume should go a long way to remove that reproach, if only by making known to a wider public the comparatively large number of books which has already been written on a subject with so many aspects for study.

More than 800 books are listed, and the headings are sometimes functional, sometimes territorial. This is the fifth of a series of bibliographies and reading lists, which have been produced with the help of money provided by Nuffield College. Previously published are *Colonial Administration, Colonial Economics* (by Miss Penelope Bower), *Urban Conditions in Africa* (by Jean Comhaire) and *Rural Conditions and Betterment in the British Colonies* (by Dr. Philip Mayer).

*(Published for Nuffield College by Geoffrey Cumberlege, Oxford University Press, London, E.C.4, price 4/6d.).

Chimpanzee Flight

FLYING to Africa this week by *Air France* was a representative of the London Zoo. Mr. Lester, who was due in Freetown on June 17, is to collect a chimpanzee and bring it to London for the Zoo authorities. Apparently chimpanzees are not yet air-minded enough to fly, or maybe air passengers might discriminate. In any case, Mr. Lester plus chimpanzee is returning by sea.

CHALLENGE TO NIGERIA

COLONIAL development is too often handicapped by the politician and the public speaker. The apt phrase, the sweeping generalization abound from the lips of great and small. And each expert sees salvation only in his sovereign remedy. Even so gentle and reserved a speaker as the EARL OF LISTOWEL said recently, in Oxford: "Here is a great chance for soil scientists to start a revolution that will raise the pitiful living standards of those who live in the tropics."

It is heartening, therefore, to find that there are other approaches to Colonial development. One such approach concerning the future of the Nigerian Palm Oil Industry has been made by The United Africa Company, to whom readers of WEST AFRICA are indebted for the series of articles currently appearing. Factually, statistically, and with little recourse to the embellishment of metaphor or simile, the Nigerian Palm Oil Industry is presented with its present deficiencies together with suggestions for its immediate improvement and for ultimate progress to the maximum of economic achievement.

In the world of ideas where the raising of living standards seems obviously imperative though difficult, it is sometimes forgotten that first attention is due to the maintenance of the existing very low levels. Starvation, we are reminded, is always around the corner. What must be the treatment of The United Africa Company's challenge to Nigeria? since *The future of the Nigerian Palm Oil Industry* must be thus considered.

Obviously, it must be studied by home and local governments. But it must be studied, too, by educated Nigerians because on their recommendations alone is there the least likelihood of its main proposals being acceptable to the Nigerian communities. The public spiritedness of the Company in making such a document available through these channels deserves every recognition.

There are bound to be criticisms of some of the proposals. The word "plantation" has associations which mean to Africans what red symbolizes for the bull. There would be no African "problems" if there were no African criticism. Nor would uncritical Nigerian acceptance of proposals for benefiting their palm oil industry be good either for themselves or for anyone by whom that responsibility might be taken.

What, then, are the points for special consideration? The first obvious challenge affects the inhabitants of Benin and the provinces lying eastward. Any cessation of the trade in palm products, or even any considerable diminution would, it is claimed, lead to such a collapse of the local economy as to result in three or four million people being reduced to famine conditions. Certainly, Nigerians have a vested interest in resisting such an eventuality.

The second main challenge is quality. The real weakness of Nigeria, it is claimed, lies in the fact that the output of her competitors is of far higher quality than her own. "There is a serious risk that Nigeria will find herself excluded from all but the soap markets." This statement is almost frightening in its simplicity.

Little would be gained by recapitulating here the arguments by which are indicated the great accession of wealth which would accrue to Nigeria if it were possible to improve the agricultural and mechanical skill and practice of the African peasant. But it is well-worth the repetition that "if extraction were undertaken by a factory plant which would enable 93 per cent. extraction to be achieved and if, at the same time, every palm at present harvested was a cultivated rather than a wild palm, the total value of the oil and kernels marketed would reach £28,500,000; that is to say, at a time when everything possible is needed to improve the standard of living, the potential wealth from oil palm cultivation could be doubled."

So far, the ground is firm; but when the plantation proposals are made, there are suspicions of bogs ahead. There is nothing new in the proposal for a tripartite syndicate in which the Government, the African, and the European should each play a rôle for which each is best fitted. Since Great Britain's proved Colonial objective is the leading of dependent peoples towards self-government some partnership of this nature is inevitable.

But the very perfection and plotting of the details of the "settlers" who are to spend six years as wage earners before emerging as proprietors responsible for the maintenance and harvesting of their palms will need much explanation and patience, before it is accepted for what it is—a well conceived plan for improving the material conditions of the Nigerian peasant.

Again, the absolute certainty that if the plantation is to be a success it cannot be run by

THE NIGERIAN PALM OIL INDUSTRY	669

Africans themselves may tend to obscure the general application of these words to the average European as well. There is always a sensitiveness of feeling produced by blunt statement of facts and the more true the truth, the greater the hurt. These are but speculations, however, as to the possible unfavourable reception which may be accorded to certain points of detail.

What is important is that here is being presented, by the most competent authority, a proposal for assisting the material development of Nigeria and its inhabitants. The proposal must be examined on its merits.

One interesting suggestion which will appear in the last article of the series is that if The United Africa Company were invited to co-operate, it would be prepared to regard this work as a contribution to the progress and development of Nigeria and would agree to participate on a service rather than a profit basis. The African would, in this way, be virtually the sole owner and draw the entire profit for himself from the enterprise. No stronger incentive could be offered. Its suggestion from the Company and not from the African should clear the ground for co-operation if a long-term programme is found acceptable to the Nigerian Government.

Two other considerations are worth pointing out. If the production of palm oil in Nigeria were doubled, more of it would find its way to local stomachs, quite apart from the material advancement of living standards which would accrue from increased sales. Since nutrition is the gateway to health, the cogency of this argument needs no underlining. But the greatest challenge is found in the tail of the articles. "An opportunity presents itself which may never recur."

Surely, these words contain nearly all the wisdom necessary to the consideration of every plan for Colonial development to-day. The Colonies, with few special exceptions, have been complaining of neglect for generations. To-day, private enterprise vies with Governments in promoting development of all kinds. How long will this happiness last?

There can be no development *at all costs* since the permanent result of such development will be resentment against or hatred for the developer. But if the opportunity for development is not fairly grasped now, when it is offered, British Colonial territories will know where to affix blame, should there then be any spirit left for this comfortless sport.

42/9C/210

WEST AFRICAN TALKING POINTS

Presenting the Facts

THE Colonial Empire, 1947/1948, the annual report of the Colonial Office, is a massive, impressive document.

A vast array of facts is recorded. They are marshalled in relation to the Colonial Office and Colonial Service, political, constitutional and social progress, the development of economic resources, Colonial finance and international problems, and they shout a vigorous denial of the criticism that Imperial Government lacks a Colonial policy. They offer proof that, in every field of endeavour—whether of recruitment or nutrition or of definition of the interests of the various Powers operating in West Africa—there is *co-ordinated* activity.

New economic enterprises, of which the Colonial Development Corporation and the Overseas Food Corporation are the spearhead, are discussed under the heading of "Colonies and the Crisis." Their incentive is admitted frankly: Europe's and the world's urgent need for raw materials. Their purpose is stated clearly and persuasively: to enable the Colonies to play an expanding part in an expanding world economy and, thereby, to improve Colonial living standards.

Of course, argument will arise about every fact and every activity. The challenge, however, will not be to Colonial policy, but to the priorities selected in the course of applying policy. Is economic development, for example, being related effectively to political conditions? And should policy aim at political progress before economic emancipation?

Many facts of especial interest to West Africa are recalled in a form that makes reference easy.

The Colonial Economic and Development Council has approved 17 plans under the Colonial Development and Welfare Acts. Their costs will total £180 million, of which the United Kingdom will provide £55 million.

Nigeria's ten-year plan will cost £55 million of which the Fund will find £23 million, leaving £16 million to be raised by loan and a similar sum to be raised from local resources. Sierra Leone has been allocated £5,256,000 (£2,900,000 from the Fund, £1,400,000 from loan, and £956,000 from local resources). In the Gambia, £1,980,000 will be spent (£1,300,000 from the Fund, £250,000 from loan and £430,000 from local resources).

The schemes in each plan are set out in detail. Cmd. 7433 is an indispensable two-shillings' worth.

A word of praise is due the writer of the report. It is always readable and often exciting. It perpetrates only one horror. The Colonial Office, we are told, is responsible for *screening* the plans prepared by Colonial Governments—as though these plans were undesirable aliens trying to wriggle through an enemy blockade!

* * *

The Old and the New

THE American view of British Colonial development is important for many reasons. Americans have grown up in the British tradition. They are passing through, although at greater speed, the social, political and industrial revolution which Great Britain believes she has survived. They can represent for us the virtues of our own youth—its high-mindedness, its optimism and its vivid sense of fact.

All these qualities make worth reading the report on West Africa presented to the Foreign Policy Association by Mr. Vernon McKay, now chief of the African Political Section of the State Department. Mr. McKay defines clearly one danger of Communism. It is that Africans can understand conditions in Russia, because they are as primitive as conditions in their own homeland, and can appreciate the reality of Russian progress. Mr. McKay defines with equal clarity the clash between the old and the new in West African official circles. The old men have done a grand job and have acquired an intellectual vested interest in what they have done. "Innovation," they cry with Burke, "is not reform." Nevertheless, the dynamics of innovation still work, and must work if the Colonial tradition is to live.

When we learn how, consciously, to apply the dynamics of innovation we—and the Americans—shall have solved the central problem of democratic government.

* * *

"Our Noble Selves"

THE Corona Club was founded in 1900 by Joseph Chamberlain, as an organization for promoting friendly personal relations between past and present members of the Colonial Service and the Colonial Office, by means of an annual dinner. Except during the two world wars, the dinners have been regularly held, and this week's is the 38th of the series.

The Corona Club Dinner has at least one unusual and admirable feature—there is only one speech. This is delivered by the Secretary of State for the time being, and traditionally concludes with the toast of the Corona Club—"our noble selves," as one Secretary of State expressed it.

The dinner and the speech, excellent as each may be in its way, are only preludes to the important business of the evening. The company breaks up and adjourns to the next room for what the members of the original Com-

WEST AFRICAN COMMENTARY ON COLONIAL POLICY

By R. B. Wellesley Cole

FUNDAMENTALLY, the broad lines of Colonial Policy in the last decade present a continuum. On the one hand, Government has shown an increasing sense of the need to promote the economic and social well-being of Colonial peoples, as a condition of their political advance; on the other hand, West Africans have shown a phenomenal advance all round, but particularly in the direction of self-confidence and national consciousness. While not doubting the good faith of Government, they demand that they must be treated as colleagues, and consulted fairly and fully in all decisions that are taken about their country and their people.

This is just the type of situation that makes for impatience and frayed nerves. On the one hand, there is a tendency to resentment that despite all that Government is doing *for* the people, they are not grateful, but their leaders continue to malign it. On the other hand, there is the constant complaint of the people through their leaders that they are not being consulted in the drawing-up of plans and in their execution. This conflict of Paternalism, "father knows best," versus Nationalism, "we must be consulted," will be found to be at the root of most of the main difficulties in political West Africa to-day. It is the most significant pointer that West Africans have advanced to the position where a new approach is necessary in dealing with them; and it is just this new approach that they looked for, and still look for, in the Labour Government.

To them, Mr. Creech Jones represents the Labour Government. It is not merely that he is the Minister charged with responsibility for Colonial Affairs, but that in his antecedents, his long association with the Fabian Colonial Bureau, his contacts with Colonial students when Labour was in opposition, and in his wide travels throughout West Africa, he had come to symbolize whatever new approach Labour might be expected to bring to the problems of the Colonial Empire.

It would be dishonest to pretend that Africans feel that the three years of Labour rule have brought a radical change in their fortunes. Equally, would it be unfair to assume that the Minister and his responsible officers have not been trying genuinely to improve conditions in this part of the Empire. Many of the problems with which they have to deal are legacies from the past. Many of the measures which have been initiated under the present regime will require time for fruition. Between Whitehall and the executive officers in the Colonies, there is too often a difference of temperament and outlook, if not of intention. The former are sensitive to politico-philosophical thought; the latter are "holding the outposts of the Empire." Even in Whitehall, situations are not always handled with the maximum of tact although there are evidences latterly of a more realistic approach.

The various groups of Colonies are at different stages of development. For some, the pressing need is for material investment and action from without: But others have reached a point where further development can only come from the people themselves, while Government provides capital needs. West Africans are at this latter stage. It is futile to draw a distinction between "the masses," and the "enlightened few." It is the latter who will listen to and study the Minister's speech, and they will study it carefully to see what new hopes of real advance it holds out in the present position.

It is perhaps not without significance that, of all the actions which Mr. Creech Jones has taken since he came into office, none has given so great a satisfaction and captured the imagination so much as his prompt and unequivocal repudiation of legal and administrative discrimination on ground of race or colour, in the West African Colonies. Another move which has been warmly appreciated, and will go far towards smoothing out difficulties, is the forthcoming African Conference of Unofficial Members of the Legislative Councils. These are acts of statesmanship that the people can see for themselves and feel. Even though, in immediate returns, they do not have the economic and financial results which the expenditure of vast sums may yield yet, in the long run, they are much the more likely to yield results in mutual understanding and give and take. In the long run, West Africa will be developed by the people themselves with the understanding assistance of Government.

One should like to see introduced, therefore, a system similar to the Working Parties which have proved such a useful innovation in British industry. The analogy is very close. In both instances, you have two opposing groups, each indispensable to the other but hitherto apart, the less dominant one having now reached the position where clearly smooth progress is impossible without its intelligent co-operation. There is only one way out, namely to pool resources. If this had been done, the Fourah Bay *imbroglio* would not have developed. The same failure led to much of the ill-feeling over the Nigerian Constitution. Although, in the case of the Sierra Leone Legislature, pains are being taken in theory to avoid a repetition of the same mistake, in practice much of what is taking place there at the moment is in the nature of a rearguard action, instead of a Working Party or round table conference.

To mention these facts is not to be critical but to draw a distinction between statesmanly pronouncements and the day-to-day execution of a policy which makes for a contented people with a minimum sense of friction.

was it intended that the police are to be armed? and was he aware that this Ordinance has been the cause of considerable uneasiness in Sierra Leone?

Replying, Mr. Rees-Williams said the legislation in question had not yet been enacted but was at present under examination by a Select Committee of the Legislative Council, which includes two African unofficial members. With regard to the first provision, he said the intention was to empower the Governor, if and when necessary, to call on the Police Force to perform military duties in support of His Majesty's Forces.

The licensing of processions was already provided for in the Processions Ordinance 1935. Provision with regard to public assemblies was considered desirable to preserve public order and was based on similar legislation in Nigeria. The provision requiring members of the Force to obtain approval before joining political organizations, trade unions or secret societies was intended to ensure that all police officers should be strictly impartial in the execution of their duties.

It was not proposed that Police should carry arms in the normal execution of their duties. He was aware that the Bill, when published, was the subject of some criticism in Freetown, but he was satisfied that the Sierra Leone Government had no desire to take powers in excess of those generally recognized as necessary to preserve law and order.

Private Enterprise

The only set of electro-cardiographic apparatus in the four West African territories belongs to a private practitioner in Freetown. This information was given by Mr. Rees-Williams in a reply to Dr. Segal. The Governments of Sierra Leone, Nigeria and the Gold Coast have ordered this equipment on behalf of their Medical Departments—the Gold Coast as long ago as July, 1946—but in present conditions of supply delivery is expected to take at least two years.

Fourteen Shillings

No general census has been undertaken in Nigeria since 1931, when the figure was 19,928,171. This statement of Mr. Rees-Williams was made in reply to Mr. Reid, who also asked to how much per head does the total revenue of the central government of Nigeria amount?

Mr. Rees-Williams added that the present total population of Nigeria is unlikely to be less than 23 millions. The estimated revenue for Nigeria for 1947/48 was £16,165,870 and, therefore, the figure per head was almost exactly 14/- per annum.

On the Way

"Of the 24 Cocoa Survey Officers required by the Gold Coast Government for the campaign to eradicate disease among cocoa trees, 20 have already been recruited of whom all but two have sailed. Offers of appointment have been sent to a further three candidates and the remaining vacancy is in process of being filled. Any additional staff required will be obtained." This statement was made by Mr. Creech Jones in reply to a question from Mr. John Morrison.

Asked by Mr. T. Reid whether there will be any compulsory powers to induce people to cut out dead and diseased cocoa trees, Mr. Creech Jones said the treatment of disease was another matter. "Could the Minister say," asked Mr. Bossom, "how long it is since he was first asked to send out these people, and how many have arrived? He said just now that a small number had arrived. How long ago were they invited?"

Mr. Creech Jones: I cannot give the date of the invitation, but practically all the officers have now been selected and many of them are there. Others are on the way."

NEW PUBLICATIONS

West African Art

AT a time when West African art is being exhibited in Europe and West Africa on occasions far more numerous than ever before, the need for an introduction to the subject will be appreciated. This need is met, so far as wood figures are concerned, by Leon Underwood's *Figures in Wood of West Africa* (John Tiranti Ltd., 6/-). Published with both French and English texts, this book also includes some fifty illustrations of West African figures which have been preserved in museums or private collections. It is a simple introduction to West African wood figures, as may be seen from the following sentences: "it is unfortunate that wood should be the staple material of the carver and the diet of the white ant in a country which has no readily workable stone. But this fact may have helped in preserving the art of ancestor worshippers from the static style of stone. The perishable condition of wood, allowing no work to become a fixed example for over-long, assisted the dynamic variety of style so characteristic of West African art." Or perhaps in the summing up when the writer concludes: "Africa, in its art, reflected the limited boundaries of its sensible world; back, front and sides of figures—the four winds; the feet and head—earth and sky. The unseen places in which the African's spirit may have roamed did not call upon his imagination to explore them in sculptural form."

Atonement in Africa

Pasted in the front of *Atonement in the Sun* (by René Guillot. Staples Press, 6/-) is a little note in red letters stating that the binding of the book has been specially treated with anti-termite solution for preservation in all tropical climates. It is time that this practice was generally adopted. No purpose will be served therefore by singling out this volume, which has been translated by Philip John Stead from the French, for any particular query as to why

WEST AFRICAN ANTIQUITIES

(Continued)

THE CITY OF GHADAMES AS IT APPEARED IN THE MIDDLE OF THE 19TH CENTURY

The opinion formerly prevailed that most of the cities of the Sahara and the Western Sudan were first established by the Mohammedanized Arabs invaders of North Africa. Recent archaeological and anthropological research, supplemented by a renewed study of certain classical works and Arab chronicles has revealed, however, that many of these cities were already in existence and were in a flourishing state centuries before Mohammed himself was born. Studies of the architecture and other evidences of their culture make it clear that most of these cities, while, influenced to some degree by the civilization of the Arabs, were mainly the work of indigenous peoples of Africa. Some of them are known to have been in existence since the days of the Greeks, the Phoenicians, and the Romans. The economic life of these cities was greatly influenced by the trade carried on by and through them with the Negro lands of the interior. Ghadames, reproduced here, was a typical city of this kind.

WEST AFRICAN ANTIQUITIES
(Continued)

37-31-10

AN EXAMPLE OF NATIVE AFRICAN SCULPTURE IN BRONZE

Portuguese and Dutch explorers [illegible]th and 16th centuries and British explorers in the 18th and 19th centuries, on visiting certain old cities along the Guinea Coast were surprised to find the Negroes of these regions engaged in making statues and other objects of art which showed remarkable proficiency in the delicate arts of moulding in metals and in carving in wood, ivory and stone. Many of these objects are now among some of the most prized possessions of some of the leading museums of the world. Some of these objects have been the subjects of considerable study with the result that the opinion is now held by some antiquarians that they represent not only an indigenous African art of a high order but one which dates back into antiquity. Some authorities however doubt this, and are inclined to regard, those objects especially the objects done in bronze, as creations of entirely recent origin. Some have held that they grew out of ideas and practices introduced by the Portuguese and the Arabs. That this art was not introduced by the Portuguese nor the Arabs, seems clearly revealed in the fact that neither of these produced works of the kind in their own homeland. Indeed much of it is done in forms--images of human beings and animals--which are strictly prohibited in the Islamitic world. Another important discovery has been, that the older objects are more skillfully and artistically done than are the more recent forms--a fact which seems to indicate that the hey-day of the civilization of which this art was a part, goes back to a period far removed from the modern age.

The

International Labor Conference in Geneva in 1947 adopted a series of conventions designed to act as charter for colonial peoples. They demanded international labor standards, the rights of association and settlement of labor disputes . Africa critized the I.L.O. for not passing the principle of "equal pay for equal work" recommended by the Dakar , French West African Conference in 1947.

Gov't of South Africa Hushes UN Wage Report

[1948]

LONDON, Aug. 9 (Telepress).—Asked what conventions of the International Labor Office had been ratified and applied by the Government of South Africa for the mandated territory, the Union Government answered: "None." No scales of minimum wages are laid down by law.

The document which contains these admissions, and which was submitted by the South African Government to the Trusteeship Council of UN, has not been published in South Africa. One copy of this official reply to the Council's questionnaire of 50 questions is reported to have reached South Africa.

All during South African rule over the South-West African Mandate, a territory which the Government now proposes to incorporate in the Union against the wishes of the people, only two Africans have succeeded in passing their matriculation examination after going through correspondence courses at their own expense.

The wages of African miners are eightpence a shift as compared with two shillings and fivepence in the Union.

The Union Government has determined in what area Africans may live and for what period they may live there, and it admits with truculent frankness that it has no plans for the fuller participation of non-Europeans in the government of the territory.

It is certain that opposition at the coming session of the United Nations to South Africa's declared object of incorporating South West Africa will be very strong and may very likely lead to threats by the

that Dr. Malan, with his more blatant recial philosophies, holds the Premiership to leave UN.

In that event, it will be interesting to watch the efforts of America and the colonial powers to whitewash South Africa's record in South West Africa and explaint away this incriminating document. The British Labor Government has already during Smuts' regime, shown its full support for what South Africa is doing there. The Americans, all the more since the Fascist Malan came to power, are anxious to appease ruling circles there and consolidate the growing American influence in South African mines and industry.

(d) Sierra Leone: - In 1946 the Mining Wages Board made recommendations for wage increases which have now (Aug. 1946) become law. Minimum wage for light work, 1s. 6d.; for heavy work 2s. About 5000 Native workers will benefit, employed in the

Africanisation of the Civil Service

The problem of Africanisation of the Civil Service is receiving much thought and attention from various quarters. Britain, needing manpower and realizing that the demands of the African himself that he be given higher and more responsible posts, and with salaries commensurate with such positions, can no longer be entirely ignored, is more inclined than ever to look favorably on such a shift.

The Gambia has recently made a step forward in the Africanisation program. The new constitution of this territory has opened new opportunities. The Governor pointed out in his inaugural address that the posts of Secretary-General, Assistant Receiver-General and one Assistant Colonial Secretary are to be abolished. The Receiver-General's Department is to be replaced by Departments of Customs, Treasury and Post Office Collectors and Supervisors of Customs, Accountant General and two Assistants, Post master General and one Assistant. (Western Nigerian Guardian, Jan. 28, 1948)

This step in the Gambia has called forth further demands from Nigeria. While admitting that efforts are being made to Africanise the Nigerian Civil Service, Nigerians are smarting under the fact that their Senior Appointees are "All under one European boss or another" while the Gambia is supposed "To have an African Accountant General". On the other hand a number of Africans in Nigeria are being appointed to higher posts in such Departments as Labour, Agriculture, Education, Colony Welfare Office, Judicial, etc. (Nigeria Gazette)

Despite the recent changes, however, there is particular dissatisfaction being voiced in the Judicial sphere. Nigerians find there has been unfair play. Not only the question of position but also that of salary in the Civil Service comes in for much debate for there are those who find that "Harragin has ... failed to achieve anything". Here as everywhere there is the demand "equal pay must go along with equal work. Until this is done the scale of justice is unevenly tilted even in the very departments of Justice". (Daily Service, Feb. 17, 1948)

COMPANY MEETING

ARISTON GOLD MINES

Mr. H. G. Latilla's Survey

The eighteenth annual general meeting of Ariston Gold Mines (1929), Limited, was held on June 18 at Chartered Insurance Institute, 20 Aldermanbury, E.C.2. Mr. H. G. LATILLA, chairman of the company, presided.

The Chairman, addressing the meeting, said: The reports and review which have been in your hands for some days deal so fully with the position that there is little which can usefully be said.

There is an item in the accounts dealing with "Freehold property," which calls for brief comment. You will have noted it has disappeared, the reason being that we cashed in a quick and satisfactory profit.

Broomassie Drive—A cable received states North crosscut 376 has intersected reef with poor values, but quartz exposures continuing strongly. No details are given of widths or values.

You may like to know that the sterling value of our proved ore reserves—of 3,353,988 tons with an average value of 6·5 dwt.—and based on present price of gold, and actual recovery figures, namely, 90 per cent., is £8,449,219. From this, of course, has to be deducted working costs, a fluctuating factor. I put it in this rather unusual way, not with any idea of creating optimism, but because I think many shareholders might like to have the information.

Rise of Costs

The following is extracted from the Chairman's statement which was circulated with the report and accounts:—

The reasons for the progressive increase in the costs of production are threefold; firstly, the substantial wage increases granted to the African workers by the Government-appointed Arbitrator, following the strike in October/November last year. It was recommended by the Arbitrator that these wage increases should be made retrospective for six months, a concession that cost our company £22,679, and increased working costs for the year under review by 1/8d. per ton. In fact, the wage increases for a full year will add 3/4d. per ton to working costs. Secondly, we were temporarily mining a very slightly lower grade ore; and finally, we have the ever rising costs of all classes of mining supplies and machinery.

Taxation Burden

I had hoped to have been able to give you some encouraging news concerning taxation, with which Gold Coast mining companies are grievously burdened. I refer particularly to the export duty that is charged at the rate of 17/5½d. on every ounce of gold produced and delivered. Strong representations have been and are continually being made to the Gold Coast Government for a substantial reduction in this deplorable tax, which is imposed on all gold producers alike, irrespective of whether their gold reserves are of high or low grade, and produced at a profit or a loss. Such a tax is unscientific and harmful, and we hope to see it abolished altogether. The gold mining industry, through its representative body, the Gold Coast Chamber of Mines, has, as I have said, lodged a very strong case for the repeal of this tax, and I understand the Gold Coast Government are not unsympathetic. Our industry is in urgent need of some such assistance, being one where no compensating rise in the value of the commodity has, as yet, taken place to offset the many heavy increases in the costs of production.

Position Summarized

Highly encouraging results have attended development work on the 17th and 20th Levels of the mine to the north of the North Shaft, where a new orebody is being opened up. A well-known mining engineer who visited the mine very recently expressed the view to me upon his return that this particular area could well be described as a "New Ariston"! I will give you the figures to date, and you may form your own conclusions.

I did my best at our meeting in February to bring you up to that date with regard to the position at the mine. I propose now to inform you briefly as to the most recent developments, and to summarize the facts as I see them today. So that you may, perhaps, more easily grasp the situation, there is attached to this review a small plan which should be read from right to left. At the 17th level, some 1,200 feet from the north shaft, an orebody was entered. The work at this level has opened up an oreshoot so far 342 feet in length, disclosing a reef 104 inches wide, with a value of 6·9 dwt. and at the 20th level, 645 feet in length, width 92 inches, not fully exposed, with a value of 9·8 dwt.

I might tell you that in three crosscuts through the reef at this 20th level and over a length of 430 feet, the full width of the reef appears to be 168 inches, with a value of 8·3 dwt. To quickly bring home to you the possibilities, and at the same time to make it quite clear that this is not any computation of ore reserves (because that cannot be done until the orebody is opened up on four sides), it is reasonable to expect that there exists in this block of ore roughly 250,000 tons.

Broomassie Drive

This brings me to the continuation of the work beyond the section already described. The drive is known as the Broomassie drive and the face is roughly 9,350 feet from the north shaft, leaving us some 1,130 feet before we get below the old Broomassie main shaft. At the point where we are now operating a crosscut, the most northerly of a number of crosscuts seems likely to have just cut the main orebody worked by the old Broomassie Company. We have a cable stating that the width of the reef is 22 inches and the value is 25·3 dwt., equal to 557 inch-dwt. It is possible that before the meeting another crosscut to the north may intersect the reef. Results will be published immediately the news comes in. We must not, of course, permit ourselves to become unduly elated at the result of this particular crosscut—but we are entitled to be encouraged by this first taste of success from a great enterprise.

I would like to emphasize that the orebody nearest to the North Shaft is really a part and parcel of the main Ariston mine, although it is a new discovery; but the other orebody at the far end of the drive, plus anything which future developments may disclose, is really a joint venture of Gold Coast Selection Trust, Marlu and your company. Much work has yet to be done to enable us to gauge the possibilities and, of course, it is too early for us to formulate any scheme to deal with this Broomassie mine.

Tackling Costs Question

Having given you what I think are the bright spots of the mining position, I feel I must refer to the high working costs at present obtaining. We are assured that these costs can and will be reduced. The increase in milling alone will naturally bring down the cost per ton, but what our management is aiming for is greater efficiency with less expenditure.

We are considering the formation of a power company to be jointly owned by Bremang, Gold Coast Main Reef and Ariston. This should be helpful in reducing costs, and ensuring adequate power for all three companies. Our thanks are due to the management and staff for their continued good work and enthusiasm which has brought about the satisfactory state in which your company is today.

The report and accounts were unanimously adopted.

Commercial News

Board Changes

GOLD & BASE METAL MINES —Messrs. A. Hedley William Arnall have been elected directors. Mr. Arnall was, until general manager of the Company's ties in Nigeria.

Personal

From the June issue of *The Bu* the Institution of Mining and Meta the following movements of Me Associates and Students, of inter West Africa, are abstracted:—

MEMBER: Mr. Arnold S. William gone to Nigeria.

ASSOCIATES: Mr. C. W. F. Bond returned to the Gold Coast; Mr. J. Esmonde has gone to Eire, on leave fr the Gold Coast; Mr. W. P. Gaskell b returned to the Nigerian Department Mines, at Jos; Mr. Alfred Mann h returned to Prestea, with Gold Coast Ma Reef; Mr. T. Penhale has returned Nigeria.

Refined Oils and Fats Prices

The Ministry of Food announces that there will be no change in the prices of refined oils for the eight-week period ending August 14.

New B.E.S.T.E.C. Members

The B.E.S.T.E.C. group of engineering companies has been augmented, effective June 1, by four new members. These are British Aero Components, Limited, of Coventry; Richard Lloyd Limited, of Birmingham; Pultia Limited, of Salford; and L. M. Van Moppes & Sons of London, N.W. Exhibits of the products of these new members will be seen on the B.E.S.T.E.C. stand No. 237 at the Machine Tool & Engineering Exhibition to be held at Olympia (August 26 to September 11) along with those of the other ten members of the Export Organization of B.E.S.T.E.C. Agents have now been appointed in over 63 world markets. Another exhibition of B.E.S.T.E.C. products will be seen at the Copenhagen Exhibition (September 18 to October 3) on the Stand of Hans Schroder (of Norre Farimagsgade 65/67, Copenhagen). Also Mr. H. P. Potts (Managing Director of B.E.S.T.E.C.) is at present visiting the Toronto Exhibition, to establish the sales of B.E.S.T.E.C. products and secure additional agents in Canada and the U.S.A.

The Nanwa Gold Mines

The directors of The Nanwa Gold Mines, Limited, announce the issue of 723,530 shares of 1/- each at a premium of 1/6d. per share (or 2/6d. gross). This offer comprises the balance of the unissued share capital and follows the exercise of 1,276,470 option rights by holders of the two million option certificates. The balance of 723,530 shares is thus available to share holders on the basis of one for every 13 units of stock held by members at the close of business on May 27. Fractions of shares will be disregarded. At the same time, shareholders are invited to apply for any additional shares that may be waived by members otherwise entitled to take them up. The closing date for applications is Monday, June 28.

The purpose of the issue is to provide

...iant cotton tree which bears ...me of Tom Cringle stands on ...oad from Kingston to Spanish ...n and is named after the hero of ...m Cringle's Log', an early nine-...nth century adventure story set ... the West Indies. Tom, a young ...aval officer in the tradition of Mr. Midshipman Easy, deals with slavers and privateers in the summary and effective manner expected of such heroes and the book also contains entertaining and informative descriptions of the way of life of the West Indian people in those days. Much has changed since the book was written but the great tree remains as a link with the Jamaica that Cringle knew. The capital of the island was transferred from Spanish Town to Kingston in 1870 and the port of Kingston now handles a volume of trade which would have staggered the merchants of a century ago. Full and up-to-date information from our branches in Jamaica on industrial conditions and commercial trends in the island is readily obtainable on request.

WEST AFRICA AT WESTMINSTER

African Ten-Year Plans

MR. REES-WILLIAMS stated, in the House of Commons last week, that ten-year development programmes for all the African territories have been approved, except that for the Gold Coast, which has been referred back to the Governor for further consideration. Of the £131,284,000 required to finance the plans already approved, £43,400,000 is to be drawn from the territorial allocations under the Colonial Development and Welfare Act; and the remainder, from loans and local sources. These figures do not take account of regional allocations to East and Central Africa, or of the central allocations from the Colonial Development and Welfare Fund on which each territory is drawing.

African opinion, said Mr. Rees-Williams, has been and is being associated with the preparation and implementation of the programmes through the Legislative Councils and the Central and Area Development Authorities and Committees in the various territories.

Labour Exchanges

Particulars of Labour Exchanges in African Colonies were given by Mr. Rees-Williams in reply to a question from Mr. Dodds-Parker. In Nigeria, he said, employment exchanges and registration offices for adults have been established at Lagos, Benin and Sapele. In addition, there are exchanges for juveniles at Lagos, Benin, Ibadan and Sapele. Full use is being made of all the exchanges except, as yet, in the case of the adult exchange at Benin. A further exchange at Jos, to deal initially with tin mines labour, will be opened shortly.

In the Gold Coast, the offices of the Labour Department at Accra, Sekondi and Kumasi and most District Commissioner's Offices constitute small unofficial labour exchanges. In addition, there are 17 Labour and Resettlement Advice Centres, the services of which were sought by approximately 30,000 persons during 1947.

In Sierra Leone, labour exchanges have been opened at Freetown, Bo and two smaller centres for the use of ex-Servicemen and civilians. During 1947, as many as 22,438 persons registered for employment with the Freetown exchange, of which 12,160 were placed in employment. Corresponding figures for the exchange at Bo were 2,050 and 904 persons.

In Gambia, it has not been found necessary to establish a labour exchange, but an unofficial register of clerks, tradesmen and domestic servants is maintained in Bathurst by the Labour Officer. During 1947, approximately 500 persons were placed in employment by this means.

Gold Coast Pottery and Furniture

The Gold Coast does not yet produce pottery on a scale commensurate with an export trade, said Mr. Rees-Williams, in another reply. The development of an export trade in furniture was already under consideration; and the possibility of developing pottery as an industry will shortly be considered in the Gold Coast.

Police in Sierra Leone

Dr. Segal asked the Secretary of State for what reasons certain provisions—that the police may perform military duties within and without Sierra Leone, that no public meeting or procession may be held without prior licence by the police, and that no police officer may be a member of any political organization—have been included in the Sierra Leone Police Ordinance of 1947? To what extent, he asked,

ADBURY

it should circulate in tropical countries. Books are free, or at least there should be no restriction on reading because the sun is warmer or colder in the countries where readers live.

At the same time, it is possible to assess reader appeal on the basis of the personal experience of the readers. *Atonement in the Sun* seems to fall within a category of some such assessment. There is sun enough and there is Africa enough; but the book is mainly a study of three Frenchmen one good, one bad, and one who did the atoning. It is a powerful novel but its real homeland is France and the skill of the translator does not wholly succeed in removing a nostalgia for the French words which, by virtue of their originality, are needed to perfect the unity of what is undoubtedly a novel of high merit.

International Locusts

Seasonal Breeding and Migrations of the Desert Locust (Schistocerca Gregaria Forskal) *in Western and North-Western Africa* is an interesting publication, not only for those specialists intimately concerned with locusts, but also for the greater public. Because this "Anti-Locust Memoir No. 3" shows how far more successful is the geographical than the political approach to Africa. The West African area under reference comprises French North Africa, Spanish Morocco, Libya, Rio de Oro, French West Africa, French Equatorial Africa, Gambia, Sierra Leone, Gold Coast and Nigeria.

The information it contains is therefore complete, and does not stop short as soon as national boundaries emerge. The locusts of different regions within this large area have different habits, but the value of the information about these habits may be assessed from the bibliography of the memoir where are included research works from all nations in the area. For the specialist, the memoir, which is published by the Anti-Locust Research Centre (British Museum, Natural History) will be greatly enhanced by a profusion of maps and useful appendices.

COMPANY MEETINGS

Ashanti Goldfields Corporation

Taxation and Labour Problems

The fifty-first ordinary general meeting of the Ashanti Goldfields Corporation Limited was held in London on May 20, Major-General Sir Edward L. Spears (the Chairman) presiding. His address, which had been circulated with the report and accounts, was taken as read. It referred in the first place to the retirements of Mr. G. W. Eaton Turner and Mr. H. E. Ashby, both of whom had given invaluable service, for 26 years and 41 years respectively, and whose counsel would still be available with their unrivalled knowledge of the affairs of the Corporation.

The Chairman then dealt with the accounts and balance sheet, which were fully reported in the previous issue of WEST AFRICA. Development had been handicapped by the fall in output per man and the limitations of shaft capacity; and both of these subjects were being tackled. The new treatment plant had now been practically completed, which reflected great credit upon the management and engineering staff. It had cost a large sum, but operations had proved that it had been a very wise investment. Its coming into operation was an important milestone in the history of the Corporation. The treatment of Ashanti mine ore had never been a simple process, and the new plant did not give as high a rate of extraction but, with experience, the rate was being gradually improved and the saving, in operating costs, more than offset the difference in gold production. Since November, 1947, the whole of the output was being treated by the new plant.

Development and Shaft Sinking Programme

Priority was being given in their development programme to the exploration of the Main Reef below No. 32 Level and it was encouraging to know that progress was being made with the sinking of the subvertical shaft planned to go down from No. 31 to No. 42 Level. The subvertical shaft had been sunk half way to No. 33 Level. The sinking of the new circular ventilation shaft had been considerably delayed awaiting equipment. That had now been received and steady progress could be expected. Ayeinm Mine had been re-opened but most of the work done had of necessity been of a preliminary nature, preparatory to stoping. The examination of the area between Ayeinm and Sansu had begun and steps to re-open Sansu Mine had been taken. The area was being systematically surveyed by a special team, and a diamond drilling programme had been arranged. The changing conditions in West Africa had brought new problems, and new methods were required to meet them. Rising costs had made it imperative to introduce mechanization wherever possible, but the slowness and difficulty in obtaining supplies was a severe handicap.

Turning to taxation, the Chairman said that the Export Duty of 17/5½d. per ounce, equal to 10 per cent. of the gold produced, had cost £168,121, and took no account of operational costs. Income Tax took £285,529; Profits Tax, £107,000; and Royalty, £83,057. Thus, out of earnings of £893,000 the Government took £611,000 or over two-thirds. It was harmful to the industry and tended to limit production when gold was important in national economy.

A most serious problem was labour. Inflation and the lack of consumer goods had caused output per man to be reduced. The Corporation had instituted canteens, serving good food at half cost price, but interested parties had secured the boycotting of these canteens, which had been closed; and this applied to the agreement whereby the local stores at Obuasi had co-operated in a scheme for an equitable sharing of scarce goods at reasonable prices. The Corporation was making every endeavour to train Africans for the higher and more responsible positions; and a scheme of apprenticeship was operating in the fitting shops.

The Chairman then turned to the strike, and revealed the background which was more or less omitted from the report which was officially drawn-up. He asked for a return to the happy conditions of the pre-strike period, unaffected by large doses of ideologies which had proved such dangerous potions in lands, like the Gold Coast, which were unprepared for them.

Recent Development

At the meeting, the Chairman said that members would no doubt have seen the report of the recent development on No. 29 Level. The lateral extent of the pay shoot on the lower levels of the Mine had been known for some time, and the location of further payable reef so close to the assumed boundaries had not been expected. The guarded optimism expressed in his printed speech had been justified by results. In crosscuts Nos. 19, 20 and 21 South, a strong body of quartz had reappeared after values had apparently run out. Over a length of 100 ft. represented by those crosscuts values averaging 35 dwt. over a width of 27 feet of reef had been proved.

The latest information on a further crosscut (No. 22) was that values averaging 35·9 dwt. over a width of reef of 41 feet had been proved. Results on No. 30 Level, too, suggested that the new shoot was of considerable importance. Work was being accelerated to prove the upward and downward extension of the new ore body. Until then its size and value could not be assessed. He was indeed gratified to give them the good news—in fact, the very good news—of this development.

The report was adopted and a Final Dividend of 17½ per cent., making 42½ per cent. (less tax) for the year, was approved.

Bibiani (1927)

Sir Edward L. Spears's Address

The twenty-first ordinary general meeting of Bibiani (1927) Limited was held in London on May 20; Major-General Sir Edward L. Spears (the Chairman) presiding. In his address, which had been circulated with the report and accounts, and was taken as read, the Chairman referred to the retirements of Mr. Turner and Mr. Ashby, as indicated at the meeting of Ashanti Goldfields Corporation. He then dealt with the accounts, which were fully reported in WEST AFRICA (May 22).

He felt it necessary to explain why they had included a provision for Income Tax for both 1947/48 and 1948/49, in these accounts. Under the Finance Acts, the assessment for each tax year was based upon the profits for the year ended within the previous tax year. At each Balance Sheet date, the assessment which had to be included as a liability was that based on the profits for the preceding accounting period, as the assessment on the profits in the Profit and Loss account attached to the Balance Sheet did not arise until a later date.

Some Companies in the past had been of the opinion that, in addition to including this liability, usually known as the legal liability, provision should be made for Income Tax on the profits for the period covered by the Accounts. They were advised by their Auditors that that view had been generally accepted as the better practice and that, when possible, the necessary reserve should be built up.

This year, they had a credit in respect of the final amount of E.P.T. recoverable. This amounted to £50,798 covering the fifteen months to December 31, 1946. It had been thought prudent, in conformity with the principle just referred to, to allocate part of this credit, £30,000, to reserve for the estimated liability on the profits in these accounts in addition to the legal liability. This was the reason why there was provision made for two Income Tax assessments this year. In future years, it would only be necessary to make provision for one year. Each year's profit would then bear the charge for its own Income Tax, and not that arising from the profits of the preceding year which might vary in amount.

Final Dividend

An Interim Dividend of 10 per cent. was paid on September 24, 1947, and it would be recalled that, at the time it was declared, they had stated that it was not to be taken as an indication that the total dividend for the year would be increased. When the Interim Dividend was announced, they had every expectation of maintaining the usual rate for the year, their object, when increasing the Interim, being to meet the wish expressed by some shareholders that the yearly rate should be paid in more equal proportions. They had, in the event, had to reduce the recommendation for a final dividend to 5 per cent., making 15 per cent. for the year against 25 per cent. for 1946. Members might ask why this had been done seeing that the balance carried forward had been increased by £25,146 after reserving the extra Income Tax of £30,000.

The cut in the dividend had been forced upon them by the events, following the 10 per cent. Interim Dividend; the strike had cost the Company a month's production; and the ancillary losses had not been liquidated until three months' working. Thus, after five months of the current financial year, they had only £1,959 credit. Output and ore reserves were also down, the latter by some 176,000 tons; but the outlook was more promising.

Turning to taxation, the Chairman said that shareholders should be made aware of the crushing burden of taxation under which they laboured. The Export Duty on Gold amounted to 17/5½d. per ounce, or about 10 per cent. of the gold produced. This impost took no account of operational cost. In the year under review, they had paid £65,569 on this duty but hoped to recover about £17,000 by way of refund. Income Tax accounted for £69,433. Profits Tax was particularly unfair to their industry. The rate of this tax had been increased with the result that they paid 25 per cent. on practically their entire profit. It had been calculated that by the present year the mines on the Gold Coast should be producing 1 million ounces, instead of which the figure of 640,000 only had been attained. Meanwhile, costs of mining and management, including wages and stores, which had greatly increased in price, amounted to £403,728. Depreciation took £51,695 and taxation £150,502 leaving a balance of only £50,116 or 7·6 per cent. on gross earnings for the shareholders.

Labour and Welfare

They had an unusually happy and contented labour force at Bibiani which had been intimidated into striking very reluctantly. They hoped that common sense would make the African employee realize in an ever increasing degree that anything that injured the interest of the mine must affect them adversely. There were many signs that their workers deeply regretted the strike. They were endeavouring to make them realize that good wages could only be provided in return for a good day's work. They were studying and trying out different systems of incentive payment.

The report was adopted and a Final Dividend of 5 per cent. making 15 per cent. (less tax) for the year, was approved.

Well forward on the production lines of the CP manufacturing organization is a range of British-made portable compressors in sizes to meet the needs of all industries.

By adhering rigidly to a very high standard of engineering design and production, CP compressors have established for themselves a reputation for utmost reliability—a most important factor appreciated by the many users of CP plant.

Condensed information on the full range of these British-made plants is given below.

Model	Numbers of Heavy Duty Breakers operated at normal working pressure of 100 lbs./sq. in.	Drives	Mountings

NEWS FROM THE MINES

Naraguta Tin Mines.—Output of tin concentrates, for the month of April, was 27½ tons (33¾ tons for March).

Naraguta Extended Areas.—Output of tin concentrates, for the month of April, was 6½ tons (6 tons for March).

Naraguta Karama Areas.—Output of tin concentrates, for the month of April, was 20½ tons (15 tons for March).

Rukuba Tin Mines.—Output of tin concentrates, for the month of April, was 1¼ tons (1 ton for March).

South Bukeru Areas.—Output of tin concentrates, for the month of April, was 11½ tons (9 tons for March).

Tin Fields of Nigeria.—Output of tin concentrates, for the month of April, was 5½ tons (7¾ tons for March).

Accounts and Dividends

London Tin Corporation

The directors of London Tin Corporation Limited announce that they have decided to declare an interim dividend of 6 per cent., less tax at 9/- in the £, in respect of the financial year ended April 30. This compares with 4½ per cent., less tax, paid for the previous financial year, when no final dividend was paid; and the directors intimate that it is not their intention to recommend a final dividend on this occasion, when the annual meeting takes place, it is hoped, in July. The accounts will be issued as soon as possible after receipt of all the subsidiary companies' accounts from abroad. They believe that the profits for the financial year are in the neighbourhood of £160,000, compared with £117,284 actual for the previous financial year.

Naraguta Tin Mines

The directors of Naraguta Tin Mines have decided to recommend payment of a final dividend of 3 per cent., in respect of the year 1947; and this, with the interim of 2 per cent., will make a total of 5 per cent., less tax, for the year. This is a repetition of the dividend for 1946. An interim dividend of 2 per cent. (same) is declared for 1948, and both dividends will be payable on July 27. The profit for 1947, after depreciation, is declared as £20,314, which compares with £21,264 for 1946.

Naraguta Extended Areas

The directors of Naraguta Extended Areas have decided to recommend payment of a final dividend of 4 per cent., for the year 1947; and this, with the interim of 1 per cent., will make a total of 5 per cent., less tax, for the year. This compares with 6 per cent., less tax, for 1946, when the interim was 2 per cent. An interim dividend of 1 per cent. (same) is declared for 1948, and both dividends will be payable on August 20. The profit for 1947, after depreciation, is declared at £6,181, and compares with £7,492 for 1946.

South Bukeru Areas

The directors of South Bukeru Areas have decided to recommend payment of a final dividend of 7 per cent., less tax, in respect of the year 1947. This repeats the final dividend for 1946, and makes 10 per cent. (same) for the full year. An interim dividend of 3 per cent. (same) has been declared for the year 1948, and both dividends will be payable on August 27.

The program, except for bare mention of the necessity of developing a balanced economy, provides no tangible means for the East African colonies to escape the single-crop-for-export economy which has been the blight of colonial countries everywhere. An agricultural economy, even though mechanized, can never become self-sufficient in the framework of colonialism.

The next question is: where will the money come from? Can Britain herself finance this project, in view of her present straits, or is it expected that American money will come to the rescue, either through private investments, a U. S. Government loan, or a loan through the World Bank? And if outside capital is to be involved, would it not be more proper to place an undertaking of this type — especially since it involves a trusteeship territory — under the direct supervision of a United Nations agency?

Problems of Labor Supply and Land Rights

And what about the labor supply for the vast project? Twenty-five thousand Africans are to be employed in the initial work of bush clearing alone. The Government estimates that a ton of peanuts can be produced for $17.25 but it does not indicate what fraction of this would go in wages to workers. Much is said, however, of providing proper health, nutrition, education, housing and welfare facilities for the employees and their families; but here again the "how" is omitted. The United Africa Company has established no record along these lines in West Africa — far from it.

IF conditions of employment on the project are indeed attractive, Africa workers will be drawn away from the plantations and other enterprises of the white settlers and we may expect a loud protest to be raised from those quarters. Even now the white settlers complain of a lack of adequate labor supply (see *New Africa,* January, 1947).

Apart from the question of wages and working conditions, there is the necessity of inducing the African to cooperate whole-heartedly in a project toward which he may very well be antagonistic. One important cause of such antagonism may be the African's view that his land rights have been violated. The British government passes lightly over this point with the assertion that "for the initial development in Tanganyika no question of disturbing African rights arise, as the land is almost uninhabited." This has been an old, old excuse for land alienation by various governments throughout Africa.

But as the African sees it, no one has the right to take away areas, even though uninhabited and unused, which have traditionally been regarded as the domain of the tribal group. The British government, by-passing the African people, states its intention of negotiating with the respective governments of the three colonies "for the lease of the land to the undertaking for an initial period of not less than twenty-five years, with an option to renew it at the end or during the currency of the initial lease."

In this last point we have one very real explanation of why the United Africa Co. and the British government decided on East Africa rather than West Africa as the area for this project. The land rights of Africans in the East African colonies have

(*Continued on next page*)

FRENCH TOGOLAND—A pioneer system of District Councils has been set up in this trusteeship colony. There are six Councils ranging in size from 21 to 51 members. They are to meet at least once a week and the administration is called upon to submit all legislation concerning taxation, public works, education, etc. to them. There are two types of members on the Councils: permanent ones, mainly chiefs, and others elected for four year terms by adult suffrage.

•

BELGIAN CONGO—The new Société de Colonisation Belge with capital of 35,000,000 francs plans to settle about 1,000 Belgian families in the Katanga Province of the Congo. Le Comité Speciale de Katanga is supplying half of the capital and about 750,000 acres of land. Every colonist will be given approximately 1,250 acres.

•

LAGOS, NIGERIA—Francis O. Coker, President of the All-Nigerian Technical and General Workers Federation and a delegate to the Paris meeting of the World Federation of Trade Unions, was recently arrested and charged with possession of an official secret document in violation of the local law. His trial aroused great excitement. He received a sentence of five years probation.

•

WASHINGTON, D. C.—The U. S. Department of Agriculture reports that the American tin plate industry may import 1,000 tons of palm kernels from Liberia this year. Oil from the palm kernels is an essential requirement in the manufacture of tin plate. The average price paid is $100 a ton. U.S. purchases last year from Liberia amounted to 500 tons. This was sent through U.N.R.R.A. to Czechoslovakia.

West African Labor

Although the Nigerian Labor movement is still in its infancy, dating its actual rise as a positive factor in Nigeria to the general strike in 1945, it is today a growing and developing force on the West Coast of Africa. Following the 1945 strike the Tudor Davies Commission gave the labor unions their first major labor victory when the Commission granted the workers a 50% wage increase. The Harrigan Commission has greatly added to the work of the Tudor Davies Commission developing a reliable and sound basis for African labor to grow upon. Some idea of what at

It can be stated then, that to-day the West African Labor Movement is growing in both stature and power in the West African areas and that it is at least beginning to assume its proper place in West Africa society.

6

I.L.O. Conventions and Recommendations

The thirtieth International Labour Conference at Geneva from the 19th of June to July 11th, 1947, adopted a series of conventions designed to act as a charter for colonial peoples. These conventions represent three successive years of debate and preparation in I.L.O. Of the five main conventions No. 82 is concerned with "social policy in non-metropolitan territories"; No. 83 deals with "the application of international labour standards to non-metropolitan territories"; No. 84 has to do with "the right of association and the settlement of labour disputes in non-metropolitan territories, No. 85 concerns itself with "labour inspectorates in non-metropolitan territories; and No. 86 sets "the maximum length of contracts of employment of indigenous workers. The above conventions, if generally applied, should greatly transform and better colonial labor conditions. However, it should be kept in mind that the application of the above conventions varies greatly. at present

> "Figures show that only a small proportion of the possible number of ratifications have taken place, small even when allowance is made for a number of special considerations. Even after ratification there is only a report from the Governments concerned to show that the provisions are being enforced. Conventions have their influence even when they are not ratified, but obviously they cannot exert their full effect, and the need to strengthen the present proceedure is undoubted." (London Times, July 12, 1947)

A basic criticism leveled at the I.L.O. Conference from Africa was the failure of the convention to pass the principle "of equal pay for equal work", recommended by the Pan-African Trade Conference held in Dakar, French West Africa, 10 April to 13 April, 1947. (See Marché Coloniaux, April 12 and 26, for summary and comment on Dakar Conference) The Nigerian Daily Comet (Oct. 6, 1947) comments:

> "The fundamental democratic principle 'of equal pay for equal work' for black as well as white workers and civil servants in Africa was rejected by British delegates at the meeting of the General Council of World Federation of Trade Unions meeting at Prague."

The West African Review (August, 1947) also says:

> "It may be regretted that the principal of 'equal pay for equal' work - always a considerable bone of contention - has had to be deferred on the advice of the British Government representative, but since the problem has yet to be solved in the United Kingdom the difficulties of its application in the Colonies are magnified."

The most significant decisions of the Conference were the "labor inspections and freedom of association proposal which carry behind them connotations of a comprehensive system of international labour inspection.

> a textile industry and to start what amounts to a consumers cooperative ..... It is therefore welcome that the RWUN is planning to run the proposed newspaper by a cooperative society which will also own retail stores and shops. A well organized consumers cooperative retail society typifies the hall-mark of economic democracy, and the Railway workers, by introducing one in answer to the combines would be doing this country a great service. (West African Pilot, Jan. 27, 1948)

In other parts of West Africa similar labor developments and activities are taking place. In the recent call for the amalgamation of the Gold Coast U.A.C. African Employees Union with the Amalgamated Union of UACAfrican Workers of Nigeria is the first positive step toward uniting the labor movements in Nigeria and the Gold Coast and giving both greater labor strength in the unity of the two territories. The recent strike undertaken by the entire Gold Coast Railway technical workers shows the growing strength of labor on the West Coast and particularly in the Gold Coast.

LETTER TO THE EDITOR

People and Government in Sierra Leone

Sir.—Will you please allow me to say a few words in reply to Mr. A. Sayers, the Ag. P.R.O. of Sierra Leone, in your edition of February 28, on this very important subject? It is not generally realized, especially in the Coast, how significant are the times in which we live. World events have inevitably stimulated race consciousness in West Africa, as they have done elsewhere in the world. This is the fundamental fact against which the local demand for improved conditions, and especially Government plans for their solution, must be judged. We cannot escape the logic of these facts by casuistry or legalism, but by honestly facing issues.

It was in this spirit I addressed the article which is the subject of this correspondence. Although naturally I wrote as a private individual, I need not remind you that I have special facilities for keeping abreast of all Development planning, not only in Sierra Leone but in the whole Colonial Empire. As a member of the Colonial Economic and Development Council, and the Colonial Advisory Medical Committee, among other things, I should be most reprehensible in basing criticisms on "inaccurate or insufficient information." What is more, I visited Sierra Leone in 1945, and not only visited the Harford Girls' school at Moyamba, but Bo and other centres, and was able to discuss *with every head of department*, and the heads of the Missions, the plans for development and welfare. As an expatriate Sierra Leonean, and the accredited representative in England of more than one local organization, I am also kept *au fait* from the point of view of my countrymen.

While I welcome the willingness of the Sierra Leone Government to take the public into its confidence on this matter, it is with regret that I note that the P.R.O.'s statement sheds no fresh ray of hope on the confused situation in Sierra Leone. To talk of "all major non-official interests" being consulted means very little, unless they have been consulted in the actual drawing up of the various sections of the plans, or allowed to alter them in detail where necessary. If, on the other hand, as happened once to my information at Cline Town, where the local residents were summoned to discuss the plans for their district without any plan being produced—indeed I understand they were told that only Members of the Legislative Council could see it—such gestures are meaningless. To sum up: "Unofficial members" however unanimous, does not always mean what it seems at first sight, in a Legislative Council where, out of 22 members, only three are elected representatives.

Situation is Serious

I am anxious not to descend to polemics. The situation in Sierra Leone is serious, and I know is a source of anxiety to all who wish to see the development of progressive policies there. The fact is that Fourah Bay College is a part of the whole structure of education in Sierra Leone, *and the whole is a cause for grave concern*. The basic factor throughout is that in Sierra Leone, unlike the Gold Coast, the plans for education are an official conception, and Africans are not consulted fully and freely and at every stage in their drafting. This criticism is prominent and constant in the local Press.

In the Protectorate Assembly of 1946, the Chiefs moved (i) that a special education tax be levied, (ii) that the mines be nationalized. They also expressed the wish that Fourah Bay should be made a National College, to include the teaching of agriculture. It is worthy of note that, the following year, the Protectorate Assembly was unexpectedly terminated by the Chief Commissioner before the Chiefs could raise any matter under "Other Business." If my information is wrong, I shall be only too glad to make amends!

The Protectorate is governed under "Indirect Rule." That means that its two million people are approached by outsiders through their Paramount Chiefs (twenty-six) and the sub-Chiefs (over a hundred). In the approved record of the interview of December 9/10 the Ag. Governor admitted that although "contributions by individuals were entirely a matter for the personal concern of each person . . . ," the Paramount Chiefs were forbidden to recommend the sub-Chiefs or their people to support the Fourah Bay College Endowment Fund on pain of disciplinary action. Civil Servants (at least the senior ones) were similarly warned off, and so were all business firms, because any contributions from them would be from taxable profits. This latter is what shocks opinion in the United Kingdom most profoundly. In practice, it means that of the two million people of the Protectorate only twenty-six can be approached for their support!

About the site of Fourah Bay College, I said that the Government had taken it over for a Deep Water Quay, and had not provided an alternative *permanent* site nor offered to help in the search although asked. Mr. Sayers says exactly the same thing, although in a different way! This is a fundamental issue in the fight for Fourah Bay; the Government knows it; the C.M.S. know it, and have held out from compounding the old site for a cash settlement.

The splendid Harford Girls' School is the brightest spot in the education of girls in the Protectorate, and we cannot be too appreciative of our debt to the U.B.C. Missions. Why Government has only planned that, in ten years, the girls should still only reach Cambridge *Junior* standard is difficult to understand. One certain fact is that, under those conditions, no girl will be able to pass from there to Fourah Bay for a university education! As it is, Harford is neither new nor secondary. The news of a Government secondary school for girls will come as a welcome surprise to Sierra Leoneans, who no doubt will want to know what Government calls "secondary." The Mission secondary school for boys has been discussed for a few years, and will materialize eventually; for the Missions usually keep their word. Surely Government is not taking credit for this? Certainly it is not included in the published Development Plan.

I must confess to little satisfaction in writing this letter. It is like fiddling while Rome burns. In a way, it is symbolic of the attitude to affairs in certain Colonies. The broad issue in West Africa is not particular minutiæ, but a bold policy of constructive planning, which will harness the more responsible forces among the people, and together forge a link of progress and cooperation between the races. In our leaders, in our tradition of humanistic and liberal education headed by Fourah Bay College, Sierra Leoneans have inherited a sense of *worth* and stability. We must be careful lest, through undue reaction, we sow the dragon's teeth of irresponsibility and indiscipline.

Yours, etc.,

R. B. WELLESLEY COLE.

Yoruba Bible

A British and Foreign Bible Society exhibition, which is to tour Britain for three years, was opened at Newcastle on March 2. Called "Is this the way?" the centre-piece of the display is a group of about 30 water-colours forming a chronological representation of Biblical translations. One of the pictures records the publication of a Yoruba Bible in 1850. A large map locating languages used by the society, and an electric press-button quiz are features of the exhibition. The British and Foreign Society has so far issued over 530 million copies of the Scriptures in 769 languages and dialects.

Precious Enclosures—

A letter to or from home is doubly welcome when it includes photographs. The high quality of Ilford Selo Films and their wide response to colours ensure that every picture of people and places has the same vivid quality in whatever part of the world it is taken.

EDUCATION

The Scarbrough Report

With the cessation of war and the realization of the need, perhaps more urgent now than ever before, to know better our neighbors near and far the findings and recommendations of the Interdepartmental Commission of Enquiry on Oriental, Slavonic, East European and African Studies are of importance not only for Britain but for other countries as well. In the words of Lord Hailey:

> There is much that must be obscure in any views which we can now form regarding our future relations with some of the peoples with whom Imperial policy or economic developments have given us a close connection in the past. But one thing is obvious. We are entering on a stage in which our relations will be regulated in a diminishing degree by considerations based on political supremacy or economic strength.
>
> ....we shall have to rely increasingly on personal associations, on cultural contacts, and on the mutual understanding derived from the exchange of knowledge regarding our civilization and theirs. It is a phase, therefore, in which a study of their language and culture must become a matter of national concern rather than of individual interest. That is the more essential because, with the growing tide of nationalism in some of those countries, any desire shown by us for increased knowledge of their way of life and thought must make for friendship with us, just as any apparent neglect of it will be a cause of estrangement.
>
> If so, it becomes important to note the extent to which the State has hitherto concerned itself in the organization of such studies...
> (London Times, June 14, 1947)

A Commission, presided over by the Earl of Scarbrough, was appointed to deal with the whole range of Oriental, Slavonic, East European and African studies under present conditions. This Commission has made an intensive study not only of the available facilities for linguistic and cultural studies, but also of the position of such societies or institutions as, for instance, the British Council or the Broadcasting Corporation. The Commission emphasizes that it is concerned not only with the teaching of languages (although already in 1942 the Associated Chambers of Commerce found occasion to emphasize the benefit of employing agents familiar with the language as well as the life of the peoples with whom they were in contact) but rather with "the interpretation to the British people of the whole way of life of these peoples",

Upon reviewing its findings the sub-Committee for Africa concluded, due to the fact that the study and teaching of African languages is "a highly specialized business", that the "shortage of trained staff is one which can scarcely be overcome for a long time to come" and that "no university, other than London, has shown the smallest desire to undertake the teaching of African languages",

> ....the teaching of African languages must continue to be concentrated in the School of Oriental and African Studies, with the consequence that outside London the present divorce between linguistic and non-linguistic studies will persist... In so saying we are not unmindful of the opinion expressed in authoritative circles,..to the effect

3-Education

(ii) For the wider public, our recommendations regarding expansion of research work and of university facilities for teaching are of great importance. It is on research that good books are based, and this need not necessarily apply only to specialized publications The greater the number of those engaged in academic work, the greater will be the opportunities for individuals to produce popular works that are really sound.

(iii) The Colonial Museum in Brussels is an example to the world of what may be done to give a wide general public an insight into the way of life of one part of Africa. The example is one from which our own museums might benefit.

(iv) We consider that special attention should be given to making the stay of African students at our Universities and other institutions profitable both to the students themselves and to this country. The best way in which this can be done is...to enable these students to enjoy all the social amenities provided for other students....they should be assisted to mix with British students having interests in common with them and to obtain some acquaintance with British family life.

The impressive results achieved by the International African Institute have received due praise and the Committee finds that in consideration of the many valuable services it has and is performing

> ....it is essential that the Institute should be in a position to continue its function of sponsoring and financing the publication of books embodying the results of research....
>
> In view of the benefits which in the future, as in the past, are likely to accrue to British Colonies in Africa from the operations of the Institute, we recommend that His Majesty's Government should make a substantial annual free grant to its revenue. We suggest that the sum should be not less than £1,500 a year.

Although the cost to the State in carrying out the recommendations of the Scarbrough Commission has been estimated at £250,000 at the end of the first five years the Committee finds that "our own most pressing problems are seen to be but parts of world problems, and the peoples of the world are drawn together as never before by a common need to struggle out of an abyss of political and economic disorder caused by the war. It is against this background" that the report is "to be read and considered". (Report of the Interdepartmental Commission of Inquiry on Oriental, Slavonic, East European and African Studies, 1947)

Problems of Native Students in the U.K.

At a recent press conference, the head of the Welfare Department of the Colonial Office, Mr. J. L. Keith, gave several pertinent facts about Colonial students in the United Kingdom. A report of the interview and editorial comment on the situation appears in the 12 Feb. (1948) issue of East Africa and Rhodesia (pp. 599-601), from the pen of its editor, who was present.

Mr. Keith said that his department had direct responsibility for more than 3200 Colonial students at present, and the number is increasing. In 1941, when the department was founded, the total was 80. Of the present students, 1500 are on scholarships and 1700 are supported privately to varying amounts. Three-fourths of the department's time was spent finding places in universities and colleges, administering the scholarships, and supervising the welfare of the students. As all British Universities and Colleges are over-crowded and must reserve 90% of their places for ex-servicemen, the department had to allocate admission priorities among the Colonial students.

Proper living in the U.K. now costs at very least £275 to £300 a year for students, yet some Colonial Governments and many parents were supplying less than this. Hostels had to be used for accommodation, though disliked in principle as it encourages segregation. The possibility of getting more Colonial students into Australian and Canadian Universities was being examined. Groups of Colonial Governments had been asked to send welfare officers to help look after their students, and West Africa and Malaya-Hong Kong have already done so; officers from East Africa, Mauritius and the West Indies were expected soon.

The West African liaison officer, Major H.B. Shepherd of Nigeria, said that non-scholarship students were very distrustful of information given them in the Colonies as to difficulties they would face, and on arrival in the UK would seldom come to him for aid, so he had to seek them out. The distressful truth was that they tended to congregate in slum areas, became introspective and hard to handle, and had to work by day to support themselves, leaving little time for study. It was very difficult to find suitable accommodation for them, and much color prejudice was evident. If people would only invite these colored Colonials into their homes it would make an immense difference.

Mr. Keith said that students who did have leisure time were prone just to sit over their fires or go to a cinema and some were leading an irregular existence. Many were not real students, but just grinding away to get law degrees. The East and West Friendship Council was doing good work putting students in touch with British families, but many of the students would not help themselves nor accept help offered. As to curtailing the numbers of Colonial students, whether scholarship or private, Mr. Keith said there could be no question of obstructing anyone in the Colonial Empire who wished to come, they must be quite free to choose for themselves.

The editorial comment by East Africa and Rhodesia reflects the fears expressed by several Colonial Governments, who have seen many of their Native students come back from overseas with quite disturbing ideas as to the eternal truths and values, beside which they make trouble for the Administration, Mission groups, non-official Europeans, and even some Government Department Heads are similarly exercised. So many students, they say, are deriving the worst possible impression of the British way of life. Serious danger is involved in leaving them to their own devices outside

school hours, for many are known to be associating with undesirables of both sexes, many with police records. The inevitable result is that these students return to Africa as political agitators of a vicious type. Keep them in the Colonies until they are older, and can take graduate work; assemble them in hostels under discipline such as the resident schools impose; send home all that are not properly behaving; reduce the numbers allowed to come and select only the excellent ones - these are some of the remedies suggested, but all agree that something ought to be done about it.

Notwithstanding the difficulties to be encountered by going abroad to study Africans still prefer that to their own schools. According to reports Makerere College is"still struggling upward" and in the African's eyes "there is nothing to equal a stay in an older institution, learning by seeing how things are done by a much more mature country."

women may be put in charge of family affairs, provided they have the appropriate qualities of ability and the experience of age. This means that, as trustees for lands and property, their influence in the community is as great as that of any male head of a family, and that as such they are equally eligible for political office, such as village or town headmen, and members of the Native Administration. In some cases, women are appointed as paramount chiefs, and in some chiefdoms the institution is apparently a regular one. To-day the fact that pecuniary considerations are replacing occupational and traditional ones in determining the status of women strikes right at the heart of the indigenous structure. Literate women are as yet very few in number, but their position is an important index to current developments in the social structure. There are some 2,000 girls at present at schools. Most girls do not go farther than Standard IV and few gain qualifications sufficient for the only careers, nursing and teaching, open to women in the Protectorate. A new type of society, inspired by European standards of life and etiquette, is emerging out of the old, but offers, as yet, a relatively low status for its women members.

The Nigerian Schoolmaster, Vol. XII, Nos. 1 and 2. This is the organ of the Nigerian Union of Teachers. The present numbers bring an article on the higher education programme in West Africa and reports on the Sixteenth Annual Conference of the Nigeria Union of Teachers at Ilesha, and on the activities of the Education Committees, Western Provinces, for the year 1946–47.

The Anti-Slavery Reporter and Aborigines' Friend, Series VI, Vol. 3, No. 4, January, 1948, contains an article on "Some Reflections on East Africa To-day" by H. W. Foster. He gives the impressions of a traveller who revisits East Africa after a long absence and discusses the main things that appear to stand out for him. He shows how the East African territories have assumed a new importance to-day in the strategic and economic spheres. The granting of independence to India and Burma has altered the strategic importance of the Indian Ocean and the development of modern methods of warfare have minimized the importance of Egypt and the Suez Canal. There has been a shift of strategic importance to the East African mainland. In the economic sphere East Africa has a great contribution to make to the regeneration of British power. With the loss of our overseas income, the debts that we have incurred through war, and the shortage of the dollar, it becomes imperative that we develop the productive capacity of these territories. The writer refers to the enormous industrial potential in East Africa, as yet to a large extent uncharted and unexplored, and cites the importance that should be attached to such schemes as the Kariba Gorge scheme to harness the waters of the Zambesi, the groundnuts scheme in Tanganyika and the hydro-electric scheme at Jinja in Uganda. But the only answer to real development is mechanization and in this connection the African must learn to show greater responsibility in charge of machinery than he has so far. Not only this lack of responsibility but his economic backwardness is also a serious stumbling-block to progress in the territories, and examples are given of how cotton is allowed to rot in the fields of Uganda, because only enough is harvested for immediate cash needs, and the retention of cattle on over-grazed lands in the other territories, in the face of a world hunger for meat. The writer ends his article with a spirited plea for women's education, which he considers is the only way to uplift the moral and economic status of the African.

Bulletin of the Imperial Institute, Vol. XLV, No. 2. In "The Geology and Mineral Deposits of Uganda", K. A. Davies, Director, and C. B. Bisset, Deputy Director, Geological Survey of Uganda, give an interesting and comprehensive survey of the resources of the Uganda Protectorate, and deal with future problems and development which have a bearing on the economic geology.

Man, Vol. XLVII. In an article on "Early Foreign Trade in East Africa", G. A. Wainwright describes the history of Egyptian and Greek trading expeditions into the Horn of Africa and as far south as Zanzibar. He bases his remarks on finds of coins and other trade relics, and the survival of ceremonies which bear resemblance to foreign festivals and customs.

Race Relations, Vol. XIV, No. 1, 1947, has "A Note on the Indo-European Situation in Natal" by Maurice Webb, and an article on "As an Indian sees Natal" by V. Sirkari Naidoo. The first article contains useful figures on education, housing, social welfare, etc., the second has a number of tables on population growth, religion, languages and legislature.

Far Eastern Survey, Vol. XVII, No. 1, has an article on "Human Resources of Micronesia" by John Useem. All of the Micronesian islands have far fewer peoples than in the past. Since the coming of the foreigner, native populations have been reduced to fractions of their former numbers. There are native groups who have become virtually extinct. During recent decades, however, a moderate increase has taken place among the Natives of Micronesia as a whole although some sections are still losing numbers. But there will be no over-population problem in Micronesia in the forthcoming years. In areas where increases may take place there are enough resources to absorb

It may well be ter teaches me carpentry. , and as a result I shall t will hardly develop my ght me by one who has taken a scientific training in carpentry he will stimulate my intellect as well. Not only shall I then be an expert carpenter but an engineer also. For the expert will have taught me mathematics, will have told me the difference between the various kinds of timber and where they come from, thus giving me a knowledge of geography and also a little knowledge of agriculture. He will also have taught me to draw models of my tools and given me a knowledge of elementary geometry and arithmetic." In learning by doing, Gandhi believed children were bound to become self-reliant and cheerful. Their power of self-expression would be well developed and by participating in co-operative work they would acquire the spirit of toleration, sympathy and brotherly regard. That his views were also actuated by his philosophy of non-violence is clear from his declaration: " If we want to eliminate communal strife we must start with foundations pure and strong by rearing our younger generation on the education I have adumbrated. That plan springs from non-violence."

It can be seen, therefore, that Gandhi's conception of education is based on the main principles of his life: dignity of manual labour, his identification with the rural life, and his ideals of non-violence and truth. In Indian education he will have the pride of place which Pestalozzi had in Switzerland; and if future generations revere him first as the " father of the nation ", they will also recognize him as the architect of Indian education and the champion of the pragmatic approach.

Notes on Articles

Soundings, March and April, 1948. This interesting publication which deals with current events and trends has, in its March number, an article on " European Union and African Development ", by Douglas Woodruff, and a study of the Spanish case in the Tangier question, entitled " Opposite Gibraltar ", by Arthur F. Loveday. The April number brings "African Prospects ", by Brigadier G. S. Brunskill (see p. 165 of this issue).

The Rhodes-Livingstone Journal, No. V, 1947. The present issue of this journal has some very interesting articles. Leo. Silberman considers some problems of sampling in social research; the Government statistician, Southern Rhodesia, throws light on probable (white) population trends during the next forty years in that territory; and Miss Phyllis Deane contributes a most interesting discussion of the problems involved in national income research in Central Africa. M. G. Marwick deals with techniques for the study of social attitudes and their possible application to modern African society. J. A. Barnes, research officer of the Institute, discusses the collection of genealogies in anthropological fieldwork; and E. G. L. Nicholls, Location Superintendent, Lusaka, urges the importance of providing the urban African with practical opportunities for the development of a sense of civic responsibility.

Farm and Forest, Vol. VIII, No. 2, 1947. Three contributions, " Land Rehabilitation, Plateau Province ", " On Grass Burning " and " Soil Conservation " in Sierra Leone, deal with the problems of erosion and soil fertility. Important ecological problems are the subject of two papers, " On the Definition of Forest Types in the Closed Forest Zone of the Gold Coast " and " Observations on the Sobo Plains ".

Review of International Co-operation, February, 1948, brings a report on West Africa. Good progress is being made in the Gold Coast, where the members of the Government-sponsored Cocoa Marketing Societies are beginning to manage their own affairs. Good progress is also reported regarding other points of the programme of reorganizing the Marketing Societies into economic units. In Nigeria, the number of Cocoa Marketing Societies has increased during the last three years from 176 to 219, and the Unions have worked excellently in developing the collection and handling of cocoa.

The January, 1948, number of the *Review* has an article on " Co-operation in Agriculture in Palestine " by H. Halperin, who says that most of the Jewish agriculture consists of Co-operative Labour Settlements. Their aim is to build up a healthy mixed farming which could supply the settlers with their own requirements, provide an ever-increasing proportion of the country's food supply, and ensure the economic stability of Palestine's agriculture. The Labour Settlements to-day produce 85 per cent of the total green fodder output, and 65 per cent of the cereals, milk, eggs and vegetable output of Jewish agriculture.

Africa, Vol. XVIII, No. 1, January, 1948. K. L. Little describes " The Changing Position of Women in the Sierra Leone Protectorate " and says the social position of women is somewhat paradoxical. On the one hand, they are regarded as a form of property. On the other,

FIGHT AGAINST STARVATION

"WE have lost virtually a year but the experience that has been gained has been most valuable." That was the summing-up of Mr. A. J. Wakefield (Director Designate of the Overseas Food Corporation) in a talk on the East African groundnuts scheme to specialist journalists in London last week. There had been many rumours, he said. One circulating in Nairobi before a single groundnut had been planted in the East African Groundnuts scheme was that the entire crop had been destroyed. Actually, the position was that instead of 150,000 acres only 40,000 had been cleared. Four thousand acres had already been planted with groundnuts; another eight thousand had been partially cleared of roots.

Mr. Wakefield did not know how much ground would be cleared before the rains; but he did not think more than ten thousand acres would be planted before the middle of this month. In spite of difficulties, he still believed in the scheme and he preferred that hard experience should be bought over ten thousand acres than over 150,000. The East African groundnuts scheme had been worth it, if only because "we are up against starvation." We had to get the experience to enable us to carry on the fight against starvation.

At the same time, it had introduced something new to Africa and had provided a bridge for developing a technique for avoiding war, pestilence and famine in Africa. Mr. Wakefield paid tribute to the Unilever organization, which is scheduled to hand over to the proposed Overseas Food Corporation in August this year. Without that organization, he said, we could not have got our supplies.

Friends of Fourah Bay

A meeting of well-wishers of Fourah Bay College was convened recently in London by Dr. R. B. Wellesley Cole. Those present included the Rev. H. M. Grace, Dr. Kenneth Little, Mr. R. Sorensen, M.P., Miss Margaret Wrong, and representatives of the West African Students' Union, the West African National Secretariat and the League of Coloured Peoples.

A full report of the present position of the College and of the Fourah Bay College Fund was given. Grave concern was expressed over the difficulties of the supporters of the Fund in raising money as a result of the Sierra Leone Government's implementation of official policy. In view of this, and of the strength of popular feeling in favour of the retention of Fourah Bay's university status, the meeting decided to institute themselves as the Friends of Fourah Bay College for the purpose of making the cause of the College better known in Britain. Dr. Little undertook the role of honorary secretary.

It was considered that a way out of the present deadlock between Government and people was necessary for the sake of wider development plans in Sierra Leone, as well as for the sake of the College. Proposals for a compromise solution, which would meet the wishes of the people and the Secretary of State's present intentions for West African higher education, were considered for submission to Mr. Creech Jones.

LETTER TO THE EDITOR

Ethiopia's Progress in Education

Sir,—The introduction, to the Ethiopian Parliament, of a Bill to establish Compulsory Education throughout the country, marks a great advance in Ethiopia's struggle for popular education, and in the educational history of Africa. Education has taken first place in Ethiopia's programme of reconstruction; for elementary, secondary, teacher training, commercial, technical, arts and crafts, music, agricultural, theological and law schools have been established, since the Government took office again, after the Italian war and occupation, in February, 1942.

All Ethiopian schools had been closed during the Italian occupation, and only the so-called Ballila Corps, admitting some 500 boys, and giving a very fragmentary course, in preparation for the Italian army etc. had existed during the occupation. The Ethiopian Government was therefore obliged to start from scratch in its educational programme. In addition to the above mentioned schools, all Government Departments, have their educational branches for their young employees, teaching, for instance, in the Post Office, English and general academic subjects, as well as morse, radio and other special subjects required for the work of the Department; in the Finance Department, accountancy and kindred subjects; in the army, morse, radio, signals, gunnery etc., in addition to academic subjects, always including English.

Ethiopia's great progress in Education will be a stimulus, we hope, to the governments and peoples of other parts of Africa.

Yours etc.,

3, Charteris Road, Woodford Green, Essex. E. SYLVIA PANKHURST.

THEY WANT TO GO TO SCHOOL

"In Nigeria, you do not have to compel anybody to go to school, rather they compel you, or entreat you to build a school for them. Fortunately, Nigeria is favoured with very good schools but there are not a sufficient number of them as yet. There is the Technical Institute at Yaba, which aims at training students in mechanical subjects. Among the three eldest secondary schools are the King's College (Lagos), C.M.S. Grammar School in Lagos, with the Hope Waddell Institute (Calabar). Among the latest are the Dennis Memorial College (Onitsha), Christ the King's College (Onitsha), Government Colleges (Ibadan, Kaduna and Umushia), St. Patrick's (Asaba), and others too numerous to mention here, but all doing really good work. Then, of course, there is to be the new University College at Ibadan.

"Some two to three hundred students yearly pass the Senior Cambridge School Certificate in Nigeria. Of these, some enter the teacher training colleges; some take vocational training in various institutions, like the Marine Training School or the Public Works School; a few come to the United Kingdom, or go to America for professional training; but the majority go into the Civil Service, usually as clerks. Various schemes are on hand in Nigeria, whereby youth should be re-directed back to the land in the villages, rather than be allowed to waste their time in uncreative form-filling posts.

"Like other parts of Africa, Nigeria owes a great debt to the Christian missionaries, who may be said to be the pioneers of education. It is only recently that Government has come forward with anything like adequate grants-in-aid to assist the Missions in their education programme. The Native Authorities are now officially providing schools for their areas; and private individuals and bodies have joined in the fight against illiteracy. Conspicuous among these are the tribal unions (like Ibo Federal Union, Ijesha Union, Ibibio Union, and Ishekiri Union) who have initiated programmes for building Secondary Schools and sending their children abroad for training. Given the money and the teachers, Nigeria should be able to carry through her programme of mass education in record time."—Dennis Osadebay in "Calling West Africa."

NEWS FROM WEST AFRICA

A Colony education office, to deal with primary and secondary education in Freetown and rural areas, has been established in Sierra Leone.

Mr. J. F. Odunjo, headmaster of St. Paul's Catholic School, Ebute Metta, recently returned to Nigeria from Britain after completing studies under a scholarship awarded by the Catholic Mission.

PRIVY COUNCIL TO HEAR THREE APPEALS FROM WEST AFRICA

(*Specially reported for* WEST AFRICA—*Copyright*)

Appeals set down for hearing before the Judicial Committee of the Privy Council this legal term, which began on January 12, include three from the West African Court of Appeal. They are: "Maduka and others versus Ezeodimegwu," concerning a land dispute between rival tribes in Nigeria, special leave to appeal having been granted; "Patterson versus The District Commissioner of Accra and another," the subject being given as "Proceedings taken to levy execution under an assessment order: writ of prohibition"; and "Nkwantahene Nana Kwame Boakye Tromu II versus Bechemhene Nana Fosu Gyeabuor II." the subject and this appeal being described as "Dispute with regard to tribal lands."

U.A.C. Dinner in London

Presentation to Mr. W. Sloss

A correspondent writes: Last month, the directors and senior staff of the United Africa Company Limited met together at a dinner given by the company at the Dorchester Hotel, London. Marshal of the Royal Air Force Viscount Trenchard (the chairman of the company) presided. This was the second function of its kind to be held since the company was formed in 1929, the first having taken place in 1939.

After the toast: "The King," proposed by Lord Trenchard, Mr. Geoffrey Heyworth (the chairman of Lever Brothers & Unilever Limited) proposed the toast: "The United Africa Company." Mr. Frank Samuel (managing director of The United Africa Company) replied and coupled his reply with the name of Mr. William Sloss, who was about to retire from the company's service after an unbroken association with West African trade of fifty years. Mr. Sloss joined the African Association in Liverpool on January 1, 1898, and became a director of The United Africa Company in 1940, responsible for the whole buying organization of The United Africa Group.

The speeches were followed by the presentation to Mr. Sloss of a handsome silver salver (on which the signatures of over a hundred of his business associates were engraved) which was handed to him by Lord Trenchard.

OBITUARY

SIR DONALD CAMERON

Sir Donald Charles Cameron died in London on January 8. He was Governor of Nigeria (1931/35) and of Tanganyika (1925/31). Born in British Guiana (1872) he entered the local Civil Service when eighteen years of age. He became Assistant Colonial Secretary of Mauritius in 1904 and, four years later, was transferred to Southern Nigeria as an Assistant Secretary. In 1911, he was made Principal Assistant Secretary; and after the amalgamation of Nigeria, under Lord Lugard, was appointed Secretary to the Central Government. As Governor of Tanganyika, Sir Donald spent some time in organizing Native Administration and creating an African Civil Service. Returning to Nigeria, after an absence of six years, his grasp of details and capacity for work were great assets in a country suffering from economic depression.

Sir Donald, whose wife has been seriously ill for years and whose son was tragically lost in an air accident during the war, lived in retirement near Sloane Square in London. He kept up his interest in West Africa and the other Colonial territories, and was always prepared to help anyone who wanted information or advice on Colonial matters. His most recent contact with this newspaper was a conversation with a member of the Staff, in which he expressed his great pleasure at the honour paid to the Colonial Service by the barony conferred on the former Sir Arthur Richards.

"It's only natural! The first things to become scarce are always the best, the things that everybody wants."

Supplies of White Horse Scotch Whisky seem even smaller, because so very many people ask for it first.

Agents for West Africa: PERCY CHRISTIAN & CO. LTD., LIVERPOOL

42/9C/48

The Dean of Westminster's Fund for a Cultural Center for African Students in London is making slow progress. Nearly £8,000 (of the £50,000 target) has been collected in Britain, while in Africa the tour of Ladipo Solanke, (Warden of the West African Students' Union), yielded somewhat less, from which must be deducted his £1769 expenses. In view of this last figure, and since many wealthy individuals would contribute nothing, the Nigerian Government has refused to give permission for Native Authority Funds to be tapped for this cause.

Jan-1948

London School of Oriental and African Studies receives £13,050 from Colonial Office towards Colonial Service Training Scheme, and contributions from Uganda £500, Tanganyika £500, Sudan £400, N. Rhodesia £100, Nyasaland £50, Zanzibar £50, but apparently nothing from Kenya or Southern Rhodesia.

Education

Inter-regional

UNESCO sponsors 4 pilot projects in Mass Education; one in East Africa; control and finance by States concerned; they are field experiments with latest techniques and materials, in literacy, health, agriculture, citizenship, with results correlated.

42/9C/57

The Scarborough Report (inter-departmental commission on Oriental, Slavonic, East European and African Studies) shows 5 year plan for greatly increased School of African Studies and 50 scholarships from Colonial Development and Welfare.

January 3, 1948 WEST AFRICA

7- GOLD COAST STUDENTS

According to records in the Colonial Office, there are at present 283 Gold Coast students in the United Kingdom, of whom 30 are following legal studies. It may also interest the hon. Member to know that, of these students, 180 hold scholarships and 103 are private students.

42/9c/68

COGENT COMMENTS ON EDUCATION

An Old Chestnut

By Observer

EDUCATION for Citizenship in Africa, from which extracts were given in a previous issue, suffers from many disabilities of which its "high-mindedness" is the most obvious. Its title is another. It should be qualified by some such adjective as "backward," "tribal," or "undeveloped" because, in the foreword, it is written that the sub-committee was more familiar with conditions of a tribal society than with conditions in Colonies of a different type. It may be that some such title was intended but, as the report progressed in another direction, the title was changed, as the tribal society disappeared almost entirely from its pages.

Citizenship or Education

What, in fact, is the subject matter of the report? Is it not the old chestnut in another form, how to make literate partially-educated and text-book-educated Africans appreciate that "education" is not the same as citizenship? That is why the document is so unrealistic. There is hardly a suggestion made in its pages which in some way could not be applied critically to the failures of the British educational system itself. *The Times* (March 22) reported Sir Percival Waterfield as saying at Oxford, recently, that "of 3,000 men and women graduates interviewed for the Civil Service, 40 per cent. of those who wanted to get into the administrative service and 50 per cent. of applicants for the foreign service scored marks for personality and intelligence which represented complete failure. From the point of view of the Civil Service, they were not in the running. Indeed, about five per cent. in the administrative service and eight per cent. in the foreign service were below even the lowest category. A disquieting feature was that, among those who failed, 60 per cent. had university or college scholarships; and 20 per cent. were those who had State scholarships."

In other words, it is not only the Colonial Office and the Advisory Committee on Education in the Colonies that have for some time been concerned with the problem of educating for citizenship of the modern world. The week after this document was prepared, a priest was telling scores of London children that their behaviour in church was far below the standard of "so-called savages" with whom he had spent twelve years in Borneo.

Character Training

There is certainly something to be learnt and (wherever the actual experience of tropical tribal Africa comes to light) much to be gained from this document, but the sub-committee should be writing from the floor, not from the pedestal. "We are aware," they write, "that in thus describing the qualities of a democrat, we are perhaps describing a citizen and a polity the pattern of which may be laid up in heaven but is hardly yet to be seen on earth."

It is not only in general principles, however, that the sub-committee appear to be missing the trail. They consider it a serious over-simplification to say that the education given in the schools is mainly responsible for the drift from the land into the towns; and they are probably right, since the appeals of the towns are manifold. But how can it be said that "character training is primarily a matter of close and constant contact between the pupils and the right kind of teacher"? Such over-simplification on the part of educationists contains in embryo the germ which is spreading within the educational world and the effects of which are obvious in the words of Sir Percival Waterfield and others.

Even if every teacher were the right kind of teacher, and comparatively few seem to be that, character training can only be naturally performed by the parents of the children. The curse of Colonial education, in general—and tropical Africa seems to be no exception—is that in despair of "educating" the adult the authorities and the educationists, for the most part unwittingly, have taught the children to despise their parents. They have therefore destroyed the framework for that very character training which in the United Kingdom no less than in Africa is now realized to be more essential than the passive capacity for absorbing other people's ideas which sometimes results from too much contact of the child with the teacher.

Importance of Humility

At times, the writers of the report grasp reality as in the following excellent admission: "In teaching citizenship, as in teaching all subjects, some of the most effective work is done when the teacher says frankly 'I don't know; let us see if we can find out'"; but the effect of this pearl of wisdom is straightway nullified by the next sentence: "We realize that we are asking a great deal of the training colleges when we ask them to inculcate in their students the alertness and humility necessary for this kind of teaching; but we are confident that they will agree with us that this must be their aim."

Surely! humility is the essence of the teaching as of all professions. The results of self-opinionated, self-satisfied, arrogant teachers are only too visible in every country where "character training" has been considered of little importance.

There are other defects in this report, with relation, not to general principles in which the educationist can plead the province of the amateur, but in the very fibre and context of education itself. In the age of the atomic bomb, surely it is surprising to read that "the history of scientific invention and discovery offers the more heartening spectacle of constant progress among the scientists themselves through cooperation, whatever evils may have come of their work through competition among statesmen." Surely most of us would prefer the statesmen!

Then and Now

There are some statements which do not bear comparisons too well. "Welsh and Scottish educationists," write the sub-committee, "wish the educated Welshman or Scot to retain and develop his attachment to the understanding of his country's cultural heritage. And if it is urged that there is less gulf between English and Welsh culture than between English and Ashanti, it may be replied that seven centuries of contact between England and Wales have greatly narrowed the gulf."

Early in March, the Ministry of Education published a report on 100 years of Welsh education. "Exactly 100 years ago," said the official announcement, "a report was made to young Queen Victoria (she was then 27) by a Commission set up to inquire into the state of education in Wales which, when published, so infuriated Welsh people that a great wave of indignation swept through the land."

Some of the Commission's findings were that "there was a great deal of loose-living, untruthfulness, idleness, drunkenness and deceit in Wales," "the incompetence of the schoolmasters was avowedly great," "the Welsh language was a vast drawback to Wales and a manifold barrier to the moral progress and commercial prosperity of the people."

Chance of Exercise

There is much in this pamphlet which reflects the knowledge of those responsible for its publication of the tendencies of education as practised in "advanced" countries today. It would be surprising were it otherwise. But there is little new in its pages which has not been ventilated on previous occasions; nor is there any sign of confidence that the suggestions put forward will necessarily be followed. Indeed, the following sentence may well have been intended as a warning: "It is that you cannot educate people for citizenship unless you give them the chance of exercising their citizenship."

It is painfully obvious that this chance is not being wholeheartedly given in Africa today and, until it is, reports like these are likely to be of greater interest to posterity than to the generation to which it is addressed.

WEST AFRICA

No. 1624. Vol. XXXII. SATURDAY, APRIL 3, 1948 Registered at G.P.O. as a Newspaper.

Fact Finding . . . . Claims of the Blind

THE delay in announcing the names of the members of the Commission of Inquiry which SIR GERALD CREASY hoped would be in the Gold Coast next week, has been due entirely to the difficulty in obtaining a Chairman. The delay has been commendable, even though it has been irksome for the Colonial Office at a time when an early publication of the names of the members of the Commission would have given weight to the determination to send one. It has not been easy to find a Chairman with suitable qualifications and whose personal commitments would enable him to leave for the Gold Coast at a date as early as that hoped for by SIR GERALD; and the Commission had to be composed of members who are known to have no preconceived ideas of the circumstances which they are going to investigate.

Fortunate Delay

All these difficulties have been satisfactorily overcome by the announcement of the invitation to MR. A. AIKEN WATSON, K.C. (to be Chairman); and to MR. ANDREW DALGLEISH and DR. K. A. H. MURRAY (Rector of Lincoln College) to serve on the Commission. The Secretary is to be MR. E. G. G. HANROTT (Colonial Office) and the Commission is to fly to the Gold Coast during the coming week. The terms of reference are " To inquire into and report on the recent disturbances in the Gold Coast and their underlying causes; and to make recommendations on any matter arising from their inquiry."

From another point of view, the delay in announcing the names of the Commissioners has been fortunate. As SIR GERALD CREASY has stated, the threat of disturbances must be altogether removed and normal ways of life resumed, before the Commission could do its work. Otherwise the arrival of the Commission, which was greatly desired by everyone, would be indefinitely postponed. In a way, therefore, the coincidence of the difficulty in finding a suitable Chairman with the duration of the period of unsettled conditions, has not been entirely unhappy, since the knowledge that the Commissioners had been appointed and were unable to go out because of the uncertainty of further outbreaks might possibly have been the cause of misunderstanding in the Gold Coast.

Since the most recent reports indicate that the period of tranquillity is being maintained, it is clear that the date of departure has been wisely chosen. While delay in the appointment of a Commission has not proved to be without compensation, it is to be hoped that the sifting and collection of evidence will be carried out with as great swiftness as may be reconcilable with the safeguarding of justice. On this course, too, the responsible authorities appear to be agreed. Where there must not be delay is in the very earliest possible publication of the findings of the Commission.

The Gold Coast disturbances have aroused public opinion in Britain in a way comparable only to the publicity given to the outbreaks of violence which attracted the attention of the British public to the British West Indies in the years immediately preceding the war. While the circumstances of the Gold Coast riots cannot substantially be likened to the circumstances of the West Indian riots, it is not unlikely that some of the causes of the more recent disturbances will be found to resemble in certain degrees those which provoked the earlier occurrences. In keeping with tradition, the British public has so far maintained a fairly open mind as to the underlying causes of the Gold Coast disturbances, although it has not unnaturally largely deprecated the fact of lawlessness which had to be countered by the firm legitimate measures of the Governor. But all comment on the subject has not been entirely open-minded; and there is much suspicion and uncertainty which can only be removed by the publication of the Commissioners' Report.

The terms of the present Commission are clearly nothing like as comprehensive as those given to the MOYNE Commission, so there is little reason for delay on this score. Nor is there much fear of its publication being withheld for the same reasons as those which made it impossible for the report of the MOYNE Commission to be published during the late war. There have, however, been many occasions recently where the time-lag between the investigations of Missions or investigators and the publication of their findings appear to be excessive. It is to be hoped that the Report of this Commission of Inquiry will set a precedent for speediness of publication and the great care which has been taken in the selection of its Chairman should ensure the achievement of this hope.

* * *

While African superstitions and suspicion of the white man's medicine are obvious drags to the progress of the battle against disease which has for so long been patiently fought in Africa, one of the tribal superstitions about blindness is not unwholesome. It is that blindness will come to the one who neglects to look after his blind relations. This is a worth-while superstition, which may be recommended to those who have to award priorities of expenditure on African betterment because, whoever is to blame, the fact of blindness itself is enough to evoke sympathy. It is little consolation to know that the estimated incidence of blindness in the capital of Bornu Province (1,400 per 100,000) is one of the highest in the Northern Provinces of Nigeria. If comparison is made to the incidence of 179 per 100,000 in England and Wales it is at once obvious how tragic is the position of blinded Colonials when it is also remembered how few aids are available for the blind in the Colonies. The presence of a blind man on the delegation is itself a reminder of the benefits which can be conferred on the blind, and the sympathetic spirit of MR. WILSON towards his fellow sufferers may be detected in the practical recommendations which have been made by the committee.

Helping the Blind

The suggestions that African teachers of the blind should be trained in Africa and that a vocational training centre and demonstration school should be set up in Accra, are deserving of every encouragement from local governments. One sentence on "training in England" deserves consideration by an audience larger than that concerned with education of the blind. The committee writes that " the education of the English child is geared to a highly organized system of training and subsequent employment, completely different from anything that faces the blind African on leaving school for his home in the bush; so that the African teacher, having imbibed ideas in England, would find them of little guidance in tackling a completely different and often more difficult problem." If only the sound commonsense of this remark had been followed by more teachers in the past, how different might have been the course of Colonial education for citizenship!

WEST AFRICA AT WESTMINSTER

Funds for Fourah Bay

WHY were senior Civil Servants dissuaded from collecting funds for Fourah Bay College? was one of the questions put to the Secretary of State by Mr. Sorensen, in the House of Commons recently. He also wanted to know why the Chiefs were not allowed to collect money for this purpose and, in view of strong popular desire for the retention and development of Fourah Bay College, whether all direct or indirect opposition will now be withdrawn.

Mr. Creech Jones replied: One senior officer of the education department was advised against acting as a collector for the Fourah Bay Appeal Fund, because it was felt that such action by such an officer would suggest that the fund was officially sponsored or supported. Collections by Chiefs could not be approved, because any collections sponsored by them would be regarded by the people as a compulsory levy. It has been made clear, to the organizers of the appeal, that the Government will in no way interfere with any person wishing to contribute to the fund in his personal, as opposed to his official, capacity.

Mr. Sorensen: May I have an answer to the last part of my Question?

Mr. Creech Jones: There has been no opposition, either directly or indirectly, by the Sierra Leone Government.

Mr. Sorensen: Will my right hon. Friend give an assurance that he intends to safeguard the future of this institution?

Mr. Creech Jones: It is not a Government foundation. We have already made an offer to the governors of the body in regard to the transitional period immediately ahead.

Mr. Vane: Does the right hon. Gentleman mean that he prefers the principle of contracting in to contracting out?

Mr. Creech Jones: In this case, the continuance of this college as one of the higher educational institutions in West Africa is not quite consistent with the general policy for higher educational development in that region.

Their Point of View

Mr. Sorensen: Is my right hon. Friend aware that public opinion in this area is very anxious that this college should continue to receive every support?

Mr. Creech Jones: We have offered support during the transition period. In the place of this college, we have offered to found a territorial college which, from our point of view, offers far greater advantages for educational development than the continuance of this university college.

Mr. Sorensen: What about their point of view?

7

Western Africa

Creech Jones announced that the new University College at Ibadan is shaping up rapidly, preliminary work begun on site, architect selected, Principal appointed, quarters for teachers going up, etc.; staff and student body of the higher college at Yaba is to be transferred to temporary quarters at Ibadan as soon as practicable to form nucleus for new University. Nigerian Government will provide most of operational funds; but University is to remain independent of Government, having an African majority Council to direct its policy; as Africans become qualified for high degrees they will be eligible for senior positions without discrimination.

March - 1948

42/90/80

7. NEWSPRINT AND LITERACY

At present in Nigeria, the largest of our Colonies--one third the size of Europe, with a population of almost 25 million--there is a total

42/9c/121

42/9c/122

7. of 25 publications, and the total daily circulation of newspapers does not amount to more than 33,000. In the Gambia, with about a quarter of a million population, there is not one daily newspaper.

"THE process of education alone is too slow for Africa," said Mr. A. J. Wakefield, during his talk on the East and Central African Groundnut Project at The Royal Society of Arts, last week. "The present world population is nearly 2,300 millions, of whom the great majority are far from adequately fed by any reasonable standard; and a large proportion exists on little more than a starvation basis. But when one considers the present rapid rate of increase in world population, the picture is even more grim. Despite war casualties, the increase has been 125 million since 1930 and, at this rate, world population could double itself within 100 years.

"Can anyone in his senses imagine that, unless really terrific efforts are made to increase the production of food, famine will not spread throughout the world? Is peace possible under such conditions?

increase of medical sources by means of hospitals, maternity homes, etc.

The movement will co-operate with other regions throughout Nigeria, where similar objectives are being planned. It is reported from Nigeria that all the important Obas have pledged unanimous support. Scholarships will aim to train technicians for farming, mining and engineering especially. It is hoped to start the building of hospitals within three years.

Oxford West Africans' Protest

The West African Students' Club at Oxford have sent the following communication to the Secretary of State for the Colonies: "We, the West African Students at Oxford, view with grave concern and horror the recent shooting of our unarmed countrymen on the Gold Coast. We deplore the sending of troops from outside against these people, when they were demonstrating against the failure of the Gold Coast Government to meet their grievances. We condemn wholeheartedly the attitude of the Under-Secretary of State for the Colonies, who said he was almost certain there must be Communist incitement. We feel that he was prejudging the issue, and that does not speak well of a responsible Minister of the British Government. He was shifting the responsibility on the Communists, and giving the impression that Africans are incapable of asking for their rights without incitement from outside. We sincerely hope that a public inquiry will be set up. It must be realized that the Gold Coast Government is involved in the case, and it is imperative that only parties not concerned with it should be made judges. We need not emphasize that such situations are bound to shake our faith in the sincerity of the British Government when they say that imperialism has been thrown overboard."

The communication, which was signed individually by the Executive Committee of the Club, was dated March 7, 1948.

FOUR THOUSAND IN SEARCH OF KNOWLEDGE

Task for British Universities

By COLONIAL

THERE is growing in the United Kingdom a propaganda—verbal and literal—which would disparage the achievements of African students in this country at the expense (be it noted) of British universities and other British educational institutions; because it is a slur on British universities and educational establishments (and a particular slur on those in the London area) to suggest that they admit Colonial students without requiring testimony as to their intellectual capacity or character. The Inns of Court have come in for a great deal of this misinformed criticism. Surely the whole crux of the self-created problem of educating Colonial students in this country is that there is nowhere else to educate them. That, without any possible doubt, is a fault of the past.

If the critics of these African and Colonial students (of whom there are less than 4,000, as compared with a considerably larger number of Europeans resident in Colonial territories) would themselves treat them like normal undergraduates instead of regarding them as immature Africans exposed to London's admitted vices, perhaps there would be no problem. But to blame the Welfare Department of the Colonial Office for the collective fact of British colour

42/90/67

West African Trade Unionists

Mr. Siaka Stevens (General Secretary of the Sierra Leone Mine Workers' Union) and Mr. Adio Moses (Secretary of the Nigerian Trade Congress) are on a month's course at the T.U.C. education department at Clapham, London. Previously, they were studying at Ruskin College, Oxford. After their course, they expect to spend another two months visiting mining areas and attending trade union meetings before returning to their own countries.

42/90/173

Imperialism cultivates a small section of native intellectuals to man the lower offices and functions of the Civil Service and of commerce. If the countries were industrialised it would be essential to increase education, since it is impossible to carry on industry with uneducated workers. And here one can pay a tribute to the missionaries—despite the fact that they were largely instrumental in bringing the territories under white domination. Were it not for the missionaries the percentage of illiteracy would be even greater, for they were the pioneers of such organised education as does exist. Only within very recent years have Colonial Governments granted subsidies for missionary education work, and only here and there have they provided elementary and secondary education. Much can be read about this in Norman Leys's book, *The Colour Bar in East Africa.*

This takes me back to my original premise. Unless the natives have control [illegible] government, that is, of their finances, this educational problem can [illegible] now control Parliament know this problem, but

[illegible] where the people had a

West Africa Through American Spectacles

FROM OUR NEW YORK CORRESPONDENT.

BRITISH West Africa's most pressing needs are "quicker Africanization of the civil service, more vigorous effort to improve agricultural production and develop local industries, and greater emphasis on the psychological problem of building mutual confidence between races."

These are the conclusions of American Vernon McKay, after a study of the four Colonies on behalf of the Foreign Policy Association of the United States.

Mr. McKay, who has become chief of the African political section of the U.S. State Department, adds: "If the needs aren't met, the Africans are likely to show a growing interest in the methods by which the Soviet Union has developed its backward areas. Educated Africans are impressed by what they read about the rapid industrialization of backward areas and quick education of illiterate peoples in the Soviet Union."

All the same, McKay is obviously impressed by the progressive policy of the Colonial Office in West Africa. He sees in the four Colonies, "a rapidly changing society that will ultimately have repercussions throughout the continent."

"British officials in West Africa," he observes, "have permitted the growth of nationalist movements far more vigorous than in any other area south of the Sahara."

While many senior officers have difficulty in adjusting themselves to the vast Colonial changes, "younger men, with a greater awareness of the need for a Colonial policy devised to keep pace with the times, are gradually entering positions of responsibility.

"Occasionally, the new officers show far more skill in the important task of understanding and getting along with the African Nationalist leaders."

Yet he considers that mutual confidence between Africans and British is deteriorating.

"An outstanding officer has been dispatched to the Public Relations Department in Nigeria, where he has done excellent work in winning the confidence of many Africans. But if the programme is to succeed, the entire British Colonial Service will have to become a huge public relations department, for the injudicious remarks or conduct of one officer can undermine the good work of many."

Reviewing farming and economic plans, McKay decides that "In neither local industry nor agriculture are Britain's efforts sufficient to meet West Africa's tremendous needs."

Urging faster Africanization, he points out that although clerical staffs of governments are entirely African, "African members of the senior services are relatively few."

African representation on the Legislative Council has been substantially increased in recent years. "But in the last analysis, power rests in the hands of British officials rather than with the people of the Colonies."

At the same time, he stresses that "only one African in twenty is able to read and write" and adds: "The problem of finding financial resources for an adequate school system is insurmountable at present." Within necessary limits, the British are making noticeable efforts to provide new opportunities in most grades of education.

SPRING-CLEANING

Seasonable Advice for Administrators

By COLONIAL.

THE Greek word *catharsis,* I was taught at school, means to the mind what the pull-through means to the rifle. It represents a thorough cleaning. That is what the world needs most nowadays, but it is to the relations existing between Great Britain and her Colonies that our attention must be riveted here. The disturbances in the Gold Coast may fittingly be used as a peg on which to hang the thesis. A commission from outside is to inquire into the underlying causes of the disturbances. It will discover much and there will be a great glare of publicity. And it is well that this should be.

But before ever a commission begins its inquiry, let us first examine what is already known about the Gold Coast. In the first instance, if there is any good that has resulted from these regrettable incidents, it is the shattering of the self-esteem which marked officials of the Colonial Office whenever the Gold Coast was mentioned. There could be no greater condemnation of the woolly-headedness of the Colonial Office than this total misunderstanding of a situation. The personal qualities of Sir Alan Burns and his real knowledge and appreciation of African peoples has been allowed to obscure a picture which ought to have been perfectly clear to any intelligent reader of the Gold Coast Press.

Ever since the unfortunate interpretation put on the speech made by Sir Alan, in New York, last year, there has been a marked increase in the bitterness of educated Gold Coast writers directed against Great Britain. Still the Colonial Office continued to talk of a "model colony." Never has a lack of understanding by the Colonial Office of the African people been more clearly demonstrated than by the recent riots on the Gold Coast. And yet there has been indication enough for any but the pig-headed to see.

Fundamental Misunderstanding

One of the regular features of speeches made by Mr. Creech Jones, during the past two years, has been the reference to ill-informed critics of British Colonial policy with particular allusion to Africans "crying for the moon." It has been a fundamental misunderstanding of the African point of view. When Dr. Wellesley Cole writes this month that "the broad issue in West Africa is not particular minutiae, but a bold policy of constructive planning, which will harness the more responsible forces among the people, and together forge a link of progress and cooperation between the races," he is certainly not moon-struck. He writes sober truth.

When he adds that "we must be careful lest, through undue reaction, we sow the dragon's teeth of irresponsibility and indiscipline" it is still sober truth. The pity is that the truth is not sought after. It is all right for the British public official who, it must never be forgotten, has a vested interest in the *status quo* to say that a handful of educated Africans are not representative of the whole African people.

But this argument innocently stated is like saying that the French, Belgian and other Continental families which have migrated to England ever since the days of the Conquest (and still do so migrate) are not representative of the Angles and Saxons, to say nothing of the other tribes which once made up the inhabitants of Ancient Britain. It is a dangerous argument, and it is not made less dangerous when any disinterested attempt at comparisons between Africans and Europeans is made. Comparisons may have been "odorous" to Malvolio but there comes a time when they must be made in the interests of justice.

The Case of Dr. Johnson

Let us first take Dr. Johnson, an African from the Gold Coast, who is employed by the Colonial Office in a junior position in the Economic Division. It was recently suggested, by a member of the Legislative Council of the Gold Coast, that Dr. Johnson should be given a job of high standing in London as a representative of Gold Coast interests. Dr. Johnson has not been appointed to that post, presumably because the job is too high for an African. And yet there are Europeans employed at the Colonial Office who, almost singly, are responsible for whole African territories.

It would be difficult to ascertain what higher qualifications any of these individuals possess that make them better qualified to do these jobs than possesses, say, Dr. Johnson. It can only be assumed that they are more highly qualified by virtue of being Europeans. But even if Dr. Johnson is not invited to take charge of the department dealing with the Gold Coast, what possible objection could there be to his representing the Gold Coast in a job in this country? There are many people holding quite important jobs in the Colonial Office as well as in the Colonial Service, who are less qualified than Dr. Johnson.

Even if he proved a failure (and I am sure he would not) he would have been given that opportunity to fail which has so far been rigidly denied to the majority of Africans educated on terms of equality with the Europeans who get the jobs. The use of the expression: "lack of suitable candidates" for Africanization has been made so recently by high-ranking Colonial Service Officials that it deserves further examination in the light of Dr. Johnson's experience. Has Dr. Johnson been considered an unsuitable candidate or has he not applied for a post in the Gold Coast Service?

The Case of Mr. Akintola

Then there is the case of Mr. Akintola, the Nigerian journalist who is studying law in this country and whose articles in the Nigerian *Daily Service* are deeply critical of British Colonial policy in Africa. He has been asked to serve on an advisory committee for the welfare of Colonial students in the United Kingdom. Why has it not occurred to the Colonial Office to invite Mr. Akintola to serve on the Public Relations Department of that Office? I know of no other writer on colonial affairs who can write so well in a *foreign* language about the affairs of Britain's largest colony. Surely the Colonial Office would not be rash enough to claim that anyone in that department at present possesses the qualifications of Mr. Akintola?

The Little Things that Matter

I learnt with horror that Dr. Danquah was present in London at the time of the Royal Wedding and arrangements had not been made for him to attend as representative of vast British West African territories. These are the things that matter, the little things. The experts can go on planning until the controls inevitable in the philosophy of socialism have wrecked the good relations built up by the British "squire" class in Africa and other colonies during those years much maligned by British Labour politicians who, ten years ago, were agitating for the freedom of subject peoples. They will do much better to listen to the voices of experience which are not only the voices of the Colonial people but also of every disinterested European and African with whom I have spoken during the past two years.

Humiliation Sickness

The British African is sick of being humiliated. Liberia is on his doorstep; French African Members of Parliament and wealthy American negroes visit his country; Africans see Europeans living in their homeland, they read their newspapers: they know of the brutal murders, the divorce cases, the daily robberies, the black market and they lose all sense of perspective. It is not their fault. The error may be traced to those officials and advisers who, in the shaping of colonial policy, have no time to profit by the lessons of the past.

Before ever this Commission begins its inquiry, enough is known of what is wrong with the Gold Coast for immediate reforms to be made. And the Gold Coast is merely indicative of the root evils which surround colonial affairs. "Human beings, not machines," should be the motto for any department responsible for Colonies.

WEST AFRICA

No. 1622. Vol. XXXII. SATURDAY MARCH 20, 1948 Registered at G.P.O. as a Newspaper.

Avoiding a Breakdown . . . . One a Month . . . . The Will to Know

"TODAY, with the entry of other Government Departments on the Colonial scene, the appointment of an Under-Secretary for African Colonies would make it easier for Government departments to side-track the Colonial Office as an institution and to 'bull-doze' the Colonial peoples." That opinion, expressed in WEST AFRICA (December 13) holds good today with regard to the suggestion of an *Under-Secretary* for Africa. But it is not applicable to MR. IVOR THOMAS'S suggestion that there should be a Colonial Secretary for Africa when the *office* of Secretary of State would remain, and the needs of Africa would receive more and not less attention from those best qualified to speak. Provided that the Secretary of State for Africa has full equality with the Secretary of State for the non-African Colonies, MR. THOMAS'S suggestion would appear to be the next step which *must* be taken by the British Government if there is not to be a breakdown of the overloaded Colonial administrative machinery.

Change in Keeping

Like the Secretary of State for the Colonies, the Secretary of State for Africa should be a member of the Cabinet. Thus the needs of the Colonies would be doubly represented at meetings of the Cabinet. MR. OLIVER STANLEY (a former Secretary of State for the Colonies) made it quite clear recently that, at the moment, the status of the Secretary of State for the Colonies with reference to the Cabinet was less than that of the Minister of Food. Two Secretaries of State for Colonies as members of the Cabinet would rectify a position which is the more intolerable at a period when the Chancellor of the Exchequer has so openly turned to Africa for the ultimate salvation of Britain's economy.

There would, as MR. THOMAS, who is also singularly qualified to speak, has said, be little break with tradition. There is nothing sacred about the Colonial Office as such. Certainly there has been little static about it in the past. In fact, a change, such as that recommended by MR. THOMAS, would appear to be more in keeping with the traditional changes which have been made since a Committee of the Privy Council was appointed, by Order in Council of 4 July, 1660, "for the Plantacons."

In 1768, a Secretary of State for the American or Colonial Department was appointed. After this office was abolished on the loss of the American Colonies, the affairs of the other colonies were administered first by the Home Department and later by a committee for Trade and Foreign Plantations. Later, the Secretary of State for War became nominally Secretary of State for the Colonies and the departments were actually united in 1801. It was not until 1854, less than one hundred years ago, that the affairs of the colonies became the entire charge of a Principal Secretary of State. From that time, there have been Secretaries of State for Dominion Affairs, for India and for Burma. There seems to be little objection on the grounds of constitutional precedent for there not being a Secretary of State for Africa.

* * *

On the other hand, the reasons which favour there being a Secretary of State for Africa seem to outweigh any argument that may possibly be advanced to discourage that suggestion. Anyone who has followed the physical movements of MR. CREECH JONES, from the time he left for Jamaica late last summer, until he hurriedly returned from New York last week to move the Palestine Bill, will appreciate the impossibility of his being able to devote much concentrated thought to the more than thirty colonies for which he is responsible through Parliament to the British electorate. Even if he remained rooted to his chair for 365 days each year (taking the extra day of the leap year off as a holiday) it would be impossible for him to know enough about what was going on in all the colonies at any one period, let alone to be able to persuade his fellow members of the Cabinet of the priority of attention which it is the right of Colonial peoples to obtain.

Those in Favour

The fact that he has legions of experts and advisers, and even two Parliamentary Ministers to assist him, diminishes the argument not one whit. But reading files are relatively trivial details. The social engagements, the speeches, the angry visitor, the pompous visitor, the Colonial with a grievance, the Colonial who only wants to give advice, the Colonial in search of a job, the European in search of a job, these alone would weary the average man. But MR. CREECH JONES must "have a go" as well at "Twenty Questions" each week in Parliament before an audience much more critical than that which the Canadian STEWART MACPHERSON has to face in his broadcasts for the B.B.C. In fact, the Parliamentary Under-Secretary has to shoulder more and more of this load. And not the half of it has been told.

* * *

Nor would life be a picnic for a Secretary of State for Africa. He, too, would have to do all these things, but, instead of an hour in the Far East, an hour in the South Atlantic and less than an hour every day spent with the affairs of every colonial territory he would, as MR. THOMAS pointed out, have at least one month (plus a well-earned rest) to cope with the enormous task which would then be his. Africans, even then, would reasonably be excused for feeling that one month each year would be too little time for the urgent matters which demand attention. But it would be at least some improvement on what is today an impossible position.

No Picnic

MR. THOMAS is doing a splendid work in ventilating a state of affairs which he knows from the inside. Those who can look only with the normal human powers of reason and deduction, have come to these conclusions many moons ago. It is not too much to say, if MR. THOMAS'S fellow Members of Parliament were acquainted with the facts as MR. THOMAS knows them, that he would have little difficulty in obtaining support for what he so rightly calls an urgent practical necessity. That there is little indication of such support forthcoming is yet another vindication of the claim so frequently made in these columns that it is the "will to know" that is lacking.

Meantime, the fate of one Colonial Department may be thought on with no great measure of complacency.

* * *

Yorubas Unite

THE Yoruba National Movement whose inaugural conference will be held at Ile-Ife (June 5/6), seems to herald something new in the political development of Nigeria. The movement Egbe Omo Oduduwa means a society of the Sons and Daughters of Oduduwa (who is the progenitor of the Yorubas and whose home is at Ile-Ife). Over £3,000 of its £100,000 endowment funds are already collected and Sir Adeyemo Alakija heads the list with £500.

The first object of the movement is the extension of education. Bright children of poor parents are not only to be fed but will be given school books under scholarship schemes. Parents are to see that all children are sent to school. Scholarships for boys and girls at the new University College, Ibadan, are expected to start next year; and some scholars will be sent to the United Kingdom or United States.

Other aims of the movement are to weld the Yorubas into a united body, to foster a single nationalism under the present Chiefs, the rapid development of political institutions, the wisest use of national resources for the prosperity of the people, extension of social welfare to "combat the evils of superstition and ignorance," and the

8 May 44

64

P :—I am opposed to both systems, for they are simply methods of achieving the same end : the maintenance of Imperialist domination. However, apologists for Imperialism make out that Indirect Rule is a conscious policy instituted to induct backward peoples in the art of self-government. But, as already explained, under this system the chiefs are merely pawns in the hands of the Colonial administration. All intelligent and progressive elements are opposed to it. Margery Perham, its official apologist, who is always extolling it as Democracy's gift to backward Africans, has been obliged to record the criticism levelled against it. "Most educated Africans," she writes in *Africans and British Rule*, "especially in West Africa and the Sudan, criticise and strongly condemn Indirect Rule. They say that it gives power to uneducated chiefs and elders instead of to the educated ; that it strengthens tribal feeling and so continues he disunity of the country. It is, they say, part of the old policy of 'divide and rule' by which an Imperial Power keeps its subjects weak and prevents their advance towards self-government." That is very succinctly put and this form of Imperial mis-rule.

42/90/249

The first African to earn an Oxford PhD is K. A. Busia, with thesis on "Ashanti Kingship".

The African Department of the School of Oriental and African Studies (one of London University's) has established 10 studentships, financed from Colonial Development and Welfare Fund. Students will spend two years on general linguistics and their own language. Of the 700 odd languages in Africa, several are widely enough used to warrant scientific development, and it is in this field and in native "Academies" that these students will be found most valuable. Africa's hopes for self-determination and advance must depend on a common understanding within each group at least, and a common language is therefore vital for each group. The sooner these languages are selected and developed the better for all concerned.

42/95/71

> that the study of the various regions...must throughout be founded on a firm linguistic basis...
>
> We are in complete and cordial agreement with the Colonial Office in insisting that probationers must receive linguistic training before they go to Africa.

It is recommended that the optimum requirements as set out in a letter from the Director of the School be accepted.

> "...These envisage an expansion of the staff of the African Department until it reaches a total of 38 Europeans and ten African Assistants. This total includes Readerships in African anthropology, and customary law and a reserve of posts to allow of periodic field work and of collaboration with Universities and Institutions of higher learning in Africa...It is estimated that a period of about sixteen years must be allowed for the attainment of the full establishment.

Since the Universities of Oxford and Cambridge and London (apart from the School of Oriental and African Studies) have a special position in the field of colonial studies and have established departments of anthropology they will be associated with the training of Colonial Service personnel. However, the Committee finds that the training of personnel should not be their sole or major object but repeats the dictum of the Oxford Committee of Colonial Studies:

> It is essential, if Oxford is fully to play its part as a center of Colonial Studies, that original research should occupy a considerable place in its activities. Teachers will not be good teachers unless they are constantly refreshed by research and research is improved if researchers take part in teaching,. The University would think it unfortunate if research in Colonial Studies could not look beyond the field necessary for the training of Colonial Service Officers.

In view of the important place which an understanding of colonial affairs ought to occupy in the education of the citizen the Committee thinks that one University in Scotland and one in the north of England should provide "permanent and comprehensive facilities" for African studies and suggests that for several reasons Edinburgh and Liverpool be invited to do so. It is also their hope that other universities will endeavor to strengthen and integrate colonial studies and should, indeed, be so encouraged.

Channels for sustaining and developing interest in the Colonies include, (in addition to the schools) among others, the B.B.C., the Inspectorate of the Ministry of Education, the Imperial Institute and the Ethnological Section of the British Museum. The following are the principles which the Committee would like to see followed by such groups:

> (i).... Empire History was by no means generally taught in the schools, and that World Geography, including the geography of Africa was largely a subject for specialization after the School Certificate stage.... hope that geography at least would become part of the education of every child .....We would like to see British children taught more about the history of African peoples.

London Log . . . . .

Air Mails

Revised air mail posting times, at the G.P.O., London, are—For Nigeria, French and British Cameroons: 9.0 a.m. on Monday, Tuesday, Wednesday and Friday; and 11.30 p.m. on Saturday. For Gold Coast: 9.0 a.m. on Monday, Tuesday, Wednesday, Friday and Saturday. For Sierra Leone: 11.30 p.m. on Monday, Thursday and Sunday; and 9.0 a.m. on Saturday. For Gambia: 11.30 p.m. on Monday, Tuesday, Thursday and Sunday.

Gambia Regatta

The Fifth Gambia Regatta is due to be held today.

Flying Time-Table

Containing all the information required by would-be air travellers, *The A B C World Airways and Shipping Guide*, recently published, gives up-to-date details of world air-routes, including the revised B.O.A.C. West African schedule.

B.B.C. Entertains West Africans

Over 1,000 Colonial students, among whom were many West Africans, were guests of the B.B.C. at Golders Green Hippodrome on May 23 when they saw a special Empire Day edition of *Variety Bandbox* being broadcast in the Light Programme. A large section of the audience came from the various Colonial centres in London.

Bequests

Two bequests of £500, for the S.P.G. and S.P.C.K., were contained in the Will of Miss Mary Shaw (of Guildford) who left £26,941. The S.P.G. are also to receive £1,000 under the Will of Miss Mary Barclay (of Stevenage) who also left a similar sum to the C.M.S.

Canterbury Consecration

Sierra Leone and other West African students in London are to visit Canterbury Cathedral on June 11, under arrangements made by the International Language Club at Croydon. They will attend the consecration service of the Rev. Percy Jones, the newly appointed Assistant Bishop of Sierra Leone.

Nigerian Film Premiere

Visitation, a feature-length documentary film made in Nigeria and Eire, is to have its first showing in London on June 23. The film shows the work of the Medical Missionaries of Mary in Nigeria and is to be screened throughout Britain. Cardinal Griffin (Archbishop of Westminster) will introduce the film at the *premiere*. The Secretary of State for Colonies and the Minister of Health are among the list of invited guests.

Privy Council Appeals

Set down for hearing before the Judicial Committee of the Privy Council during the new law term beginning this week is an appeal listed as Chief Kwame Asante *versus* Chief Kwame Tawia, from the West African Court of Appeal. The subject of the appeal is given as "Disputed claim to land; alleged defect in the constitution of the Divisional Native Court."

Another appeal from West Africa, which has been stood over while a search was made for documents, may be heard this term. This is listed as Nkwantahene Nana Kwame Boakye Tromu II *versus* Bechemhene Nana Fosu Gyeabuor II and is concerned with a dispute regarding tribal lands.

Student Arrivals

Recent arrivals in Britain include Miss Misi Dada, of Nigeria (who has gone to Rochester Hospital to train as a nurse), and Miss M. Geyima, of the Gold Coast (who has come to London to study dress-making). Arriving by the same boat, and now staying at the Balmoral Hotel Hostel, are Messrs. V. F. Lake and J. W. Vincent (two Sierra Leone medical students), Mr. E. K. Ohene-Anobah, of the Gold Coast (who is to study law at Lincolns Inn) and from Nigeria, Messrs. J. Togun and M. J. Bosah (Marine Engineer students), Mr. C. E. Ekpe (Law and Art student) and Mr. J. A. Oyeshile (who is to study Criminology).

Sierra Leone Study Group

A study group has been established in London for Sierra Leone students. Its leader (Mr. H. Maurice-Jones, of Freetown) who was successful in the recent Bar Finals, states that the Club has already over 150 members who meet fortnightly at the British Colonies Club to discuss their country's economic, social and cultural problems. Mr. Maurice-Jones is now studying Public Administration and, in his spare time, works in the Sierra Leone Liaison Department of the Colonial Office.

People of Sierra Leone

> *"In the Hour of Peril the People of Sierra Leone Earned the Gratitude of the British Nations sustaining the Valour of the Royal Air Force and fortifying the cause of Freedom by the Gift of Bomber and Fighter Aircraft. They shall mount up with wings as eagles."*

These words have been inscribed on a plaque presented by the Ministry of Aircraft Production to the people of Sierra Leone, in commemoration of their £25,000 gift to Britain for the purchase of bomber and fighter aircraft during the war. Photographs of the plaque are to be exhibited throughout Sierra Leone.

Delegates for London Conference

Nigerian delegates to the African Conference which will be held in London later this year are as follows: the Emir of Katsina, Emir of Abuga, Mallam Tafawa Belewa (Senior Legislative Council member for Northern Provinces), Mallam Aliyu Makanen Bida (fourth member, Northern Provinces), Mallam Yaheya Ilorin (fifth member, Northern Provinves), the Oni of Ife, Mr. Obisesan (first member, Western Provinces), Mr. Odutola (third member, Western Provinces), Mr. Onyeama (first member, Eastern Provinces), Mr. Ikoku (third member, Eastern Provinces), Dr. Ibiam (fourth member, Eastern Provinces), Mr. Anwan (member for Calabar) and the Rev. Ogunbigi.

SOCIÉTÉ COMMERCIALE DE L'OUEST AFRICAIN,

LAGOS

One official member of the Legislative Council is to be nominated later. From Gambia there will be Mr. John Pelly Murphy (Attorney-General), Mr. Edward Francis Small (Unofficial member, Legislative Council) and the Rev. John Colley Saye.

Empire Talks to Come

Mr. Roy Harrod will speak at The Royal Empire Society headquarters on June 2 on: "The Economic Relations of a United Europe to the British Commonwealth and Empire." On June 16, Mr. Creech Jones will be in the chair when Lord McGowan speaks on: "The Chemical Industry and Empire Development." To commemorate the 50th anniversary of Sir Ronald Ross's final proof that malaria is transmitted by mosquitoes, the Society is to hold a meeting on July 7, when Professor G. Macdonald (director of the Ross Institute of Tropical Hygiene) will be one of the speakers.

Enwonwu Exhibition Transferred

About 24 sculptures and eight paintings, part of the Enwonwu art exhibition, which closed at the Berkeley Galleries last Saturday, are to be transferred to the Mansard Gallery, Tottenham Court Road. They will be shown with paintings by Miss J. Huxtable, whose work deals mainly with Southern Rhodesia. The joint exhibition is expected to run about a month and will open on June 16. Mr. Enwonwu is leaving Britain on June 12 on a visit to Italy.

East and West Friendship

The annual report of the East and West Friendship Council states that the number of subscriptions has more than doubled during the past year. Including grants from firms with overseas connexions, the income, at £1,286, was the highest received but still below the annual target of £2,000. The Council's annual meeting is to be held at Beveridge Hall, London University, on June 3, when among the speakers will be Lord Pethick-Lawrence and Mr. Michael Peterside (President of W.A.S.U.).

Complaints

Complaints of the reception given to African students in this country were made by the Bishop of Gambia and Rio Pongas and by Major H. B. Shepheard (Colonial Office Liaison Officer) at the Gambia Pongas Association meeting held in York recently, according to the May 15 issue of *The Yorkshire Post*. The Bishop stated that Africans were disappointed to find they were not welcomed with the enthusiasm with which they would greet a visitor to their own land.

Social and Personal

The engagement is announced between Mr. John Michael Tiddy (younger son of Mr. and Mrs. Richard Tiddy, of Accra) and Miss Dorothy Mary Pendlebury (only daughter of Mr. and Mrs. C. Pendlebury, of Northenden, Manchester).

Lady Edith Manson-Bahr, wife of Sir Philip Manson-Bahr (consulting physician in tropical diseases to the Colonial Office) died on May 17, aged 69. She was the eldest daughter of the late Sir Patrick Manson (former Colonial Office medical adviser and malaria research worker) and married Sir Philip Manson-Bahr in 1909. Sir Philip is a director of The London School of Hygiene and Tropical Medicine.

Mr. George Archibald Smeaton, late of the Nigerian Service, died at Greenock on May 9. He is survived by his widow, Mrs. Joan Smeaton (of Fairlie, Ayrshire).

Sir Hubert Walker (chairman of the West African Airways Corporation) flew to Lagos on May 18.

Dr. Beatrice Joly (of London) has been appointed Professor of Surgery at University College, Ibadan. She has previously held hospital and university appointments in India.

Dr. Phillips (Assistant Bishop of Lagos) was the preacher at the Empire Day service held in St. Margaret's Church, Westminster.

The Minister of Food announces that he has approved the appointment of Messrs. Cooper Bros. and Co., of London, as auditors of the Overseas Food Corporation for the current year.

New arrivals at Nutford House, London, include Mr. E. O. Coker (a law student from Lagos); and Mr. M. A. Aderemi (of Ife) who has come to Britain to study languages.

Major-General W. A. Dimoline (G.O.C. East Africa Command) is to be Commander, Aldershot District from November. Major-General Dimoline was commissioned in the Regular Army in 1917 and attached to the R.W.A.F.F. in Nigeria from 1922 to 1928.

Canon Noel Dolben Coleman (Secretary for Translations and Librarian of the British and Foreign Bible Society since 1944) was among those who lost their lives in the air crash at Libenge on May 13. The aircraft, belonging to the Sabena Company, was on its way from Leopoldville to Brussels with 25 passengers and a crew of seven.

The Victoria League wishes to obtain particulars of people willing to offer hospitality to Colonial students who are living in hostels or rooms in Britain and therefore have little opportunity of meeting British people in their homes. The League is looking for people who would invite coloured students to their houses for a few hours or a few days.

NURSERY SCHOOL of long standing. Children from one month to nine years. Entire charge. **NORLAND CARE.** Home influence. Healthy country life and sea. Oldfield, Lindisfarne, Broadstone, Dorset.

and it is not by any means their desire to trade slogans for driving away the white people from any of the territories. They, like ourselves, however, are fully convinced that the Crown Colony system of governing their countries is despotic and in many instances obsolete, showing conspicuous need for abrogation. Present administration of the Nigeria and the Cameroons is static, unprogressive and not in accordance with the true democratic ideals to which these vast territories contributed man-power, money and materials for the successful conduct of World War II.

Friends, not Enemies. Nigeria and the Cameroons under British Mandate/Trust have an area of 407,000 square miles, three times the size of Great Britain, or the areas of France, Great Britain, Portugal, Netherlands, Belgium, Jamaica, Pueto Rico, Corsica and Trinidad put together, and is inhabited by over twenty-one millions which according to the 1931 census is three times the population of Australia and New Zealand added together. Their agricultural resources include palm oil, palm kernels, cocoa (thirty-five per cent of the world's output), groundnut, rubber, cotton, tobacco, rice, hides and skins, mahogany, coffee, ginger, peppers, potatoes, yams, sugar, dates, pineapples, bananas, grapefruit, grapes, tangerines, oranges, limes, etc. Their mineral resources include bauxite, bitumen chromite, coal and lignite, iron, kaolin, columbite (ninety-five per cent of world's output), diamond, diatomite, galena, gold, ilmenite, lead, limestone, magnetite, manganese, mica, molybdenum, monazite, oil, phosphate, platinum, rutile, salt, silver, tantalite, tine, tungsten, wolfram, zinc, zircom, etc.

Official Reception. It is very reassuring to report that, in addition to an informal visit to the Colonial Office on the 5th August on which occasion the Delegation met the Secretary of State for the Colonies, the Right Honourable A. Creech Jones, the Delegates were officially received on the 13th of August and during the discussion which took place had an opportunity to elaborate on the memorandum which they presented and to discuss additional points of interest.

Mr. Creech Jones made it clear that the Nigerian constitution introduced in 1945 should be given a fair trial. There was no question of change to the constitution which he feels flexible and adaptable until experience has shown in what ways amendments were required. He emphasised the intention of His Majesty's Government to do all in its power to assist the political, economic and social progress of Nigeria, and strongly urged the Delegation to co-operate in this great task.

He also informed them that some of the other points raised in their memorandum and the discussion

would require study, and that a reply on these points would be furnished as soon as possible. He indicated that some of the points required consideration in consultation with the Government of Nigeria and that it would be sometime before a reply would be given.

THE CARIBBEAN LABOUR CONGRESS.

It is interesting to note that while we on this side are enjoying the company of the delegates from Nigeria and the Cameroons, an account of whose mission is reported in this issue, our West Indian brothers are holding a congress meeting in Jamaica which is graced by the attendance of Mr. A. Creech-Jones, Secretary of State for the Colonies. The organisers have a very fine but nevertheless, important programme. Richard Hart, its General Secretary, writing on the Colonial Office Memorandum for Federation states as follows:—

There have been two memoranda issued by the Secretary of State for the Colonies on the Federation of the British West Indies and British Guiana. The first, issued by Colonel Stanley on 14th March, 1945, did little more than approve the idea in principle, ask that local legislatures express their views, and suggest that a conference be held in London to consider the matter.

The C.L.C. at its inaugural conference in Barbados (September, 1945) expressed appreciation of the Secretary of States' acceptance of this long standing West Indian demand but urged that the conference to consider the matter be held in the West Indies. The Legislatures of all the colonies concerned except the Bahamas went on record in general terms as favouring federation.

The C.L.C. made it plain in its statement at Barbados that Carribean Labour demands federation with Self Government, not without it, and further made it plain that each unit of the federation must be advanced to a status consistent with a Self Governing federal constitution:

> **"This conference advocates the granting of all the units of the British Caribbean area of wholly elected legislatures based on Universal Adult Suffrage, with policy making Executive Councils responsible to the Legislatures, and of wholly elected local Government authorities."**

Accounts and Dividends

Bank of British West Africa

The directors of The Bank of British West Africa Limited have decided to recommend, at the forthcoming annual general meeting, the payment of a final dividend of 4½ per cent. less tax, in respect of the financial year ended March 31, 1948. If approved at the meeting this will make, with the 2½ per cent. paid, less tax, as an interim dividend in December, 1947, a total of 7 per cent., less tax, for the full year and will repeat the dividend for the previous year.

Filani (Nigeria) Tin Mining Company

The accounts and report of the directors of The Filani (Nigeria) Tin Mining Company, Limited, for the year 1947, show a profit of £5,645, compared with £6,815 for the previous financial year. Total revenue was £8,419 (£8,085) made up as to trading profit in Nigeria, £8,238 (£7,938); transfer fees, £5 (£9); interest, £176 (£138). Outgoings were: London expenses, £1,142 (£839); depreciation, £132 (£131); profits tax, £1,500 (£300); making a total of £2,774 (£1,270) and leaving the profit indicated.

Allocations included: Proposed dividend of 9⅜ per cent. tax free (same), taking £2,484 (same); income tax on profits, £2,650 (£3,200); making a total of £5,134 (£5,684) and leaving a credit of £511 (£1,131) which, with the credit balance of £3,038 (£1,907) brought in, makes a total credit of £3,549 (£3,038) which it is proposed to carry forward to the current year's accounts.

The report states that output of tin ore was 58 tons (63 tons for 1946) averaging 70 per cent. tin; and output of columbite was 4 tons (5½ tons). Despite this decline, there was a higher realization. Output depends largely on rainfall and given that, the outlook for 1948 is good. The new price of tin £535/10/- per ton, which will operate in 1948, compares with an average of £412 per ton for 1947, and with £354 per ton for 1946.

Meeting at Pinners Hall, Old Broad Street, took place yesterday at noon.

Gold Coast Banket Areas

The report and accounts of Gold Coast Banket Areas, Limited, for the year ended June 30, 1947, show an operating loss of £31,395—the year including six months of preparation for resumption of milling and six months of restricted working; the revenue, less realization, being £47,563 and mining expenses being £78,958. Additional costs were: Care and maintenance, £12,253 (£4,773); depreciation, £11,623 (nil); development, £17, 237 (nil); London, £7,385 (£1,320); to staff superannuation, £1,112 (nil); making a total of £49,609 (£6,093) and raising the total loss to £81,004. Credit items were: Interest, £2,438 (£2,063); sundries, £1,714 (£2,229); transfer fees, £413 (£535); making £4,566 and reducing the loss to £76,438. Add credit balance of £24,108 brought in, leaves a total debit of £52,330, carried to the balance sheet.

The shortage of skilled labour seriously retarded supplies of ore from stoping, so that only 29,734 tons were treated in the six months of prod[illegible] activity; and only 5,547 ounces [illegible]re recovered, at an extracti[illegible] Development w[illegible] rising and cross[illegible] 6,947 feet were s[illegible] proved payable, averaging 5·9 dwt. over 33·4 inches. The South Shaft was sunk 170 feet to 2,010 feet. The Main Shaft sinking was started in June, so only 6 feet were accomplished, the depth being 2,277 feet at the end of the financial year. Ore reserves were then 383,933 tons, averaging 4·98 dwt. over 38·3 inches; but on March 31, 1948, were raised to 556,801 tons, averaging 5·2 dwt. over 37·3 inches.

Meeting at Winchester House, E.C.2, on Monday next, June 28, at noon.

Gold Coast Main Reef

The report and accounts of Gold Coast Main Reef, Limited, for the year ended June 30, 1947, show a profit of £112,135 compared with £96,999 for the previous financial year. Total revenue was £373,581 (£348,726) made up as to: Bullion, net, £373,235 (£348,647); and sundries, £346 (£79). Outgoings were: Mining costs, £201,513 (£178,261); development, £36,965 (£33,400); depreciation, £10,108 (£14,895); London, £8,587 (£7,681); concentration scheme, £2,556 (£17,490); superannuation scheme £1,717 (nil); making a total of £261,446 (£251,727) and leaving the profit indicated.

Allocations were: Taxation on profits for the financial year, £48,000 and on those of the previous year, £15,244 (£80,000); dividends of 2½ per cent. and 5 per cent., both less tax, £42,903 (£34,545); directors' additional remuneration, £5,000 (same); making a total of £111,147 (£119,545) and leaving a credit balance of £988 (debit of £22,546) which, with the credit balance of £7,328 (£6,201 plus overprovision for bullion expenses written back, £23,673) brought in makes a total credit of £8,316 (credit of £7,328) which it is proposed to carry forward.

The Chairman (Major E. Seaborn Marks) in his review, circulated with the report and accounts, reveals that 112,540 tons of ore were treated, assaying 9·332 dwt. to yield 48,090 ounces of fine gold. Revenue, as a result, rose by £24,800 but mining costs rose by £23,200; and the increase in profit is thus mainly due to the drop in the concentration scheme costs, now terminated. He states that instead of Government help in these difficult days, the industry is victimized by excessive taxation and little in the way of priority for delivery of plant and machinery which would help the industry to increase production.

Meeting at Winchester House, E.C.2, on Monday next, June 28, at noon.

Elder Dempster Lines Holdings

The directors of Elder Dempster Lines Holdings, Limited, announce a net profit of £189,114 for the year 1947. Gross revenue was £355,550, made up as to: Gross dividends from Elder Dempster Lines, Limited, £312,500; gross dividends on trade investments, £38,685; and gross dividends and interest on general investments and sundries, £4,365. Outgoings include: U.K. Taxation, £163,634; directors' fees, £1,500; and management expenses, £1,302; making a total of £166,436 and leaving the profit indicated. Allocations were: Interim dividend of 4 per cent., less tax, £60,469; proposed final dividend of 8⅓ per cent., less tax, £128,497; making a total of £188,966 and leaving a credit balance of £148 which, with the balance brought in [illegible] (£2,155) makes a total of £2,303 which [illegible] proposed to carry forward.

The Chairman (Mr. Alan C. Tod), in his statement circulated with the report and accounts, reviews the work of the Lines company in 1947, including delivery of m.v. *Accra* and three of the S-class cargo/passenger-ships. Two more of the latter were delivered in the current year, as well as m.v. *Apapa* (sister ship to m.v. *Accra*) and all are now in commission. The remaining S-class ship is expected to be in service before the close of 1948. Further orders for ships are to depend upon price and delivery date, as well as upon the prospects of profitable operation, with due regard to the effects of air travel and Government sponsored air services on the passenger traffic; and the attitude of the authorities in speeding up the inland carriage of vegetable oils and oilseeds to the ports for shipment.

Meeting at India Buildings on Monday next, June 28, at 12.15 p.m.

United Tin Areas of Nigeria

The report and accounts of United Tin Areas of Nigeria, Limited, for the year ended June 30, 1947, show a profit of £8,249 compared with £13,209 for the previous financial year. Total revenue was £37,760 (£53,781), mainly on tin account. Outgoings included: Working costs in Nigeria, £12,236 (£24,004); general, £7,474 (£7,405); realization charges, £5,588 (£6,228); depreciation, £339 (£381); prospecting, £774 (£405); London, £3,100 (£2,149); making a total of £29,511 (£40,572) and leaving the profit indicated.

Allocations were: Taxation, £4,287 (£5,749); special prospecting expenditure £4,732 (nil); provision for dividend, nil (£9,000); for directors' additional remuneration, nil (£450); making a total of £9,019 (£15,199) and leaving a debit of £770 (debit of £1,990) which, with the credit balance of £16,249 (£17,851 plus profit on sale of investments, £388) brought in, make a total credit balance of £15,479 (£16,249) which it is proposed to carry forward.

The report states that output of tin concentrates was 139 tons, against 211 tons for the previous year, though the average price received was higher at £365 per ton (£350), and no columbite was sold. Working costs rose so that the 146 tons shipped cost £177/14/3d. per ton (against £172/2/3d.). No addition was made to the ore reserves which were 293 tons at June 30, 1947. The outlook for the new year is better, with the new increased price of tin; and the silver/lead areas show promise for the future.

Meeting at Finsbury Pavement House, E.C.2, on Tuesday next, June 29, at 2.45 p.m.

Lyndhurst Deep Level (Gold & Silver)

The accounts and report of the directors of Lyndhurst Deep Level (Gold & Silver) Limited, for the year ended December 31, 1947, show a revenue of £27,604 (£27,235) from dividends and interest. Income tax took £12,255 (£12,350); and the interim dividend of 5 per cent. (same), took £12,100 (£11,000); general expenditure was £17,366 (£5,475); making a total of £41,721 (£28,825) and leaving a debit of £14,117 (debit of £1,590) which is added to the prospecting and development account and carried to the balance sheet.

Meeting at the Chartered Insurance Institute on Tuesday next, June 29, at 2.30 p.m.

What is the best roofing to withstand extreme climatic conditions?

There is no quick answer to questions about weather resistance. Only years of use can tell you whether one roofing material is better than another. Years of continuous everyday weathering have earned for Ruberoid roofing the unqualified approval of builders and architects throughout the world.

The Ruberoid Company provide tested Standard Specifications for roofs of wood, concrete or steel to withstand the worst extremes of climate. In every specification the common factor is Ruberoid, the original flexible bitumen-impregnated roofing material.

Ruberoid is famous for giving lasting weather protection to roofs of all types in all climates.

WEST AFRICA

A weekly Newspaper circulating throughout Nigeria, Gold Coast, Sierra Leone, Gambia, French West Africa, Mandated Territories, Belgian Congo and in Europe.

No. 1631 Vol. XXXII. Registered at G.P.O. as a Newspaper. SATURDAY, MAY 22, 1948 **Annual Subscription £1 5s. 0d.** Post free to all Countries.

HYDRO-ELECTRIC POWER FOR THE GOLD COAST

By F. J. Erroll, M.P.

RENEWED interest in a hydro-electric project on the Volta River poses once again the question as to whether large-scale hydro-electric developments are really feasible in the African Colonial territories. Before proceeding to a detailed examination of the Volta River project, it is worth while considering the various factors, economic and technical, which must be taken into account before a decision to proceed is made.

Large schemes are the order of the day in Africa, and it is natural that enthusiasts should see a potential hydro-electric scheme in every river and waterfall. Too often, the cart is put before the horse; and a hydro-electric development is discussed as being a desirable end in itself, regardless of whether there is likely to be, within the foreseeable future, a sufficient load-demand to make the project economically feasible.

The harnessing of the Zambesi River in the Kariba Gorge has been put forward on several occasions as being a useful development for Southern Rhodesia, and the search for possible uses for the power is still going on, suggestions ranging from an electrically-operated steel plant to the provision of domestic supplies for the Native population.

In Uganda, the newly appointed State Commission is devoting a great deal of time and attention to the harnessing of the River Nile, as it flows out of Lake Victoria at Jinja. Here, too, a frantic search for suitable loads is going on; and the proprietors of small factories are being canvassed with a view to their likely requirements. Industrialists in England are also being asked if they will consider the erection of plants in Uganda which would have the benefit of and consume the cheap hydro-electric power produced.

This is clearly the wrong way to go about hydro-electric schemes of development. It is only when a reasonably large potential load can be shown to exist that the search should begin for the most appropriate source of power supply. Such a source may or may not be water power. Water power should be considered only as one of several possible alternatives. It should not be regarded as an end in itself, worth developing simply because the waterfall or swift-flowing river is ready to hand.

The Volta River project is fortunately free from faulty planning of this sort. It is because the need for cheap power exists that the scheme is being considered. As is well-known, the Gold Coast is a rich source of bauxite, the raw material from which aluminium is derived. Pre-war, no bauxite was exported from Africa, and France was Britain's chief source, although small amounts were imported from British Guiana. In 1938, for example, 230,000 tons out of 250,000 tons came from France.

The German occupation of France altered all this and the deposits in the Gold Coast were rapidly exploited so that, by 1945, Britain was importing 148,000 tons from the Gold Coast, out of its total requirement of 163,000 tons. Gold Coast resources have been estimated, by an American authority, to be in excess of eighty million tons.

During the war, the bauxite was shipped to reduction plants in England and elsewhere, but considerable economies might be achieved if the bauxite could be reduced to aluminium in the Gold Coast itself. To be a satisfactory financial proposition, an aluminium reduction plant must have available an abundance of cheap electric power; and plants have been sited in Norway and the North of Scotland to take advantage of the hydro-electric power available. If the Volta River could be harnessed and enabled to produce a sufficient power supply, there is no reason why the production of aluminium should not take place in the Gold Coast itself.

Extensive investigations have been put in hand by the West African Aluminium Company Limited, and measurements of the flow rate of the River Volta are being taken. Preliminary work of this character is necessarily a slow business; and four or more years may elapse before it is completed. If the investigations are successful, another three or four years of construction work would be necessary before production could commence.

The plan proposes to harness the waters of the Lower Volta by the construction of a dam just above Senchi. This would impound a large volume of water, which would flood the river basin as far north as Kete Krachi, thus making the river navigable for barges over a considerable distance. The catchment area is estimated to be about 170,000 square miles, over which the average rainfall varies from thirty to fifty inches per annum. The station would be a low head one; and large slow-speed

IN THIS ISSUE

	Page
EDUCATION IN AFRICA	*504*
CONDITIONS IN COLONIAL SERVICE	*505*
ASPECTS OF COMPANY LAW	*506*

water wheels would be installed on the dam itself. The power generated would be supplied to the reduction plant nearby to which bauxite would be transported from the concessionary areas.

Initially, it is proposed to quarry bauxite at Mount Ejuanema only and carry it by aerial ropeway to a tributary of the Volta, to be loaded into barges and shipped downstream to the refining plant. From Yenahin, to be developed later, the ore would have to come part of the way by rail and a further stage by barge before following the same route. Below the dam, it is proposed to develop the port facilities of Ada, through which, in the construction stage of the plan, the contractor's heavy plant, equipment and materials could be brought into the Colony.

The surplus power would, of course, be available for industrial and domestic purposes throughout the Gold Coast, though it must be remembered that long-distance transmission and distribution is expensive; and that, where loads are small and intermittent, it might well prove cheaper to generate supplies on the spot for local needs. Hydro-electric power is not necessarily cheap power, and the balance of advantages in the case of the Volta River project may not prove easy to determine. Whatever the result, the time spent in the preliminary investigation will not have been wasted.

WEST AFRICAN TALKING POINTS

Ample Career

ONE clear perceptible thread running through the Lords' debate on conditions in the Colonial Service was the fact that uncertainty as to its future was felt. Lord Tweedsmuir bluntly stated that we have come to a turning point. Unless we could offer, to the Colonial Service of the future, some prospects, some security and some really reasonable terms of service, the right sort of people would not be forthcoming.

It was Lord Milverton who took up the cudgels for the Colonial Service. His aim, he said, was to encourage the recruit to the Colonial Service, and his words were directed to this end. "No person," he said, "who knows anything of the subject, can believe, in the lifetime of anybody joining the Service today, that the Service will not provide an ample career; there is a long way to go before these Colonies will be able to do without the advice, help and support of the British Services." There has been no clearer statement made as to prospects in the Colonial Service. The fact that it was made at all shows how real has been the reluctance among potential recruits. Were this not so, there would have been no need for encouragement.

Even in his earlier statement that "there never has been a time like the present when we need and must have the best and, for the moment, we are getting the best," Lord Milverton leaves room for the suggestion that the best might not be continually forthcoming. His opinion on the duration of prospects should encourage many would-be applicants to persevere in their intentions of entering the Colonial Service.

* * *

Potential Danger

ONE other remark of Lord Milverton deserves especial scrutiny. "The Colonial Civil servant of today," he said, "goes to meet the difficulties of the task a far better trained man." Few would quarrel with the accuracy of this statement. Lord Listowel's account of the progress made since the Devonshire report is confirmation by itself. But this very excellence of training contains a potential danger which Sir Alan Burns, by virtue of his status as a Colonial, was peculiarly qualified to emphasize when he spoke to a Summer School of Colonial Civil Servants at Oxford last September.

There was, he said on that occasion, "a danger in Courses such as this one, lest the Course be regarded as more important than the Colonies for whose benefit it is devised; and worst of all, would it be if anyone began to think that the Colonies existed for the benefit of the Colonial Civil Service."

The time is long past, he went on, when we can get away with the attitude that "Daddy knows best." "We are there in the Colonies to help and to educate; and we can only help by a thorough understanding of the Colonial point of view, so far as it is possible for us to understand it. But we certainly will never understand, unless we take the trouble to try to understand."

Lord Listowel did make passing reference to the fact that Colonials were being included in the new courses for Colonial Civil Servants, but if there is to be any criticism made about the Lords' discussion, may it not be fairly said that, in spite of its high level of debate, the one thing lacking seemed to be practical consideration of the real potential of Colonial peoples themselves.

The emphasis which Sir Alan Burns made last September, that our rôle must change from an executive to an advisory one, seems not to have been made at all; although Lord Milverton did say that "the natural corollary of our policy is that the Colonial Administrative Service, recruited from this country, should be a diminishing body because, as they train the people of the countries to administer their own affairs, it is obvious that the need for so many will slowly diminish. . . .

* * *

Paper Brakes

TWO points made by Lord Rennell are of the first importance. For years now, Colonial Administrative Officers have been complaining of the deluge of paper work which cramps their activities. The late Sir Selwyn Grier, who had a distinguished career in Nigeria, attributed no small share of this paper work to the misfortune of blindness which afflicted his last years of energetic life. Not long ago, another Governor told an audience in Trinidad that his time was so taken up with official literature that he had no time for reading.

And yet there are people who profess to be satisfied with the existing state of affairs by which (to look no further for examples) the ordinary Parliamentary Question can create additional work for the administration already struggling with returns. Lord Rennell's remarks are most refreshing and timely. Sooner or later, the battle of paper has got to end. It might as well be sooner; because there can be no success resulting from a state of affairs where "Administrative Officers are finding themselves tied up in their offices with not enough time to get around their districts and with no time at all to get into contact with the people whose affairs they are supposed to administer."

The other part concerns the suggestion for interchanging personnel between the Foreign and Colonial Services. Important at any time, such a policy would seem to be imperative today when international co-operation in Africa is admitted to be the first essential of almost any step forward; with the possible exception of political progress, although this too has been perceptible in recent years.

* * *

Capital Equipment

MR. SHINWELL did not overlook Colonial interests in his chairman's speech to this year's Labour Party Conference. He signposted three fields of enterprise Great Britain must cultivate to ensure survival. Coal, he argued, must cease to be used mainly as a fuel to be burned; it must be exploited as a source of new raw

BRITISH WEST AFRICA AND TRADE POLICY

By F. V. MEYER.

TRADE policy can be defined as Governmental attempt to change the pattern of trade from what it would be in its absence. It can take the form of interference with, or control of, values or quantities. In British West Africa's import trade, values are interfered with by means of Imperial preference, quantities were controlled in pre-war days by textile import quotas and at present import licensing.

Preferential tariffs were introduced in the Gambia and in Sierra Leone in 1932. But neither the Gold Coast nor Nigeria ever had a preferential tariff. The Gold Coast could not discriminate in favour of the Empire owing to the Anglo-Dutch treaty of 1871, which provided for equality of tariff treatment for British and Dutch goods, and thus automatically for all goods coming from countries enjoying most-favoured-nation rights. Nigeria could not give anything either, in view of similar provisions in the Anglo-French treaty of 1898. When this treaty was denounced by the French in 1936, Nigeria legally became free to introduce a preferential tariff, but made no use of this legal right.

Save for textiles, this liberty was surrendered once more, in the U.K./U.S. trade agreement of 1938. The result of this difference in tariff policy in the four West African Colonies was that the Empire's percentage share in the import trade of the Gambia and Sierra Leone was higher in the 'thirties than in the 'twenties, while the reverse holds true for the Gold Coast and Nigeria. It is probable that the principal foreign countries lost about half of their export trades to the Gambia and Sierra Leone, on account of the discriminating tariffs in these two dependencies.

Quantitative import controls were resorted to in 1934, when imports of Japanese textiles were subjected to quota regulations. The above-mentioned treaties prevented the application of such measures to imports from most-favoured-nation countries, so that Japan had to be deprived of her most-favoured-nation rights in British West Africa, to makes these quotas legal. After 1936, Nigeria applied quotas on all foreign textile imports. It was decided that the Gold Coast should do the same which, in view of the Anglo-Dutch treaty, meant that British textiles had to be quotaed as well.

The results were disappointing for the British textile industry: British exports of quotaed textiles continued to decline and the benefit of Japan's exclusion went chiefly to India and Hong-Kong. The textile quota system was allowed to lapse after the outbreak of war and is not likely to be heard of again. Imperial preference may become important again in the Gambia and Sierra Leone, but has become overshadowed in importance by import licensing, first introduced as a war-time measure and thereafter continued in view of the balance of payments difficulties of the sterling area.

Imperial preference, as applied to Colonial exports, was of comparatively little value to British West Africa. None of the Dominions offered anything substantial. Of the United Kingdom preferences, the cocoa preference was valueless. The Empire has an export surplus in cocoa, and as long as the preferential market cannot be charged more than the foreigner (who pays the world price) such a preference cannot be exploited. The same applies to vegetable oils and oilseeds though, in this case, it is conceivable that the preference avoided some diversion of demand to substitutes for West African vegetable oilseeds and oils. Only the banana preference was of definite value; it stimulated some expansion of the banana industries of Nigeria and the Gold Coast. But even in 1938, bananas ranked only eleventh amongst British West Africa's principal exports.

The war-time bulk purchase arrangements made Imperial preference of purely nominal importance. Bargains were struck between Governmental agencies for fixed quantities at prices determined by the administration after consultation with interested parties. It is intended to make bulk purchase a permanent feature of trade policy, as applied to British West Africa. Marketing Boards have been set up in Nigeria and in the Gold Coast, to take care of all exportable cocoa and vegetable oilseeds and oils. Such centralized selling agencies are bound to be in a strong bargaining position *vis-a-vis* buyers who take only part of the crop as long as attempts to introduce substitutes can be frustrated.

In West Africa, these bulk purchase arrangements are coupled with price stabilization schemes which affect not only the producer, but also the United Kingdom consumer. Thus, the Ministry of Food

As far as British West Africa is concerned, ... system was of little or no value, since the ... has an export surplus in the more important ... African exports. It is precisely this fact which now puts British West Africa into a more favourable position than most other British Colonial territories.

In foreign countries, British West Africa was faced by such obstacles as the American tariff, French Imperial preference and quotas, and German exchange control, to mention only the most important trading Powers of pre-war days. In the United States, principal British West African exports, if not admitted free of duty, were all covered by the trade agreement concessions given under the Reciprocal Trade Agreements programme. On the whole, the American tariff is not very restrictive on British West Africa. German exchange control put a value-quota on imports into Germany; such action, by one of British West Africa's chief markets in pre-war days, probably intensified the unfavourable trend in West Africa's terms of trade in the 'thirties. Most restrictive was French trade policy; the measures introduced in the 'thirties probably eliminated more than four-fifths of British West African sales to France.

WEST AFRICAN TALKING POINTS

The Stage is Set

WHILE distinguished West African visitors have, through the good offices of the British Council, been learning about the British way of life (especially in Richmond, Yorkshire) Sir Stafford Cripps has been speaking to the Glasgow Chamber of Commerce about "accomplishing our object without having to cut down our standards of living." There was, he said, a long way to go and only a short time in which to get there. The main theme of his speech was the necessity to improve efficiency of production by a greater adoption of new techniques and, of course, by hard work.

There was no doubt that we could succeed, but it needs all our efforts of brain and muscle to win through. There seems to be a new note of emphasis since Sir Stafford told the African Governors, last November: "it is to your contribution to the righting of the world unbalance, that we must look; and in order to give you the chance of success, we must put behind you all that we can in the way of capital goods supplies."

To many Europeans and Africans, these words of Sir Stafford seemed at the time to be placing too much reliance on Africa as a solution for what was, in effect, a European problem. To-day, in view of the European Recovery Programme under the Marshall Plan, the axis has changed and the emphasis is once more on Europe. Europeans, like Africans, must be the final architects of their economic salvation.

"If we are to get over this huge unbalance between Europe and what is substantially the Western Hemisphere," Sir Stafford told the Glasgow Chamber of Commerce, "we must increase Europe's dependence upon itself by increasing its production of its own needs, in foodstuffs in particular, and by increasing the exchange of commodities internally in Europe." Africa is not ruled out, but Europe, too, has a contribution to make towards the righting of the world unbalance. The stage is set for Western Union and for the development of the Commonwealth.

* * *

Commonwealth and Western Union

FIELD-MARSHAL SMUTS, in his eve-of-Empire Day speech, posed the obvious questions: "Can Britain," he asked, "be a leading member of both Commonwealth and Western Union? Will the Commonwealth suffer from such a dual relationship?" One thing, said Field-Marshal Smuts, was quite certain: "Britain will be necessary for both Commonwealth and Western Union."

That, surely, is the only answer to a question which is obviously being asked throughout the Commonwealth to-day! Geographically, the United Kingdom is a part of Europe and, in an air age, separation by water can no longer have the significance it had when Britannia ruled the waves. That is why Mr. Bevin, strong advocate and supporter of Commonwealth development though he is, cannot consent to a policy which would isolate Great Britain from the remaining democracies of Western Europe.

There must be Commonwealth development and there must particularly be Colonial and African development, but it must be planned as part of an overall plan, in which not only the Commonwealth but also the Western European countries (especially France and Belgium) must be consulted at every stage. And it would be foolhardy to overlook the United States, where interests in European recovery naturally extend to include the development of the Colonial territories which are administered by certain of the European countries.

Canada, said Field-Marshal Smuts, has long found loyal membership of the Commonwealth compatible with close co-operation with the United States and has thus set a precedent for the Commonwealth as a whole. Canada, besides, has provided the world with an object lesson in Anglo-French toleration. In Africa, French and English are also drawing together in understanding and exchange of knowledge with reference to the great challenges presented there. In Liberia, the Americans, from the beginning, have shown and continue to show great interest in the development of that section of the Continent. There is much to be learnt from the Belgian Congo.

Surely, the idea of Western Union and Commonwealth development is a complementary idea! and surely the fulfilment of one is dependent on the fulfilment of the other! Those who advocate Western Union as an end in itself, and those who advocate Commonwealth exclusiveness as a practicable achievement endanger the fruition of a purpose which must be achieved if either idea is to survive at all.

* * *

Nigerian Ways of Life

TOMORROW, cinema goers in London will be able to see *Challenge in Nigeria*, Number 19 in the series: "This Modern Age" news magazines produced by the J. Arthur Rank organization. It is a documentary film and it presents Nigeria as a country as large as Italy and France put together, and a country whose population has doubled in the last 50 years of peace. Beginning with the Hausas in the north, answering the Moslem call to prayer, the film shows, in turn, the Pagans of the Jos plateau, the Ibos and the Yorubas.

It is a challenge, because it does not dwell much on the life of the city dweller, except to comment that one in every three of the houses in Lagos has been condemned; but harps on the disease and poverty of a country with great resources. It shows pyramids of stationary groundnuts and grounded railway wagons. It cries out for more doctors and more nurses. Attention is paid to Dr. Azikiwe; and there are glimpses of the Legislative Council, Provincial Assemblies and Native Administrations.

WEST AFRICAN MARKET NOTES

Fibres in Coast Colonies

By the Commercial Editor

THE issue of the Empire Cotton Growing Corporation's annual report and that of the Commonwealth Economic Committee's *Industrial Fibres* draw attention to the apparent neglect of fibre culture in West Africa and, therefore, of the need to expand it not only in the interests of the whole world, which is desperately short of fibre, but also of the Coast Colonies which are in need, above all other things, of a more widely spread agricultural net than the one they enjoy at the present.

World production of fibre, in the latest year for which full details are available, is about 20,000 million pounds weight in 1946; whereas the peak year was 1940, when nearly 29,000 million pounds were produced. Of these totals, approximately 15,000 million and 19,000 million pounds, respectively, were of the chief apparel fibres, such as cotton, wool, rayon, staple and silk; and both represented peak values for the same years. Cotton naturally furnished the lion's share of these totals, at 11,686 million and 14,559 million pounds respectively, again marking peak figures for those years.

The Coast Colonies have but a small share in these huge totals; and they enter but one field in the full range of industrial fibres, being confined to cotton alone. If coir can be called an important fibre, it appears that something might be done about it, seeing that coconut culture is not unknown in West Africa. Little can be expected as regards wool, rayon or silk culture in West Africa, but some information might well be forthcoming as to the possibilities for flax, hemp and jute culture. Surely, these have been considered, at some time or another, as potential products for the variety of climate enjoyed by the vast expanses of the West African Colonies.

Room for Expansion

We appear to be facing cotton alone, therefore, as a practical proposition for a worth-while expansion in production. So let us see what has been done in the past! The maximum production of cotton, in Nigeria, was achieved in 1941, when 73,400 bales of 400 pounds weight, were produced. The next best year was 1940, with 50,900 bales. It is important to note that 1940 was the peak year for the world and, as the season in Nigeria is from mid-June to February, it is a reasonable assumption that that year was also the real peak for Nigeria.

When we calculate Nigeria's contribution in terms of million pounds, the world basis, we find 1940 with 20·4 million pounds, and 1941 with just under 30 million pounds out of an Empire total of 300 million and 353 million pounds, respectively; and this was out of world totals of 13,441 million and 14,559 million pounds, respectively. It is fairly clear that not only is the Empire but a small producer of cotton, but that Nigeria is only a small contributor to Imperial supplies. It follows that, in Nigeria in particular, there is an immense potential for a big increase; and such an increase is not only of vital importance as a dollar saver, but it will be recognized as one of the major planks in the platform for extending the agricultural interests of West Africa.

Vital Factors

The picture, however, is anything but bright and the reasons reflect the current world shortage of almost everything needed by modern civilization. First in importance is the growth of African spinning and weaving, which has followed naturally upon the big increases in the prices of imported products. This factor has reduced the amount of Nigerian cotton available for export. Next is the competitive demand for labour which is gravitating towards those industries which give the best reward in wages. Chief amongst these is the culture of groundnuts, with rich rewards for the African farmers in the high prices ruling. The price of cotton has, of course, advanced too, but not sufficiently to offset the greater attraction of groundnut culture.

Finally, there is the important factor of trained specialist staff, of which there is a world dearth; and this, humanly enough, is attracted to those industries or products which offer the best advantages. Certainly groundnut culture throughout Africa and cocoa specialization in the Gold Coast could scarcely fail to induce agricultural specialists to leave cotton.

Nevertheless, those who are interested in cotton culture, sure that Nigerian varieties can hold their own against the best in the U.S.A., and take whatever is likely to be offered, can hope that the authorities will be alive to the dangers of any one-sided economy, such as groundnut culture in Nigeria and cocoa growing in the Gold Coast, taking too firm a root in those Colonies.

Rhodesian Gold Subsidy

Further details are now available as to the operation of the Rhodesian scheme to aid gold mines, intimated in last week's issue. The cost of the scheme to pay a subsidy of 27/6d. per fine ounce to gold mines is £695,000. To raise this sum, there is to be a special surcharge, to be called "Gold Industry Contribution," and to be levied upon all income-tax assessment for the year ended March 31, 1948. All income-tax payers will be liable, including public companies, private companies, and ordinary individuals; and it is understood that the profit-making gold mining companies will also pay the contribution.

million cwt. in 1946, there would again appear to be reason to expect that soon West Africa will take an increasing share. The more recent news that the authorities are offering £64 per ton for Gold Coast coffee is bound to act as a stimulus to any such effort. British imports, in 1947, were 887,000 cwt., of which 383,000 cwt. came from the Empire (mainly East Africa).

Finally, a work on spices, for Sierra Leone was chief Empire source of ginger before the war, with an average of 44,000 cwt.; and Nigeria was the lowest, with 5,000 cwt. out of a total Empire contribution averaging 134,000 cwt. per annum (1937/42). Sierra Leone fell away to only 20,000 cwt. in 1946 whilst Nigeria had disappeared altogether. Seeing that world exports before the war reached 287,000 cwt. and were only 121,000 cwt. in 1946; the West African Colonies can make headway in this ginger-starved world.

Accounts and Dividends

Elder Dempster Lines Holdings

The directors of Elder Dempster Lines Holdings, Limited, have decided to recommend payment of a final dividend of 8½ per cent., less tax, in respect of the financial year ended December 31, 1947. This, if approved at the forthcoming annual meeting, will make 12½ per cent. for the year (same) and will be payable on July 1. The net profit for the year is declared as £189,114 (£172,008).

Konongo Gold Mines

The directors of Konongo Gold Mines Limited have decided to recommend, at the forthcoming annual general meeting which is to be held on June 15, the payment of a first and final dividend of 10 per cent., less tax, in respect of the financial year ended September 30, 1947. This dividend, if approved, will be payable on June 25 to all shareholders on the registers at the close of business on Thursday, June 3, when the transfer books were closed and will reopen on Tuesday morning, June 8. This recommended dividend is thus a repetition of the 10 per cent. paid in respect of the previous financial year. The directors report that the net profit for the year was £124,590 (compared with £115,711 for the previous year) and out of this sum, depreciation of buildings, etc., takes £16,573; also £3,209 has been written off shares in the F. P. H. Hostel Limited; and £1,386 has been written off stores.

Barclays Bank (D.C. & O.)

The directors of Barclays Bank (DC&O) have declared an interim dividend of 4 per cent. on the A stock and B shares, in respect of the year ending September 30, 1948; in both cases, income tax at the standard rate of 9/- in the £ will be deducted. Payment will be made on June 16, to all stockholders and shareholders on the registers on June 1. The stock registers were closed on June 2 only. This declaration repeats the interim dividend declared for the previous financial year, when it was followed by a final dividend of 4 per cent., less tax, making 8 per cent. less tax for the full year.

Mining Taxation

The mining and oil industries, through their trade and technical organizations, have been pressing for some time for reform and some measure of co-ordination in the taxation which they are called upon to pay. The scales are so varied in the different overseas countries as to cause real perplexity and they are also so harshly imposed as to cause hardship that, at the moment, is so gross as to hinder, if not forbid, further exploratory work, which is itself so necessary for the betterment of world conditions.

With this in mind, the British Overseas Mining Association submitted a request to the Chancellor of the Exchequer on February 26, urging that depletion allowances for mines might be included in the Finance Bill. This representation has been rejected and no reason has been given; so the Association has issued a memorandum on the subject, in which disappointment is expressed that a tax anomaly is being perpetuated, and a serious handicap to British enterprise overseas, in competition with foreign countries, is being imposed.

The memorandum continues: A depletion allowance is intended to amortize the capital spent in acquiring mining property or rights. Since mines and oil-wells are wasting assets, there can be no net profit from operating them until the whole of the capital expended in the land, development, works, equipment and buildings has been recouped. A partial recognition of this long-ignored fact was given in the Income Tax Act of 1945, which made allowances, out of the taxable profits, so that most of the capital sunk in a mine or well could be amortized over its life.

Nevertheless, the 1945 Act failed to grant any allowance for depletion, possibly because of the impending controversy over coal nationalization. Sir John Anderson, however, admitted that this failure could be regarded as "a hiatus which ought to be filled," and that this "was important, from the point of view of competition between this and other countries, where the incidence of taxation may be different."

The absence of a depletion allowance means that the cost of acquiring the mineral or the right to extract it, must still be amortized out of taxed profits. Some 40 years ago, when all tax rates were low, and concessions were relatively cheap, this was not a serious matter; but in these harsher times, with more exact knowledge and mounting costs, these items represent a rapidly increasing proportion of the total capital outlay, in some cases more than one-half.

British mining companies, working overseas, are now exposed to severe competition, particularly from the New World; and this is largely because the U.S.A., the world's largest mineral consumers, are seeing their native sources dwindling and naturally are looking for suitable alternative supplies; and this applies not only to oil but to the base metals, chiefly lead and copper. Now Canadian and U.S.A. companies enjoy a depletion allowance and this puts them in an unfair position vis-a-vis British companies.

Further, many British gold-mining companies, well-established in their field, have to face rapidly advancing costs with no increase in the price of gold. They are operating either at a dead loss or on a rapidly narrowing margin that is dangerous. Despite this, gold is one of the greatest of the dollar-earning exports of the sterling area. Excluding South Africa, gold mined in the sterling area, in 1947, reached 90 million dollars; it is important, therefore, that these mines should not be forced to close down. It is not contended that a depletion allowance would solve all the problems that gold mines have to face but, at least, it would make a contribution that would be welcome.

The B.O.M.A. rightly complains that all mining taxation is illogical; for if a purchaser agrees to pay the vendor of the concession a royalty instead of a capital sum, that royalty can be charged as an operating expense for taxation purposes. Further, if the operating company explores its own property, the cost of prospecting is also allowed. But if the company buys the land from another company that has done the prospecting, the purchase price is not allowed. This unjust taxation handicap should be removed.

TECALEMIT Car Lifts for EFFICIENT CAR MAINTENANCE

To the up-to-date Garage Proprietor operating an efficient maintenance service Tecalemit Air-operated Car Lifts are invaluable for the following reasons :—

1. Built throughout with a very wide safety margin.
2. Flush Fitting. Every inch of floor space available for other uses.
3. Easily erected.
4. Simple in operation.
5. Cruciform Super-Structure giving extreme rigidity and strength.

Drive-on and wheel free type lifts also available.

Colonial Development Corporation

ONE of the Corporation's major activities will be the development of agricultural production. In the field of agriculture, not only has clearing work to be carried out and seeding or planting operations, dependent upon seasonal conditions, completed but many tropical agricultural and tree crops may take from five to ten years before coming to maturity. For these and other reasons, the Corporation wishes to discourage expectations of early productions on a large scale but it hopes to apply to its task the utmost sense of urgency which is compatible with solid and permanent achievement.

Agricultural projects may include corn crops, rice and other cereals, cotton and citrus fruits; some of these schemes might be for large-scale mechanized farming; but in addition, the Corporation will examine closely the possibility of stimulating and improving existing production by the provision of machinery and other supplies for small-scale Native producers. The current timber shortage makes the investigation of lumber and forestry schemes a matter of urgency. In the realm of animal husbandry, there will be schemes for rearing cattle, pigs and poultry. Fisheries development will not be overlooked.

Development of public utilities has been provided for under the Colonial Development and Welfare Acts and, normally, this field will be one for the Colonial Governments. In particular cases, however, where the circumstances are appropriate or where the Corporation can be of particular assistance, it will be prepared to undertake schemes; for example, a hydro-electric project which is part and parcel of a manufacturing or processing scheme, might well be undertaken by the Corporation.

All projects adopted by the Corporation must be economically sound. In deciding to go ahead with any particular scheme, a major factor will therefore be whether that scheme will be economic and self-supporting once the development and constructional stages have been passed. The economies of the Colonies would, in the long run, only be weakened if they were saddled with permanently struggling and insolvent enterprises.

In view of the urgency of the economic situation, however, the Corporation will, in the initial stages, give some preference to short-term projects, or to those intended to expand existing production. A further and equally important test will be the dollar-earning or dollar-saving potentiality of a project, and whether it will produce commodities in short supply. No preference will be given to projects merely because the Corporation can operate them without the participation of private concerns; indeed, the Corporation will often prefer to operate in partnership with commercial interests on the spot.

It is envisaged that such arrangements might take the form of joint subsidiary companies, in which the equity capital would be shared and in which the Corporation would take a direct and active interest in the control of operations. The Corporation may also act on an agency basis for Colonial Governments and will, in due course, make available to them, at pre-arranged fees, the services of highly qualified technicians for investigations and advice.

Later on, it may be possible to provide equipment and staff on an inclusive cost basis for schemes not being undertaken by the Corporation itself.

FOR

ig

GOLD AND THE GOLD COAST

THE forthright comments of Major-General Sir Edward Spears in his annual statement to shareholders of Ashanti Goldfields Corporation sharply refocus attention, on the situation in West Africa generally and on that of the Colony's gold mining industry in particular. After the record gold output of 882,241 oz. achieved in 1940/41, production fell away during the war and there was little that shareholders could do but forget about their holdings and hope for better times when hostilities ceased. To date, they have experienced nothing but disappointment.

What is behind the story of the sorry progress which the industry has made towards rehabilitation during most of the past three years? The root of its present troubles is, quite simply, oppressive taxation—plus an unsatisfactory Native labour situation superimposed on a post-war inflationary set-up that was already making the costs position a delicate one for most of the producers. There was a confident belief, at the end of the war, that despite obvious difficulties the industry, within two or three years would, of its own volition, recover most of the ground lost during the later war period. That this has not been possible has been mainly due to the unexpectedly difficult African labour situation which has developed—and this at a time when a not particularly understanding or benevolent Government attitude has been discernible.

Until 1946, there was little indication that things were going to turn out like this. Then came the Harragin report on conditions of employees in the service of the Colonial Office in the Gold Coast. This not only granted increased rates of pay but made them retrospective. That this was of no importance to the gold mining industry has since proved a fallacy of the first order. The increased Harragin wage awards were applicable mainly to Europeans, but their effect generally was electric. Before long, came the Korsah report on conditions of African employees in Government Service and this also recommended increased pay. Although comprising one of the Gold Coast's major industries, the gold producers were not invited to these discussions, which were conducted under the surveillance of the Native judge, Korsah. But what the Harragin report had started the Korsah rulings multiplied tenfold.

Every African on the Coast began to think in terms of increased wages and back-pay and it was inevitable, last year, that the mines employees' union should come forward with the exorbitant demands of two years' arrears of pay plus increases, despite the fact that during the war years—and without any solicitation—better conditions and increased wages had already been granted by the industry. On the basis of these demands, the annual cost to the mining industry would have been of the order of £600,000—a clearly unrealistic figure contrasted with the industry's post-war earning ability. The upshot was that a Native labour strike on the gold mines broke out at the end of September, last year, and persisted for fully a month, the matter of increased pay being referred to an arbitrator, Mr. William Gorman, K.C. Once more, the result was higher wages . . . . and shorter working hours.

Wherever gold is produced, it has been the unvarying experience, since the end of the war, that costs have been steadily rising while the price obtainable for the mines' product has remained fixed. In West Africa, this situation has been seriously aggravated not only by the higher wages which have now been granted to African workers (to say nothing of the swollen cost of plant and machinery and the like) but also by the imposition of heavy tax scales. It might have been thought that any mine, as a wasting asset, should enjoy favourable consideration in the matter of taxation—though there is seldom any indication that Government officials share this view.

The West African producers, in the past few years, have been subject to particularly savage imposts. First, there is the Gold Coast export duty of 17/5½d. per ounce produced, while remaining earnings are subject to profits tax, doubled retrospectively to the beginning of 1947, plus normal income tax and Gold Coast tax. Ashanti Goldfields Corporation alone of the West African producers has to bear a 5 per cent. Gold Coast royalty; but even allowing for this, it is a measure of the scale of taxation which the industry bears that the Corporation was mulcted by Government imposts last year to the extent of two-thirds of its earnings.

It was well back in 1947 that the industry first made representations for the removal, or at least an amelioration, of the gold export duty—the most severe of the imposts with which the producing mines are burdened. It is a tax which is at once unscientific, since it automatically lifts the payability plimsoll line and thus discourages the working of lower grade ores; and at the same time is inequitable, since it is levied on revenue and not profits. Even if only to be replaced by a fundamentally sounder imposition, it is a tax which should by now have been removed without any of the dilatoriness and seeming indifference which has characterized the attitudes of both the Colonial Office and the Gold Coast Government during the past six months or so. Technically, it is a matter for the latter to decide upon, since it is the Gold Coast finances which stand to be affected by any modification of this important revenue item; but to suggest that the Colonial Office here could or ought to be unaware of this vital problem, and that it has no part to plays in resolving it, would be taking a tragically naïve attitude towards the subject.

The pity of it all is that there has been so little recognition of the importance to this country of Colonial gold production or that it is necessarily anything to which priority or urgent consideration should be given. Even now, it is not known when the Gold Coast budget will be presented nor to what extent the gold export duty has come under consideration. All in all, it is as unsatisfactory a state of affairs as could be found anywhere. Meanwhile, the investor, who for the most part has shown more than ordinary patience with his West African gold holdings, is still left groping in the dark. As Sir Edward Spears has lately said: "It is not fashionable to-day to consider the shareholders," although it is only axiomatic . . . . that the industry could never have existed without their support.

Is, then, all hope lost for the holder of West African gold shares against this sombre and discouraging background? Certainly, it would seem true to say that he should be prudent with his more immediate expectations, for experience has shown that officialdom is for the most part lethargic and unrewarding. At the same time, it would seem much too pessimistic to suppose that the industry cannot in due course regain its feet. Native labour is less efficient by a long way than it was pre-war; taxation is high—preposterously so; and costs so far have shown no sign of coming down. But the mining managements concerned have not been deterred in pressing on as far as is humanly possible with the exploitation of their properties; certainly from more than one mine has come news in recent months of what by normal standards could be considered exceptionally encouraging developments; and finally, it is a reasonable view that, even if further delays are seen, something *must* be done before the year is out not only to solve the more general of the Gold Coast's problems but equally to take basic steps to assist the gold-producing industry.

There is no reason why, in a matter of two or three years, its pre-war prosperity should not be regained. That must depend to some extent on the good will and common sense of the Government departments concerned. But in the interim, the advice to shareholders must be to exert still further patience. On a six to nine months' view, the market appears more likely to improve than the reverse; for such a situation has been reached that any developments at all can hardly be other than of general benefit to the gold producers.

(The above article, under the heading of *The Joyless Jungle*, by a Special Correspondent, was published in *The Investors' Review*, for May 22, and is reprinted here with due acknowledgments).

is a possible basis for an arrangement with America which would be of great benefit alike to her, to us, to the Colonies and, by its effect on the general balance of payments, to the world as a whole."

Recognition of the importance of Sir Arthur's conclusions does not imply endorsement of them. What is needed is realistic consideration and quick decision on the greatest single problem affecting the British Empire's future.

Reminder on Mass Education

THE Colonial Department of the Institute of Education, London University, sponsored a three-hour exhibition last week on mass education. It was a simple affair, arranged mainly by Colonial students using pencil and paper to illustrate photographs which had been taken in Colonial territories. Students from each of the territories represented (including the four British West African territories) were responsible for their own section of the exhibition.

There were several pamphlets, particularly from Jamaica, where the quantity and diversity of reading matter reflects the progress of literacy. In the African sections, photographs concentrated mainly on the practical instruction by word of mouth in the fields or in the classroom. Much attention was paid, in the Gold Coast section, to a scheme for mass education which was drawn up by an African.

Two main impressions derive from this exhibition. The first is the awareness of the Colonial Department of the Institute of the value of interesting the students in schemes which are ultimately theirs. An off-shoot of this is the understanding and interchange of ideas which develop between Colonial students from so many parts of the Colonial Empire. The second impression is the realization of how little achievement there seems to be available for recording, although the signs of progress are obviously there.

Long before the war ended, mass education had been spoken of as something capable of achievement on a grand scale. Reports have been written and U.N.E.S.C.O. has taken a hand in the work. Apart from isolated instances of minor successes, here and there, it would seem that expectations have, by and large, exceeded actual results. The stumbling-block would appear to be the different ideas that are entertained by individual exponents as to the meaning of mass education. Some seem to mean literacy; others, instruction in fundamentals like diet, sanitation and the elementary rules of hygiene.

Free Men

HOLLAND'S relation with Curaçao and Surinam may more happily be contrasted with Britain's relation to the West Indies than with those existing between Britain and the African Colonies and Protectorates. In view, however, of the British Nationality Bill and the proposed new status of citizens of the United Kingdom and Colonies, the recent Round Table Conference at the Hague between Holland, Curaçao and Surinam is noteworthy.

During this conference, it was decided, in principle, to unite the Netherlands territories in Europe and the Western hemisphere in one kingdom which, in its turn, would closely co-operate with the United States of Indonesia in a Netherlands-Indonesian Union to be headed by Queen Wilhelmina. As soon as this united kingdom consisting of Holland, Surinam and Curaçao has become a fact, an imperial government will be formed, in which ministers from Surinam and the Dutch Antilles will be included and which will be responsible to an imperial parliament, consisting of members of the Dutch, Surinam and Curaçao parliaments. All this will be based on an Imperial constitution in which all matters of mutual interest will be laid down.

"There are indications," said Radio Hilversum, recently, "that these far-reaching plans will come to fruition in a not too far distant future. Holland will then continue to exist in the Western hemisphere, but she will have no Colonies there. The Dutch flag will continue to fly over these territories, accepted by the population as a symbol which will enable them to devote themselves in complete independence to what they consider their own interests. The impartial and supreme leadership of the House of Orange will remain.

"The centuries-old ties will not be torn to pieces, but the populations of Curaçao and Surinam will be enabled to carry out their own tasks; and not only will Surinam and Curaçao be able to build up an independent life in the midst of the Americas but, in European affairs also, they will be a factor of no mean importance. It will be clear from this that, in these circumstances, one can no longer speak of Dutch Colonies in the Western hemisphere. Those living and working in these former Colonies have become completely free men, whose rights are equal to those of the inhabitants of the Mother-Country, and whose word is of equal value and importance."

* * *

For Builders

ONE feature of the exhibition were drawings by a firm of architects who are making plans for schools and other buildings in West Africa. Several factors likely to receive wide application with regard to new constructional work of this nature in West Africa are revealed by consideration of the development plan for a community centre at Ogwafia, Udi division. The use of imported materials, for instance, is to be avoided; and the construction is to be such that it can be begun by the people of Ogwafia with the minimum of supervision and without the use of expensive plant.

As the use of imported steel is not possible, resort was made in the drawing to the use of local timber; and since this use of timber makes the structure liable to attack from termites, it is isolated from the ground by raising it on concrete stools. For reasons of finance, the building consists of a series of structural bays, to enable erection to be undertaken in stages as and when funds and conditions permit.

* * *

Appropriate Moment

LORD TREFGARNE (the Chairman) and Members of the Board held a short party in London last Monday, to mark the foundation of the Colonial Development Corporation. There were no speeches. Guests included men distinguished in the service of the Empire.

A booklet available to the guests sets out the origin and functions of the Corporation. The Board is already considering many projects submitted by Colonial Governments and it invites more. The proposed plans may be large or small, run by Government agency alone, or in conjunction with private enterprise.

But the Board insists that every project should be economically sound, since the Corporation must each year balance its revenue and outgoings. But the hour is urgent and priority will be given to short term projects aimed at easing the immediate difficulties.

The Board asks Press and public not to expect details during the first stages of any venture, and promises to give fullest information at the earliest appropriate moment.

The trouble about that is that official boards too often delay the "appropriate moment" too long and first, perhaps garbled, reports come from other sources.

Meanwhile, anybody with a serious Colonial plan requiring financial and skilled assistance is invited to apply to the Corporation's Controller of Plans at 33, Dover Street, London, W. and is told the kind of preliminary information the Board wants.

WEST AFRICA AT WESTMINSTER

Mineral Royalties in Nigeria

LAST week, Mr. Skinnard asked the Secretary of State for the Colonies whether he has now inquired into the position as regards mineral royalties in Nigeria? and when action can be expected on his findings?

Mr. Rees-Williams said: "I take it that the hon. Member is referring to the inquiry by a mining engineer, regarding the mineral potentialities in a certain area of Northern Nigeria. This inquiry has now been completed. Its object was to enable negotiations to be begun between representatives of the Nigerian Government and representatives of The United Africa Company regarding the reversion to Government of the share of mineral royalties and mining rights in this area which the company held as successors to the old Royal Niger Company. These negotiations are beginning, but complex technical problems are involved and they will inevitably take time to complete."

Agricultural Vacancies

Mr. Hurd asked the Secretary of State for the Colonies how many vacancies there are at the present time for agricultural officers in the Colonial Service?

Mr. Rees-Williams: The number of outstanding vacancies for Agricultural Officers proper, which Colonial Governments have asked us to fill, is at present 85.

Mr. Hurd: Is the Minister satisfied that the Colonial agricultural service is attracting a due proportion of university students from this country? and, if not, will he review the terms of service?

Mr. Rees-Williams: We have filled 50 vacancies already, which compares very favourably with the pre-war position, and I am satisfied that, as at present devised, it is satisfactory.

Administrative Officers

Since January 1, 1946, there have been 470 administrative officers posted on first appointment to Nigeria, Gold Coast, Kenya, Uganda and Tanganyika. There had been eleven resignations and two transfers. These figures were supplied by the Earl of Listowel, in the House of Lords, in reply to a question from Lord Rennell.

Congo Basin Treaties

Mr. Prescott asked the Secretary of State for Foreign Affairs if consideration is being given by His Majesty's Government to revision of the Congo Basin treaties? and in particular, the position of Japan under such treaties?

Mr. Bevin: It has for long been recognized that these treaties require revision, to bring them into line with modern requirements, including the needs of the Charter of the United Nations. The question is now under the consideration of the various Departments of His Majesty's Government concerned; but the hon. Member will appreciate that it is a matter which requires much study and that other Governments besides His Majesty's Government are directly and equally concerned. It is not, therefore, possible at present for me to give any further indication of His Majesty's Government's views on the matter. The position of Japan in relation to the Congo Basin treaties is under consideration, in connexion with the Japanese Peace Treaty.

Tariffs, Preferences and Trade

Lord Broughshane asked for an assurance that no agreement with America or any other foreign country "will be ratified which, in any way, restricts the freedom of Great Britain to enter into tariff or other arrangements with any Dominion or Colony" and would the Government undertake that most-favoured-nation arrangements shall not apply within the British Commonwealth and Empire?

In his reply, Viscount Hall said: "I presume that the noble Lord has in mind the General Agreement on Tariffs and Trade negotiated at Geneva last year, and the Charter of the International Trade Organization drawn up at Havana by the International Conference on Trade and Employment. Both these agreements provide for most-favoured-nation treatment between the countries parties to them, but there is an exception for pre-existing preferences, including preferences within the British Commonwealth. The preferences saved in this way are subject to any modifications resulting from negotiations between the parties to the agreements. These negotiations were designed to bring about the reduction of tariffs and the reduction or elimination of preferences on a reciprocal and mutually advantageous basis. The agreements also provide that, subject to certain possible exceptions, existing preferences shall not be increased and no new preferences shall be introduced.

"The General Agreement on Tariffs and Trade incorporates extensive lists of reductions of tariffs and preferences resulting from the negotiations held at Geneva last year between the participant countries. It has not yet been brought finally into force, but has been applied provisionally, from January 1 last, between certain countries, including the United Kingdom, United States of America, Canada and Australia. The Havana Charter is not in force, pending its acceptance by a prescribed number of Governments. Before His Majesty's Government takes steps to accept the General Agreement finally, or to accept the Havana Charter, there will be opportunity for Parliament to debate those instruments."

West African Hardwoods

Increases in hardwood imports from British overseas territories were detailed by the President of the Board of Trade. "The pre-war imports," he said, "from the Gold Coast were only 413,000 cubic feet; last year, they were 3,240,000 cubic feet. For Nigeria, the figure before the war was 1,129,000 cubic feet; last year, it was nearly three million cubic feet."

Vexatious Taxation

THE continued absence of any word, from the Gold Coast, about the representations that have been made to the taxation authorities there, since February, in particular and, in general, since the price of gold has been more or less stabilized at 172/3d. per fine ounce, brings into prominence the recent issue of a memorandum, by the British Overseas Mining Association, concerning its efforts to get some relief, however modest or trifling, that will help gold mining companies in their real anxiety.

This memorandum reveals that the Chancellor of the Exchequer was asked, in late February, for some compensating relief whereby gold mines could earn a depletion allowance on the lines of what is given to competitive mining companies whose centres are in the New World. This effort by B.O.M.A. has failed, but no reason has been given for the decision against the mines whose interests are abroad but whose centre is London. It is fairly clear that British mining companies are being asked to put up with unjust conditions.

It is bad enough to have to face increased costs, increased wages, and still keep up a high standard of welfare work; all of these would, in any other industry, be followed by an advance in the price of the commodity to the public. But gold mines, overseas, are not allowed to increase the price of gold no matter how much the cost of production rises; and this constitutes a hardship for which only taxation relief or allowances can do justice.

The gold mines of West Africa, several years ago, started welfare plans ahead of anything ever seen in their area or elsewhere. Their pioneer efforts were warmly approved and much appreciated; and it is interesting to see that the Government welfare services are still lagging behind those of the mining companies.

In addition, the mines have started training schemes, so that Africans can take up posts of responsibility; again, the mines are ahead of the authorities. Surely, the time has come when, whether as depletion allowances, subsidies or some fair scheme of taxation (applicable to all and not imposed as a penalty on gold mines), the gold mines should be encouraged in their good work.

WEST AFRICAN MARKET NOTES

New Avenues for West African Trade

By the Commercial Editor

TRADERS will give a cordial welcome to the publication of any statistics concerning the production, trade and consumption, throughout the world, of such produce as sugar, tea, coffee, cocoa, spices, tobacco and rubber; but when these are compiled so carefully as the Intelligence Branch of The Commonwealth Economic Committee has done, and given us the war years, in so far as details are knowable at the moment, in the compact form of pages (i) to (x) and pp. 102, in a volume entitled *Plantation Crops* (H.M. Stationery Office, price 5/- net); and, what is more, brought in as much of 1947 as possible of the post-war period; then the trading community has every reason to be grateful, in these days of scarcity of newsprint and official reticence about world trade figures.

West African Produce

The chief interest of West Africa in this volume will naturally be in the direction of cocoa, with a slant towards rubber and perhaps a glance in the directions of coffee and spices. Taking cocoa first, seeing that West Africa is the world's greatest production and export centre, the British Commonwealth during the ten seasons covered by this record (1937/38 to 1946/47) has consistently produced over one-half total world cocoa; and this figure is probably even larger because the Gold Coast and Nigeria, which together account for all but 3 to 6 per cent. of the Commonwealth total, can give only export figures as distinct from production figures.

Cocoa Future

Chief reason for this is that cocoa, in West Africa almost uniquely, is a family or tribal culture, still largely grown in conditions of shifting cultivation, which do not lend themselves to accurate assessment of production. This is not a serious matter because, so far as trade is concerned, it is better to take export figures, seeing that these do give the volume available for consumption overseas. Still, it is interesting to see that, in the Cameroons, peasant farming is working alongside plantation culture; and that, in the Belgian Congo, a British firm is introducing plantation methods. The outcome of these, together with the growth of co-operatives in Gold Coast and Nigeria, will be of considerable interest. The marketing authorities of these areas are refusing to accept cocoa beans below Grade 2; and the governments are encouraging growers to improve their crops.

Total world production, in the decade under consideration, averaged 570,000 tons. Naturally, the export total, each year, did not tally with production, there being adequate reasons for sharp fluctuations. Thus 1938/39 was the best year for production, with 705,000 tons; and 1942/43 was the poorest, with 440,000 tons; yet exports were 736,000 tons in 1939 and as low as 389,000 tons in 1942. It is even more interesting, however, to note that world exports of cocoa were but a modest 250,000 tons in 1913 and were double that figure by 1931. The chief importing countries were, and still are, the U.K. and the U.S.A. the latter taking the major share, thanks to its greater population.

A trend, which has previously been noted in this column, and cannot be over-stressed, is that the Gold Coast economy is too much linked with cocoa production. Thus, in 1938, as much as 41 per cent. of total domestic exports of the Gold Coast was due to cocoa, a percentage exceeded only by Grenada, with 47 per cent. These figures dropped, in 1942 (the poorest year for world cocoa) to 20 per cent. and 28 per cent. respectively. Since then, however, they have risen, for the Gold Coast, to 47 per cent., whereas preliminary figures for Grenada give only 26 per cent. With the sharp increase in cocoa prices since 1946, whereas gold has stayed still, it would scarcely surprise us to hear that 1947 and 1948 will, despite the decline in output raise the rates to really alarming proportions.

Room for More Rubber

Turning now to rubber, we have been actively pursuing production figures for Nigeria, with little success; so we read with considerable interest that Nigerian exports were 3,000 tons in each of the years 1937/1940; declined to 2,000 tons in 1941; rose to 7,000 tons in 1942 and 1943; to 9,000 tons in 1944; and to 11,000 tons in 1945 and 1946. In the table on page 90, giving these figures there is a curious mistake by which a note (b) for Nigeria and Liberia appears to have a double meaning. These small totals are seen in due perspective when we remark that total world production was averaging 1,200,000 tons in the years 1937/41. The years of Japanese occupation (1942/45) are not statistically accountable, but 1946 gave a world total of 838,000 tons. There is clearly room for increased Nigerian culture of rubber and it is not obvious why Gold Coast should not join in the pursuit.

Coffee, whose expansion from 205,000 cwt. exported in 1937 from French West Africa, to 717,000 cwt. in 1946 appears to indicate that the area can grow coffee, a fact to which at least one Gold Coast mining company can give good witness, does not seem to enter this statistical analysis. With world exports at the rate of 33

DANGER BY WATER

Washing in a polluted stream, the drinking of contaminated water, or the eating of uncooked food, may be the means of worms entering the system. For upwards of thirty years AYRTON'S WORM TABLETS have demonstrated their safe and speedy action in dislodging— ROUND WORMS, THREAD WORMS, HOOK WORMS and SCHISTOSOMES. *Look for the name "AYRTON'S" on every label.*

Why put up with

Backache

KIDNEY AILMENTS often follow a cold, a chill or a spell of overwork and worry, since at such times the kidneys may become overburdened and act sluggishly. Perhaps you feel tired, miserable and depressed —back aching, muscles and joints stiff and sore. Possibly your trouble may be lumbago, rheumatic pains, urinary and bladder disorders, gravel or disturbed sleep.

Take Doan's Backache Kidney Pills. This well known medicine stimulates and flushes out the kidneys, so helping them to filter away the excess uric acid and other impurities which have been causing your distress. Doan's Pills have helped thousands. Let them help you!

GROUNDNUT PROPOSALS FOR WEST AFRICA

IN considering the possibilities for mechanized agriculture in the areas which we visited in West Africa, we examined the opportunities both in existing areas of production and in land at present not under production. As regards existing areas of production, we are of the opinion that the introduction of mechanized methods is not immediately feasible; as in the opinion of those whom we consulted, both African and European, the drastic reorganization of present farm holdings which would be involved would not be accepted voluntarily by African farmers until they had received a clear demonstration of the benefits of such a step. Moreover, we feel that there is at present a lack of experience in the application of mechanical cultivation to crops in Tropical Africa and that, although there is every reason to undertake bold experiments it would not be morally proper to disturb existing agricultural communities until experimentation has established the lines on which mechanization could be successfully applied to the farming operations.

At the same time, we regard the introduction of some degree of mechanization into the peasant agricultural economy of West Africa as a matter of vital necessity. For any immediate development, we have turned to the opening up of new areas. West Africa is comparatively densely populated; and the land suitable for cultivation from the point of view of soil and climate, which is at present sparsely populated or uninhabited, is small in area compared with land already under cultivation. In each of the territories we visited, however, we found tracts of land of some extent which, for reasons such as the lack of water for domestic purposes, the presence of tsetse fly, or the reduction of population through the activities of slave raiders in bygone days, are now not being cultivated but appear capable of development.

Development Areas

These areas are: In the Gold Coast—(i) an area in Western Gonja, comprising some 2,000 square miles in the vicinity of Damongo; and (ii) an area in Northern Ashanti, again approximately 2,000 square miles, to the east of the Attebubu/Ejura road.

In Northern Nigeria—(i) an area in Bornu of approximately 2,000 square miles on both sides of the Maiduguri/Potiskum road centring on Damaturu and extending both northwards to Lantewa and for some distance to the south of the road; and (ii) an area in Kontagora, of approximately 2,000 square miles, lying to the west of the projected Kontagora/Bokani road and extending some way towards the Niger River.

In the Gambia—(i) an area of approximately 30,000 acres in West Kiang; and (ii) an area of approximately 5,000 acres in Upper Niume.

Establishing Communities

The invention of the bulldozer to clear the bush, the use of well-boring machinery to secure water at depths beyond the reach of African methods and the employment of the tractor to extend the area of land cultivable per head of population, make it possible to bring these tracts into production. Mainly for political, but partly for technical reasons, we consider that the best method of development in these areas is by the establishment of a number of village units, at first comprising paid labour but ultimately practising collective or group cultivation assisted by mechanization.

We aim, therefore, at the eventual establishment of communities in which increased production will be achieved through mechanization and higher efficiency. A considerable degree of specialization of labour will be an essential element. In this way, not only will a better and more assured food supply be secured, but the wealth of the community will be enhanced and, at the same time, the fertility of the soil will be raised to a higher level.

Mechanization Imperative

We are hopeful that these units will serve as a demonstration, to village communities elsewhere, of the practical benefits of mechanization in agriculture. We were pleased to find, among articulate opinion in the territories we visited, every desire to see mechanization introduced into Tropical Africa. It is, in fact, imperative, if the risk of starvation is to be avoided, that such a development should take place speedily. At present, agriculture in these territories is carried on nearly exclusively by peasant producers.

It has been the deliberate policy of Governments in the past that this structure of society should be maintained; and the idea of private "plantation" development arouses in the minds of West Africans in British territories an almost instinctive feeling of repugnance. But the great majority of peasant producers have no implements beyond the hand hoe and the cutlass, and the limit of productivity has already been reached with these primitive methods. We suggest, therefore, that unless a greater acreage per family can be brought under cultivation and a higher degree of efficiency in production achieved, peasant agriculture cannot provide both the food which Africa itself requires and will require in increasing measure, and the export crops by which its national wealth can be maintained and increased.

It is true that, in Northern Nigeria, it has been the accepted policy for some years that a system of mixed farming, involving the use of cattle as draught animals and a source of manure, should be introduced. It has been conclusively proved that, by these methods, a farmer can increase his acreage under tillage threefold and substantially increase his wealth. There has been much competition among farmers to obtain the oxen necessary to set up such mixed farms. But the establishment of a general system of this kind is bound to be slow, since the number of cattle is limited, their rate of reproduction low, and the turnover in working beasts high.

We feel that this policy has been overtaken by developments in the use of machinery in agriculture and that more speedy results are to be obtained by the introduction of mechanical tillage, leaving the place of cattle in the farming economy to the important roles of providing meat, milk and manure. As a first step to this end we would suggest that Governments concerned should establish experimental units in all main producing areas at which a suitable technique of mechanization in respect of local crops can be worked out and demonstrated to African farmers.

Economic Revolution

The introduction of mechanization into peasant agriculture would represent not only an agricultural but also an economic revolution. So far, the economics of agricultural experts from West Africa have been governed by the fact that they are no more than a "spill-over" from subsistence farming and involve no overhead charges over and above those arising from marketing, processing and transportation. The increased production made possible by mechanization would carry with it increased returns, but it cannot be assumed that the increase would be clear gain to the producer. Out of his total income, he would have to meet, in addition to previous charges, the operating cost of mechanical equipment and renewal charges on it. Clearly, unless there is a reasonable hope that prices keep above the level necessary to meet these charges and give the producer at least the income he attained by hand cultivation, it would be wrong to embark on a policy of the kind suggested. In this connexion, the importance of research and other measures designed to increase the efficiency of the producer and lower his costs of production, needs no emphasis.

We would point out that mechanization is not the only solution to the problem of increasing productivity. Artificial manures have not hitherto been used by peasant cultivators in Tropical Africa because of their cost in relation to the price formerly received for the cash crop and the physical difficulties of distribution to individual farmers of the quantities required. The development of "placement" planting, however, has increased the efficiency of artificial manures to the extent that their use by peasant farmers now appears a practicable and economic proposition.

Recommendations

The Mission recommended:

(*a*) The progressive development in the Damaturu area in the Bornu Province of Northern Nigeria, and in the West Kiang and Upper Niume areas in the Gambia, of production of groundnuts with the aid of machinery and with the use, in the first instance, of paid labour but with a view to the eventual establishment of group cultivation by village units. (The rate of development in Bornu is dependent on the restoration to full working capacity of the Nigerian Railway.)

(*b*) The establishment, at first, of large-scale experiments in the Northern Ashanti and Western Gonja areas in the Gold Coast, and in the Kontagora area in Nigeria, with a view to:

(i) determining the practicability of large-scale production of groundnuts in the "middle rainfall" belt of West Africa; or

(ii) finding a rotation suitable to the climate and use of machinery; or

(iii) investigating the possibilities of production in that belt of other oilseeds suitable under local conditions for mechanization, e.g. sunflowers, soya beans or cotton, and ultimate large-scale development in these areas.

(*c*) The establishment, in the Gold Coast and Nigeria, of local Government-controlled Corporations in close association with a United Kingdom-based Development Corporation to undertake development of the areas selected in these territories, and the leasing of the areas in the Gambia to a United Kingdom-based Development Corporation for development in association with a local Advisory Committee.

(*d*) The use of superphosphates in existing areas of production in Northern Nigeria where lack of phosphate is a limiting factor to yields of groundnuts.

(*e*) The establishment of demonstration units (based on mechanized cultivation) in present areas of production for the growing of annual crops, especially oilseeds and cotton.

Twenty-Five Million Pounds

The proposals under (*a*) and (*b*) above will result in the ultimate establishment of 1,120 new villages, each consisting of 20 families, in each of the areas selected for development in Nigeria and the Gold Coast. For purposes of supervision, these villages would be divided into groups of 20 with a headquarters for each group where mechanical workshops would be situated and certain technical, administrative and social services performed. There would also be a central headquarters for each area of development which would include a stock farm and base workshops.

In the Gambia, the proposals provide for the establishment of 30 villages with a central administrative headquarters. The Mission estimated that the proposals will involve a total capital expenditure of the order of £25 million and will result ultimately in an annual

ASPECTS OF COMPANY LAW—4

Accounts

BY A LEGAL CORRESPONDENT.

THE main reason for Company Law revision in England was that the relationship between management and ownership of limited companies had tended, during recent years, to become, in many cases, obscure, and that it was now necessary to restore and revivify that relationship. A second reason was to incorporate the recommendation of the Cohen Committee to provide adequate legal safeguard for the modern system of holding and subsidiary companies.

The system of accounting adopted by the new legislation is designed to ensure that every balance sheet and profit and loss account must give "a true and fair view."

A change of first-rate importance is that, in future, a company has to present a consolidated balance sheet and a consolidated profit and loss account. That this revision was not introduced by the revising legislation of the 1920's was due to the fact that the methods of operating through subsidiary companies, now widely practised, had not been developed.

In the case of a company having subsidiaries, it is the scope and not the form of the information presented that counts. Directors are allowed to decide the answer to their individual accounting problems provided that, if they decide against adhering strictly to one consolidated statement, the method they devise discloses an equivalent amount of information. In certain cases, approval for this departure is reserved to the Board of Trade.

In preparing the accounts, fixed assets must be distinguished from current assets, an explanation being included to show how the fixed assets were determined, so that their real worth may be ascertained.

Reserves, provisions, liabilities and fixed and current assets must all be clearly classified.

Unless, in the opinion of the Board of Trade, disclosure should not be made, the aggregate total of the capital reserves and the revenue reserves and provisions must be shown separately and the reasons for any changes in these totals as regards the preceding year must be disclosed.

Trade investments, quoted investments (with their market value) and unquoted investments, all require separate headings; so do bank loans and overdrafts; and the net amount, after deduction of tax, which is recommended for distribution as dividend.

The basis on which the charge for income tax is computed is another informative innovation to be incorporated in the profit and loss account.

There are many other minor items now to be included which all help to clarify the picture.

The 1947 Act defines a subsidiary company as one in which another company controls the composition of its Board of Directors, or holds more than half in nominal value of its equity share capital. Shares or powers held in a truly fiduciary capacity do not count.

Auditors' duties have now been extended to include reports on whether they have obtained all the information and explanation they deem necessary; whether, in their opinion, the accounting system is adequate; whether the balance sheet and profit and loss account are in agreement with the books of account; and to give the information required by the Act. It is for Auditors to decide what is necessary.

They are entitled to receive notices and other communications relating to any general meeting, to attend such meetings, and to speak at them on any part of the business which concerns them as Auditors.

They hold office from one Annual General Meeting till the next, and will be reappointed without any resolution being passed unless they have ceased to be qualified for appointment, or they have given notice in writing of unwillingness to be reappointed, or a resolution has been passed at the meeting against the reappointment.

LETTERS TO THE EDITOR

Hydro-Electric Power for the Gold Coast

Sir—I have read your front page article, by Mr. F. J. Erroll, M.P., in your issue of the 22nd ultimo, and advise you discourage this scheme for harnessing the River Volta. In the early months of 1925, when acting for the Gold Coast Government in another matter, I was asked to look into the possibilities of such a scheme, which I did, jointly with the late Mr. (later Sir) Albert Kitson and strongly advised against it. For the months of February, March and April, 1925, the flow at Kpong was so small the salt water from Ada backed up almost to the foot of the rapids. With such a small fall, continuously, any useful amount of power would be quite impracticable.

Mr. Kitson and I discussed fully, with Mr. Murray Morrison (the then General Manager of the British Aluminium Co. Ltd.), the question of using Gold Coast bauxite; and my recollection is he considered the only feasible way of doing so, by his Company, was to bring the bauxite to Europe. He was fully alive to the danger, in wartime, of relying on French bauxite. I favoured working the bauxite west of Bibiani and bringing it to Takoradi by aerial cableway. The quantity of bauxite required could have been greatly increased by using it in the manufacture of high aluminious (quick setting) cement and this increase would have justified the aerial cableway.

Owing to the shifting sand bar, at the mouth of the River Volta, Ada is useless as a port, except for small craft. I have often, at high tide, bumped badly on the bar, in one of the Volta Transport Corporation small steamers drawing only eight feet.

Yours faithfully,
LEWIS A. SMART, M.I.Mech.E., M.I.E.E.

Constitutional Club,
London, W.C.2.

Mr. Erroll's Reply

Sir—In reply to Mr. Smart's letter, it must of course be realized that the scheme outlined in my article is a private venture and not one which is calling for the use of Government funds, at any rate so far.

The Company seems to be adopting the right course in taking measurements of river flow over a period of three years before going any further. These will either confirm Mr. Smart's experience of twenty-five years ago or else provide data suitable for the furtherance of the scheme.

As regards the mining and processing of bauxite in the Gold Coast, world prices and markets have altered considerably in the last quarter of a century and there may well be scope for development in the Gold Coast in the next ten years, where it would not have seemed wise in the 1920's.

Yours faithfully,
F. J. ERROLL.

House of Commons,
S.W.1.

"Death Penalty in the Colonies"

Sir—If the death penalty is abolished in Britain, it should not be abolished in the penal codes of West Africa, particularly Nigeria where I belong. "An eye for an eye" still represents our conception of what is just, and it would be extremely difficult to convince the Natives that the execution of murderers is contrary to natural justice.

Furthermore, murderers who are found guilty in Kano, in Northern Nigeria, are executed in the open markets. At Enugu, in Eastern Nigeria, Chiefs and tribal headmen are invited by the Government to see for themselves and carry the news home about the execution of those condemned to death. This method, however, has extremely lessened the cases of murder in Nigeria.

We are not yet ripe to abolish the death penalty.

Yours sincerely,
E. NJOKU NWANSI.

151 Kingsley Road,
Liverpool.

COMPANY MEETING

KONONGO GOLD MINES

Increased Production

Mr. Robert Annan's Speech

The fourteenth annual general meeting of Konongo Gold Mines, Ltd., was held on June 15, at Chartered Insurance Institute, 20 Aldermanbury, London, E.C. Mr. Robert Annan, M.Inst.M.M., chairman of the company, presided.

The Chairman said :—Dealing first with the profit and loss account the mine working profit at £124,590 was lower by £8,948 than in the previous year. Mine expenditure was higher by £17,504 and other expenses by £2,178, against which there was an increase of £7,969 in gold sales and a reduction of £2,749 in export duty, the lower rate of duty having applied to the full year instead of the seven months in the previous period.

In the appropriation account, the provision for taxation is increased by £22,344 due to the introduction of profits tax and to there being no E.P.T. repayments for inclusion in this year's accounts. Your directors recommend a dividend of 10 per cent., less tax, which will absorb £34,059 net, leaving £41,928 to be carried forward.

Since the close of the financial year, a payment of £38,440 has been received on account of the company's claim for refund of export duty which, at September 30, 1947, amounted to £61,037. The sums recovered in this way are subject to taxation.

Operating Results

Work on the property continued without interruption up to the end of the financial year when a strike, lasting from September 29 to November 3, brought all operations to a stop. Tonnage milled amounted to 118,450 tons.

Actual working costs amounted to 38/- per ton compared with 39/3d. in the previous year, but "back pay" granted under the Gorman Award amounted to 1/6d. per ton, bringing the total up to 39/6d. per ton exclusive of development and making away with all the benefit of the economies effected during the year. As the Award rates were made retrospective for six months, the effects in a full financial year will be proportionately greater and, pending further experience of the cost of sickness and holiday benefits, cannot be precisely estimated.

Mine costs for the past year including the cost of development and £8,878 for back pay under the Gorman Award came to 44/6d. per ton milled or 103/5d. per ounce of gold produced.

The distribution of our revenue is as follows : Out of each 20/- received we pay—

	s. d.	s. d.
In wages	5 11	
For supplies and services ...	6 2	
London office	4	
Total costs		12 5
Taxation	4 9	
Dividend	1 6	
Retained for depreciation, etc.	1 4	
		7 7
		20 0

Based on profits before depreciation, taxation absorbs 12/5d. in the pound.

Development

Since the end of the financial year, the 15th level has been completed and I regret to say that the results, in the aggregate, are no better than they were on the 13th, what we have gained at some points having been lost at others. While the ore-body is still split into separate shoots of restricted size, the values are still good and it is clear that mineralization of the vein has not ceased. We have therefore started work on sinking a winze to the 17th level in the first instance, with the object of exploring the vein again at this horizon. The length of ore developed on the 15th level is, as I have said, substantially the same as on the 13th and the amount of ore developed between these levels is approximately 40,000 tons averaging 12·9 dwt. per ton ; payable development on the 15th level itself averaging 15·1 dwt. over 42 inches.

Future Operations

In addition to further exploration of the Odumase vein in depth, future development is being directed to testing of lateral extensions of this vein hitherto unexplored.

The 9th level crosscut has been extended from the Akyenase workings towards Boabedroo and is being continued into Lyndhurst ground for the account of the Lyndhurst Company for the purpose of testing the downward extension of the Boabedroo ore-shoot. It intersected this vein, which is certainly the same as the Odumase, at a point 460 feet north-east of the Konongo boundary, and driving is in progress in both directions along the vein. As recently announced by the Lyndhurst Company, the south-west drive encountered ore at a point 255 feet from the crosscut and the next 105 feet averaged 21·8 dwt. over 98 inches. The face was at a point 100 feet from the common boundary in Lyndhurst ground and was still in ore when this information was received. While it is still too early to estimate the significance of this development to our company, it is an encouraging sign of the possibilities on the Odumase vein and its further progress will be followed with interest.

Ore Reserves

At the end of the year the developed ore reserves amounted to 257,912 tons with an average value of 11·5 dwt. per ton.

Taxation

On the question of taxation I regret that I have nothing new to report and we are still without information on the intentions of the Government on this vital matter. It is gratifying to have received the long delayed settlement of our claims for refund of export duty, but this ill-conceived tax still remains as a serious handicap to the industry.

The report and accounts were unanimously adopted.

NEWS FROM THE MINES

Taquah & Abosso Mines.—Output and profit for the month of May : Ore crushed was 24,000 short tons (same for April), yielding 5,545 (6,005) ounces of fine gold, valued at £47,756 (£51,718), or an average of 4·62 dwt. (5·004 dwt.) per ton. Outgoings were : Working costs and general expenses in West Africa, £41,753 (£40,984), averaging 34/9·53d. (34/1·84d.) per ton ; Gold Coast Government export tax, £4,840 (£5,242) ; development, £6,000 (same) ; London expenses, £800 (same) ; realization charges, £554 (£600) ; making a total of £53,947 (£53,626) and leaving an estimated loss of £6,191 (£1,908) before charging for depreciation, etc.

Naraguta Tin Mines.—Output of tin concentrates, for the month of May, was 23¾ tons (27½ tons for April).

Naraguta Extended Areas.—Output of tin concentrates, for the month of May, was 5½ tons (6½ tons for April).

Naraguta Karama Areas.—Output of tin concentrates, for the month of May, was 12¼ tons (20½ tons for April).

Rukuba Tin Mines.—Output of tin concentrates, for the month of May, was 1¼ tons (same for April).

South Bukeru Areas.—Output of tin concentrates, for the month of May, was 7½ tons (11½ tons for April).

Tin Fields of Nigeria.—Output of tin concentrates, for the month of May, was 2¾ tons (5½ tons for April).

Banish Backache

DO PAINS strike across the small of the back? Are you afraid to bend or straighten afterwards? Do you feel tired, nervy and depressed? Is the urine disordered and your rest disturbed? Do weather changes bring on rheumatic twinges? These are all symptoms which Doan's Backache Kidney Pills successfully combat, since they frequently arise from sluggish kidney action.

Doan's Pills succeed in bringing back ease and comfort because they stimulate and flush out the kidney filters, so helping them to regain normal, natural activity.

Backache, lumbago, rheumatic complaints and urinary troubles disappear when the impurities which cause them are expelled from the system by healthy kidney and bladder action.

Ask for DOAN'S Backache Kidney Pills 1/3 2/9 5/-

Accounts and Dividends

South Bukeru Areas

The accounts and report of the directors of South Bukeru Areas, Limited, for the year 1947, show a profit of £7,558 compared with £7,062 for 1946. Revenue was £32,170 (£29,965) made up as to tin accounts, £31,200 (£28,731); columbite, £536 (£764); and sundries, £434 (£470). Expenses were: Working costs, £19,015 (£18,611); Nigerian Government rents and royalties, £4,067 (£2,892); London, £1,530 (£1,400); making a total of £24,612 (£22,903) and leaving the profit indicated.

Allocations for this profit were: Taxation, £3,500 (£2,683); dividends, £1,375 (same); property reserve, £1,000 (nil); contingencies reserve, £500 (same); depreciation reserve, £356 (nil); dividends equalization reserve, nil (£750); prospecting, £621 (£655); buildings, £307 (nil); making a total of £7,659 (£6,963) and leaving a debit of £101 (credit of £99) which, with the credit balance of £1,773 (£1,674) brought in, makes a total credit of £1,672 (£1,773) which it is proposed to carry forward to the current year's accounts.

The report states that output of tin ore was 105¼ tons (117¾ tons for 1946) and output of columbite was 4 tons (5 tons); all but three tons of tin ore came from sections outside the proved areas. The reserves at the end of 1947 were just three tons lower at 107 tons (110 tons) showing that nothing has been added during the year. On this point, the report says that further close prospecting is necessary on the areas to assess what additional tonnages can be added to the reserves. Production for the current year, to end-April, was 45 tons, compared with 47 tons for the corresponding period of 1947; and there are hopes to maintain the output.

Meeting at Winchester House, E.C.2, on Thursday last, at 3.0 p.m.

Ariston Gold Mines (1929)

The accounts and report of the directors of Ariston Gold Mines (1929), Limited, for the year ended September 30, 1947, show a profit of £153,587, compared with £207,378 for the previous financial year. Gross revenue was £685,905 (£664,705), made up as to: Bullion less gold premium duty and realization charges, £682,841 (£659,682); interest, £844 (£5,023); and sundries, £2,220 (nil). Outgoings were: Mining costs, £456,373 (£365,162); superannuation scheme, £4,003 (£813); depreciation, £28,433 (£29,798); London expenses, £11,962 (£10,814); concentration scheme, nil (£27,731); written off development, £31,547 (£23,009); to make a total of £532,318 (£457,327) and leave the profit indicated.

Allocations from this credit were: Taxation, £72,000 (£96,513); dividends, £117,563 (£99,000); directors' additional remuneration, £5,000 (£2,000); making a total of £194,563 (£197,513) and leaving a debit balance of £40,976 (credit of £9,865) which, with the £118,912 credit brought in (£109,047), make a total credit balance of £77,936 (£118,912) which it is proposed to carry forward to the current accounts. The balance sheet note points out that no credit has been taken for the gold premium refund due to the Company for the period of seven years ended September 30, 1947; the amount is

"Worth Pointing Out"—
By "The Searcher"

Ariston Gold Mines (1929)

THERE have been so many adverse factors affecting the gold mining companies of the Gold Coast that the hopeful factors are likely to be overlooked ; and the recent issue of a full, almost pre-war size, annual report of Ariston Gold Mines (1929) Limited rightly draws attention to them.

Chief among them will naturally be the development results to the north and to the south of the main Ariston mine. The Company has included a map, showing a section through the North Shaft and including the old Broomassie mine, still further to the north. This old mine has not been working for years, and it was developed only as far as the No. 10 level, though a winze was sunk from No. 9 level to what would have been No. 12 level.

Amongst the achievements of the old Broomassie mine was the treatment of 254,367 tons of ore and the recovery of 231,132 ounces of gold, equal to 18¼ dwt. per ton. The Ariston Company has now, in its drive north from the North Shaft, on No. 17 level, reached a point just below the old Broomassie No. 12 level ; and has, in a series of crosscuts, established a value of 25·3 dwt. over 22 inches, following other lesser values. There is good reason to believe that still better values will be found as the Broomassie Main Shaft is approached.

The next feature is the important find that, on the way to the old Broomassie mine workings on the No. 17 level and No. 20 level of the Ariston workings, just north of the North Shaft, valuable ore was discovered which appears to prove a new orebody ; and it outcrops at about 1,800 feet to the north of the North Shaft.

Its direction is such that it will probably be struck by No. 24 level, as it advances past the North Shaft horizon. As a shorter cut, Ariston is going to sink a winze from No. 17 level, about 300 feet from the North Shaft and this should cut through the orebody between what will be No. 23 level and the No. 24 level.

To the south, there are hopes of a new orebody which may be connected with the Gold Coast Main Reef Ekotokroo section.

Finally, a new joint power station (in which Bremang and Main Reef will be associated) is to ensure adequate supplies of electricity at reduced rates.

WEST AFRICAN MARKET NOTES

Colonial Contribution to World Needs

By the Commercial Editor

THE issue of the *Report of the West African Oilseeds Mission* (Colonial No. 224. H.M.S.O. price 1/6d.) though belated, has been worth the patience of the reader. Its principal virtue is that it is a fact-facing document; and its authors have evidently taken to heart the experiences which have befallen the "parent scheme" in East Africa, now so much in the news. The latter, first in the field at the suggestion of the Managing Director of The United Africa Company, has had more than its expected period of teething troubles. The lay Press, on the other hand, has been abundantly unfair, alike to the originators, to those who had the burden of initiating the enterprise, and to the Government which, under its corporate body, has now assumed the task of completing the scheme.

The chief objection appears to be that the cost has exceeded the estimates, but those who use such an argument can have had scarcely any contact with the world of reality, in which an ultimate cost in excess of estimates is quite commonplace. Indeed, the West African gold-mining companies in recent weeks have had parallel experiences after the most careful of planning in a field in which they are experts. The plain truth is that world costs have risen and it is by no means certain that they will not rise further. The critics, however, have shown their bias by not admitting that, whilst costs have doubled, the likely cash returns from the scheme have more than doubled. The scheme is evidently still financially sound and that fact must not be overlooked.

This is not the only problem that has faced the Oilseeds Mission, as its report reveals; and the modesty of its approach to these problems is to be warmly commended. If any particular point can be singled out for comment, it is surely the way in which the Mission has taken up the thorny problem of getting the goodwill of the African farmer in those areas of Nigeria which are already cultivating groundnuts on a fairly extensive scale—in fact, faster than the railway can deal with them, last season or even this season. Of course, the rise in price has stimulated African interest to excellent purpose; but despite this, the world shortage of groundnut oil and products is acute. The question of haulage to the ports is being actively tackled, so that of enlisting still more African help has become of prime importance.

The Mission evidently has in mind the experience of the U.A.C. in the direction of improving palm oil and palm products nearer the coast. Despite all its endeavours to educate African farmers in the task of improving palm oil and products, there is still a long way to go before success can be seen faintly on the horizon. The African peasant farmer is suspicious and will have to be convinced that the new method is an improvement upon the old method. The U.A.C. has done good work in that direction but there is still a hard core of antipathy to change. This the Mission recognizes as applicable to groundnut culture.

It has not recognized, however, that the African farmer of groundnuts may need more than convincing experiments, even on his own doorstep. In saying that, we hope we are proved to be wrong; and in any case, we like the idea of a doorstep lesson in the "magic" of mechanized cultivation for, upon its success, in educating the reluctant peasant farmer, will depend the success of the major schemes that are planned, according to the *Report*.

The next factor that makes an appeal, is the decision not to disturb the present agricultural balance (which, whatever its faults, viewed from the world angle, is still delivering the goods) until such time as these experimental attempts have shown their value in practice. To be sure, the mechanization of the industry is the best way to get the maximum of output in the shortest possible time; and this decision (not to disturb current methods) has forced the Mission into new areas where groundnuts have never been grown before. Here a certain risk has to be taken and much pioneer work will have to be put in; but the effort, cost what it will, must be made if the Colonial Empire is to contribute, as it can in its own agricultural field, to the extent that the Mother Country has contributed to world needs in the way of political and commercial enterprise.

Those who have the interests of the world generally, and of Africa in particular, at heart will surely endorse the conclusions and recommendations of the West African Oilseeds Mission.

French Togoland Trade

The total imports into French Togoland, for the 11 months ended November 30, 1947, were valued at 514·6 million C.F.A. francs, compared with 251·2 million for the whole of 1946. The total of exports from French Togoland, for the 11 months ended November 30, 1947, were 292·9 million C.F.A. francs, compared with 137 million for the whole of 1946. In both cases, trade has more than doubled in the year.

France, as was to be expected, supplied the largest share of the trade in both directions, the actual amount being 55 per cent. of the total imports and 55 per cent. also of the total exports. The chief items imported were cotton and jute goods, clothing, foodstuffs, medicinal preparations, wine, household goods, metals, paper, petroleum and petrol. The chief items exported were coffee, cocoa, palm kernels, groundnuts, copra, tapioca, hides and dried fish.

1 or 2 gun Models available.

You need a Car Lift — a LAYCOCK LIFT, because it is installed on any level site without excavating. It is electrically operated; a 3 h.p. motor does all the work. There is no centre ram obstruction; no need for a compressor, and you can shift it to another site if need be, leaving an undamaged floor. Simple to install and operate.

On the right is the NEW Niagara MERLIN high pressure vehicle washer, destined to take its place as the world's finest machine for this purpose. It embodies the latest engineering practice, and is notable for its high efficiency, with maximum economy in operating, and water consumption. Gives high pressure jet or spray at will.

THE PALM OIL INDUSTRY IN NIGERIA

WHILE the oil palm grows all over Southern Nigeria, it is in Benin and the provinces lying thence eastward, where no alternative crop such as cocoa or cotton has been evolved, that the whole native economy is centred round the palm. With the cessati n of tribal wars and the improvement in hygiene, the population, which in many places already reaches 1,200 to the square mile, is yearly growing greater. Coupled with this, the soil is far from rich and the population would be hard put to it to raise sufficient crops merely to provide for their own subsistence. Starvation is always only round the corner. It is no exaggeration to say that any cessation of the trade in palm products, or even any considerable diminution, would lead to such a collapse of the local economy as to result in three or four million people being reduced to famine conditions.

The oil from the palm is not only an export crop but forms a basic part of the native dietary. The extent of this domestic consumption is fluctuating and unknown, but some attempt to estimate it is necessary, if it is desired to measure the degree to which present African practice fails to make full use of the country's agricultural resources.

According to the Report of the Oilseeds Mission of 1946 (Colonial Paper No. 211 of 1947) the weight of the kernel of the oil palm fruit equals 10 per cent. of the weight of the fruit; and oil, 28 per cent. of the weight of the fruit. From other information, and from our own experience, we find that the kernel content is about 14 per cent. by weight, and the oil content 20 per cent.; and these are the figures we have adopted in the calculations which follow.

The African utilizes palm oil for his own purposes, but has no use for kernels. For this reason, the export of kernels in any year greatly exceeds the amount which would be proportionate (assuming 20 per cent. oil to 14 per cent. kernel) to the quantity of oil exported.

The following figures are worked out on the basis of kernel exports:—

AVERAGE FOR 10 SEASONS 1936/7 TO 1945/6

	Thousand Tons
Weight of kernels exported	314
Estimated weight of fruit harvested... ...	2,250
,, ,, ,, total oil content ...	450
,, ,, ,, palm oil produced by present means of extraction*	252
Weight of oil exported	140
Estimated weight of oil consumed locally ...	112

These figures cannot in the present state of our knowledge of palm oil production be verified, but there are reasonable grounds for assuming that they are of the right order of magnitude.

At the beginning of the century, Nigeria was virtually the sole provider of the world's requirements in palm oil and kernels. How gravely the situation has since deteriorated, and is likely to deteriorate in the near future, can most vividly and convincingly be shown by the following figures, which give the production for export of the various oil producing countries in 1928 and 1938, together with estimates for 1948.

The Nigerian estimates for 1948 have been based on recent experience, and represent the maximum exportable production that may reasonably be expected to be obtained with present methods of extraction.

In the case of the Netherlands East Indies and Malaya, the 1948 figures are nothing but intelligent guesses, assuming a continuation of the slight recovery from the effects of Japan's occupation made in 1947. The Belgian Congo estimates are based on the current rate of production and purchases for export.

I. OIL PRODUCTION (for export).

COUNTRY	1928	1938	1948 (est'd)
	Tons	Tons	Tons
Nigeria	128,000	110,000	140,000
N.E.I.	25,200	217,500	50,000
Malaya	1,166	55,000	50,000
Belgian Congo ...	19,200	71,500	90,000

* Nine-tenths by native method: efficiency 55 per cent.
One-tenth by hand presses: efficiency 65 per cent.

II. KERNEL PRODUCTION (for export).

COUNTRY	1928	1938	1948 (est'd)
	Tons	Tons	Tons
Nigeria	249,000	312,000	325,000
N.E.I.	2,900	45,000	10,000
Malaya	200	9,400	6,000
Belgian Congo ...	68,000	90,000	70,000

Figures of oil production show how rapidly and surely the N.E.I. and, to a lesser extent, the Belgian Congo and Malaya, challenged and overhauled Nigeria in the 10 years before the war.

These figures, however, do not reveal the full seriousness of the menace. It might be deduced that Nigeria had little to fear, having at least succeeded in retaining a market for her own products. This, however, is not Nigeria's doing, but is due to the fact that world demands have hitherto expanded sufficiently rapidly to continue to absorb, not only the Nigerian oil production, but also that of the Far East and the Belgian Congo, as well as greatly increased quantities of other oils, vegetable and animal, the supply of which, in direct competition with Nigerian palm oil and kernels, was also markedly growing in pre-war years.

The real weakness of Nigeria lies in the fact that the output of her competitors is of far higher quality than her own. The quality of oil is dependent on the percentage of free fatty acids which it contains—the higher that percentage the lower the quality. There is little doubt that, in the post-war years, the entire output of the N.E.I. and Malaya, as well as the greater part of the Belgian Congo output, will contain less than 3 per cent. free fatty acids; whereas in Nigeria, the only export oil to reach that standard will be the relatively negligible quantity produced on the plantations of The United Africa Company Limited.

Although there has been a considerable improvement in the quality of Nigerian oil in the last few years, the average percentage of free fatty acids is still about 16 per cent.; and one quarter of the production is in excess of 25 per cent. f.f.a.

It becomes, therefore, an absolutely vital question for Nigeria whether demand will keep pace with increased supply and, in particular, whether there will be a demand for low grade oil. If not, Nigeria will either find that her oil fails to command the same price as that of her competitors in the world, or indeed that she cannot even dispose of the whole of her crop at any price.

Hitherto, palm oil has held its own with competing products, partly, because of its cheapness and, partly, owing to great technical advances which have enabled increasing use to be found for it in the edible field, provided it is of a sufficiently high quality.

There is the serious risk that Nigeria will find herself excluded from all but the soap markets. Even in these markets, the soap-maker, given an option of low or high f.f.a. oil, would also prefer the former for the lower cost of bleaching, and often on account of the larger glycerine recovery.

The Nigerian Government has discarded the solution which has commended itself to other countries, that is to say, to the Dutch and the Belgians as well as to the British Far Eastern Dependencies. All these Administrations have taken the view that the interests of the country demand, above all, efficiency of production. With this achieved, they hold that not only will the material prosperity of the country as a whole be advanced, but also that of the native inhabitant, because nothing is so likely to induce him to follow efficient means of cultivation and production as the example in his midst of a European, scientifically-based, and ordered organization.

In the N.E.I., rubber production was first in the hands of European planters. By 1939, half the total production was from peasant sources and the high standard of production would never have been reached without the example and the competition of the European. Also, these Administrations took the long term view that the good must inevitably oust the inferior product and, apart from the intrinsic advantages of concentrating on the production of the former, they ran the severe risk, if they did not do so, of losing their market to their competitors.

The Nigerian Government has rejected this solution, mainly on politico-social grounds, less certainly on economic grounds. The problem, therefore, is how, within the terms of this decision, the undenied advantages of plantation production can be secured.

(The above article is the first of a series of extracts from "The Future of the Nigerian Palm Oil Industry" prepared by The United Africa Company Ltd., to whom acknowledgements are made).

New hope for malaria sufferers!

Here is the panacea for that scourge of mankind—Malaria. It comes to you as 'PALUDRINE', evolved in the I.C.I Laboratories in England. Obtainable here and now as a small white tablet, 'Paludrine' is the most potent remedy ever known.

1. *Malaria is controlled and cured by 'Paludrine' in doses of three tablets twice a day for ten days.*
2. *One tablet of 'Paludrine' daily prevents an attack and wards off relapses.*
3. *There are no headaches, sickness or skin discoloration after taking 'Paludrine'.*

COAL FROM NIGERIA

By F. J. Erroll, M.P.

THE shortage of coal in Britain has naturally focused attention upon the extensive deposits which exist in Africa. The well-exploited seams in the Union of South Africa, and the famous Wankie Colliery in Southern Rhodesia are frequently quoted as examples of the abundant natural resources of the African continent. Less well-known but equally extensive are the deposits in Tanganyika, although current interest in the East African groundnuts scheme is naturally now causing inquiries to be made regarding the commercial possibilities of mining these reserves.

It is surprising, therefore, that comparatively little publicity should have been given to the Nigerian coalfield at Enugu. The colliery was originally developed to provide locomotive coal for the Nigerian Railways, and bunkers for ships visiting ports in the Niger Delta. Output has expanded steadily over the last twenty years, but has been limited by the high cost of transport and by the Government policy of the day, which rightly declined to spend funds on the development of the colliery in excess of what was then considered to be the maximum foreseeable demand.

The fuel crisis in Britain, the inadequacy of Ruhr coal supplies to Europe, and the substantial developments within Nigeria itself have necessitated a complete change in the hitherto cautious policy of the Government. The colliery management, always drawn from the best technical and managerial resources of Britain, has been fully alive to the situation, and has not hesitated to recommend a policy of vigorous post-war development. Thus, in the Annual Report of the Colliery Department for the year 1946/47, the Manager asserts that "these collieries, with their present staff, are capable of producing and maintaining an output at least twice as large as our present output. . ."

At present, the annual production is restricted to about 660,000 tons, largely owing to lack of transport capable of moving the coal produced. As at present developed, the collieries are capable of maintaining an output of 1,000,000 tons per annum without any increase in staff, and with very little additional equipment. In a matter of six months, the collieries could be made capable of producing and maintaining an output of 1,500,000 tons per annum; while in two years, if the necessary staff and equipment were forthcoming, the collieries could be expanded and made capable of producing an output of 3,000,000 tons per annum. These are big figures, especially when the strenuous efforts of Britain to raise output in her mines are considered.

In almost all underground sections of the colliery, favourable and rapid progress can be reported. In the new West Area, accelerated development work has led to an output of 500 tons per day; while in the New Obwetti mine, daily output at the beginning of 1947 was at the rate of 2,500 tons, with favourable prospects of an increase. It is typical of the frustrations which the management is experiencing that a new ventilating fan, ordered in 1943, only arrived at the end of 1946. Similar delays with other equipment have been experienced, but it is to be hoped that deliveries will improve in the future.

In contrast with the disappointing output per man shift from British pits, the Nigerian underground worker has greatly improved his rate of production. In 1945/46 hewers on an average cut 40·7 cwt. of coal per man shift; but during the period 1946/47, the daily average had risen to 47·8 cwt. Of the total labour force of 5,365 in 1946/47, some 73 per cent. were employed underground, comprising 954 hewers, 1,019 tubmen, and 1,921 on ripping and repairs. Work in the collieries is popular and well paid, so that there is usually a waiting list for jobs. This has a stimulating effect on the mine workers who know that others are waiting to take their jobs should they reduce their effort.

As part of its programme for developing the resources of Africa, the Colonial Office asked Messrs. Powell Duffryn Research Services Limited to send a team out to Nigeria to report on the possibilities of the coalfield. Their report is believed to have been received by the Colonial Office, but it is not yet available for publication. Only too often, the good intentions of the Government to ensure a full survey of development possibilities, before commencing on a positive programme, have led to a disastrous period of inaction. It is to be hoped that the practical suggestions of the colliery management on the spot, for an immediate

PALM OIL IN NIGERIA	611

increase in output, are not being shelved while the outsiders' report is being leisurely considered in London by Civil Servants with little or no experience of colonial mining and fuel problems.

Whatever happens, there are certain definite limitations to the expansion of Nigeria's coal production. The first is the nature of the coal itself. The ash content is high, in common with most African coals, and this makes it less suitable for ships' bunkers. Coke, produced from this coal, has a high friability, but the raw coal has a calorific value of some 12,000 B.Th.U. per pound. Secondly, railway transport charges are extremely high. While the coal sells at Enugu for about 11/6d. per ton, by the time it reaches Kano the cost has risen to about 60/- per ton.

Apart from the railways, coal consumers are scattered widely over Nigeria and, except for several generating stations, individual requirements are small and not likely to increase very rapidly. Transport to the coast is expensive and, owing to its variable quality, Nigerian coal probably could not compete in world markets. In fact, Nigerian coal presents the familiar African story of natural resources ready for easy development, but too remote from large markets. Whatever the technicians may say, world competitive conditions finally decide the rate of development of any natural resource.

WEST AFRICAN TALKING POINTS

Colonial Austerity

THIS week-end, Mr. Creech Jones was due to address the Fabian Colonial Bureau on Colonial Policy in the last few years. Anticipation of his remarks which will be noted in our next issue would be foolhardy, but it will be surprising if the Secretary of State contents himself with those "pats on the back" which have been ready snares for so many Labour politicians in the post-war years. An interesting effect of British Colonial policy, since the Labour Party came into office, is the evident disillusionment of so many Colonials in this country many of whose votes helped to swell Labour's majority. Henry Swanzy (Editor of the Royal African Society's *African Affairs*) outlines the reasons for this in: "Africa and the British Political Parties" in *Soundings* this month.

"In the strict sense," he writes (extending the application beyond those Colonials resident in the United Kingdom), "what these groups of politically conscious people overseas had been doing was to use the Opposition as a pressure group to advance their own interests and, what is more, their way of life. The English Socialists were flattered by these attentions, which they quite honestly related to their own view of the world." But, continues Henry Swanzy, the apparent deviation of the "Labour Imperialists" is not really a deviation seen from the objective standpoint of truth, which is the need for material developments in the Colonies as a basis for self-government; it is the previous propaganda statements based on emotion and without a true insight into all the facts, material and psychological, that are mainly to blame.

What, he then asks, is the major political development of the last few years from the Colonial side? The substitution, he answers, of the Fabian Socialists by the Communists as the English nucleus of African sympathizers seen through the eyes of the African. A reading of the Communist pamphlet *The Way Ahead*, he says, suggests that it is almost exactly the same as the Fabian Socialists before they came into power. "There is the same insistence on development, side by side with the best elements in the African peoples; the same human belief that all the sins of omission and commission in the past came from the short-sighted greed of the Imperialists; in short, the same lack of experience and even sometimes of elementary honesty in considering facts for their own sake."

It is debatable how far Colonials have actually turned towards the British Communists as alternative champions of their "cause." But Henry Swanzy's remarks plainly suggest that the time has now arrived when the isolation of British Party Politics from Colonial political development is becoming most difficult if not impossible. It is the Conservative Party which has lost no occasion since Labour came to power to claim that Labour Colonial policy has continued along a line of development about whose main lines there was little Conservative opposition. Labour politicians and party propagandists have frequently attempted to take credit for some new policy only to find that Conservative spokesmen vied with them in sharing the credit.

So far from liquidating the Colonial Empire and "freeing the Colonial peoples," Labour spokesmen daily revile the Tories for having neglected the Empire. This washing of British political linen is duly given prominence in the Colonial nationalist organs. It is a luxury which the British Parliament and the people they represent may with benefit forgo.

* * *

In a Nutshell

BRITISH Colonial policy in the last few years has been outstripped by the British economic position. An enterprise like the East African groundnuts scheme, the cost of which is now considered likely to be twice the original estimate, would have been unthinkable in times of normal Colonial development based simply on terms of gradual political and economic advancement. However much official Government spokesmen stress the undoubted advantages which will accrue to Africans from schemes of this magnitude, it has never been pretended from the beginning that the driving force behind their execution is not the shortage of fats with particular emphasis on the needs of the British housewife.

Nor can British Colonial policy be free from the effects of dollar shortages and the dollar earning capacity of certain well-known Colonial products. There, in a nutshell (a suitable repository at such a time) are the two handicaps of British post-war Colonial policy. They are handicaps which would almost certainly have provided obstacles for any other British political party that might have been in power.

* * *

Commonwealth Complement

THE Colonies, particularly the African Colonies, are so patently assets of the overall British economy (to say nothing of British prestige) that greater vision than is conjured up by the formulæ of "trusteeship" and "leading peoples to self-government" is an urgent priority of British Colonial policy now. Nor is "partnership within a commonwealth of nations" sufficiently practical to give more than rhetorical persuasiveness to an idea which is strictly limited in its application. Whatever slogan is finally put forward, the word "complement" should not be despised; because it precisely describes the relation which to-day exists between Great Britain and Africa where the majority of the sixty million British dependent peoples live.

It is a serious underestimate of African intelligence to expect him to overlook the real gain which Great Britain is openly seeking from her African connexion. It is no less an insult to African intelligence to suggest that Africa stands to gain nothing but exploitation from Great Britain's new intensive interest in Africa. Yet African intelligence is persistently being insulted on both these counts. Whatever the failings and the advances in British Colonial policy during the last few years, the rallying cries of the future must be "self-interest," at the lowest, and "mutual benefit" at the highest end of the scale. Paternalism is a deadweight and a negation of policy.

over

THE NIGERIAN PALM OIL INDUSTRY

THE agricultural aspect has not been overlooked by the Nigerian Agricultural Department. In 1928, it began to encourage the local farmers to replace existing groves by small palm plots, with a view to introducing a high yielding strain of palm, and adopting more up-to-date methods of cultivation and maintenance. It has, however, been uphill work, partly owing to the African's reluctance to spend time and money on cultivating palms, the return on which is deferred for some years, when the wild palm can be cropped for nothing; and partly owing to the paralysing impact of land tenure laws and customs. Without security of tenure, no individual is likely to undertake long-term improvements. As a result, 7,996 farmers have established plots which cover a total area of only 14,864 acres (1943 figures).

Cultivated Palm

The cultivated palm has these advantages over the wild palm: The palms are evenly concentrated at an ideal density and, therefore, one farmer can tend a larger number; they do not grow to as great a height as the generality of forest palms, consequently, the fruit can be gathered with much greater ease. For these reasons, a bigger concentration of oil is found in a given area, and the fruit can be harvested not only more cheaply but also with greater rapidity to the vast improvement of the quality of the oil. As a result of seed selection and breeding, the cultivated palm bears more bunches of fruit and the bunches themselves have a higher oil content.

The Fourth Annual Report 1942/43 of the Nigerian Agricultural Department's Palm Oil Research Station assesses the yield of the cultivated palm as showing a 50 per cent. increase in oil and a 25 per cent. increase in kernels. Experience in the Far East, as well as in the Belgian Congo, confirms an oil content of 30 per cent. as against that of 20 per cent. in Nigeria's natural palmeries.

Let us contrast the position of (*a*) the farmer with 10 acres of cultivated palms, treated at a neighbouring Pioneer Mill, with that of (*b*) the farmer who harvests the wild trees and relies on Native methods of extraction.

(*a*) 10 acres of cultivated palms will give an average yield, from the 10th year onwards, of 20 tons clean fruit and from this will be extracted:—

	£ s. d.
5 tons of oil under 5 per cent. f.f.a. and selling at £32/5/- per ton	£161 5 0
1·6 tons of kernels selling at £21 per ton ...	33 12 0
	194 17 0
Less milling costs (oil £4/15/-, kernels £2/7/6d. per ton)	27 11 0
	£167 6 0

(*b*) From a corresponding acreage of average natural palmery, the farmer would harvest approx. 7½ tons* clean fruit and would extract by Native method:—

	£ s. d.
16½ cwt. oil averaging 16 per cent. f.f.a. selling at £30 per ton	£24 15 0
21 cwt. kernels selling at £21 per ton	22 1 0
	£46 16 0

* Throughout Nigeria's oil palm belt, there are great variations in the density of stand or number of wild palms per acre. In seeking a fair average, we have taken the figures appearing in the O.P.R.S. 4th Annual Report (Appendix VIII) for the Palm Grove experiment at Gkiadolor in Benin Province, which the Government Agricultural Officers regard as representative of the usual type of palm grove found in the Benin Province. Here, yields recorded over a period of 13 years (1930/42) put the average at approximately 15 cwt. clean fruit per acre. We have assumed, as earlier in this paper, a total oil content of 20 per cent. and kernel content 14 per cent. in natural palmeries; and Native oil extraction methods 55 per cent. efficient.

Nigerian Productive Capacity

Sufficient has been said in the preceding paragraphs to indicate the great accession of wealth which would accrue to Nigeria if it were possible to improve the agricultural and mechanical skill and practice of the African peasant. It has also been seen that, on the one hand, progress has been, and is likely to be, painfully slow unless a new spirit prevails; and on the other, and even if the Nigerian Government achieved complete success on its present lines, Nigeria would still be at a marked disadvantage compared with her competitors.

We have assessed the fruit harvested at 2¼ million tons which, expressed in terms of today's oil and kernel market prices, is worth £14 million. If extraction were undertaken by a factory plant, which would enable 93 per cent. extraction to be achieved; and if, at the same time, every palm at present harvested was a cultivated rather than a wild palm, the total value of the oil and kernels marketed would reach £28·5 million; that is to say, at a time when everything possible is needed to improve the standard of living, the potential wealth from oil palm cultivation could be doubled. This indeed, is an understatement. In the preceding paragraph, we have shown that, under plantation conditions, an African family, without stinting the cultivation of subsistence crops, could in fact cultivate and harvest a larger number of palms than in their wild state. In the estimate we have just given, no allowance has been made for this possibility.

African Plantations

Our proposal is that a tripartite syndicate should be formed in which the Government, the African and the European should each play the role for which each is best fitted. The Government would secure the land, provide the whole or a proportion of the capital for long term development and exercise safeguarding powers of oversight. The African would contribute his agricultural skill and labour, and the European the commercial and technical skill required for the management of the plantation and mill; and if this were needed, the marketing of the produce. The capital for the mill could also be supplied by the European interests.

Each plantation would form an economic unit, requiring an area of at least 10,000 acres, with 1,325 additional acres of farming land to provide subsistence crops.

The one great difficulty in the past has been that, in the principal palm areas, owing to the density of the population, no suitable land could be found which was not already under occupation or likely to be needed by the African in the near future. But areas certainly exist where suitable land, not open to these objections, could be found. The Government must be fully informed on this subject; but it is suggested, for example, that search might usefully be directed at any of the following districts—(1) Cameroons; (2) The area North of Ikang on the right bank of the Akpa Jafe River; (3) Ahoada district in Owerri Province; and (4) The land on the right bank of the Niger south of Asaba.

In all these regions, it is reasonably safe to say that, owing to the sparse population, anything up to 100,000 acres could be set aside without causing hardship to the local inhabitants. In the Cameroons, of course, much larger areas are available. All possess good outlets to rivers and shipping ports. The labourers and settlers would be found by colonization, and by emigration from more thickly populated parts of Nigeria.

During the period of development, the settlers would work as labourers and subsist on the daily wages paid and capitalized by the Syndicate, supplemented by the produce raised on their farming lands. The plantation would be divided into 10-acre plots and, from the sixth year (or whenever the produce of the palms on each plot began to exceed the value of the daily wage) the plots would be leased to the settler and his family, who would henceforward be no longer a wage earner but a proprietor and responsible for the maintenance and harvesting of his palms. He would deliver his fruit to the central mill for treatment, receiving an advance equivalent at least to his former wages, and the balance of the price due when the month's accounts were closed; and he would still enjoy the produce raised on his acre of farming land. Against this, until the ninth year, he would only be called upon to meet the rent on his 10 acres. From the ninth year onwards, he would be required to make, in addition to his rent, payments sufficient to amortize the capital cost of the development of the plantation.

Capital Cost

The estimated cost of bringing a plantation of 10,000 acres into full production would be approximately £360,000; of which £270,000 would cover felling and clearing, construction of roads, the planting and maintenance of palms, rents, general expenses, salaries and wages; and £90,000 would be needed for construction of the settlers' cottages and provision of buildings, and equipment for social welfare purposes. The mill, with a capacity of 2,000 tons of clean fruit per month, would cost approximately £120,000 to erect. The total capital expenditure thus required would amount to £480,000.

Settler's Budget

The following table shows the settler's budget from the sixth year when he relies no longer on a daily wage (@ 1/6d. a day = £27 per annum) but on the sale of his fruit, supplemented by subsistence crops from his farm land. As soon as the plantation is in full bearing, that is to say from the tenth year onward, it will be seen that his nett annual income amounts to £145/15/9d.

Year	Tons clean fruit per 10 acre plot	Income from fruit	Rent	Yearly Expenses Amortization	Total	Nett Yearly Earnings

...and competitive tests prove
LaPlant-Choate scrapers lead the field in earning capacity!

In the final analysis, *any make* of crawler tractor with sufficient horsepower will do a reasonably good job of handling a scraper. But, when it comes to selecting *the right scraper*, it's an entirely different story. Some scraper outfits get heaping loads in double-quick time. Others take much longer—even with the aid of a pusher. Some will carry a smooth, even spread in high gear, while others are slow and uncertain. Some scrapers make efficient use of tractor power—others burn it up by lugging around "an extra yard of deadweight" that they never get rid of.

Regardless of what tractor you use, there's *a tremendous difference in scraper performance.* And that difference in the scraper alone can easily "make or break" the profit on a close-bid job. That's why more and more smart dirtmovers use whatever tractors they can get—yet stay with LaPlant-Choate Positive Forced Ejection Scrapers. Competitive tests prove that under the varying conditions of scraper operation, LaPlant-Choate's improved rigs consistently deliver *highest average production at lowest over-all costs.* Ask any recent LaPlant-Choate owner. COLONIES "NO MILK AND HONEY OVERNIGHT"

Experts Not Pessimistic But Realism Necessary

"IT is necessary to take a realistic view and people sometimes talk as if, in a matter of months, the Colonies could be made to flow with milk and honey. But we do not want to be regarded as pessimistic. There are, as we hope to show, great possibilities. But it will take time to bring them to fruition." With the spirit of these timely sentences running through its brief 23 pages, the Colonial Primary Products Committee (Chairman: Mr. C. G. Eastwood, who is Assistant Under-Secretary of State for the Colonies) has issued an interim report (Colonial No. 217) published last week.

"The Colonies," they write, "are not British estates which can be exploited by the United Kingdom for her own advantage. The primary concern of Colonial agricultural policy must be the benefit of Colonial peoples themselves. There are, of course, many possible developments which, while benefiting the Colonies, will also benefit the United Kingdom and the world at large. The Colonies, too, have an overriding interest in the stability of sterling on which their finances and their general economics largely depend." One of the general factors which the Committee proposes to discuss at future meetings arises from experience of the slump in the inter-war years, which tended to make primary producers, *entrepreneurs* and Governments cautious in responding to appeals for a great expansion in production.

Export Prospects

"In the Committee's view, the very large expansion of agricultural production in the Colonies, which His Majesty's Government wishes to see, will inevitably be retarded unless the producers can feel some assurance of a market for their increased production for a reasonable period of years and at reasonably remunerative prices." The Committee has done its best to cover production to meet internal needs and for export to all markets; but since the commodities chosen for early study have been for the most part those which are in short supply in the United Kingdom, the prospects of export to this country loom largest in the report.

At the present time, the United Kingdom is unable to supply goods for export to meet Colonial demands in full "but this difficulty must be overcome and, to do so, is an essential feature of our economic plans." Whereas the Committee had before it up-to-date analyses of the United Kingdom's present and prospective needs, it was obliged to examine the possibilities of expanding Colonial output of particular crops in general terms only; and was unable, even where some expansion seemed possible and desirable, to reach firm conclusions on how or where it could best be achieved.

Consequently, "the Committee has been very conscious of the preliminary nature of its deliberations and of the need for further detailed investigations, in consultation with Colonial Governments and, where necessary, through the medium of special missions of inquiry, before developments which seem *prima facie* to be worth considering are translated into concrete schemes." The Committee had to recognize that, as all economic progress involves competition for scarce resources, the encouragement of one line of development would normally require the establishment of priorities for the use of available land, labour and capital goods.

Establishment of Priorities

"It is sometimes imagined," it writes, "that by the introduction of new capital, new techniques and new incentives a change in the pattern of Colonial agriculture can be brought about and output vastly increased almost overnight. It is therefore, in the Committee's view, of some importance that several limiting factors should be fully understood. It must be borne in mind, in the first place, that the Colonies are already making a very substantial contribution to United Kingdom and world needs." One of the basic obstacles in the way of new development of all kinds in the Colonies is said to be the absence of adequate capital equipment in the form of communications, public utilities and the wide range of small industrial services upon which agriculture in advanced countries so vitally depends.

"Even if a plentiful supply of financial capital (through the Corporations being set up under the Overseas Resources Development Bill or through other Governmental or private channels) could be assumed, it would inevitably take time to remove this obstacle. The Colonies will suffer from much the same shortages as we suffer from in Britain —not enough new locomotives and wagons, not enough industrial plant or agricultural machinery. They will not find it easy to translate new financial capital into new capital goods. The process of development (with the benefits it could bring to the Colonies themselves and to the world as a whole) might be considerably accelerated if substantial supplies of such goods could be obtained from sources other than the United Kingdom.

Social and Political Obstacles

But apart from the shortage of basic capital equipment and labour, there are social and political obstacles which cannot be easily overcome. The introduction of any substantial degree of mechanization or of large-scale production to African Colonies will involve something akin to a social revolution. "The earliest success with mechanized methods may perhaps be achieved by group farming on a cooperative basis among peasant cultivators." A further point is made that, in the case of foodstuffs in particular, the claims of the export market must frequently compete with the needs of the local market. "It must be expected that, with the increasing prosperity and rising living standards at which Colonial policy aims, there will be an increasing domestic demand for foodstuffs of all kinds.

"There is also likely to be some increase in the domestic consumption of raw material as a result of the development of local processing industries, although this is not likely to be a very significant factor for some time to come, and so long as capital equipment scarcity persists. It cannot therefore be assumed that increased production will lead always to an increase in exportable surpluses."

The Committee has worked to the following terms of reference: "to review, commodity by commodity, the possibility of increasing Colonial production, having regard, on the one hand, to the interests of the Colonial Empire and, on the other hand, to the present and prospective world needs and the desirability of increasing foreign exchange resources."

Meat, Pigs and Bones

Some of its findings relative to West Africa are noted here. It believes that, "taking a really long view, there are great opportunities for development of the meat industry in Africa, for internal consumption and for export. Before there can be any question of exports, some solution will have to be found of the difficulties caused by rinderpest. The building up of a carcase meat industry on progressive lines need not wait for this since "there are at present large unsatisfied demands for meat inside Africa itself, and all the cattle available may well be required to meet them. Such a demand exists in the Southern Province of Nigeria; as wealth increases, it is likely to rise and all the beef from the Northern Province will probably be required to meet it."

The Nigerian and Gold Coast Governments are being

asked to review the possibilities of expanding pig production for export. In East and West Africa, a considerable capital investment will be required; and development is likely to be very much more rapid if producers can be given an assured market. Production on a small scale was undertaken in West Africa during the war.

With regard to dairy products, "Nigeria's contribution might well be an export of clarified butter fat and ghee from the nomadic native herds which are distant from population centres." Africa's contribution to the world trade in livestock products has hitherto been mainly in the form of raw hides and skins. In 1945, exports of hides and skins from West Africa were valued at £813,000. A mission of United Kingdom tanners to examine local conditions and to establish trade contacts in producing territories has been proposed. A reasonably encouraging response in bones production has come from West Africa which has recently been visited by a representative of the largest United Kingdom bones importers.

Rice, Jute and Conophor Oil

In West Africa, a considerable expansion in the rice crop seems possible, for example, at Bida and Sokoto and along the lower reaches of the Niger River, in Nigeria; in the Volta River basin, in the Gold Coast; in the littoral areas, in Sierra Leone; and along the Gambia river. A Mission is now in West Africa, and it is also qualified to explore the possibilities of producing jute, particularly in Nigeria.

The Committee has been informed of the interest which the Empire Cotton Growing Corporation has taken in the development of cotton, and of the visit of two of their senior scientific staff to West Africa to survey selected areas for new cotton development in Nigeria and the Gold Coast. Experiments which have already begun on the new conophor oil from West Africa are expected to take two or three years to complete.

WEST AFRICA AT WESTMINSTER

Gold Coast A.W.A.M. to Disband

THE Association of West African Merchants is a trade association and not a trading body, said Mr. Creech Jones, in reply to a question in the House of Commons last week. He had been asked by Mr. Parkin what official recognition is given to the Association and what proportion of the trade with West Africa is done through this body. "The second part of the question," he said, "does not therefore arise. On the first part, official recognition has been given to the Association to no greater extent than to any other lawful association of business or professional interests. I take the opportunity of saying that the Governor of the Gold Coast has recently suggested that the Gold Coast branch of the Association, which was formed during the late war on the suggestion of Government to assist in the administration of war-time economic controls, is no longer required and should be disbanded. The firms concerned are in agreement and will, I understand, take the necessary action."

Low Prices Active Policy

Asked by Mr. Gallacher what were the prices in the Gold Coast in 1939, 1945 and for the latest available date of printed cotton goods, linen, khaki drill and boots and shoes, Mr. Creech Jones said he had asked the Governor to supply the information.

"As well as communicating that information," said Mr. Gallacher, "will the Minister do whatever is possible to keep prices there down to the lowest minimum, as the wages of the African workers are very low?"

Mr. Creech Jones: "That is always part of our active policy."

Gold Coast Living Costs

Mr. Sorensen asked what is the increased cost of living in Accra today, compared with 1945 and 1939? to what extent wages have risen proportionately? and what is the approximate number of ex-Servicemen and others unemployed in Accra?

In a reply circulated in *The Official Report* Mr. Creech Jones said: "Figures are not available specifically for Accra. In the Gold Coast generally, the cost of living index is as follows: August, 1939, 100; November, 1945, 186; and November, 1947, 211. Wage rates for unestablished and daily paid subordinate Government staffs were revised on the recommendations of a commission last year with retrospective effect to January 1, 1946, and are now estimated to be, in Accra, 85 per cent. above the 1939 level. Increases have also been made in the wages of workers outside Government employment, but no detailed figures are available.

"In February, 1948, there were 4,620 unemployed ex-Servicemen on the register of the Labour and re-settlement advice centres in the Gold Coast as a whole. Of these, a number have refused employment offered outside the town in which they applied."

Industrial Development

Mr. Sorensen asked what industries have been established in the Gold Coast during the past five years? what mainly is their nature? approximately how many are employed therein including ex-Servicemen? and what is the prospective industrial development for the next three years?

Mr. Creech Jones said he could not give precise details, but he was obtaining them.

"Does the Secretary of State," asked Mr. Sorensen, "appreciate the fact that a large number of ex-Servicemen and others, who received training during the war period, expected to find civilian jobs, but cannot find them? In view of that fact, can he say what steps are being taken to increase the number of industries in order to absorb their labour?"

Mr. Creech Jones: A most vigorous policy has been

Keeping in Step

It was of immense importance that the three lines of advance should keep in step with each other. Political advance, not based on a proper economic development or bolstered up by an advanced social standard, is bound to fail. It was of vital importance that none of us should think too much in terms of the particular advance that interests us. The fault during the war, largely during his own administration, said Mr. Stanley, was that we had advanced the political side without raising the economic standard at the same time. This had been forced upon us by the war. The task of his successor was, and still is, to bring economic and social advances up into line with the political advances made.

Nigeria—Geographical Expression

There were many problems of constitution making, said Mr. Stanley, when attempting to assess some of the political problems of the Colonial Empire. The most intractable political problem was bi-nationalism. This was found in a number of Colonial territories like Mauritius and Fiji, but Nigeria provided another example. "There you have," said Mr. Stanley, "within that single expression—because Nigeria is nothing more than a geographical expression—three wholly distinct African races."

In communities where there was no interchange whatever between the varying units, if our own form of democratic government were adopted we would be faced with a permanent majority and a permanent minority. The problem of bi-nationalism was a problem for the community out there. They have got to break down their own divisions and become assimilated to one national hope. The problem could not be removed by anything done over here.

Power Without Responsibility

Difficulties of administration were greatest at a time when a good deal of power has been given to local legislatures, but before final responsibility has been transferred to them. It was not easy to see how we were going to get round the difficulties of power without responsibility. Making allowances for the personal problems of Jamaica, Mr. Stanley thought the experiment there was not working too badly. In African territories, there was the special problem of countries whose history was so recent. "You start," said Mr. Stanley, "with a more or less clean sheet of the form

over

Colonial Empire's Limitation of Resources

On the economic side, it was wholly mistaken to think that, in the Colonial Empire as a whole, we have a territory of great wealth which we have been engaged for many years in exploiting for the benefit of the taxpayers in this country. Not only was it not true that we exact any contributions for the Exchequer—on the contrary, the British taxpayer made contributions to the Colonies—but it was quite a mistake to think that this Colonial Empire is an immensely rich area. It was well below the average of the world in its mineral resources.

Its resources were far below those of America and far below those of the Soviet Union. With the exception of the Rhodesias, the Gold Coast, Trinidad, Malaya and a few others, the Colonial Empire, as a whole, remained an agricultural community. The first thing is to improve their agriculture. In any attempt you make, Mr. Stanley said, "you are always going to have a difficult conflict between maximum efficiency of the project and the impact upon the social customs and habits of the inhabitants of the territories. The groundnuts scheme was being carried on in an area practically devoid of population. You cannot do that sort of thing in a dense area without upsetting the land tenure laws and social customs.

In Southern Nigeria, for example, the only way in which you can get an increase of efficiency is by a combination of individual ownership and communal production. You cannot upset the whole land tenure system by grabbing a whole lot of land and employing a man as a wage-earner where previously he had been an owner. You might say to him: "this land is yours; the product is yours; but if you are to survive, we must regulate your production on some settled basis." You must try to bring home to the individual cultivator some of the simpler lessons of agricultural development.

Secondary Industries

Industrial development depended on the different opportunities of the different territories. "I, on the whole," said Mr. Stanley, "do not believe that you are likely to find in more than one or two areas opportunities for industrial development on the lines of the Black Country or East Lancashire in this country." He did not see either proximity to the raw materials or the markets. "What I do see," said Mr. Stanley, "is the development of secondary industries. I think this country should foster development of that kind in Colonial territories."

42/9c/232

miracle will bring the same standards of social services that we have been able to build up here. Finally, said Mr. Stanley, the whole of our future position in the world is going to depend upon the relationships which we can establish with the Colonial Empire. He believed those relationships could be established on the basis of mutual self-interest and self-respect; but there would be need of skilful handling. A great responsibility rested on the

READING, ENGLAND

in June. In addition to other temporary and regular staff appointments, ten African assistants were appointed to take part in the teaching. They are: Messrs. T. Boatin, N. Ekanem, Said Hilal El-Bualy, G. E. Igwe, E. Kasonde, E. L. Lasebikan, G. J. Magembe, B. E. Malekebu, J. H. Nketia, J. Tafida Umaru. Languages taught by these assistants respectively are Iwi, Efik, Swahili, Igbo, Bemba, Yoruba, Swahili, Nyanja, Twi and Hausa.

Miss Green, with the help of the Igbo assistant, Mr. Igwe examines for the London matriculation, for the Cambridge School Certificate and for entrance to other British Universities, while Mr. Rowlands, with Mr. Lasebikan, acts similarly for Yoruba. The report notes: "for the first time, we have had regular African assistants; this has meant that the oral approach to language teaching has been notably strengthened."

The last two of the first eleven studentships for Africans ended this session with the return of two Northern Rhodesians. Three Gold Coast students (Twi and Adanme) sent by the Government of that Colony; and one Yoruba, who is a British Council scholar, have followed courses in Phonetics, Linguistics, and in the study of their own language. Another set of African students is expected in the next session.

Colonial Cadets in Training

The first post-war training course for recruits to the Colonial Administrative Service was started during the session and ninety-eight cadets began the intensive language course in June. During the first two terms, lecturers and African assistants prepared the closely integrated courses, and fully documented gramophone records were made in the recording studio. Mr. J. Carnochan, of the Department of Phonetics and Linguistics, gave classes in the phonetics of Yoruba and Igbo; and Mr. Trevor Hill, in the phonetics of Nyanja.

A number of wives of cadets applied to be admitted to the courses and the report welcomed this move "which incidentally was recommended in the Director's section of the Nuffield Report 'Nigeria.'" West African languages, in which teaching is required by the Colonial Governments, are: Hausa, Yoruba, Igbo, Efik, Twi and Mende. The School has planned to initiate the study of the History of Tropical Africa. Of a total of 938 students at the School during 1946/47, no less than 33 were from West Africa.

West Africa

8

ECONOMICS AND INDUSTRY

Anti-Inflation Campaign and Boycott

In recent months, there has been a growing tension among the people of the Gold Coast due to the high cost of consumer goods. The more important suppliers of many of these goods are the big trading firms such as the Association of West African Merchants of whom the United Africa Company is an outstanding organisation.

A committee was formed in Accra to fight inflationary prices with Nii Kwabena Bonne III, Osu Alata Mantse, Accra as its Chairman. The Anti-Inflation Campaign that the committee was to conduct was a large order requiring advocates and speech-makers in towns all over the Gold Coast in order to instill in the minds of the people the idea of self-denial in the purchase of unessentials.

The Standing Committee of the Joint Provincial Council in session at Cape Coast issued a statement as to the attitude of the Chiefs towards the Anti-Inflation Campaign as follows:

> The Chairman of the Anti-Inflation Committee Nii Kwabena Bonne III, Osu Alata Mantse, Accra, sought permission and was granted an interview by the Joint Provincial Council in session at Dodowa on Saturday, 20th Dec., 1947, in the course of which he informed the Council of the intention of his Committee to devise ways and means of combating the incredibly high cost of imported goods; and further to tour the various States in the Colony with a view to seeking the active co-operation of the State Councils. The Joint Provincial Council after carefully surveying the unhappy situation gave the Anti-Inflation Committee its blessing and assured the Committee of the willingness of the members of the Council to discuss suitable measures to be taken at their respective State Councils.
>
> With regards to demonstrations in support of the boycotting which commenced on the 26th Jan., 1948, throughout the Colony the Standing Committee considers that the country is at liberty to stage non-violent demonstrations in conformity with customary practice as an indication of the country's utter disapproval of trading methods of the Commercial establishments.
>
> It is further emphasized that the Chiefs of the Colony are entirely in support of this national campaign against inflation and counsel solidarity among the people and the adoption of constitutional methods in this struggle. (Gold Coast Observer, Feb. 6, 1948)

The above statement was signed by 12 members of the Joint Provincial Council, 8 of whom are Omanhene, and was dated 3rd February, 1948.

On the previous day, February 2, the United Gold Coast Convention issued a statement in support of the boycott on imported goods with a view to compelling importers to lower the much inflated prices prevailing on practically all imported lines but particularly on cotton piece goods. There follow excerpts from the published statement:

> It is our view that the policy adopted by Government at the initial

stages of the last war to permit importers to make as much as 75 percent profit on cotton piece goods ought long ago to have been altered.

It is our view that in the absence of a rigidly controlled system of price control at one end and rationing at the other, any attempt to regulate importation without controlling distribution to the consumer does inevitably result in a system of hoarding and of blackmarketing.

The importers having taken advantage of this unfortunate policy have, in addition, created a system of conditional sales which enables them to dump unmarketable goods on a few favored traders who thus obtain large quantities of essential commodities at high cost to dispose of them at excessively inflated prices.

Consequently the masses of people, the consumers, have been the sufferers. By meansof Harrigan, Korsah and Mangin, it had been hoped that the salary and wage-earning classes could have coped with the inevitable rise in the cost of living which came about as a result of the war. But the methods adopted by the traders and importers have largely offset this advantage, and economic imperialism sponsored by Association of West African Merchants and such like combines have resulted in reducing the purchasing power of the £ in the hands of the wage earning class to something less than 7/6.

Until the Chamber of Commerce responds to the invitation by the Anti-Inflation Boycott Committee to reduce prices beyond the present excessively high levels, and until the Government introduces a policy to ensure greater and freer flow of goods than at present, it is our view that the boycott should continue and that, except in case of indispensable supplies, such as school books, milk, sugar, soap, bread, medicines etc. the self-imposed austerity measure of the masses of the people of this country to avoid the use of luxury goods imported from abroad, should be enforced throughout the length and breadth of the Gold Coast. (Gold Coast Observer, Feb. 13, 1948)

After January 26th, varying reports were made as to the effectiveness of the Boycott. In Accra, Cape Coast, Salt Pond, Nsawam, and Tarkwa the Boycott was immediately taken up in high spirit and "waxed strong" as time progressed. Dunkwa and the Anlo State were slow in starting, but through published demands, action was taken by Chiefs to proclaim the Boycott on imported goods. Thus, in the Anlo State the Boycott was declared for Jan. 26, but was not very effective until Feb. 9. Dunkwa's boycott was not declared until Feb. 11 but was effective from the beginning. Practically all the towns took measures to enforce the Boycott by arresting and fining any person caught breaking the Boycott. All during the Boycott, there were mild, peaceful demonstrations with Mass Meetings, and processions, much speech-making, and placards being carried. Thus, gradually through the efforts of members of the working committee for the Anti-Inflation Campaign, who visited may towns making speeches, it became quite effective with many towns reporting no buying and selling of imported goods.

On February 11, 1948, the Standing Committee of the Joint Provincial Council went to discuss the inflationary prices and the Boycott with the Colonial Secretary. It was learned that the Colonial Secretary had already asked the Price Committee un-

42/90/224

der Chairmanship of the Accountant-General to report as quickly as possible on the claim that the sellers' margin included in the price of textiles was excessive. The Secretary of Commerce and Industry had also been instructed to examine the question. On Feb. 19, the Standing Committee received the preliminary conclusions of the Price Control Committee from the Colonial Secretary.

At a meeting in the Colonial Secretary's Office on Feb. 21 between the representative of the Joint Provincial Council and the representatives of the Boycott Committee, an agreement was reached and the Boycott was called off with effect on Feb. 28. The agreement included a reduction of 331/3 per cent on the overall margin of gross profits on textiles.

The terms of settlement of the Boycott were received by press wireless telegram at the Observer and published as follows:

> Conditional sales to be abolished; chit system also to be abolished; all goods to be displayed on counter for sale to all and sundry. There will be equitable distribution of goods, that Syrian cotton Merchants to receive only 7½ percent release from the firms; that the Native Authorities will see that the sales are made to individuals, so that the consumer can get the full benefit of the reduction. Price lists of all goods will be exhibited in the stores and gong-gong will also be beaten telling the public the prices to prevent exploiting by resellers. Broadcast by myself on Friday afternoon will follow. Nii Bonne. (Gold Coast Observer, Feb. 27, 1948)

Prior to this time, on Feb. 17, the first sign of violence in connection with the boycott occurred in Accra. Large crowds had gathered at the Supreme Court to witness the trial of one charged of being in possession of property unlawfully. After the adjournment of the case, the crowd moved to Station Road and High Street and damaged the premises of Station Mill, the U.A.C. Main Offices, Kingsway Stores, U.A.C. Lighterage Company and the Seaview Hotel. Stones were thrown, glass smashed, and managers threatened. The Police Commissioner who led in breaking up the crowd was hit several times by flying stones. The crowd finally dispersed about Noon, and there was official announcement by Government stating:

> Riots, or any other breaches of the peace will not be tolerated and if there is any recurrence of lawlessness, it will be necessary to impose a curfew on the affected areas. (Gold Coast Observer, Feb. 20, 1948)

On the same day that the Boycott was lifted (Feb. 28) a procession of ex-servicemen presented a petition and was held up by the police on the basis that the procession did not keep to the prescribed route. The men refused to turn back, and eventually, the superintendent-of-police opened fire causing two casualties. Then, the men bitterly turned back and rushed into town coinciding with the excited mobs thronging the Accra Streets. People had come to buy their goods on the day the Boycott lifted only to find that all prices had not been reduced by one-third, and many items were not available at all. The resulting crowds lost control; shops were looted, and before order was restored 26 people were killed.

As a result, thousands of West Africans demonstrated in London and Edinburgh. On March 7, in London, there was a mass meeting against the way the Gold Coast Government had handled the Boycott situation. After the meeting a petition was handed in at No. 10 Downing St. demanding that a Constituent Assembly be set up immediately to as-

42/90/225

-3- Economics & Industry

sume power over the affairs of the Gold Coast. The meeting also protested against the "distortion of fact" by the Under-Secretary of State for the Colonies in his speech in the Commons on March 1st when he attributed the demonstration by ex-servicemen to "communist incitement".

The Governor of the Gold Coast has broadcast a statement that he would see that a thorough and impartial investigation would be made not only into the recent disturbances but into the underlying causes. The Secretary of State for the Colonies has accepted the Governor's recommendations that a Commission of Enquiry should be appointed from outside the Gold Coast. This Commission of Enquiry, however, cannot begin its work until, "in the opinion of the Governor", normal conditions have been completely restored.

United Gold Coast Convention, a Nationalist move ment, called upon the Chiefs to vacate their seats in Legislative Council in favor of educated commoners - object (alleged) the sooner to qualify for self-government. Chief's reply indicates they are not in sympathy with abdication idea. Accra Press is highly indignant over alleged statement by their ex-governor, Sir Alan Burns, in recent speech in New York, that it is mainly semi-educated Africans who are clamoring for independence. Sir Alan, it is reported, says he was misquoted by the New York Times.

In French West Africa also the labor movement has taken on new strength and force, particularly in the general strike of African railway workers which has tied up all railway transportation in French West Africa since the early part of Oct., 1947. The strike is comparable to the Nigerian railway strike of 1945 in scope and importance as 12000 Africans are participating in the strike and supporting their union. The strike arose in the demand of the workers for "Equal pay for equal work". This particular principle was ignored at the instance of the British at the last ILO conference, 1947, but was supported by the Pan-African Trade Conference of April, 1947 (See African Transcripts, No. 12 p. 210) A new phase in the development of organized labor can be implied in this strike as the object of the strike is the creation of equal wages and service conditions for both Whites and Africans which so far has met complete refusal in all parts of Africa.

Western Africa

The Gold Coast is pushing its groundnuts scheme in the Northern Territories; acquires 3 agricultural stations; rice, cotton, potatoes, fruit, cocoanuts are also being fostered.

Brigadier Sachs has completed his investigation. West African Court of Appeals sets aside the conviction of Robert B.S. Ofie (editor of "Spectator Daily") on criminal libel and orders restitution of £100 fine.

Gold Coast Government faces £1.5 million deficit due largely to salary increases; taxes and import duties will probably be raised; however, as of April 1, 1947, the country's accumulated surplus was £8 million.

Timber controls have been relaxed, permitting shipment to any destination; 2500 tons a month of rail space has been allocated to timber. 24

Sierra Leone's proposed "Police Ordinance, 1947" has aroused great popular disapproval; viewed as the first step towards a Criminal Code; the main objections are: (1) finger-printing of all persons taken into custody, whether innocent or guilty, (2) requirement of police license for gatherings in any public place - which means license needed for weekly Bible Class!

1947 deficit is about £244,000 due mostly to increased salaries; increased import duties planned for 1948. Income tax ordinance of 1943 is amended, so that Sierra Leone Development Co. (iron mining) is no longer exempt; this done at the behest of the British Government. 1946 gross revenue was £909,926. 25

The Gambia proposes a broadened representation and unofficial majority in Legislative Council. Approval received for appointment of Africans to high Civil Service posts; Treasury, Customs and Post Office to be staffed entirely by Africans in forthcoming reorganization. Five officials and three unofficials appointed to Executive Council. African Judge, Mr. E.S.B.Betts of Sierra Leone comes to preside over session of Gambia Supreme Court in its criminal juridistion; he is Senior Puisne Judge of Sierra Leone, and acted for nine months as Chief Justice. 26

West African cocoa surplus was £9.6 million thru 1946; estimated £ 15 million more in 1947; these sums go to Gold Coast and Nigeria Cocoa Marketing Boards as stabalization and benefit funds - except Gold Coast will devote £850,000 of hers to Achimoto College.

42/90/142

and intend, to know them, [illegible]
for the welfare of the different regions as a whole. [illegible]
must have a wide exchange of Colonials, coloured and white, coming over here to us, just as we, technicians of different kinds, should go over to them. I will write a series of articles about this one day soon ! However—this is a digression. So—back to Imperialism, and backwards !

P :—There you are—backwardness is an economic question. The conscious policy of Imperialism is to keep Colonial economies backward and Colonial peoples ignorant. As long as such countries remain mere agrarian appendages to the "mother country," that is, sources of raw materials and also markets for manufactured commodities, there is no need to educate the people.

42/9C/59

[illegible]

LORD TREFGARNE explained why the world must look to Colonial areas to play the part in redressing the dollar-sterling gap. Their products—food and raw materials—are more acceptable to the United States and some other areas than manufactured goods. The total value of imports of manufactured goods into U.S.A. in 1947, from all sources, amounted to some £250 million. The total imports of food and raw materials were upwards of £1,150 million or more than four times their imports of manufactured goods from all countries.

The United States imports of coffee alone, in 1947, were more than three times the total imports of British manufactures. The American imports of cocoa were £38 million; and of rubber, £79 million; of tin, £16 million; and of other metals and ores, £129 million. If the world could achieve a 5 per cent. increase in its exports of food and raw materials to U.S.A. or if a favourable turn of 5 per cent. in terms of trade for these commodities could be obtained, that would be equivalent to increased dollar earnings amounting to more than 100 per cent. in exports of British manufactures to U.S.A. Sterling is likely, therefore, to gain more from Colonial products than from manufactured exports to America.

WEST AFRICA

No. 1613. Vol. XXXII. SATURDAY, JANUARY 17, 1948 Registered at G.P.O. as a Newspaper.

42/92/262

Bowing to the Storm . . . . Heaven Helps Those . . . . Inquiries

ON January 3, *The Board of Trade Journal* published a list of commodities the imports of which Colonial Governments have been asked to continue to restrict, to help the sterling pool. It was on August 21 that MR. CREECH JONES, then at sea on his way to the Montego Bay Conference, sent a message to all Colonial peoples about the British economic crisis. Since that date, there has been a hue and cry throughout the British Colonies as well as from almost all interested quarters in the United Kingdom. The week ending January 3, the Colonial Office publicly bowed to the storm and issued a statement. The statement notes *inter alia* that "it is no part of the Government's policy that Colonial territories should be pressed to practice austerity, simply for the sake of austerity, when neither supply nor balance of payments considerations

Muddled Action

not to be dictated to as irresponsible people." It almost staggers belief that the Colonial Office, surrounded on all sides by advisers and experts from all parts of the scattered Colonial Empire, could ever have expected that the West Indies would take any other attitude. And yet apparently something of the sort was hoped for.

Criticism has not been wanting from Africa and, of course, the relaxations from austerity are applicable to the British Colonies there. Yet here the tasks of the advisers were even more onerous because of the unlikelihood of general African opinion being sufficiently aroused to appreciate the full implications of the policy of "calamitous restrictions." And even if organized African opinion were alive to anything like a full appreciation of what a policy of restrictionism would mean to the *status quo*, let alone the future development of their country, they have nothing approaching the degrees of responsible government prevalent in the Caribbean where the talk is now of Dominion status.

Colonial officials arrived from other lands, in compensation. But the moment that Colonies are obviously set on the road to self-government, every leakage of potential man-power from the Colony to the Colonial service as a whole is an irreparable loss to the particular colony.

SIR DONALD died on London, an exile from his native country. There were occasions when he might have returned to the Colonial Service of British Guiana. He made other decisions and, as a result of those decisions, he has left "footprints" in a much larger world. His work in Tanganyika and Nigeria will not be forgotten. At the same time, he never lost interest in British Guiana; and the offer of his insignia of the "G.C.M.G." to a British Guianese society is indicative of the affection he felt for the Colony which gave him birth. His marriage to a West Indian, and his assistance and advice freely given to all West Indians who consulted him after his retirement, were other obvious signs of his interest in the territories among which he was born.

At the same time, by the very facts of his career SIR DONALD was more than a great Guianese. He was a great Colonial Civil Servant. His country's loss was this country's gain; and there will be few Africans, in Nigeria or Tanganyika, who will not admit that, in this particular case, their countries shared in the United Kingdom's gain. The career of SIR DONALD CAMERON and of other Colonials is a heartening example for those who champion the rights of Colonials. At the same time, it is an example to Colonials that fame is not lightly bought, but must be earned.

Primary Sorter

Less than two years ago, an Information Bureau was opened at the Headquarters of The Royal Empire Society in London. Yesterday, the Bureau moved into new offices in the Meath Room of the same building. The occasion was duly marked by a small ceremony and it is worth recording here. The activities of The Royal Empire Society are well-known throughout the British Empire and it is not surprising that this new development of an Information Bureau should have been initiated by a Society which has based its activities on such a wide basis and has not been slow in adapting itself to the changing tempo of progress within the Empire. The need for an Information Bureau has been felt by thousands of people in this country, particularly with reference to the British Colonial Empire and to Africa especially.

Other societies like The Imperial Institute, The Victoria League, The Royal Society of Arts and many more have been, and still are, of great assistance to those seeking information about the British Empire. The great houses in London, like Australia House, South Africa House and others; and the specialized agencies like The West India Committee, have for many years been most helpful to inquirers, but a primary sorting house has been much desired. It is that function of the primary-sorter of inquiries that the Information Bureau is equipped to fulfil; and we have no hesitation, from personal experience, in recommending its resources to visitors.

Secondly, what Miss Huxley has to say about the new African and the political future is not without bearing on present conditions in West Africa. It is a commonplace to think of West Africa as an entirely African slice of the continent, without any settler population as such. Actually, the time is overripe for emphasis on the importance that the first settlers in Sierra Leone, the West Indian infiltration and perhaps even the Syrian and European "settlers of long residence" have played in the development of political thought in these communities.

Political privilege certainly was the basis of the Liberian State; and the main quarrel between Colonial educated peoples and the metropolitan governments has always revolved around this question of privilege. Colonials who have arrived at one or other of the privileged stages claim that they are by experience and permanency of residence better qualified to administer Colonial affairs; metropolitan governments reply: "Yes, in your own interests, but the under-privileged go to the wall."

It is the smooth transition between metropolitan control and Colonial legislative supremacy that will decide finally the success or failure of this policy of compromise. Meanwhile, minorities in all Colonial territories still need to realize the harsh dictum that only by their own efforts will their positions be safeguarded!

Chocolate Story

DOUGLAS Woodruff's *The Story of the British Colonial Empire*, which was published in 1939, is still without peer as an introductory textbook for British readers who want to acquire a rapid acquaintance with the British Colonies. It is lavishly illustrated and full of humorous sketches which add zest to the racy narrative.

A World-wide Business (price 5/-) which has been published by the University of London Press, in association with Cadbury Bros., is very reminiscent of this earlier volume although its Colonial content is mainly confined to Gold Coast and Trinidad. It tells the story, by means of photographs, maps and charts, of the many activities which are involved in the production of a bar of milk chocolate. Although it is intended primarily for use in County Colleges and the upper forms of Secondary schools, *A World-wide Business* will appeal to a far greater public.

The importance of cocoa not merely as a dollar earner but as food for Britain has recently been further emphasized by the spread of swollen shoot disease. There must inevitably be millions of consumers and others who are in greater or less degree likely to be influenced by the future of the cocoa tree. The special knowledge which this volume discloses, because of its association with the business organization pre-eminently experienced in the cocoa industry, is available here in an easily assimilable form.

prices, and receive back from the natives any moneys they have paid to him as purchasers of his crops.

In 1937-38, the farmers of the Gold Coast held up their crop, and at the same time the entire population carried out a boycott of British goods. This was the only direct means they had of opposing the "squeeze" that the monopolies were working on them. Of course, a Royal Commission went out and made its report, and then came the war—no settlement was reached. Now the British Government buys the cocoa crop at a fixed price agreed upon by the Chairman of the Cocoa Board at the Ministry of Food, who, not by chance I am sure, turns out to be Mr. John Cadbury.*

The situation with the palm industry in Nigeria is practically the same; only, in this case, United Africa is alone in the field. Since 1924, the price has been depressed to such a level that the Nigerian farmer finds it almost impossible to live. Ground nuts maintain economy in Gambia. Without this crop the Colony would be bankrupt, since the export-tax on the product is almost the sole source of revenue.

N:—All of this certainly gives an idea of how it is with agricultural matters in Africa. Now tell me something about industry.

P:—Exploitation in the mines has reached a considerable degree of intensity, especially in the Gold Coast and the northern part of Nigeria. Around these mines are centred large industrial populations completely divorced from the soil. Here conditions approximate those in South Africa as far as wages and labour are concerned. There is no Colour Bar as in the Union of South Africa, for the simple reason that there are no white workers. Most of them are Africans, and as mining develops there is a growing tendency to squeeze the peasants off the land. Tin and coal are the minerals chiefly mined in Nigeria; gold, diamonds and manganese in the Gold Coast; and diamonds and iron ore in Sierra Leone.

In Nigeria the mineral rights belong to the Government, who took over from the Niger Company in 1900. This Company has now merged into United Africa Company, which has a 99-year lien on more than half of the mineral rights. Coal mines at Enugu are operated by the Government, while private companies have been granted concessions to work the tin mines of the Bauchi plateau. In Sierra Leone mineral rights are also vested in the Government, which makes concessions to companies working deposits. A monopoly to exploit diamonds for 99 years was secured by the Consolidated African Selection Trust in 1934, at a fixed annual rental of £7,000. The Sierra Leone Development Company, a British concern, works the iron ore at Marampa, one of the largest iron mines in Africa.

Under the Ashanti Concessions Ordinance of 1903, mineral rights in the Gold Coast remain with the native authorities, but negotiations in connection with concessions are supervised by the European District Commissioners and the Government has control over all moneys derived from these sales. The concessions are not worked on a royalty basis, but at a fixed rental, often as low as £50 and nowhere exceeding £400 a year.

Natives employed in these mines form the largest proportion of industrial workers in West Africa. Wages are incredibly low, and despite constant demands for increases to meet the rising cost of living, as well as recommendations from various Commissions, there has been no increase. In the Government-owned coal mines, rates vary from 5s. 8d. to 15s. 5d. *a week* for the different grades, and it is estimated that a married surface-worker with a wife and two children spends, say, 2s. in rent and 7s. in food, against a wage of 5s. 8d. In the privately-owned tin mines the average weekly wage is 3s. 6d. for regular

* In a White Paper, issued in September, 1944 (Cmd. 654), it was revealed that the British Government made a profit of £3,676,253 between 1939 and 1943 on its cocoa marketing.

labour. Casual labour is paid as little as 2s. 8d. Women and children employed at the coal mines receive even less than the men.

N :—Just as they do in the cane-fields and cocoa woods of Trinidad, although the women do the same kind of work and certainly have the same expenses in the way of food as do the men. What sort of general conditions are there in these mining centres ?

P :—The all-round conditions are as pitiful as can possibly be and social legislation is practically non-existent.

N :—And what about the prosperous class that exists in West Africa ?

P :—The more well-to-do of the farmers have been able to send their children to better schools or to provide them with higher education either locally or abroad. These educated or "Europeanised" Africans constitute the intelligentsia of the West African colonies. They represent the vanguard of the national and progressive movements which to-day are voicing increasingly the political and economic aspirations of the African people. This is a natural development.

Among all subject peoples, whether in Africa, India or the West Indies, it is always the middle-class intellectuals who form the most articulate section of the native races. And as industrialisation, such as it is—mining and small-scale factories—begins to develop, a working class, as distinct from the peasantry, is brought into being.

N :—Is it possible for this prosperous class to open up in an industrial way ?

P :—Well, it can buy property and become relatively rich as landlords. But as for opening mines and the like, no ; it is handicapped by impossible conditions. Imperialists are not in the Colonies to further the fortunes of the native bourgeoisie. In East Africa, for instance, where copper and other minerals are found, the rights belong to the South Africa Company, which allows financial interests to work the minerals for an annual royalty of something like £500,000. This is the case in Northern Rhodesia, where, before anything else, this sum is set aside for payment to shareholders outside the Colony ; all it gets back is one or two shillings in the pound income tax. As the companies are registered in London, their income tax is due there. Hence the Colony is poor. So you see it is all a vicious circle.

N :—Then how to get out of the vicious circle ?

P :—It is one of the greatest problems of our time. I can see no hope of solving it, of improving the condition of the native peasantry and proletariat—in Africa, India, West Indies, and in other Colonies—of civilising them, raising the level of their culture, education and physical situation in general, under the present system. If the progressive sections of the British people realise that there is no forward march for them under the existing system, how much, how very much more is this so in the Colonies ! Only a very radical and complete change will better the conditions of the Colonial peoples. I have already said what I firmly believe to be the solution : *full political representation, economic security, the widest social and educational reforms.*

N :—This seems to me the very point of our talks. I would like to hear you expand this "Charter for the Colonies."

P :—A Charter ? If you like. Anyway, the application of Clause 3 of the Atlantic Charter. Now, thinking of the Colonies individually, I would suggest the following immediate measures :—

For the African Territories :

(*a*) Economic, political and social equality, in all Colonies, Protectorates and Mandated Territories. (*b*) Abolition of forced labour. (*c*) Abolition of indenture. (*d*) Abolition of Pass Laws, Colour Bar and all racial disabilities. (*e*) Freedom of the Press. (*f*) Freedom of assembly. (*g*) Freedom of speech. (*h*) Freedom of movement.* (*i*) Drastic limitation of company profits.

---

* See *Appendix*.

also on the West Indies—as shown in his excellent *Warning from the West Indies* (in Penguin edition). Of South Africa he writes :—

"The Union of 1910 made no extension of Native Franchise. Instead, a long series of legislative measures openly defensive of white privileges, and repressive at least of black aspirations, culminated in the Native Franchise Act of 1936. In this Act Cape influence prevailed only to the extent that Native interests are now directly represented by a maximum of seven Europeans, elected on a separate register to a Parliament of approximately 200 members. The South African Union is therefore a dominion of a white democracy over a politically powerless black majority."

P :—That speaks for the political side ! And you know there is a law which prohibits the Native from engaging in skilled or semi-skilled work.

N :—What is the attitude of the white workers to this discrimination ?

P :—It is unfortunate, but true, that the white workers in South Africa were largely instrumental in placing Colour Bar regulations on the statute book. In 1924, the Nationalist Party—the political organisation of the agricultural section of white South Africa, which is largely Boer—contested the general election under the leadership of General Hertzog. Chief opponents of the Nationalists were those of the South African Party, the organ of the industrialists and mining financiers, who are mainly British. The leader of this party was then General Smuts. Incidentally, this is why Smuts is such a favourite of the City of London. In order to strengthen their chances of success, Hertzog and the Nationalists made an alliance with the South African Labour Party, led by Colonel Cresswell. As the price for the support of Labour, Hertzog promised that his government would introduce racial legislation to protect white labour against the competition of coloured labour. This coalition, Nationalist-Labour, did win, and among the first Bills introduced in the South African Parliament after the 1924 general election was the Colour Bar Act, which laid down that the mining companies must employ only Europeans in all the better-paid jobs. As a result of this discrimination the European worker has been guaranteed a minimum rate of 20s. a day, while the average wage of a Negro miner is 2s. 6d. !

Colour Bar regulations spread to other industries ; to-day they cover all forms of occupational vocation in which white workers are engaged, such as dockers, railwaymen, etc. Similar legislation exists in Southern Rhodesia, which, unlike the Union of South Africa, is under Dominion Office supervision as far as legislation affecting Africans is concerned.

In March, 1942, the Kenya Government, with the approval of the Colonial Office, legalised forced labour for plantation purposes, and in the East African colonies Colour Bar exists in practice. Africans between the ages of 16 and 55 are now liable to be called out for work on the white settlers' plantations in the Highlands for an average daily wage of 3½d. This may be implemented up to 7d. a day where rations are provided by the employer.

Since the loss of Malaya and its tin resources, similar laws have been introduced in Nigeria. Here natives between 18 and 45 are liable for forced labour in the tin mines. Generally speaking it can be said that the land problem here, in West Africa, is not as acute as in South and East Africa.

Do not think that this is owing to any particular virtue in Imperialism. Nothing of the sort. It was a dispensation of providence ! It had its origins in the devitalising climate of the West Coast and the fact that prophylactics did not come into use until fairly recently. You remember how this part of the Dark Continent was always referred to as "The white man's grave." And since Europeans did not migrate in any number to West Africa there has been little alienation of land for plantations. This circumstance it is which has made these territories the "model" colonies in Africa. Not the kind-heartedness of Imperialists, but the *mosquito* has rescued 28 million natives of Nigeria, Gold

Coast, Sierra Leone and Gambia from the worst effects of European colonisation. There are only about 9,000 whites in West Africa, mainly traders, officials, missionaries, commercial agents, etc.

Generally speaking then, the land in West Africa, or at least what is on the surface of it, has not been alienated,* and the African native races, most of whom have access to more of it than those in any other part of the whole continent save, possibly, Uganda, are responsible for the carrying on of agriculture. However, they have been induced to restrict their production to commercial crops, to the virtual exclusion of food crops. This has received official sanction. Consequently, all necessities such as milk, rice, flour, sugar, meat and even fish are imported in canned form !

Land tenure of course varies. In the Northern Provinces of Nigeria, for instance, all land is controlled by the Government and the peasants are tenants-at-will of the Crown. The Egba chiefs, of whom you will doubtless remember the Alake of Abeokuta, are its custodians in Yorubaland and other Southern Provinces. In their capacity of native administrators, they allot sections of it to the people in accordance to their needs, these allotments being worked in conformity with traditional usage. Under the Native Lands Acquisition Ordinance of 1917, land may not be disposed of to non-members of a tribe. In many places, however, tribal custom has broken down, as in the regions round the capital, Lagos, and many chiefs and influential natives own large cocoa properties worked by hired labour. Similar native landlordism is developing in the Gold Coast—an inevitable development wherever a money-economy is introduced.

N :—Taking it by and large, would you say that West Africans have avoided the worst features of colonisation ?

P :—No subject people can escape the depredations of Imperialism. They are bound to feel them one way or another. If West Africans have not suffered widespread alienation of their land, nevertheless they are as badly exploited as are their brothers in East and South Africa. In their case, not as agricultural labourers, but as producers for the foreign market. While left in possession of their lands because of climatic conditions, they have been encouraged by the British Government to cultivate almost exclusively commercial crops, as I have just said. Gold Coast and Nigeria are the two largest cocoa-producing areas in the world. Nigeria and Sierra Leone are great exporters of palm oil and palm kernels, while Gambia produces ground nuts (peanuts). Production is carried on by native farmers with the assistance of their families, usually on small lots. *But the marketing of these crops is in the hands of the Monopoly Combines.*

Among these, United Africa Company, a subsidiary of Unilever, has perhaps the widest tentacles. Its ramifications absorb the whole of West African economy. There is nothing too small or too large for this millionaire concern ; it spurns nothing in which it sees profit. In the Gold Coast it has united with the lareg chocolate firms, J. Lyons and Co., Cadbury Bros., and others, to form a "pool." At the beginning of harvest this "pool" fixes the prices it will pay the natives for the season's cocoa crop. Working hand in hand with the local banks, shipping and insurance companies and the West Africa section of the Liverpool Chamber of Commerce, the "pool" strangles the African farmer.

Besides being buyers, these large companies are also sellers. They own and control the sale of food, clothing, tools and all the manufactured commodities which the African farmer is obliged to buy at their stores. They fix their own

* In February, 1944, the Governor of Nigeria passed a bill through the local Legislature giving the Government the right to take possession of all minerals discovered on land in the possession of Africans. This law strikes at the very foundation of the native land tenure system, and is being strongly opposed by the entire Nigerian population.

nomic Grouping . . . . Fifty-Fifty

standard of life to a stage comparable with that of the more highly developed countries of the world?

Does history, that gauge of human experience and conduct, provide any other means of development of backward countries than by the penetration of external ways of life which are commonly accepted to be more forward than those of the country which is penetrated? Do West Africans, who complain of the British "yoke," forget that Britain and France and Belgium, even great Germany (that breeding ground of racial philosophy) were under the Roman "yoke" for centuries? Do West Africans deny that those ideas, the very language and expression of democracy on which they rightly base their claims to self-government have come to them by that same road which led to the emergence of the European Powers at a position from where, they, like Rome, have been instrumental in bringing new ways of life to primitive peoples? They can hardly do so, since few peoples in the world can ever have been so avid of Western knowledge and education than are themselves.

It is against this background that we must interpret the statement that SIR STAFFORD CRIPPS is reported to have made to the London correspondent of the *Paris-Presse*: "that Africa, an area rich in raw materials, should be brought to combine its resources with Europe, which was above all a manufacturing area, and thus form an economic whole." Such a scheme would undoubtedly profit the European countries as well as the African continent "whose natural resources would be consequently developed and whose standard of living would be progressively raised."

* * *

"Colonialism is dead. We do not disown our past and the proud achievements of bygone days. But a nation must be strong enough to make a new beginning. We shall

monwealth, India and Pakistan are Dominions within the British Commonwealth. In the Caribbean, West Indian islands which have been federated on more than one occasion during their history are to discuss the possibility of grouping themselves with mainland territories into one unit or Dominion. In September, the unofficial members of African Legislative Councils are to attend a conference which is expected to last for nearly two weeks.

There, in abbreviated form, are the patterns of Colonial development now being followed by Holland, France and Britain. Holland has established a new relationship. It has been strong enough to make a new beginning.

Colonial Patterns

Colonialism is dead. The Queen has spoken. In France, where members of the French Parliament have for many years been drawn from Colonial territories, the President of the Union Française greets representatives from French colonial territories as citizens of the Union Française and extends to them fraternal greeting. In France, colonialism is not dead, but a new machinery has been created to interpret today the old conception which, according to Jaurès, forty years ago, is the spirit animating French colonial expansion: "To lead nations and races to a full knowledge of themselves is one of the noblest works which can be envisaged."

Nobody represents British Colonial territories except the British Parliament, which is closed to representatives from Colonial territories except those who, like Dr. Morgan and Mr. Geoffrey de Freitas, were born there, but have left. Government spokesmen have recently complained of the particular venom which is directed against Britain as a Colonial Power at meetings of the United Nations Assembly at Lake Success. They complain because they feel that, while Britain has nothing spectacular like the Union Française or the Netherlands Union, British policy of leading dependent peoples to self-government is a finer ideal than the assimilation of dependent peoples within a clearly defined unification of common status. They point to Ceylon's independence as an example of what the British method produces and Ceylon would seem to be a good example.

The British complain that their critics at Lake Success are like pots calling "black" to kettles, or glass-house

Cocoa Migration?

"AMERICANS," say the City Press, "are predicting a veritable deluge of cocoa beans before the year 1952.

They say that the British Government's cocoa monopoly is going to be broken wide open. Twenty-two American cocoa and chocolate manufacturers, who produce 95 per cent. of the chocolates of the United States, have combined together to fight the British West African monopoly.

"These big firms have organized the American Cocoa Research Institute, which is going to begin operations in cocoa growing in Costa Rica on the grand scale. The decision of the Americans arises from long-smouldering resentment at the controls by the British and other governments and at the enormous prices which they have in consequence had to pay for cocoa."

The story of Tette Quesi, the African blacksmith who brought a few beans from Fernando Po to the Gold Coast in 1879, tends somewhat to obscure the fact that cocoa originated in the New World. Cortes, the conqueror of Mexico, was the first European to tell other Europeans how to prepare *chocolatl*. Quite apart from any question of monopoly in West African cocoa, the plight of the cocoa trees in West Africa has been noticed by the British Government and it is likely that cocoa will be suggested as a suitable crop for buttressing the economy of British Honduras and of absorbing some of the British West Indian surplus population, when the Evans Commission makes its report shortly.

West African Cocoa

Mr. A. Edward Davies asked the Secretary of State for the Colonies what reasons account for the recent drastic increase in the price of West African cocoa; and how far it is due to a lack of European supervision and pest control in the cocoa growing areas.

Mr. Rees-Williams: The increase is part of a rise in world prices for cocoa resulting from a decline in production accompanied by the maintenance of demand on the prewar level or higher. The decline in output in British West Africa is due partly to disease and partly to exhaustion of old cocoa areas. The only effective means of eradicating the disease so far discovered is to cut out the trees affected, and that task is being vigorously tackled by the Gold Coast Government; but as it takes some years for new trees to come into bearing I fear that the degree of success of that campaign is not a very material influence on the current price.

important is that the case for such services should be clearly presented.

There is a tendency, in all Colonial territories, that the interests of the emerging newly educated classes are more emphatically represented than the interests of those who have fallen by the wayside. The accident of external sovereignty over Colonial territories complicates this otherwise normal tendency of the growing communities. That is an added reason why the case for social services must be so clearly presented. It is common knowledge that, although facilities exist for training Colonial students in this work, local governments cannot guarantee jobs to Colonial students who have successfully completed such courses.

There is a parallel with the nursing profession, where it is known that, although nurses are badly needed in Colonial territories, certain Colonial Governments cannot guarantee jobs to their own citizens when qualified. One can only suggest priorities to Colonial Governments, since they are well acquainted with their own problems and handle them according to their own decided views of their comparative merits. It would not be fair to suggest to prosperous Africans that they should imitate the system of voluntary welfare work which has reached such a high level in the United Kingdom. Not only geographical differences of climate but also the completely diverse conceptions of the family which distinguish Briton and African make such suggestions unrealistic if not unfair.

More and more, as the impact of European capital and European investment is felt in Africa, there will undoubtedly grow up concurrently with such development a series of social services which will tackle the problem of African poverty and disease in the only way that it can be tackled effectively, namely by preventive services. In the meantime, the local governments may well look ahead to the demand there is bound to be for adequately trained social welfare officers. Perhaps they are already negotiating with the regional university colleges with such aims in view. If not, they may find that a service which must, by its very nature, contribute to the consolidation of the already existing civic conscience may have been overlooked for to-morrow, just as the requirements of the technical service have been overlooked to-day.

WEST AFRICAN TALKING POINTS

Focus on Nigeria

WITH the Parliamentary Committee which has been examining Nigeria's budget on behalf of the Select Committee on Estimates back in London, political observers expect to get a report in about three months' time. Speculation on what the report might contain would be sterile. In the current issue of *Tribune*, however, Mr. H. D. Hughes, M.P. (a member of the Committee) gives some lively political impressions and high lights two facets of the Colony's economic problems.

Mr. Hughes argues that the transfer to Cocoa Marketing Boards in the Gold Coast and Nigeria of surplus funds acquired by the West African Produce Control Board, marks the end of "one form of economic abuse"; he clearly favours the diversion, for local use, of surpluses arising from the difference between world prices and prices paid to producers over the whole field of commodity trade. Mr. Hughes pleads also that capital equipment for Colonial development should have a higher priority than at present.

These are two matters in which West Africa is as interested as the Ministry of Food and the Board of Trade.

* * *

West African Exhibition ?

AFTER the Whitsun recess, Mr. Keeling is to ask the Secretary of State for the Colonies whether he will arrange for an exhibition in London of West African furniture. This follow-up on a motion on the adjournment, which was mentioned in last week's issue, shows how keenly the question of West African furniture is still being discussed by those interested in its development.

At first sight, it would appear strange that the Secretary of State should be invited to make arrangements for an exhibition but since certain war-time restrictions still remain, the co-operation of Government Departments is necessary for the promotion of ideas which might at other periods have been left to private enterprise. But the fact remains that an exhibition of West African furniture and other West African manufactures would be a good thing not only for London but for other parts of the United Kingdom.

As far back as June, 1925, when the present King and Queen visited the Walled City Exhibition at Wembley, Royal approval was noted of the "timber exhibit, displayed in three panelled rooms of mahogany, teak and walnut." The then Duchess (who has recently been presented with a Nigerian snake-skin handbag by a young Nigerian) was "delighted with the silk-lined coats for women made up from African-woven cloth."

There is certainly precedent for having West African exhibitions in London and the idea, which has already been mooted of securing the patronage of H.R.H. Princess Marie Louise is a sound one. Besides her great affection for Africans and her continued interest in West Africa, the name of Princess Marie Louise will always be remembered in the Gold Coast where she laid the foundation stone of the Marie Louise Infants' Hospital and Welfare Centre in that year of Royal visits, 1925.

* * *

Food First

THE battle between Capitalism and Communism grows fiercer. Men still pursue shadows while the substance —Mother Earth—dies of erosion and neglect and the growing pressure of populations that must be fed. Mankind is being murdered in its sleep. This, the theme of Sir John Boyd Orr's latest pronouncement, marks the beginning of a campaign launched by the former Director General of U.N. Food and Agricultural Organization to awaken the world to sanity.

The campaign could have no abler spearhead than Sir John. He believes that facts speak louder than words. His work, ten years ago, on food, health and income, made Great Britain nutrition-minded and its author a powerful social force.

As a member of the General Committee of the African Research Survey, Sir John has always been interested in West Africa. He says: "There are great possibilities of developing West Africa as a food production centre. The first problem to be faced there is proper feeding of the Native population. The Colonial Office is doing a first-class job in relating the conditions and standard of living of the Natives to food production."

* * *

Three Developments from Gambia

GAMBIA'S Agricultural Department, in its report for the year ended May, 1947, tells of changes away from traditional concentration on the groundnut crop. Apart from experimental work on vegetables, fruit trees, bee-keeping, guinea corn and fodder crops, three developments are of particular interest from the point of view of improving nutritional standards and hence the productivity of the people, on the basis of local resources.

In the first place, a dairy industry has been established and, during the year under review, 7,992 lbs. of butter were produced (compared with 3,067 lbs. in the previous year and 1,200 lbs. in 1945). The cream for the butter is obtained in part from the Agricultural Department's own herd, and in part from the separators operated at milk-purchasing centres placed at points accessible to nomadic herdsmen. As more equipment becomes available, further buying and separating units will be set up.

CASE FOR SOCIAL SERVICES

WHEN LORD HAILEY expressed the wish that local development programmes in Africa had concentrated more decisively on poor nutrition, deficient water supplies and poor communications, he was speaking generally. Obviously, the erection of a top-heavy system of social welfare services, working down from the top instead of growing up from the bottom, is no way to remedy problems either in Africa or anywhere else. When, therefore, the Colonial Office announced, some months ago, that the Secretary of State for the Colonies had appointed an Adviser on Social Welfare to the Colonial Office, the announcement was met with a certain amount of suspicion that social welfare was too vague and unrealistic an approach to Colonial problems.

It must have been very gratifying for MR. CHINN, last week, in London, when he had the opportunity to speak up for his service before a small number of journalists interested in Colonial affairs. With foresight, he spoke mainly of delinquency among the young. But delinquency is only one aspect of the problems facing social services which are only at the barest remedial stage. They are like an ambulance at the bottom of a pit. Whereas what was wanted was a higher, stronger fence at the top. Now there are too many gaps, now the fence is too low. Local governments were calling on Colonial Development and Welfare Funds to organize preventive services, but the war and the serious post-war economic difficulties of the sterling area made their growth slower than was hoped.

LORD HAILEY is certainly right to emphasize the need for priorities in approaching Africa's problems, but his remarks may be interpreted in a manner which will react against the development of essential social services. While there is good reason to point out how vital it is that Colonial territories should not build up large social services which can only be financed from the pockets of the British taxpayer in the United Kingdom, this emphasis on economic reality must not disguise the absolute urgency of the claims which MR. CHINN justly makes for his sphere of Colonial influence.

What danger, in fact, is there of a top-heavy social service? What has MR. CHINN to say of the bad boys in the Colonies? In 1940, all Colonies were urged to set up Juvenile Courts. The war which accelerated the break-up of family and tribal units and the deplorable revelations made by the Royal Commission Report on the West Indies boosted the idea of social work which had only been tackled voluntarily and by private initiative before. Today, as a direct result, there are about 18 European Probation Officers and between 60 and 70 local Probation Officers in all Colonial territories. Approved schools have been set up in some 20 Colonies, usually by government but, in some cases, by voluntary bodies assisted by government funds. Remand homes and hostels have been set up in large towns.

In Nigeria, it has been necessary to set up two approved schools, both run on camp lines. In the Gold Coast, about six months ago, an approved school was inaugurated and is being run as a farm school. In the Gold Coast, Sierra Leone (where social services are said to be making considerable progress) and in Lagos, the British Ordinance for the treatment of children in need of care and protection has been adopted by the local governments and by other Colonial Governments. Not having the background of social services available in the United Kingdom, attempts are made only to deal with the worst cases.

For instance, in Lagos, efforts are being made to eradicate the practice of using very young girls for the purpose of prostitution. In brief, all that the Colonies can do today is to care for and protect only the most obvious and tragic cases of children in distress. Delinquency has increased in the coastal towns and urban centres of West Africa, as more and more young people drift in from the hinterland in their search for fortune and adventure. They readily fall victims of the undesirable elements which inhabit seaport towns all over the world.

Certainly, LORD HAILEY would be the last person to suggest that there is any danger of overloading the social services, so far as the treatment and care of African delinquents is concerned. Just as he made an exception in favour of expenditure on the new University Colleges, because they would provide qualified African staff, he would surely also have made an exception in favour of buying the bad boy and girl back for the service of the community! Yet there is little doubt that social welfare work is bound to be relegated to the background, so long as local governments are limited in their financial resources and there is a general tussle of interests all demanding priority. What is

FIGHTING THE TSETSE FLY - - -	476
GOLD COAST AGRICULTURE by Sir Gerald Creasy - - -	479

change. John Holt and the United Africa Co. claimed that the Syrian firm of A.G. Leventis had been favored. In its Report, the Commission gave its opinion that certain irregularities had occurred, some involving culpability on the part of Government officials. Based on this Report, Government entered action against those persons. Immediately the Report was published, however, a widespread storm of protest arose. It was claimed that the Report contains several completely erroneous statements on points vital to the enquiry, leading to equally improper and libelous findings. In the face of this, and in light of more investigation, Government had, in fact, publically to apologize to one person, and to suspend temporarily prosecutions instituted. The Press has made savage attacks on the (European) Association of West African Merchants, backed by statements and allegations; also many persons boycotted United Africa Co., etc. The Governor has asked the Secretary of State to send out a distinguished and disinterested jurist to conduct an enquiry into the whole matter.

The Gold Coast budget plans £7,700,000 expenditures, against estimated £8,200,000 income. Reserve is £6,444,000. Control of imports and exports is still necessary due to scarcities.

The Cocoa Marketing Board has been formed, under chairmanship of the Secretary for Commerce, with 3 officials and 8 others. A United Convention met at Salt Pond on 4 Aug., 1947. It is thought this body will replace the old Aborigines Rights Protection Society, and have paid staff and permanent headquarters. The Korsah Committee recommended increase of from 1d. to 6d. per day for unestablished men not covered by Harragin Report, starting in July with other benefits. The Maugin Committee is still considering teachers salaries. The clerks training center has been abandoned due to shortage of staff, but welfare and labor officers are to be trained.

Despite strong resistance from rate payers, Kumasi is being lent £16,500 at 2½%, for development.

(d) Sierra Leone: - Sierra Leone's 10-year plan totals L5.25 million. A 4-year Social Service Plan is now added.

New Joint Industrial Councils met for first time. With Whitley councils suggested by Harragin Commission, nearly every type of worker is now represented on wage boards.

Government has re-introduced disputed Freetown Municiple Ordinance, opposed by public opinion because of checks and balances dictated by experiences of 1920s.

Secondly, with the aid of a grant of £15,250 under the Colonial Development and Welfare Acts, a rice station has been established at Genoi, where experiments in mechanized cultivation are being carried out with the aim of making the territory self-supporting in rice. The Report emphasizes the importance of substituting machinery for the primitive and uneconomical African hoe, if improved yields are to be obtained and already over £44,000 has been granted under the Colonial Development and Welfare Acts for the purchase of machinery to be used in experiments in mechanized cultivation.

Finally, the Agricultural Department has undertaken the agricultural work connected with the Human Nutrition Research Field Unit, which has been sent out to the Gambia by the Medical Research Council. This Unit has selected a village area of 1,200 acres, to which it proposes to apply mechanized agricultural methods, artificial fertilizers and modern techniques in order to discover what it is possible for an African village to do in the way of increasing food production and nutritional standards. Its work will be closely linked with that of the Medical Research Station which is being established at Fajara, and which will be concerned with the investigation and treatment of tropical diseases, with particular reference to the effects of malnutrition on the health of the people. Funds for both projects are provided under the Colonial Development and Welfare Acts.

Relax—Within Limits

EMPIRE needs are not sacrificed by bilateral negotiations with foreign countries, said Mr. Bottomley at a Commonwealth Luncheon at Olympia last week. "We only promise supplies of scarce goods under these bilateral agreements, where it is the only way of obtaining goods or services that we must have from the countries concerned. In the longer run, we look to a great development of supplies to the U.K. from the sterling area; and our exports to the sterling area will have in the future to pay for these supplies." Meanwhile, the Colonies are still being asked to assist Great Britain during present difficulties.

"Last year," said Mr. Bottomley, "we asked the governments of Colonial territories to restrict their imports from all sources, including the U.K. Colonial Governments responded well to our request and we were able, at the beginning of this year, to suggest to them that their restrictions could be relaxed. However, we still ask them to limit their demands for goods which can be sold for dollars or hard currency, or which are made wholly or largely of dollar materials, or which are in short supply and can be used in trade negotiations in order to obtain essential supplies. We realize full well, taking the long view, that the countries of the Commonwealth and Empire are likely to remain, as they already are, our best customers. We have not forgotten either, the old saying that the customer is always right, and we shall do our utmost to supply him with what he wants."

* * *

Colonies Help Children

GOOD progress is being made in the establishment of U.N.A.C. committees in British Colonies, most of which will forward the proceeds of their collections to the Lord Mayor's campaign fund in London. Altogether, eleven British Colonial possessions have indicated their desire to take part in the U.N.A.C. campaign. In the Falkland Islands, the U.N.A.C. campaign is running during the month of April; and in the Seychelles, during the month of May. In Cyprus, the appeal day has been fixed for June 1. Other British Colonial territories in which campaigns will be organized are: Nigeria, Barbados, Aden, Nyasaland, Fiji, Tanganyika, Zanzibar and St. Helena. In the Malay States, in Singapore and Uganda, local welfare organizations are now being consulted, with a view to establishing U.N.A.C. committees. In Jamaica, Mauritius and Sierra Leone, a publicity campaign is being undertaken, asking people to contribute to the Lord Mayor of London's fund.

To-morrow We'll Sleep

AN estimated 300 million human beings are attacked by malaria each year, and three million die. It is not therefore surprising to learn that malaria was given one of the top priorities by the World Health Organization Interim Commission (W.H.O.I.C.) which is to be taken over by the new World Health Organization (W.H.O.) when the first World Health Assembly meets in Geneva on June 24. It is now believed that malaria can be completely eradicated by new insecticides and drugs.

D.D.T. or other insecticides are the primary weapons for striking directly at the roots of the trouble. If the mosquito spends part of its time indoors, the solution is simple, because house-spraying is sure, quick and inexpensive. Countryside spraying, as done in Greece, is effective against larvae in swampy areas as well as the adult carrier insect; but it is costly and time-consuming, must be repeated often, and kills harmless insects.

Anti-malarial drugs will not be given to the denizens of a malarious area, except in times of epidemic. Quinine, the bitter old stand-by, was abandoned some time ago for atebrin which, in turn, has taken a back seat to a series of new drugs, notably paludrine (an English development) and aralen (United States). Tangible results in experimental areas, the W.H.O. experts hope, will start movements which can go a long way towards convincing the governments as to the wisdom of a long-range anti-malarial programme —the only kind that pays.

The advances made during a year's hard work can be vitiated through neglect in a few months. In Greece, where the fact of the existence of malaria mosquitoes had become a part of the stoic folklore, the people of stricken areas reacted promptly and enthusiastically to the results of U.N.R.R.A.'s 1946 D.D.T. spraying programme, inherited by the W.H.O.I.C. in 1947. In Italy, where the W.H.O.I.C. is administrating U.N.R.R.A.'s old job, the people, as far back as the war years, had become convinced that D.D.T. stood for "Domani Dormiamo Tranquilli"—to-morrow we'll be able to sleep soundly.

Cheaper, more plentiful supplies of D.D.T. will help. It was synthesized as a chemical compound about 70 years ago, rested on the shelf until early years of World War II, when research for an effective insecticide was at fever pitch. A Swiss firm discovered its insecticidal talents, and remains the world's largest producer.

* * *

Stettinius-French Talks

REPORTS from Dakar mention some of the subjects which have been discussed in the Stettinius conversations with Mr. Bechard and Mr. Ramadier. Mr. Stettinius, who represents a group of American business interests in Liberia, has taken up again the question of building a railway to the iron ore deposit of the Bomi Hills and to the rubber plantations. He has been asking the French about the possibilities of opening up Haute Guinée.

Apparently, the French consider that a railway to the French territory will not be a paying proposition for many years, and they proposed a trunk road from Monrovia to N'Zerrore in Haute Guinée. By using 20-ton Diesel lorries, such a road would be capable immediately of handling the exportable surplus (half of it fats) of 20,000 tons actually available in Haute Guinée. The distance involved is approximately 250 miles. The railway between Monrovia and the Bomi Hills would cover 50 miles.

* * *

Happy Returns

THERE is exciting news from the Intelligence Branch of the Commonwealth Economic Committee. Sir Horace Hamilton announces that the Committee is to resume publication of a regular Market Bulletin and of the Factual Economic Surveys which, before the war, were essential to every colonial interest.

First in the new series are summaries on Plantation Crops and Industrial Fibres. Both volumes are now obtainable from His Majesty's Stationery Office at 5/- each.

AFRICA'S SECOND GREATEST ECONOMIC PROBLEM

By C. B. SYMES*

TSETSE flies, as many of you know, inhabit bush of a variety of types and densities over thousands of square miles of East, Central, West and South Africa. They live by sucking the blood of animals, including man and his cattle where these are convenient, and in this way they convey blood parasites that cause sleeping sickness in man and a similar condition (known in South Africa as "Nagana") in cattle. Next to malaria, they are undoubtedly the greatest economic problem of Africa.

There are 21 species of these flies, all with specific differences in their habits; but three things they have in common—they breed in the soil, the adult flies, when not in flight, sit about on and under leaves, stems and tree-trunks, and on the ground, and they alight on animals and on man to feed. There appeared to be two obvious ways in which to try contact insecticides—first to spray the bush so that as much surface as possible of leaves and stems and of the ground should be covered with a lethal deposit, and to spray cattle so that flies alighting on them to feed would make contact with the insecticide on hides and skin.

We have concentrated on the former up to now, whilst the Tsetse Research Department of Tanganyika has done certain trials of the latter method. For the treatment of bush, we selected certain small infested islands and headlands on Lake Victoria, cut the necessary fly paths through the bush, and made estimates of the densities of their tsetses by the usual hand captures. Then with the small portable knapsack sprayers, that were used for house-spraying, insecticide solution was sprayed on to the vegetation to a height of about six feet at places that had shown high concentrations of flies during initial surveys.

Effect of Trees and Sunlight

Five field experiments were conducted in this fashion. In the first two, which involved single applications of D.D.T. and benzene hexachloride each in kerosene and cotton seed oil, there was a drop in flies of 50 per cent. and 80 per cent. respectively during the week following the applications; then flies began to increase again. A third trial of the same kind, in which benzene hexachloride solution was applied over about 4 per cent. instead of 2 per cent. of the total vegetation, reduced flies by about 80 per cent. over some eight days after the spraying. Then they began to increase. (Total dosage of insecticide applied in these three trials worked out at about 1·9, 7·9, and 5 oz. per acre).

Laboratory estimations and studies, conducted side by side with the field trials, had by this time indicated that the insecticide solutions began to lose their toxicities in eight to ten days after the application to trees and shrubs, because much of the oil solution was being absorbed by their leaves and stems. It also seemed that there was an additional loss of toxicity through the prolonged action of sunlight either because of the high temperatures or of the action of certain ranges of light-rays or both.

No Fly for Nine Weeks

In the next two field trials, attempts were made to overcome this rapid loss by making four applications over a period of 55 days. This is approximately the period during which the larvæ of flies we were concerned with (*G. palpalis*), newly deposited in the soil, can complete their development into active adults. We were still treating only a very small percentage (not more than about 6 per cent.) of the total infested vegetation of course. (Total cost was between 14/- and 48/- per acre).

Results in both trials were a reduction of flies by over 96 per cent. In one of these trials, in fact, we could not find a fly for over nine weeks after the last application of insecticide.

Preliminaries to be Solved

These trials, with their accompanying laboratory studies, indicated fairly clearly that both D.D.T. and benzene hexachloride are lethal to tsetses and might well provide a method of elimination if we can apply them in such a way that they retain their toxicities on a large proportion of the vegetation for several weeks, preferably months. Studies are continuing with this aim in view. But there are important preliminaries to be solved on the way to the main solution. As you know, not all leaves and stems of plants have the same external features and textures. Some are hard and waxy; others soft and hairy. Some solutions stick well to one type, some to the other. Absorption of solutions by plants varies with types of leaf and stem surfaces. Again, some leaves have such long hairs that tsetses alighting on them rarely touch the leaf surface proper but only stand on the hairs. How soon we shall overcome these and other factors that influence results will depend largely upon the scale of effort than can be devoted to this work.

Smokes and Aircraft

For the treatment of a bigger proportion of vegetation than can be reached by ordinary ground sprayers, preliminary trials have been made with smokes, produced by grenades and canisters, containing one or other of these insecticides. From both D.D.T. and benzene hexachloride, we obtained kills of tsetses where the smokes got at them. But the kill was not complete because of inadequate spread through the bush, and the smokes were too light to leave insecticidal deposits on the vegetation through which they drifted. Escaping flies were therefore able to continue to breed and rebuild the fly population.

We are hoping to use aircraft experimentally this year for applications of insecticides to infested bush. It was thought not desirable to do this until we had made extensive ground studies. The South African authorities, as you may know, have conducted large-scale trials with aircraft over about 100 sq. miles of tsetse bush; by means of smoke containing D.D.T. emitted through the aircraft exhaust pipes they have apparently reduced tsetses almost to nil. A few remain in dense evergreen bush of water courses; and it is hoped that these will be dealt with by the use of smoke from generators distributed by hand. It is always the last two or three flies that present the greatest difficulty. Insecticide smokes produced by burning grenades and canisters and through exhausts are, of course, wasteful in that as much as 50 per cent. of the insecticide used may be rendered valueless by the high temperatures at which they are produced.

Must be Done Quickly

It will be no easy matter, even when we have learned how to use our preparations with good effect, to get them applied on an adequate scale and with adequate speed to major problems. Not only must millions of Native peoples, deprived of a large proportion of their energy and of their products, and ousted from millions of acres of fertile lands by tsetses and by insect-borne diseases and pests, be given full vigour and land on which to exercise it, but this must be done quickly, if they are to contribute reasonably to their own economic, social and political advancement, and help fill the serious deficiencies in world food supplies.

I am one of perhaps a few unorthodox people who consider that insecticides can be made to contribute more to this task in shorter time and at less cost than perhaps any other method if we can devote sufficient effort to it now.

* Extracts from a talk on "Synthetic Insecticides in Colonial Development" at the Royal Society of Arts, this week.

NUMEROUS ARRESTS IN GOLD COAST

Press Censorship Imposed

FROM OUR SPECIAL CORRESPONDENT (Accra, March 9).

TOTAL casualties so far in the Gold Coast riots are 228 Africans wounded and twenty-one killed; thirteen Europeans wounded and none killed. Casualties have been confined to Accra, Akuse, Kumasi, Nsawam and Koforidua. Other towns have been quiet.

Following the state of emergency proclaimed by the Governor, troops were called in to help restore order. On March 3 Press censorship was imposed. Tamakloe (the General Secretary of the Ex-Servicemen's Union) was arrested the same day but was subsequently released and no charge was reported. Val Vannis (Organizer of the Freedom Defence Society) has been arrested; and also Clement (Manager of the Ausco Printing Press).

A group of ex-servicemen held a meeting again last Saturday, demanding an answer to their petition. A policeman took two of the leaders to police headquarters to meet the Senior Army Officer, who gave an assurance that the petition was receiving the Governor's attention. The crowd became somewhat restless during the absence of their two comrades but were calmed by Colonel Whitcombe (the resettlement officer) and others. There were no incidents.

Concealed Convention Meeting

Troops have occupied two hotels, the Government Girls' School and two main shops as Headquarters and billets. They have installed their own telephones. Many Europeans, who have enrolled as special constables, patrol the residential areas by night. They are armed. Large quantities of loot have been recovered by the police and military; and numerous arrests have been made for concealing a Convention meeting at Sekondi-Takoradi which was banned by order of the Government. The reason given for the ban was that such meetings have led to disorder and to breaches of the peace.

An interim reply to the ex-servicemen's petition, which was handed in at the Secretariat on February 28 was issued to Tamakloe (General Secretary of the Union) by the Government on March 8. The full text was due for release on March 11.

Last Saturday, the Omanhene of the New Juaben State broadcast a message to the people, to help in the recovery of looted material by handing it to the police.

More men and women have been arrested and charged, for infringing the curfew order in Accra.

H.M.S. *Neiride* and H.M.S. *Actaeon* are expected in Gold Coast waters during the next thirty-six hours.

Opinion and Comments in United Kingdom

BY A STAFF REPORTER.

According to a statement by Mr. Rees-Williams in the House of Commons on March 10, there have been no serious disturbances in the Gold Coast since March 2. Chiefs and Native Authorities had been most helpful by expressing public disapproval of the riots; and the senior unofficial member of the Legislative Council and others had telegraphed the Secretary of State pledging their support to the Gold Coast Government.

Twenty-six Africans were dead and 207 injured. Fifteen non-Africans were injured. A high proportion of Africans had been injured by other Africans during the looting.

The first estimate of damage excluding buildings was £1 million.

Commission of Inquiry to be Appointed

The Governor has asked for a Commission of Inquiry to be appointed from outside the Gold Coast. The terms of reference will include an inquiry into the underlying causes of the disorders. The Secretary of State for the Colonies would not make any statement as to causes until a report has been received from the Commission, which is to be appointed.

Replying to a Supplementary question in regard to the origin of the shooting, Mr. Rees-Williams said that police officers had been struck in the face by bricks and stones before any shots were fired by the police, but questions like that would be covered by the Commission of Inquiry.

On March 1, Mr. Rees-Williams said "there certainly were political implications" and that "there was almost certainly Communist incitement in this case."

West Africans and coloured Colonials who took part in last Sunday's procession to Trafalgar Square have declared that they are not Communist pawns.

The Daily Worker (March 6) said: "The London District of the Communist Party had issued a call to all trade unionists and progressive people to join a protest meeting against the Gold Coast shootings, in Trafalgar Square tomorrow."

The Political Correspondent of *The Manchester Guardian*, writing on a Press conference held at W.A.S.U. headquarters, London, said invitations had been sent out over the names of K.A.M. Boadu (West African Students' Union) and Bankole Akpata (West African National Secretariat) and have been distributed through the Communist party machine.

A Bristol daily paper reports Joseph Mitchell, a coloured Trinidadian who is secretary of the League of Coloured Peoples as saying that they were asking "Protection against the high cost of living in Africa and a fair opportunity for educating their sons and daughters."

WEST AFRICA AT WESTMINSTER

African Foodstuffs

IN both East and West Africa, the production of cassava has always been encouraged as a reserve against famine, said Mr. Rees-Williams, in an answer to Mr. Keeling. Exports from West Africa were discontinued during the war in favour of other crops, but the possibility of reviving the trade is now under consideration.

All the rice produced in Sierra Leone in 1948 will be consumed locally, said Mr. Rees-Williams, when asked what amount of rice is likely to be available for export from Sierra Leone in 1948.

Asked by Dr. Segal for information about a research station in the Gambia, for the mechanized cultivation of rice, Mr. Rees-Williams said that some 30 acres have been empoldered, varietal and tractor ploughing trials have been carried out, and experiments are being conducted on water control, salinity and cultivation practices.

Satisfaction

Mr. Rees-Williams told Mr. Sorensen that the Secretary of State for the Colonies was satisfied with the working of the present Nigerian Constitution, during a reply in which he promised to supply a copy of the letter and memorandum sent by the Nigerian Government to the National Council of Nigeria and the Cameroons.

Mining in West Africa

Mr. Skinnard asked the Secretary of State for the Colonies whether he will give details of the action taken in Nigeria

Cameroons Mining Corporation, Limited. This Company has been formed jointly by the Government of Nigeria and the London Tin Corporation to carry out prospecting in the British Cameroons. The voting control will rest with the Government of Nigeria, which will appoint the chairman and half of the directors. I could not give, without reference to the Governors, particulars of all other leases that may have been granted in West Africa, Tanganyika or British Guiana in recent months, but in drawing up any leases the Governments will no doubt have been guided by the principles set out in the memorandum."

Progress in Mass Education

Mass education officers have been appointed in the Gold Coast, Nigeria and Nyasaland; and appointments in Northern Rhodesia and Tanganyika territory are expected to be made shortly. This information was given by Mr. Rees-Williams in answer to a question from Mr. C. Smith. He said that officers concerned with social welfare or public relations work have assumed special responsibility for mass education in the Gambia, Kenya and Uganda. Notes on mass education projects already in train in the various African territories appear regularly in *Oversea Education* (H.M.S.O.).

Trade Union Legislation

In the great majority of Colonial territories, trade union legislation is satisfactory, said Mr. Rees-Williams, during an answer made to Mr. Rankin. In general, he said, steps have been taken to remove from Colonial trade union legislation all such provisions as were analogous to those of the United Kingdom Trade Disputes and Trade Unions Act, 1927, now repealed. In certain circumstances, however, the Secretary of State has satisfied himself that local circumstances are so exceptional as to justify the temporary retention of certain of these provisions, but the necessity for this measure will be constantly reviewed. Compulsory registration of trade unions is a principle adhered to in all Colonial Trade Union legislation without exception.

GOLD COAST RIOTS

Background of the Scene

By SENOD

THE end of the war resulted in a world desolate, hungry, confused and confronted with many problems, due mainly to the fact that, for six long years, the normal adjustments of society, and the development of peoples were perforce largely in abeyance or proceeded with in an unnatural manner. The accumulation of these problems and the natural impatience and frustration of the peoples affected render the solution of many of them difficult, and the settlement of some of them impossible until the issues become more clear.

The Gold Coast, with its area of 102,140 square miles and its population of 3,282,863 of peoples of various origins, who are still largely, in spite of protests to the contrary, primitive in thought and culture, has its problems which are a direct result of the war. Very rapid social and economic development has taken place during the past 25 years and the increase in literacy or semi-literacy has not only loosened the ties of communal life but has produced an ever-increasing class of young men who are dissatisfied with their normal living conditions, although these have vastly improved, and who have grievances real or imagined. It has not been difficult for this class to find leaders and, though some of these are well-intentioned, others are adventurers or followers of strange ideologies.

Appeal of Strangeness

Thousands of young men from the Gold Coast joined the army during the war—the Gold Coast Regiment has reason to be proud of its record—and acquired tastes and learnt to value things they were previously unaccustomed to. They have travelled and mixed with people in other countries, amongst whom were agitators who pointed to the White races as their enemies—the British in particular. Most of these young men are members of the peasant class, who had been content with their lot before they joined the army. Many of these youths got the impression that, on their demobilization, they would all obtain some sort of salaried position and be able to retain the same standard of living that they had become accustomed to in the army.

Instead, they were mechanically discarded from a regimented life in which every want was supplied and the pay was good; and they had to provide for themselves and assume responsibility for their own destiny. When their gratuities were exhausted and they could no longer buy the luxuries they wanted, a large number of them flocked to the more important towns with the idea of claiming jobs from the Government. There, they found that they could not hope to obtain regular salaried employment in spite of all they had heard about jobs for ex-soldiers, re-settlement schemes and so on, and they became easy prey for the agitator waiting for them.

Cause is Simple

The African is accustomed to the fatherly, if in some ways arbitrary rule of a Chief and Council, and the control of the communal or family head, but the appeal of a strange thing, vaguely called democracy, as often preached in West Africa, has made him think that there is some sort of a Utopia to be achieved with little or no effort on his part, that the Government is the stumbling-block to progress and that it exists for the benefit of the 3,000 or so Europeans and their friends.

The causes of the trouble are simple but the solution is far from easy. The people in the masses are not able to appreciate an impartial or otherwise Press, and tend to believe rumours and inaccurate news passed round in markets where it is easy for propagandists to sow their seed. The intelligentsia also know that there is a great deal of ignorance in England, where there are men who are always willing to champion the imagined underdog and to misinterpret our actions and policy in the Colonies.

The African, however, generally speaking, is an honest and logical being; and there is no doubt that, although further troubles may be in store, wise counsel will prevail and whatever genuine grievances there are will be adjusted. There is a great future for the Gold Coast, when she has attained unity and is ready for responsibility as a valued member of the British Commonwealth of Nations.

LETTER TO THE EDITOR

Appreciation

Sir,—To those who have nursed the false impression that European sponsored newspapers are not out to cater for the interest of the Colonial peoples, I believe your editorial comment in your issue of March 6, criticizing the recent suggestion made in the House of Commons by Squadron-Leader Kinghorn that there should be further exploitation of African territories and planned emigration sending people there who will produce goods there which can be sold by this country and earn dollars, would go a long way to strike the nail on the head and so justify the point which I have always maintained that such impression is a mere fallacy which has no foundation. I doubt if a criticism of that statement could have been more objectively handled by even a West African journalist.

I wish also to put on record my appreciation for the ready response given by the people of this country to the Dean of Westminster's Appeal Fund for West African Students' Union as is evidenced by the regular publication, in your esteemed journal, of the total up-to-date contributions received. I hope Mr. Ladipo Solanke (of W.A.S.U. fame) whose integrity and zeal in the interest of W.A.S.U. can hardly be questioned and who, I understand, is still in Nigeria after touring for over two years important centres in West Africa soliciting for funds for this same project, will follow this noble example by sending regular releases to the papers in this country and in West Africa of the up-to-date amount which he himself has so far collected because, quite apart from the fact that such releases will go a long way to show the extent of the success of his mission, they will, I believe, also act as spurs in gingering those who have been lagging behind to subscribe generously to the fund.

Yours faithfully,

G. M. OLU COKER.

B.B.C. Year Book

THE B.B.C. has several publications to its credit; and its Year Book for 1948 is, if anything, a peak production. It would have been difficult for anyone to have combined so much information about so many places and people in so condensed yet so attractively used space. Africans have got a whole page illustration showing one of the B.B.C. commentators in their hut in South Africa; Sandra (the coloured Jamaican cabaret star) is attractively presented and Robert Adams is shown as "Strength" in a television production of *Everyman*. For overseas listeners of the B.B.C., there is little that has happened in broadcasting during 1947 which has escaped the attention of the compilers of this handbook.

CADBURY Means Quality

WEST AFRICA AT WESTMINSTER

Gold Coast Arrests

A STATEMENT with regard to the arrest of six members of the United Gold Coast Convention was made by Mr. Creech Jones in the House of Commons last week. He said: "It is provided in the emergency regulations made under the Emergency Powers Order in Council, 1939, that the Governor may detain and remove by Order any person for the purpose of public safety and the maintenance of public order. In the opinion of the Governor and of his advisers, it became necessary, on information received as to the activities and intentions of these six persons, to make such orders to restrict their movements, and orders were accordingly made on March 13. The Governor has emphasized that his action is purely preventive and in the interests of public safety. The persons in question are not under detention, but their movements are restricted to a certain area. The orders will, of course, be subject to review; and the six persons will be given every opportunity of appearing before the Commission of Inquiry which is shortly to proceed to the Gold Coast from this country.

Mr. Silverman: Am I to understand from my right hon. Friend's answer that no charge is being preferred against these men, and that there is no evidence to support a charge?

Mr. Creech Jones: The action of the Governor was due to the emergency arising from certain activities of this group of men.

Very Grave Emergency

Mr. Frank Byers: Is it not a fact that far greater power has been taken within the last fortnight than has ever been required in this country or the Gold Coast since 1939? and would the Minister give an explanation as to why it has suddenly become necessary to use, in peacetime, powers which were never exercised in this country in wartime?

Mr. Creech Jones: A very grave emergency arose in the Gold Coast, but the Commission of Inquiry will be making the fullest investigation into the whole matter.

Mr. Carmichael: Is it not the case that these six men were restricted in their movements because of their activity in the trade union world and their attempt to organize the workers there?

Mr. Creech Jones: Most emphatically not.

Mr. Donner: Is it not a fact that there is the utmost confidence in the judgment and experience of the Governor?

Mr. Gallacher: Is it not the case that, along with the arrest of these men, the Governor has issued a statement controlling the Press in the manner stated in this document? which is something that has never applied before in any Colony; and will the Minister put an end to this position?

Mr. Oliver Stanley: Is it not also a fact that, on this occasion, a number of lives was lost, and would it not be better to await the report of the Commission of Inquiry which can give us both sides of the case?

Habeas Corpus

Mr. Frank Byers asked the Secretary of State for the Colonies whether an application has been made to the courts in the Gold Coast, on behalf of the six men recently arrested under the Government's Emergency Powers, for a writ of habeas corpus? whether such application was or was not entertained? and whether he will give an assurance that no action has been taken, by the Government of the Gold Coast, to prevent the courts entertaining such application?

Mr. Creech Jones: According to information received from the Governor, no application had been made to the court for a writ of habeas corpus up to March 21. I understand that the Emergency Regulations at present in force in the Gold Coast contain a provision to the effect that no legal proceedings may be brought calling into question the legality of anything done under the particular regulation under which the movements of the six men were restricted.

Mr. Byers: Is it not a matter of elementary justice that an individual in a British Colony in any part of the world should be allowed at least to apply for a writ of habeas corpus? May we have an explanation as to why this totalitarian power has suddenly been clamped down? which is a complete denial of the rule of law and of the individual liberty of the subject.

Mr. Creech Jones: I am not aware that that is the position. These powers were given under the 1939 Order. It is quite true that an emergency had arisen which compelled the Governor to secure the dispersal of these men, otherwise certain consequences of very grave danger to the Colony would have followed.

Mr. Byers: Can an application now be made by these individuals for a writ of habeas corpus, and will it be entertained in the court?

Mr. Creech Jones: I must have notice of that question.

Mr. Byers: But it is in the Question.

Mr. Creech Jones: I understand that, so far, no application has been made; but if an application were made, it is very likely that, under these regulations, it would not lie.

Mr. Pritt: Could the Minister tell us in how many Colonies similar legislation exists, and could he define a police State?

Mr. Creech Jones: I am informed that this is not peculiar to the Gold Coast.

Mr. Byers: I wish to give notice that owing to the most unsatisfactory nature of the situation and of the reply, I shall take the earliest opportunity to raise the matter on the Adjournment.

Import Licences

Mr. Lennox-Boyd asked the Secretary of State for the Colonies whether he has any statement to make on the official notice that appeared in the *Gold Coast Extraordinary Gazette* (January 21) granting an open import licence to goods from designated countries which include Poland, Czechoslovakia, and Yugoslavia, but not including South Africa?

Mr. Creech Jones: Gold Coast Open Import Licence No. G.L.01 authorized the import, under open general licence, of various goods from the United Kingdom, the Colonies and the "war-shattered" European countries. If any other country had been included in such an open licence, there would have been discrimination against the countries not included and this would have been contrary to our obligations. The question of the extent to which it is still appropriate for open general licences to be issued in favour of war-shattered countries is under review.

Films in Nigeria

Mr. Skinnard asked the Secretary of State for the Colonies whether he is aware that the film: *Son of Dracula*, was recently shown in cinemas in the Eastern Provinces of Nigeria? what steps are taken to prevent unsuitable films from being exhibited? and what was the total expenditure of dollars on American films in Nigeria last year?

Mr. Creech Jones: I have no information about this particular film. Censorship Boards are established at five centres in Nigeria and have power to prohibit the showing of any film which, in their opinion, depicts any matter contrary to public order or decency, or which would, for any other reason, be undesirable in the public interest. American films are exhibited in Nigeria under various arrangements; and while I cannot give a precise figure of dollar expenditure, it probably did not exceed £1,500 in 1947.

Tarkwa Children's Home

At a sale of work, held in a Cambridge Church Hall mid-March, for a proposed children's home at Tarkwa, Gold Coast, Mrs. de Beaumont, who presided at the opening ceremony, announced that the three-year-old fund was now large enough to make an annual grant to the African committee at Tarkwa. Gold Coasters present included Messrs. Brandford-Mensah, A. W. Kayper-Mensah, J. M. Akita, Misses Agnes Frisby and T. O. Morgue.

HISTORY AND SEQUEL OF GOLD COAST RIOTS

Links with Communist Organizations

BECAUSE so much misunderstanding has been spread about, Sir Gerald Creasy has authorized the publication of a brief narrative of events in the Gold Coast from February 17 to March 13. "The riots cannot be regarded," says the narrative, "as isolated incidents which developed because of the shooting at the Christiansborg crossroads. They have a history and they have a sequel." Extracts from the narrative are reproduced herewith.

On the morning of February 17, the day on which considerable rowdyism broke out in Accra, a series of posters appeared in the streets attempting to cause discontent among the Police and persuade them not to obey orders. It has been proved that these posters had been printed at the Ausco Press, which worked for the Convention.

On February 20, a meeting took place at the Palladium Cinema, under the auspices of the ex-Servicemen's Union. About 9,000 people attended; but it has been estimated that only about 1,300 of them were ex-Servicemen or ex-members of the Home Guard. Among principal speakers were Dr. J. B. Danquah, Mr. Ako Adjei and Dr. Kwame Nkrumah, none of whom are ex-Servicemen.

The first two are members of the Accra branch of the United Gold Coast Convention; and the last, the General Secretary of the Convention, is a Communist among whose papers has been found a Communist Party membership card (No. 57565). There was also present a European member of an overseas Communist organization who is known to have a mass of Communist literature in his possession.

Town Riots Started Before Shooting

Although notices had appeared in the newspapers by February 25 announcing that an ex-Servicemen's parade would march to the Castle to present a petition to the Governor "at no time had any organization or individual made any request to Government for arrangements for a petition to be presented to the Governor or for a march to the Castle."

On February 27, in the presence of Mr. Tamakloe and Mr. Laryea, leaders of the ex-Servicemen, a prescribed route for a procession was agreed with the Commissioner of Police. Mr. Tamakloe assured the Commissioner of Police that he could exercise control over the men who were to form the procession. The same evening, the Convention held a mass meeting at the Palladium cinema. Mr. Akufo Addo, Mr. Obetsebi-Lamptey, Mr. William Ofori Atta and Dr. Danquah were speakers.

On the morning of February 28 cotton goods were on sale in the stores at new agreed prices. Men of a rough type were among the crowds and seemed anxious to persuade them that the agreed prices were not being charged. Shortly before 3 p.m., an attack on the Kingsway Chemists was started and, shortly after 3 p.m., the crowd succeeded in breaking in: at 3.05 p.m., a number of roughs, led by a man with a 4"x2" scantling, started to break into Bartholomew's in Station Road. At 2.50 p.m., a delegation of ex-Servicemen, headed by Mr. Tamakloe, presented as had been arranged to a senior official at the Secretariat, the petition addressed to the Governor.

By this time, the parade, which had not kept to the prescribed route, was marching in the direction of Christiansborg. Unsuccessful attempts were made by Inspectors of Police to turn it back to the prescribed route. Many persons who were not ex-Servicemen joined the procession by the time it reached the Christiansborg crossroads and there was shouting and abuse and throwing of stones. Reinforcements of Police were rushed to the spot but the crowd pressed forward. There was heavy stoning. Police had no alternative but to resort to the use of tear smoke. The crowd continued to press forward and the Police party was in the gravest danger of being overwhelmed.

As a final warning, a bugle call was blown by orders of a Police Officer and the crowd was given a last order to disperse. As a last resort shots had to be fired. The shots were fired between five and ten minutes past 3 o'clock. The mob did not start to retreat towards Accra until a quarter past three. The rioting in town had accordingly started before and independently of the events at Christiansborg crossroads.

Ends of Working Committee Revolutionary

The release of convicts from Ussher Fort, on February 29, is likened by the author of the narrative to "a pattern familiar in Communist disorders when the Communists are seeking to seize power." On February 29, "making its own judgment of events, the United Gold Coast Convention telegraphed to the Secretary of State. They stated, among other things, "Civil Government Gold Coast broken down," and "Working Committee United Gold Coast Convention declare they are prepared and ready to take interim Government." The Working Committee includes Dr. J. B. Danquah, Mr. E. Akufo Addo and Mr. W. Ofori Atta.

Further examination of the activities of the Working Committee of the United Gold Coast Convention showed additional links with the Communist organization overseas. Investigation also showed that the ends of the Working Committee, while ostensibly the attainment of self-government by constitutional means, were in fact revolutionary. They included plans for a more widespread and comprehensive disturbance of the peace than had been indicated or could be understood from the Convention's telegram to the Secretary of State, or even from Dr. Danquah's manifesto of March 1, addressed to the Chiefs which was published in the Press under the title "The hour of liberation has struck." Investigation also showed a danger of forms of terrorism, quite alien to the spirit of this country and fortunately not hitherto employed. These included assassination.

GOLD COAST COMMISSION

Mr. A. Aiken Watson, K.C. (Chairman); Mr. Andrew Dalgleish and Dr. K. A. H. Murray (Rector of Lincoln College, Oxford) have been appointed to serve on a Commission to the Gold Coast. The terms of reference will be: "To inquire into and report on the recent disturbances in the Gold Coast and their underlying causes; and to make recommendations on any matter arising from their inquiry." The Secretary will be Mr. E. G. G. Hanrott (of the Colonial Office). It is intended that the Commission should fly to the Gold Coast during the week beginning April 5.

Mr. Watson was called to the Bar in 1927, and became Recorder of Bury St. Edmunds, Suffolk, in September, last year. He is nearly 50. Mr. Dalgleish was Chairman of the Commission which reported early last month on the advancement of Africans in industry in Northern Rhodesia. Dr. Murray is a member of the Educational Advisory Committee for the R.A.F. and, during the war, was Director of Food and Agriculture, Middle East Supply Centre.

Friends of Fourah Bay

Dr. Kenneth Little (honorary secretary of the Friends of Fourah Bay) left recently by air on a short official mission to West Africa. He expects that Mr. Creech Jones will receive a deputation from the Friends of Fourah Bay in the near future. "During recent weeks," said Dr. Little before his departure, "a great deal of sympathetic interest in the future of the College has been widely aroused in this country, including the House of Commons; and a number of representations have been made by British and Colonial organizations to the Secretary of State. The Church Missionary Society (whose approach to the present problem is on parallel lines to that of the Friends of Fourah Bay) have also been working hard to ensure the continuance of the institution they founded. It is of particular interest, also, that missionary and other circles as far afield as the United States are showing active concern in the matter."

THE BLIND OF BRITISH AFRICA AND THE MIDDLE EAST

THREE investigators who travelled 30,000 miles, mostly by air, have made a report on the survey of *Blindness in British Africa and Middle East Territories*. (H.M.S.O. 2/-). They are Mr. John Wilson, Miss Mary Thomas and Captain Douglas Heath. In the foreword, Sir Bernard Reilly (former Governor of Aden) commends to Colonial Governments, on behalf of the Secretary of State for the Colonies, the hope that the recommendations of the report "will give a new and valuable impetus to the humanitarian work of alleviating the all too widespread suffering which blindness entails."

Accurate blind censuses are said to be difficult because of Native superstition. Certain tribes frequently regard it as a disgrace to have a blind child; others are reluctant, through fear of attracting evil spirits, to count their children; and in the case of girls, the bride-price often results in their blindness being concealed. Blind people in primitive communities are under a great handicap, because of the lack of techniques and inventions available for the blind in more highly developed countries. Women are unmarriageable. In general, the blind are well treated in a Native community, so long as it remains unspoilt by alien cultures.

In fact, some tribes, such as the Baganda and Yoruba, regard the punishment of oneself becoming blind as the inescapable result of neglecting blind relatives. An interesting sidelight is given on the attitude of the blinded ex-Serviceman. Generally, with his gratuity, he has been able to "buy" a wife who provides the family subsistence by cultivation. His pension makes him second only in importance to the Chief and the community regards him as a hero. Most of these blinded ex-Servicemen see no reason for offering themselves for vocational training, nor does their illiteracy worry them at all, since they enjoy a larger cash income than ever before.

Seventy-five to eighty per cent. of the blindness in the Colonies is said to be preventable. Ample proof is given for this proportion but no blame is attached to the medical services which numerically "judged by British standards, are nearly everywhere at a sub-optimum standard." Hence "the wonder is not that so little has been done but that so much has been accomplished."

In Tanganyika, for example, there are not three doctors to every 100,000 head of population, compared with 50 in the British Isles. Account must also be taken of the profound attitude of ignorance and superstition towards Western medicine in more backward areas. "Indigenous medical knowledge and practice are affronted by the stranger and rally all their powers in opposition to retain their vested interest and to discourage actively this new and strange interloper."

In general, Africans do not recognize the necessity for early or long-continued treatment. They expect "magic" or, at any rate, quick results. Because of the concentration by medical officers on "killing diseases" there has been little extension of the services necessary for fighting diseases of the eye. Conjunctivitis and trachoma are said to be the main causes. The fly is said to be the main carrier of both these diseases. Certain tribes believe that flies, settling on babies' eyes, bring them wisdom and knowledge.

Programme of Help

There are only four schools for the blind in the nine African Colonies visited, and these accommodate less than 150 children. The report commends the work of blind schools which are often carried on through the devoted labour of individual missionaries. The devotion of European and non-European teachers is said to be impressive. Adverse comment is made on the absence of after care for those who have left school. Examples of individual achievement show that the courage, so much in evidence in blind persons in the more developed countries, has its counterpart in primitive societies.

Proposals are made that blind Welfare Organizations, staffed with European experts, should be established to serve East and Central Africa and West Africa. Local bodies would be established in each Colony and development plans suitable to its particular resources and requirements would be drawn up. These plans will correlate the activities of Governments, missions, voluntary bodies and private individuals. More schools for blind boys and girls, training centres where blind Natives can learn crafts suitable for their villages, home-worker schemes and workshops, Braille printing-presses producing books in the vernacular and sight-saving propaganda are other proposals.

EXODUS OF MASKS

Two main points brought out by Leon Underwood in *Masks of West Africa* (Alec Tiranti Ltd. 6/-) are that Africans produced some of the finest work when they did not know they were artists and that much of the best traditional work has been exported. The hope is expressed that much of this work, the exodus of which has ensured its preservation, may be returned so that the rising generation of Africans may have some of it to study. The work of Bamboya, the Yoruba carver of Ilorin, is taken as an instance of one African who produced many other fine works when he did not know he was an artist.

The author comments that "when the African partakes of the fruit of the Western tree of knowledge, he falls from grace in artistic expression." There would seem to be a paradox that the Africans produce their best work when they are most African, but they would never have known how good their craftsmanship was unless the Europeans, whose advent upset their ways of life, had also preserved their best work for them. It is a paradox that seems to occur quite frequently in other connexions. There is a French text for French readers and 48 plates.

PULSOMETER PUMPS & NATIONAL ENGINES

FOR ALL DUTIES

The Portable Pumping Set illustrated is a Type largely used in the Tin Mining area of N. Nigeria

"Pulsometer" Pump driven by a "National" Oil Engine

List No. 3149

Both pump and engine made by well known firms are of robust construction.

Characteristics:

Easy to start.

Inexpensive to maintain.

Requires no special skill to operate.

The pumps will lift water heavily charged with deposits.

Agents:

Messrs. JOHN HOLT & CO. LTD.

ROYAL LIVER BUILDING, LIVERPOOL

Also LAGOS and ACCRA

PULSOMETER ENGINEERING CO., LTD.

NINE ELMS IRONWORKS, READING

THE NATIONAL GAS & OIL ENGINE CO., LTD.

ASHTON-UNDER-LYNE

London Log . . . . . .

Swollen Shoot Compensation

Cost of cocoa trees destroyed to eradicate swollen shoot disease in the Ibadan area, will be borne by the Nigerian Cocoa Marketing Board. The Board has decided to pay producers one shilling and sixpence for every tree successfully replaced. The scheme is to be operated by a committee of cocoa farmers and representatives of the Ibadan Council.

Flying Samples

Sportswear and weathercoats are among samples which Mr. S. Johnson, export manager of a well-known firm of clothiers, is taking with him on his 16,000 miles flight across Africa. Mr. Johnson, who left Britain last Monday, is mainly visiting South and East Africa, where he will study reactions to British clothing designs.

Called to the Bar

West Africans called to the Bar in the Trinity Term include: F. A. Williams (Lagos); R. T. E. Wilcox (Bonny, South Nigeria); S. A. Crabbe (Accra); E. B. Edun-Fregene (Warri, Nigeria); M. A. Macauley (Lagos) and M. L. B. A. Agusto (Lagos) all of the Middle Temple. O. I. Ita (Calabar); M. A. A. Adesanya (Ijebu); A. Akerele (Lagos) and V. D. Phillips (Ijebuode) all of Gray's Inn. S. W. Ubani-Ukoma (Aba) and S. O. A. Kester (Lagos), both of Lincoln's Inn. E. J. A. Wilson (Freetown) and S. O. Akinkugbe (Ode-Ondo), both of the Inner Temple.

Nigerian Appointments Commission

The Commission appointed to report on recruitment of Nigerians for Senior Government posts will consist of the following—Official Members: Mr. H. M. Foot (Chief Secretary to the Government); Mr. T. V. Scrivenor (Civil Service Commissioner); Miss G. Plummer (deputy director of Education). "Unofficial" Members: Mr. C. D. Onyeama (Member of Legislative Council); Dr. N. Azikiwe (Member of Legislative Council); Mallam Muhammadu Ribadu (Member of the Northern House of Assembly); Chief Jacob Rosiji Turton (the Risawe of Ilesha); Mrs. O. M. Abayomi.

International Medical Congress

Colonial and Overseas delegates are to attend an International Congress of Clinical Medicine next month. Organized by the British Medical Students' Association for students and newly qualified practitioners, the Congress will be held in London, Birmingham and Oxford respectively. About 200 delegates are expected to attend the sessions, representing 30 different countries, including parts of Africa. The work of the Congress will consist of ward teaching, lectures, films of medical interest, demonstrations, visits to research laboratories and other academic works. Visits to industrial laboratories engaged in work and research of medical interest have also been arranged.

Social and Personal

Mr. Albert Edward Greewood (of the staff of Paterson Zochonis & Co., Monrovia, Liberia) was married, on June 19, to Miss Cynthia Violet Anagnostis, at the Egremont Presbyterian Church, Wallasey; the Rev. J. Cecil Armstrong, B.A., officiating. The bride is the younger daughter of Mr. S. S. and the late Mrs. Anagnostis of 8, The Orchard, Wallasey, and formerly of Lagos.

Mr. Philip Dennis, Assistant District Commissioner, Gold Coast, was called to the Bar last week.

Sir Sydney Caine (deputy Under-Secretary of State at the Colonial Office) has been appointed Third Secretary in the Treasury. The transfer will take place early in August.

The Right Rev. J. L. C. Horstead (Bishop of Sierra Leone) will speak on "West Education and the African," in the B.B.C. Home Service on June 29. Bishop Horstead is at present in Britain for the Lambeth Conference.

Captain Keith Caldwell will speak on Faunal Survey in Africa at the general meeting of the Society for the Preservation of the Fauna of the Empire, to be held in London on July 6.

Mr. D. F. D. Jakeway, former Administrative Officer in Nigeria, was awarded the O.B.E. in the King's Birthday Honours List. He was posted to Seychelles as an Administrative Secretary in 1946.

LETTER TO THE EDITOR

West African Furniture

Sir,—I read your well-reasoned article on Furniture and Planning in your May 8 issue with especial interest for, as a former resident in Africa, and more recently on flying visits, I have noted the capacity of Africans to manufacture articles for export.

The West African furniture export difficulty is paralleled in other Colonies, and I put down a Parliamentary Question for June 16 asking the Secretary of State for the Colonies "what action he is taking to encourage the sale and export of furniture and other handcrafts from St. Helena."

You refer to the likelihood that Mr. Creech Jones will shortly make a statement on the setting up of a Colonial Economic Planning Board.

If this is so, it is clearly desirable that as many instances as possible of handicaps to the development of Colonial handcrafts and other secondary industries, whether in West Africa, St. Helena or elsewhere, should quickly be brought to his notice; otherwise, he cannot be expected to help with that celerity which his well-known solicitude for Colonial progress has led us to expect.

Yours faithfully,

15th June, 1948. DOUGLAS DODDS-PARKER,
British Empire Producers' Organization, *Chairman.*
22, Queen Anne's Gate, S.W.1.

Colonial Office policy, recently.

The new Constitution discriminates against tax-payers. Women are barred from exercising the right of the limited franchise. The same is applicable to tax payers whose annual income is less than £50 per annum. Tax payers who reside in places outside Lagos and Calabar are also disfranchised. These three discriminatory acts are indefensible. Sexual equality is regarded as a basic human right in contemporary international society. Income qualifications for voting is now outmoded. There is no justification for giving Lagos and Calabar the privilege of voting and denying other townships this privilege. A native of Lagos or Calabar, residing in Sokoto or Kano, cannot enjoy the right of franchise in that locality, whilst a native of Sokoto or Kano residing in Lagos or Calabar can. In fact, there is no criterion of qualification for any community to enjoy the right of vote.

FOUR LEGISLATIONS

The laws affecting the acquisition of land raise a fundamental issue in respect of our system of land tenure. In principle we agree that land may be acquired for public purposes absolutely, since it is for the public benefit. We also agree that the minerals of the country should be publicly owned and controlled. These are in accord with our communal way of life. But we have been specifically enjoined "to emphasise the recognised principle of the inalienability of the communal lands of the people of Nigeria and the Cameroons and to secure the original tenure of land against exploitation, and to obtain an irrevocable acknowledgement by the British Government of the foundation principle upon which the land system in Nigeria is erected, namely: that the whole of the land in all parts of Nigeria and the Cameroons, including the Colony and the Protectorates, north and south, whether occupied or unoccupied, shall be declared native land; and that all rights of ownership over all native land shall be vested in the indigenous inhabitants as being inalienable and untransferable."

The following legislations affecting the land, minerals, and Chiefs are inimical to our best interest. Relevant sections against which we are protesting should be repealed.

PUBLIC LANDS ACQUISITION (AMENDMENT) ORDINANCE, 1945.

Under this law, Government has right to acquire land for public purposes absolutely and to use same for settlement. It can declare certain land "unoccupied" and occupy same without payment of any compensation. The NCNC submits that the word "settlement" is ambiguous and should be qualified to read "settlement of people of African descent"; otherwise the law, as it stands, can permit the settlement of immigrant races in Nigeria with its attendant racial situations and humiliating experiences as are the cases in East Africa, Southern Rhodesia, and the Union of South Africa. The NCNC holds that no land in Nigeria and the Cameroons is without an owner. Ownership of land can be traced; if impossible, then such land belongs to the contiguous Local or Native Authorities which should be paid compensation by the central Government accordingly. The section of the law dealing with payment of compensation by Government is unfair. The NCNC suggests regional land assessment boards to fix compensation and to act as a judicial tribunal of the first instance. The original law legalises the right of a Chief to alienate communal land, notwithstanding that it is contrary to tribal traditional law and custom. This is bad law as it violates treaty obligations, not to mention that it is contrary to the established principle and practice of official policy in respect of land tenure.

CROWN LAND (AMENDMENT) ORDINANCE, 1945

This law gives Government the right to declare any land "Crown Land" if it was acquired originally for public purposes absolutely and it is no longer required as such. The NCNC sees this law as an attempt to alienate our lands, contrary to official policy. The money of Nigerian tax payers is used to acquire land for public purposes. In case such land is no longer required for that purpose, it should revert to the land-owners or the Native Authority or central Government, and not to the British Crown, which is a custodian and trustee and cannot convert trust property. The word "Crown" should be amended to read "Government of Nigeria."

MINERALS ORDINANCE, 1945

Under this law, mineral rights are vested in the Crown. The NCNC objects to this and suggest "Government of Nigeria," Certain sections of this law give the Governor authoritative and totalitarian power "in his absolute discretion" to grant, cancel, renew, vary, modify any

prospecting licence or mining right. This is arbitrary. The NCNC suggests that if doubt exists as to suitability of any person to have prospecting licence or mining right, then the issue should be thrashed out before a judicial tribunal in order to safeguard the constitutional rights of the citizen from the whims and caprices of colonial despots. Another section of this law which vests a mining official (and not a Police officer) the power to arrest any person suspected of violating the mining law, without warrant, is an infringement of the freedom of the person.

APPOINTMENT and DEPOSITION of CHIEFS (AMENDMENT) ORDINANCE, 1945

The principle of this law is consistent with another relevant Nigerian legislation which clothes the Governor with power to be "sole judge" of what is native law and custom, which is clearly a violation of treaty rights. Under this law, the Governor, in case of dispute, has power to appoint and depose Chiefs. The NCNC regards this law as an unnecessary interference with the traditional law and custom of the people. We strongly object to foreigners deciding who should be our rulers. This is an inalienable right.

BASIC HUMAN RIGHTS

The statute book of Nigeria and the Cameroons contains some laws which deny our people basic human rights, such as freedom of speech, press, assembly, association, movement, worship and freedom from fear, want, ignorance, tyranny, and oppression.

(1) Under the Wireless Telegraphy Ordinance, the Governor is empowered absolutely in his discretion to grant or withhold licence to receive and transmit wireless messages for press publication.

In 1946, a newspaper organisation was refused renewal of their wireless receiving licence for press publication, despite the fact that they did not violate any law of the country.

(2) Under the Newspaper Ordinance, before any person can publish any newspaper, he must be bonded for £250 by sureties approved by the Government or deposit the sum of £250 with the Government.

The practice in Britain and certain countries under British rule is to require registration of name and place of business of the person intending to be the proprietor and publisher.

(3) Under the Police Ordinance, workers can be dispersed by force when they form an orderly and peaceful procession.

Recently the railway workers formed an orderly and peaceful procession and were marching to lay their grievance to the Government constitutionally. By virtue of this law, and without provocation, the Police sprayed tear gas on the workers and dispersed them.

(4) Under the Criminal Code Ordinance, workers can be punished by fine and imprisonment, if, in the opinion of Government, their work is regarded as "essential" and if they struck without giving sufficient notice of their intention to strike.

(5) Under the Immigration Ordinance, the Police have absolute power to prevent any person leaving or entering Nigeria if one is suspected of being an undesirable. Mere suspicion is not conclusive evidence to justify deprivation of liberty of movement.

(6) Under the Deportation Ordinance, the Governor can send any person to exile if, in his opinion, such act is necessary for the peace of the country.

Many Chiefs, Native Authorities and individuals have been subjected to the operation of this law.

(7) Under the Criminal Code Ordinance, the Governor has absolute power to prohibit worship, if he is of opinion that such action would prevent the commission of any crime or breach of the peace.

(8) Under the Education Ordinance, no school can be opened if the Director of Education, in his absolute discretion, is of opinion that the person intended to be its proprietor or manager is undesirable.

(9) Under the Prisons Ordinance, prisoners may work in the open air under the blazing tropical sun, without any head-gear, if in the opinion of the Director of Prisons, such practice is not harmful.

Prisoners in Lagos, Degema, Gboko, Abeokuta, Buea, Uyo, etc. work in the open sun bareheaded. When this issue was raised in the Legislative Council, the Chief Secretary replied that such brutality did not harm the prisoners.

(10) Under the Railway Ordinance, miscarriage of goods is not a responsibility of the railway, even where on the part of its servants is proved.

The Nigerian Railway is a State concern.

of thousands of tons of rice. This would have been impossible without mutual trust and a desire to solve difficulties in common. The future of this regional machinery is uncertain. Lord Killearn, under whom it has grown virtually from nothing, is retiring, and the office of Special Commissioner is being amalgamated with that of Mr. Malcolm MacDonald, the present Governor-General. The natural tendency as time goes on will be towards closer integration with the various international organs of the United Nations. If this happens, it is to be hoped that political issues will not interfere with the very useful economic functions which it fulfils at present.

SOCIAL SERVICES

The Film and Colonial Peoples

Abridged extracts from an address by Mr. John Grierson, Controller of Films, Central Office of Information, to the Film Conference at the Royal Empire Society on January 16, 1948

JOHN GRIERSON

FROM the international point of view, nothing in the world is so striking to-day as the fact that the peoples of the world are on the move, not only physically but spiritually. There is a challenge to-day to every department of every Government and not least to those departments involved in the processes of education. There is a challenge to every thinking citizen. The basic problem in the world to-day is the result of the world's own riches and the progress of technological advances throughout the war and the enormous problems they set up everywhere ; the creation of that often disastrous gap between the getting of tools and the mastery of tools, a gap so often not met by the processes of education. That is the general problem, but for us there is a very particular concern in the problems which it is likely to bring forward. Julian Huxley said : " Man cannot exist half illiterate and half literate " for a good reason—the whole question of peace and international understanding depends in the last resort on access to means and skills of the modern world which people are reaching for, and equality in the matter of race and in all matters of social benefit. But you cannot have peace in the world where there are vast fields of frustration, whether it be on the economic level or the cultural level where prides are hurt by the assumptions of some of our Western peoples. In fine, you cannot have international understanding while half the world or more than half the world has no understanding and knows not even the ordinary literacy we take for granted. This is where Fundamental Education must play its part, not only by waging a campaign against illiteracy, but with the aim of " helping men and women to live fuller and happier lives in adjustment with their changing environment, developing the best elements of their own culture and achieving the economic and social progress which will enable them to take their place in the modern world ". Literacy teaching and the extension and improvement of primary schooling will take their place in a wider programme of community education for better living. In this wider programme the film will play an ever-increasing part.

My main proposition regarding films is that they should not be coming from outside but should be created from the inside for the people, and should come out of the integral true development of the African, not as part and pattern with us, but as the expression of his own self and specifically designed for him. I know little about the use of films in fundamental education, but some experiments have been made in a piecemeal fashion. There is no body of knowledge because no interest has been created, no funds have been found, no organization has been established. We start almost from scratch. I am not for a moment forgetting the work of the Colonial Film Unit, the pioneer work there, nor the other experiments made by other countries, but against the size of the problem we have not even made a beginning. The first requirement is to find a body of men who will make this their lifework, who will specialize in this and really begin with knowing about the Colonies. It is not just a case of dropping into Africa to make a picture, to do something for the Natives. That is not the size of the problem. We have got to create a body of men who will live and work with the African problem, who will see the African problem in its creative aspect ; men who by living with the problem will see the issues arising out of it at all levels—sociological, cultural, technological—who will study the techniques concerned with health education, community training and management on the part of the Natives, and so on, even if it takes twenty-five years. Many problems are involved ; the Colonial Office is going into the problem of the development of native communities within the tribal pattern ; other administrations are concerned with uprooting them in industrial Colonies ; still others are uprooting them altogether and putting them in great cities—whether it be in Capetown or in Detroit. I am going to ask you to consider in this country the creation of a " School on the Colonies ", for all these separate efforts to be brought together, where we can mobilize and integrate a body of knowledge, not only in respect of colonial development but in respect of relations between all the creative arts and experimental forms of the colonial problem. We want in this school, not only the experience of the Colonial Office and the creative achievements in education and other fields of the Colonial Office, but also what is being done elsewhere on this large problem.

The second project, I think, must be the very considered and very ambitious development of the Colonial Film Unit. It should not be developed as a British Unit, but as a Unit with much decentralization. It is not a question of just making a film for Africa, or of bringing films out of Africa for the people here to see. It is a question of working with Africans, for the creation of a genuine African Unit working with other Colonies, so that they may have a genuine native Unit themselves. It is a question of sending out experts to teach Africans the technical processes involved and also of giving scholarships to bring Africans to England so that they may have the benefit of our technical experience here at home, and not only here, but in other countries that have advanced in the technique of the film and the filmstrip, and not only in these, but in all those other forms of simplified teaching of a visual sort which are developing at a great pace to-day over the world. This involves, it seems to me, the founding of a school of film experiment, related not only to our Colonies, but to the African problem as a whole, where we can study the techniques that have been evolved. Above all, we should have a great concern for the psychological problems involved in the making of films in this particular field.

To sum up : The first of my propositions is that the heart of the matter lies in the subject-matter ; secondly, that appropriate machinery should be created in the form of (1) a School on the Colonies ; (2) the development of the Colonial Film Unit with true regard for decentralization and the part Natives will play in it ; (3) the creation of an African School of Film Experiment. This seems to me one of the priority problems of Britain, as it is one of the greatest privileges before the younger generation of British men and women to-day.

Educational Policy in Nigeria

[In 1944 the Nigerian Government published a Ten-Year Education Plan, S.P. No. 6/44, with the comments of the Advisory Committee on Education in the Colonies on the plan. The plan has been replaced by a new comprehensive statement of policy which has received the general approval of the Secretary of State for the Colonies, S.P. No. 20/47. Abridged extracts of the chapters on " Local Education Authorities " and " Secondary Education " are reprinted below.]

Local Education Authorities

INCREASED educational facilities cannot be provided with advantage except with the active co-operation of the communities concerned. The stage has been reached at which popular education will cease to be popular unless the communities concerned have a measure of control : and popular share in the control depends on the creation of some machinery of local government. It is recommended, therefore, that Education Committees be established in each Province with the avowed object that they should become Committees of " Local Education Authorities " in the technical sense of the term. It is proposed that responsibility in respect of primary education be entrusted to these bodies and that in time they should develop into administrative bodies. Such a development will require careful watching and the gradual delegation of administrative functions

will depend on the extent to which these bodies can accept responsibility.

Education Committees of the type contemplated have in fact developed in the Western Provinces during the past eighteen months and much useful work has been accomplished. They have dealt with such matters as the location, opening and closing of schools, the provision of playing-fields, the organization of handicraft and other exhibitions, and the problem of children's health with particular reference to nutrition. It is already clear that these Committees have been welcomed by the people and that they have come to stay.

The Board of Education (Colony and Southern Provinces) when considering the emergence of these Committees, advised that they be encouraged and strengthened by official recognition and the assignment of definite duties. It was recognized, however, that the competence of these Committees would vary considerably and, accordingly, it was considered that those which desired official status and were judged by the Director to be efficient should be recognized by Government. It is recommended that at the outset the duties of these Committees should be :

(*a*) To make plans for the progressive development and comprehensive organization of primary education within the area for which it is appointed, in co-operation with interested persons or organizations, and to implement their plans to the best of its ability.

(*b*) To examine notifications of intentions to establish primary schools and to make recommendations on such applications.

(*c*) To advise on the expenditure of such funds as may be available for the support of primary education and for the furtherance of other approved educational purposes, and generally to supervise the expenditure of such funds.

(*d*) To make themselves familiar with the social services performed by Government Departments and by persons and organizations working in the area ; and, through the schools in the area, to co-operate with them in the furtherance of their work, in particular where such work is concerned with rural community education.

The establishment of these Committees in no sense cuts athwart the principle that the formulation of educational policy and the ultimate control of education in all its branches is a responsibility of the Central Government acting on the advice of the Department of Education. This includes all such matters as the determination of general policy, the approval of the types and numbers of schools to be established, of the subjects to be taught and of the qualifications of the teachers, and it is the responsibility of the Department of Education, through its supervising officers, to ensure that the policy and regulations approved by Government are carried out. This assumption is the basis of everything that is said in the following paragraphs on the subject of devolution.

The view is held in certain quarters that the revenues of the Central Government available for education can with advantage be supplemented by local contributions, and that only through such contributions can adequate funds be assured. In regard to the general question of local contributions for the support of education, the Secretary of State has indicated that these should be regarded as supplementary to the provision of funds from central revenues for primary education and not as an alternative means of meeting its cost, and that as a corollary a sufficient sum should be reserved out of the general revenues for primary education to enable it both to stimulate and help education as may be required in backward districts where, in many cases, adequate provision from local funds would be impossible. Where local contributions are made for education there arises, sooner or later, a local demand for a share in the administration of these funds. What has been said earlier in this section demonstrates that the encouragement of local interest and initiative in education is in principle desirable. In practice, local participation in education in the tropical African Dependencies takes two forms : (*a*) the maintenance, which may or may not be combined with management, by Native Authorities of schools supported in whole or in part from their own funds, or (*b*) responsibility, great or small, but in any case subject to the ultimate control of the Department of Education, in relation to all schools of a specified grade, *e.g.* primary schools in a particular area, including aided schools, as well as schools maintained by Native Authorities. It has already been recommended that policy in Nigeria should foster the second kind of participation.

The position of the Native Authorities in the proposed new organization requires some explanation. The co-operation by Native Authorities in the management of schools maintained from their funds is a useful instrument for the development of local initiative. But it is more than doubtful whether such co-operation can be regarded as the sole or the chief mode of satisfying a local demand for participation in education to which a local contribution is made. The emergence of two separate systems of primary schools in a district, the one maintained from local funds and the other assisted by grants in aid from the central revenues, must inevitably give rise to difficulties.

It is suggested, therefore, as preferable that local interest in primary education should concern itself with the primary education of the locality as a whole, including aided schools, which along with schools conducted by Government and the Native Authorities are meeting the educational needs of the locality. This points to the need for the development of a Local Education Authority as already recommended, constituted in such a way as to be able to take an impartial and external view of primary education as a whole, while keeping in close touch with the authorities responsible for Government-aided and Native Authority schools respectively.

It has been recommended that at the present stage of development funds contributed locally can best be administered by a body exercising powers delegated to it in a specified grade of education. Clearly the Native Authorities which contribute to its funds should be adequately represented on that body. But it is no less essential that any body concerned with educational administration should include expert educational knowledge and that, in so far as its responsibility extends to schools conducted by voluntary agencies, the management of these schools should also be represented. Certain objections to this recommendation that funds contributed locally for education should be administered by an *ad hoc* educational body may be noted. The first of these is the possibility of a reluctance on the part of the Native Authorities to allocate funds to such a body, and the second is that, if Africans are to be trained in self-government, it is essential that any responsibility with which they are entrusted should be real and not sham : it is not, in other words, desirable that African initiative and ideas should be submerged in a body dominated by the views of European officials and missionaries. It is suggested that the first of these objections would be met by adequate representation of the Native Authorities on the educational body. As regards the second, it is not considered that Nigerian opinion is incapable of effective expression in a body which includes Europeans : indeed, it is only through such an association with expert educational opinion and with those at present responsible for the conduct of education in Nigeria that Africans can be progressively educated to that control of education of their own race which must be the ultimate goal of policy.

It has been recommended that Local Education Authorities should concern themselves with all primary education within a district, including the schools maintained by the voluntary agencies. If the latter are to receive aid from Government or Native Authority funds they must be prepared to conform to policy, to take account of local educational needs, and to attain a reasonable standard of efficiency. On the other hand, these schools are in many cases meeting educational needs which cannot so effectively be met in any other way, and their encouragement and improvement in such cases is the most economical and advantageous use of public funds. The establishment of the Local Education Authorities already recommended, in which representatives of all interests can meet together and discuss in common the educational needs and problems of an area, is thought to be the best means of bringing about an understanding between African opinion and the voluntary agencies engaged in education in the area. Such an understanding is of the highest importance if the best and largest use is to be made of all available resources.

Finally, it is recommended that expansion in the sphere of primary education should be conducted according to a planned scheme approved by the Local Education Authority and that grants to the voluntary agencies should be dependent on their conforming to such a scheme. Such control is essential as a safeguard against the dissipation of educational effort.

Secondary Education

The main principle asserted in the sphere of primary education is that of devolution. Education services which affect the whole territory, such as secondary schools and teacher training, should be planned from the Centre. Local services, *e.g.* junior primary education, should be entrusted gradually to Local Education Authorities. There is nothing revolutionary in this proposal: if there is an innovation it lies in the strengthening of the local bodies and in the addition to their powers and responsibilities. In regard to planning from the Centre, co-operation between Government and the Churches must be considered from a rather different angle. If this co-operation is to develop to the full it must be in terms of the future and not of the past.

Elsewhere, in conditions applicable to large areas in Nigeria, the problem has been posed in the following terms:

"Now both Governments and Missions in the African Dependencies are in their present form temporary expedients, with their own disappearance as their major task. It is settled imperial policy that the main object of Colonial Governments is to bring about conditions in which self-government within the British Commonwealth becomes practicable; it is implicit in the nature of a mission that it must fail or achieve its object, and success involves the growth of an autonomous Church in a country in the place of the mission from abroad from which it has grown. When, therefore, these temporary agencies in Church or State plan to co-operate in development, they must try to get a vision of the society and government which are likely to come into existence and to fit their plan to that. This means that account must be taken of such things as the growing authority of the Government of the dependency in relation to the British Government at home. Its main relevance to our problem is that there must be an increasing reliance for support on public opinion in the dependency, rather than on authority in the United Kingdom."

". . . These rather general observations seem to lead to the conclusion that in some respects there must be a change of outlook on both sides if Government and Mission are to co-operate fully for African development. Hitherto co-operation has taken the form, in most cases, of assistance by Government in the form of grants of money for buildings or current expenditure, generally for schools but also for hospitals, maternity centres, agricultural training and a few other things. The institutions receiving help have remained completely the property of the Missions, and there was often apparent a pronounced determination that it should always be so; and a great part of the money for them came from supporters of the Missions in Great Britain and elsewhere outside Africa. For several reasons Governments cannot accept that position for the future; in the first place, public funds cannot properly be used to build or develop private property, property which in theory at least could be disposed of by its owners for purposes other than those for which the Government had made grants. Then there is no escaping the fact that contributions to Mission funds from abroad will probably diminish, and that even if they remained at their present level they would not suffice for the vast needs of the days to come. There is a more serious difficulty; if it is agreed that Mission and Government institutions and activities ought to be complementary and not either competitive or, anyhow, duplicate, it follows that in each area and for each purpose there should normally be only one institution. Unfortunately some sacrifice of this important principle is unavoidable on account of denominational difficulties, but as a general rule it must be accepted. A Government must therefore either duplicate the facility from public funds or come to terms with the Mission for a genuine co-operation, which must involve some diminution of the property rights of the Mission, and of the dependence of the service to be rendered upon benefactions from abroad."

An illustration is the agreement recently reached in Uganda for the development of secondary schools, an agreement which may well be extended in other directions. By this agreement selected Mission-owned schools are to be placed under Boards of Governors nominated partly by the Bishop or other head of the Mission and partly by the Governor; the nominees of the former are to be in the majority, and there is provision to prevent the nomination of unacceptable persons. The property of the school will vest in trustees (normally the Board of Governors), and the general management of the school—subject to the law, of course, and any special conditions that may apply—will be the responsibility of the Board. Revenue will be derived from fees, grants from local authorities, Mission contributions, bequests or gifts; and the balance of what is needed will be guaranteed and made up by the Government. There are arrangements for co-operation in selection of staff and for the maintenance of staff conditions of service at a level which will ensure its quality and provide adequately for superannuation. It is the avowed intention of this arrangement that the schools should by co-operation of Missions and Governments evolve into autonomous foundations, with a strong attachment to the society from which they have sprung, and to a great extent under Church influence, but that they should no longer be the private property of the Mission, nor become State-owned institutions.

There is, it is true, another method beside that just described, and it has many adherents. These say that the day of the Mission is over; for better or for worse the Mission has been fulfilled. Some claim success, others admit failure. But all of this way of thinking agree that the time is come to take educational and medical work and things of that kind into hands of Governments. There is often some reservation in respect of the more arduous and unpleasant tasks, such as the management of Leper Settlements; but the general proposition is as stated.

Particularly in matters of education and medicine the fact has got to be faced that much modern opinion is strongly in favour of State services. It is indeed widely assumed that among the first duties of Government is the duty to establish these services directly under the State. That being so, it is obvious that something more than history, sentiment or mere assertion must support the view that Missions have a valuable—or an indispensable—part to play in co-operation with Governments for colonial development; and clearly an attempt must be made to state what it is.

What, then, is the case? Surely, first and foremost, that ours is a Christian civilization and that we know and can pass on to others nothing else. Now it is true, as we have seen, that we have unhappy differences among ourselves on denominational questions; it is also true that there are wide differences of opinion as to the place of institutional religion—clericalism if you like it better—in modern civilization; but there can be no possible question about the origins, evolution and foundations of what to-day we call civilization. This civilization is a joint product of Church and State, and if it is our mission to carry it to the peoples of the Dependencies we surely have no right to try to do so without adopting the same full co-operation as has existed from very early times in our own country, and which indeed exists to-day to a very much greater extent than is sometimes realized. We are naturally inclined to neglect the historical approach to problems of this kind, and to look at Africa as if its problems were those of the twentieth century in Britain; to forget, indeed, that in Great Britain we have built a house, even if it is far from perfect, while in most of Africa we have hitherto done little more than to start clearing the site; in the most advanced Dependencies we can perhaps claim that we have begun to lay out the ground plan.

The case, then, for co-operation between Governments and Missionary Societies is this basic one—that our civilized society, the moral and spiritual values, the liberty, justice and security are products of a full and whole-hearted co-operation in the past between Church and State, and that we know no other means of producing these ends. We have, therefore, a duty to the African peoples committed to our charge—to bring to the problem of their development the same methods and forces as have produced our own, unless, indeed, we are to write off the whole of our own civilization as a ghastly failure. The principles enunciated in the passage quoted have been referred to the Board of Education and have met with general approval. It is recommended, therefore, that in estimating for the future, account be taken of the likelihood that certain societies will desire, at no distant date, to enter into full co-operation in the manner proposed, while others will prefer to postpone the process. In the case of the former it is suggested that the balance between fee and other income be met by the Central Government; for the latter, a continuance of the present grant-in-aid principles is suggested as an interim measure.

In paragraph 29 of the Advisory Committee's commentary, the attention of the Nigerian Government is invited to certain paragraphs in a recent Report of the Gold Coast Education Committee

(1937–41) which is considered descriptive of the situation as it exists in West Africa. The relevant paragraphs include the following summary :

Many criticisms have been made of secondary education as it exists to-day ; these may be summarized as follows :

(1) The aim of general secondary education is still interpreted in many quarters in a narrow and almost exclusively materialistic sense, and bears little relation to the needs of the country.

(2) The present facilities for secondary education are inadequate.

(3) The existing facilties for secondary education are in danger of creating unemployment.

(4) There is no provision for the control of secondary education.

There is general agreement that these criticisms are applicable to Nigerian secondary schools. In considering this local problem the Gold Coast Committee recognized that the curriculum of the School Certificate Examination, influenced as it is by the desire to obtain Matriculation Exemption, enforces on a very large majority of the students a type of education which is designed for the small minority who subsequently proceed to higher studies. It was proposed that a Curriculum Sub-Committee be appointed and augmented as occasion demands by the addition of members of secondary school staffs and that, thus reinforced, it should survey the whole School Certificate Course, seeking the expert advice of specialist teachers of particular subjects when necessary. A similar procedure is recommended for this territory.

In giving our own estimate of the position of the School Certificate Examination we would remark first that some of us have been intimately associated with this examination from early days and have had opportunity to observe its influence at close quarters. In the last twenty years the examination has rendered useful and valuable service under the skilful and devoted labours of the University Examining Bodies. At a time when the rapid expansion of secondary schools caused uncertainty about standards in the different subjects of the curriculum, when newly recruited teachers bringing with them little tradition and little experience were in doubt about aims and methods, syllabuses and curricula, the programme put before them in carefully devised regulations exerted a steadying influence, gave a sense of direction, defined levels of achievement and helped in no small measure to establish secondary education on a sure and sound basis. To the beneficial influence of the examination in past years we wish to pay sincere tribute.

Yet its very success has tended to bring about its progressive disintegration. Rapidly winning recognition on all hands, the Certificate awarded on the examination has gathered more authority and more significance than was ever intended at the outset, till it has become a highly coveted possession to every pupil leaving a secondary school. As the curricula of schools have widened to meet the needs of a secondary school population rapidly growing more diverse in ability and range of interests, the original structure of the examination has changed. Subjects have necessarily been multiplied, whether susceptible to external examination or not ; rules which were framed to give a unity to the curriculum tested by examination have been relaxed. Secondary education has become too varied to be confined within a rigid scheme. In the early days a scaffolding was needed for the building of secondary education ; and there was some justification for examinations dictating curriculum. But secondary education has passed through its early phases ; it can stand alone, and already finds the framework which supported it to be a barrier preventing growth. The examination in its present form is having a cramping effect upon the mind of teachers and pupils. On this our evidence leaves no room for doubt. A substantial volume of evidence comes from teachers who are generally satisfied with present arrangements, and regard external examination as a necessary part of a school education. Notwithstanding this evidence we affirm our belief that the time has come when the teaching profession should have the chance to shoulder its own responsibilities and thereby gain its freedom and enhance its prestige.

Nor are we convinced that the attitude of employers and professional bodies is as favourable to present arrangements as is sometimes represented. We have been at considerable pains to gather opinions from both. We have been much impressed with the widespread dissatisfaction with the present School Certificate taken by itself as a credential for employment ; it does not tell the employer what he wants to know about the applicant for a post ; he demands it in default of any more revealing document. He would prefer a statement which would tell him more about the boy or girl as a human being rather than as an examinee, and this statement would be supported by the evidence of the record of the school career expressed in terms which would carry their own meaning. That firms and business houses should press this need upon our attention seems to suggest that neither the School Certificate nor at present the Headmaster's letter tells them what they wish to know about an applicant.

The same attitude is manifested in considerable measure by professional bodies. Again the plea is that they can gather little about the entrant from the Certificate. They accept it as an indication of " general education " and ask for proficiency in particular subjects which are of special concern to them ; but they want evidence which reveals more about the candidate, and regret the tendency to assume that the possession of a Certificate in itself constitutes fitness for entry to a profession without regard to other qualities which an examination cannot assess.

A further recommendation is that it should be the avowed object of Government to abolish, as soon as possible, the system whereby the passing of the School Certificate is regarded as a qualification for entry to the Government Service. This recommendation is not to be regarded as implying that candidates who wish to take this examination should be precluded from doing so : but it does imply that a full secondary education should include one or more post-School Certificate years.

The urgent need for the improvement and expansion of secondary education has already been demonstrated. To be effective, however, this secondary education must be fuller and more effective than that which is now given in the generality of Nigerian schools. During recent years there has been an insistent and growing public demand for more secondary schools, but it is very doubtful whether those who voice this demand understand what a thorough secondary education means. There are good grounds, therefore, for paying heed to the warning given by the Secretary of State's Advisory Committee in paragraph 30 of their commentary on the " Ten-Year Plan " that there is danger in uncontrolled increase in the number of secondary schools because of the risk of their growing up with narrowly restricted and generally unsuitable curricula and thus perpetuating existing shortcomings. The Advisory's Committee's advocacy of a system of control to prevent the mushroom growth of undesirable schools is to be recommended.

In an adjacent Colony the following measures of control have been considered desirable :

(1) No persons or body should be allowed to open a secondary school without the previous consent of the Director of Education.

(2) All secondary schools should be registered.

(3) The Director of Education should have the right to close those schools which have no possibility of sound development.

(4) No financial assistance from public funds should be given to any secondary school which has not a responsible managing body, the constitution of which precludes the possibility of personal gain.

(5) The accounts of secondary schools receiving financial assistance from Government should be submitted to the Director of Education after being audited by an approved auditor.

It is advised that these measures be incorporated in a new consolidating ordinance which will be necessary if effect is to be given to these and other recommendations, and that in the exercise of his powers under these measures of control the Director of Education should act in consultation with the Central Advisory Board, the creation of which is advocated in another section of this memorandum.

The appointment of the first non-European district officer in East Africa has been gazetted. He is an Arab, Sheikh Salim Mohamed el Barwani, and his new post is District Officer of Zanzibar. This post will in future always be given to a Zanzibari. (*The Times*, May 6, 1948.)

8. NIGERIAN WAYS OF LIFE

Tomorrow, cinema goers in London will be able to see Challenge in Nigeria, number 19 in the series: "This Modern Age" news magazines produced by the J. Arthur Rank orgainzation. It is a documentary film and it presents Nigeria as a country as large as Italy and France put together, and a country whose population has doubled in the last 50 years of peace. Beginning with the Hausas in the north, answering the Moslem call to prayer, the film shows, in turn, the Pagans of the Jos Plateau, the Ibos and the Yorubas.

W. Africa, May 29, 46

It is a challenge, because it does not dwell much on the life of the city dweller, except to comment that one in every three of the houses in Lagos has been condemned; but harps on the disease and poverty of a country with great resources.

prisoners during the Gold Coast riots. Two African warders (Mr. Jordan Oku and Mr. Tom Arrim) have been awarded the British Empire Medal for bravery on the same occasion. The citation states that, on February 29, nearly 600 prisoners mutinied. Mr. Hutchings, who was at home at the time, forced his way through a hostile mob outside the prison. Inside, the prisoners were completely out of hand and the Superintendent took charge of the 30 warders. He insisted upon peaceful methods, although "the situation was such that he would have been justified in ordering the use of firearms." Later, when the gates of the prison were forced by the mob outside and 200 convicts were released, Mr. Hutchings fought his way to the gates and succeeded in closing them. He was also successful in recapturing 50 prisoners. Until joined by the Deputy Director of Prisons, he was the only officer in the prison for three hours. Assisted by the Deputy Director of Prisons, he continued his efforts to bring the prisoners under control and, after eight hours, was successful. The citation says the two African warders went among the prisoners at great personal risk to persuade them to return to their cells.

sentatives from the colonies. We should have a real colonial conference of a new type. It seems to me that a conference of that type would bring a new life into colonial affairs.

Mr. W. Fletcher: In what language?

Dr. Haden Guest: The language of that conference would undoubtedly be like the language of the Asiatic Conference in Delhi this year; it would be English, because English has become an international language. I think that we could at such a conference discuss methods, not of introducing industrial revolution by slow stages, but of avoiding industrial revolution. There is no reason why any colonial people should go through the horrors that have devastated Lancashire and Yorkshire in order to create wealth (Interruption.) Oh, yes, Lancashire and Yorkshire. I have lived there. There is no reason why we should not skip the interval between the primitive conditions in many of the colonial areas and the Socialist conditions in which undoubtedly they will be in the future, under our guidance if we are wise, with our co-operation if we are wise; but against us and by independence movements if we are not wise. I urge the calling of such a colonial conference as a first-class measure of statesmanship which, I believe, will signalise a great advance in our Labour Party policy.

Ten Thousand Residence for Bo

The proposed residence of the Chief Commissioner at Bo was the subject of another question from Mr. Sorensen. In view of the need of financial expenditure on education and social services in Sierra Leone, he asked why it was considered necessary to devote £10,000 for the proposed residence. In view of the fact that this proposal was endorsed only by the official majority in the Legislature, would this expenditure be reconsidered?

Mr. Creech Jones: A house for the Chief Commissioner is necessary because the Protectorate Administration has recently been concentrated at Bo and no suitable quarters exist there for this officer. I am asking the Acting Governor for a fuller report on the estimated provision, but my hon. Friend will understand that there is little difference in the cost of building in this country and in West Africa,

Fab 48

and that this house is more than a private residence and must be of a type to enable the senior British representative in the Protectorate to meet his official and social responsibilities. According to my information, the provision was opposed by four only of the ten unofficial members of the Legislative Council. It was supported by all the Protectorate unofficial members, and the matter was not taken to a division.

Building is Necessary

Mr. Sorensen: Does not the Secretary of State feel that the spending of £10,000 on this particular structure, while so much is denied to education in Sierra Leone, strikes the public as rather cynical?

Mr. Creech Jones: The building is necessary, and I am inquiring into the cost.

Dr. Segal: Is it not a fact that this expenditure can be justified only if it leads to much wider economic development?

Mr. Erroll: Does the right hon. Gentleman realize that accommodation at Bo is very primitive for British officials, and an improvement is urgently necessary?

42/90/258

whole conception of Empire. If the Commonwealth ... to stand aside, even in thought and speech, Dr. Malan threatens it with secession.

Interest in Wiring Problems

THE interest of British electrical manufacturers and contractors in West African technical problems is shown by an article in *The Electrical Review* (Britain's leading electrical journal) entitled: "Wiring in West Africa." The writer, Mr. G. M. Dunbar, points out that methods of domestic wiring acceptable in Great Britain would be unsuitable in West Africa because of climatic conditions and general building methods being so different. The domestic load may vary from two or three lights in the average African house to a load of lights, fans, kettles, refrigerators, water heaters and cookers in the better type of African and European houses. As there is no cold season, provision for heating other than water heating is seldom made.

ARY FOR AFRICA

sity" says Ivor Thomas

ORRESPONDENT.

an average of £74 per head. If the population in British Africa increased without a corresponding increase in production, the total wealth would be halved and the revenue per head would be ten shillings.

An economist had stated that capital investment in Africa up to 1936 was £1,122 million. Of this, £523 million had gone to the Union of South Africa and £102 million to the Rhodesias. Up to 1936, there had been only £241 million invested in the eleven British African territories. At least seven times the present investment in Africa should be made. These developments would increase the responsibilities of the Secretary of State.

problem again, particularly to the experiments now taking place and which appear in the Colonial Report just published.

There is a vacuum, a mental need, which is being created among the new literates in Africa. I emphasised a year ago that if measures were not taken to satisfy this new mental need, it would be satisfied by immoral literature and by an African yellow Press, which is in itself immoral. If there was any truth in that assertion a year ago, there is more truth in it today. I would appeal to the Colonial Secretary to deal effectively with this problem before it is too late. No one would wish to see a further spread of the yellow Press in Africa; nor would any of us wish to see the appearance in Africa of those pornographic advertisements, which have for so many years characterised the Indian yellow Press, reproduced perhaps a millionfold in Africa as a principal influence on African minds.

I ventured a year ago to advocate certain measures to safeguard the untutored African mind from immoral, degrading and seditious influences, and I am confident that the Colonial Secretary will deal with this matter with sympathy and interest. I, therefore, ask him bluntly this question: Is he now prepared to increase substantially the paper allowance for the Christian mis[illegible]

the Reciprocal Trade Agreements Act and the British Loan a majority of Republicans in both houses voted "No."

The disagreement between the two parties has been deeper and more consistent on foreign trade than on

In peace-time, West Africa is the natural entrance to the African continent for traders and travellers from the United Kingdom and the Americas, whether they come by sea or by air; and for ordinary aircraft from the Americas there will always be great advantage in the overland route via South America leading to the shortest ocean "hop" from Natal to West Africa.

Thinking strategically, in terms of the defence by the Western Democracies against aggression from Europe or from the East, West Africa must be regarded as a vital base, subsidiary to a main

in considering the matter.

Destroyed Houses Crucial

Mr. Nesbitt said without relying on the 1940 declaration in any way, their lordships could find that the respondent was entitled to possession on the evidence put forward in the case. This established that, in 1916, the Chiefs of Nobi and Agulu marked out the boundary between the lands of the Orokwu and the Adazi, the Umuori being south of the road entirely at that time.

In 1938, the Adazi ceded certain land to the east of the boundary to the appellants. It was then the respondent's case that three or four years before the present action was brought, the Umuori had crossed the boundary fixed in 1916 and occupied the green land.

Lord Simonds: How many acres does the disputed land contain?

Counsel: Not more than 160.

One of the main issues of fact at the hearing, remarked Mr. Nesbitt, was whether the houses destroyed by the Adazi were or were not on the green land.

Lord Simonds said it ought to be possible to prove convincingly where the destroyed houses were. That matter might be very crucial.

Specially Reported for WEST AFRICA—*Copyright.*

JUDGMENT was reserved by the Judicial Committee of the Privy Council on January 29, in an appeal concerned with the right of the tribe of Umuori to retain land at Onitsha, Nigeria. It was brought by special leave by Victor Maduka, Ofafor Moka and Onwuzulike Agwu, all of Umuori, from a judgment of the West African Court of Appeal dismissing, with costs, their appeal from a judgment of the High Court of Enugu-Onitsha Judicial Division in favour of the respondent (plaintiff in the action), Ezeodimegwu on behalf of the late Chief Aboh of Orokwu.

Mr. S. Cope Morgan, K.C., appearing with Mr. F. Howard Collier for the appellants, told the Board (Lords Simonds and Morton of Henryton, and Sir Madhavan

WEST AFRICA AT WESTMINSTER

Statement on Gold Coast Riots

FIVE questions were asked in the House of Commons last week about the Gold Coast riots. A statement was made by Mr. Rees-Williams, at the end of question time. After stating that a satisfactory measure of law and order had been restored, he continued: "I am very glad to say that the attitude of the Chiefs and Native Authorities in the Gold Coast has throughout been most helpful. They have publicly expressed their disapproval of the rioting and have exercised their authority to urge restraint on their people and cooperation with the Government in the measures which it has taken to restore order. The senior unofficial member of the Legislative Council, on behalf of his

Several hundred Abeokuta women, led by Mrs. Ransome Kuti (one of NCNC's delegates to London) invaded the presincts of the Alake's Palace, demanding removal of taxes on women's incomes and release of women jailed for non-payment; Alake hurriedly summoned Chiefs to his assistance and the women were finally persuaded to leave upon promise of immediate consideration of their complaint; demonstrations continued intermittently for two weeks, finally ceasing without recourse to force, in face of the Alake's firm stand to adhere strictly to the tax law.

March 1948

and shins of the miners working in Nigeria; and within a year of his recommendation asking that protection should be given, the mortality rate among the Native miners, who sometimes live ten to 20 miles from the mines, was reduced by 50 to 75 per cent."

He maintained, with regard to the Colonies, that the Colonial Office should be the main factor, and the whole basis of these schemes should be concerned with bringing in all the small proprietors in the country from the point of view of production, organization and marketing. The schemes should be based on cooperative ideas, cooperative trading, and cooperative production.

Little Englanders

Dr. Segal who visited West Africa as a member of a Parliamentary Delegation in 1947 said: "It is pathetic to see the once great Imperial Party, not only great in numbers but great in its conception of Imperial policy, now shrunk to the miserable state of a small band of Little Englanders. Cannot we develop a far greater conception of the significance of our Colonial Empire and the whole future of our Colonial peoples? Cannot we broaden the interests not only of the Secretary of State for the Colonies, but every single Government Department so that, in the future, they will take a deep interest in the development of our Colonial Empire? So far from this being a new development, from which we should run away and of which we should fight shy, it is a development which we ought to do our utmost to encourage, not only in the interests of the Mother Country, but also in the interests of the Colonies themselves. The Colonial people get sick and tired of seeing the emissaries of the Colonial Office making their trips to Colonial territory with some new idea or because of a nationalization scheme proposed by the Government. They want, for a change, to see the emissaries of the Ministry of Food or the Board of Trade or the Ministry of Supply. Why not? Let us forge all the more closely the links which bind our Colonies to the Mother Country. Let us see to it that it is not purely a one-way traffic, which tends to be caught in a development bottleneck, but a two-way traffic developing broadly along vast new avenues of Imperial policy. So I would appeal to Members opposite to discard the ideas of the Little Englander."

Do They Pay Good Wages ?

Mr. Strachey said: "We believe that the real point of the Amendment we have before us is to exclude from my right hon. Friend his right to invite the Overseas Food Corporation to come into any Colonial territory; and the reason why there is this discrimination is unquestionably because this is a public Corporation under public ownership. We object to this particular Overseas Food Corporation being excluded by Statute from operating in Colonial territory should the Colonial Secretary of the day, in his wisdom, invite it to do so. There is no more to be said on this issue than that."

"We honestly do not believe," said Mr. Strachey, "that there is anything in this psychological question. What, in fact—I will not use the word 'reconcile' for I do not think they need reconciling—will commend these schemes to the local inhabitants of the areas in which they operate is that it will not be a question of a large corporation operating or that a Ministry is ultimately responsible, but it will be a question of how they are run. Do they pay good wages? Do they give good conditions and are their medical services good? That is how every inhabitant of the area will judge these schemes. That is the real issue."

Colonial Secretary's General Responsibility

Mr. Creech Jones, who moved the third reading of the Bill, said: "I would like to assert, with all the emphasis I can, that this Bill is as much designed for the purpose of meeting the needs of the world as it is for meeting the special needs of the Colonial peoples. By that, I mean that it is imperative today, if the Colonial peoples are to go forward in attaining that standard of living, in reaching a higher stage of social development, and in enjoying the social services they demand, that their economic resources should be fully developed. This Bill will give some assistance in making Colonial economics more stable, in encouraging enterprise and in increasing the number of economic activities possible in the territories. At the same time, the Bill will minister to the needs of Europe, and of our own country in particular. I think that, arising out of it, there will be a closer integration of economic interests because of the mutual benefit which the operation of this Bill will bring.

"I have no apprehension that, because the Bill provides for an Overseas Food Corporation, we shall be diverted, as a nation, from our main purpose of building up Colonial standards. The Secretary of State for the Colonies, answerable to Parliament, will still carry a general responsibility in regard to the whole of the economic development of the territories under his immediate control. It will be his duty and his responsibility to see that, whether it is the Colonial Development Corporation or the Overseas Food Corporation which is functioning in these territories, reasonable and proper standards are maintained, and that their activities fit in with the general economic plan of development of the territory concerned. It will be his special responsibility to see that reasonable standards are maintained and, also, that the Corporation only functions with the understanding and consent of the local government and of the people involved."

No Flattery

Mr. Stanley who, in saying goodbye to the Bill at this stage, wished to both Corporations the greatest success in their work, said that he accepted entirely the assertion made by the Secretary of State for the Colonies that he approached this Bill, and the operations under the Bill, in no selfish desire merely to benefit the people of this country, but to bring benefits to the Colonial Empire, to this country —and why not to this country?—and to the world at large. "I am not in any way," he said, "flattering the right hon. Gentleman when I say that, whatever differences we may have had in the past and, no doubt, will have in the future, he has gained a reputation for sympathy with the Colonies and with Colonial objectives that make an assertion of that kind, coming from him, of particular value."

By Hook or by Crook

Mr. Strachey, who thanked Mr. Stanley for his helpful remarks in launching what is a national series of enterprises said: "Our national position is really too grave to warrant any indulgence in our particular opinions on the methods of overseas development. I should like to end this discussion by striking this note, that by one means or another, by hook or by crook, the development of primary production of all sorts, in the Colonial areas, Colonial territories and dependent areas in the Commonwealth, as well as generally throughout the world, in far more abundant quantities than exist today is, it is hardly too much to say, a life and death matter for the economy of this country.

"We know that this Bill cannot, with the resources which we can spare for this particular purpose, do more than make a contribution to that vitally important end which, for this country and for other highly developed industrial countries in the world, is of such tremendous importance. It is a contribution which we can make, and we believe that it may set an example to other countries with resources which might join in one form or another with us in the development to the greatest possible extent of primary production throughout the world. That is really the great world need today; and in establishing that new instrument for that purpose, we feel that we are serving well the cause not only of this country, but of all the consumers and producers throughout the world."

Messrs. Staveley & Co. Limited, associate of Bartholomew (London) Limited have recently delivered a Humber Pullman limousine to Nana Ofori Atta II (the Omanhene of Akyem Abuakwa).

OVERSEAS PRODUCTION LIFE AND DEATH MATTER FOR BRITAIN

Development Bill Will Make Contribution

SEVERAL minor amendments to the Overseas Resources Development Bill were moved and agreed to during the third reading in the House of Commons last week. The House divided and decided against a Clause by Mr. Stanley that "His Majesty in Council may by Order direct that any project formulated or which is being carried out by the Overseas Food Corporation shall be carried out by the Colonial Development Corporation instead of by the Overseas Food Corporation, and such Order may provide for the transfer and vesting of any property and for any matters incidental to or consequential upon the transfer of any project as aforesaid." Voting was 252 against and 133 for the clause being read a second time.

Mr. Strachey (the Food Minister) said it would be most unlikely that it would be practicable or wise to transfer schemes, after they have been in operation for some years, from one Corporation to the other. "This Corporation," he said, "will become a large organization with an expert staff and a fund of expert knowledge in that particular part of the world. For this Parliament, or the Government without Parliament, by Order in Council to transfer schemes from one Corporation to another would be a most unwise thing to do."

Division of Power Wrong

Dr. Morgan, a Labour M.P. who hoped the House would accept Mr. Stanley's clause, said he believed that all things concerned with Colonial development should be in the hands of one Minister. It was true that the Minister of Food argued in Committee that he wanted to have power to deal in Dominions in which the Colonial Secretary was not concerned. A special Bill could be brought in for that purpose; but dividing power between two Ministries to deal with any matters concerning Colonies, as in this Bill, seemed to be quite wrong unless it was done in such a way that one Department is subservient to the other and the Bill gives the Colonial Secretary full control over anything happening in a Colony. He had representations from most Colonies—certainly Africa and the West Indies—and the unofficial opinion there was that the Secretary of State should have the power to act and not the Ministry of Food which was regarded as a permanent Ministry under temporary conditions in Great Britain.

Sir Arthur Salter (Member for Oxford University) said that when the Government goes into a Colony, it should be quite obviously and unmistakably the Minister of the Government and the chain of official responsibility to the Minister of the Government, whose primary interest is the interest of the inhabitants, and not whose secondary interest is the interest of the inhabitants after a primary interest which is that of the inhabitants of this country."

By Invitation Only

An amendment moved by Mr. Dodds-Parker with the intention of limiting the activities of the Overseas Food Corporation to other than in Colonial territories was put to a division and was defeated by 243 votes to 106. Speaking against the amendment, Mr. Rees-Williams (Under-Secretary of State for the Colonies) said there was a safeguard against the intrusion of the Minister of Food into any Colonial territory in which the Secretary of State for the Colonies does not desire him to enter.

"He can enter only at the invitation of the Secretary of State for the Colonies and that invitation will be given only after consultation with the local government, the Colonial Government, and after full consideration by the Secretary of State of all the circumstances which have to be borne in mind. Therefore, the idea that the Minister of Food and his Corporation can gate-crash into Colonies where he is not desired, either by the local government or the Secretary of State, is just fantastic. It just could not possibly happen. He would not be able and would not wish to carry any such tremendous liability as he would incur, even if he did get people other than the Secretary of State to agree to his entering."

Speaking for the amendment, Mr. Stanley said: "In the whole working of Government, I do not think things will work out in quite the simple way which has been put before us, namely, that the Secretary of State for the Colonies thinks: 'Let us grow asparagus in Mauritius,' and then asks himself: 'Is this a thing I shall do myself, or shall I ask the Minister of Food in to do it for me?' and upon thinking it over decides finally: 'Well, the Minister of Food has such special knowledge of the growing of asparagus that I ought to ask him in to do it.' I do not think it will work that way at all, but in exactly the opposite way. The Minister of Food will say: 'We should like to have for this country a certain kind of foodstuff. I think we could grow that in such and such an area of the Colonial territory,' and he will go to the Colonial Secretary and put to him a scheme for growing that foodstuff. It may be that the Colonial Secretary, regarding the whole situation, may not want that particular scheme carried out in that particular territory at all. However, he will be asked to give his permission, and if he refuses, the final decision does not rest with the Colonial Secretary, but the matter becomes one for the Cabinet; two Ministers will be disagreeing on a point which will have to be settled by the Cabinet, and not necessarily at all in accordance with the views of the Colonial Secretary."

"I Do Not Believe"

"We are told," said Mr. Stanley, "the effect would be that there might be some cases where we should be deprived quite unnecessarily of the cooperation which we think the Colonial Corporation ought to have from the Food Corporation. Frankly, I do not believe that for one moment. I believe that, in pretty well any scheme which the Colonial Secretary wanted to start in a Colonial territory, he could get all the cooperation he wanted from the Food Corporation by the loan of one or two key men. It would not be at all necessary for the whole of this vast paraphernalia which has been described to us to become operative. We have been told how immense vested interests will grow up round each particular plan in the Food Corporation, but it would not be in the least necessary for the whole of that great army to march into the territory. One or two key men—who presumably would be loaned gladly from one Corporation to another—would, I think, give all the expert advice and cooperation that was needed."

Dr. Morgan said he was very unhappy about the Bill: "I have spent much time in the Colonies, seeing how people live, their disease, poverty, and destitution. I know something of their psychology, not from a brief visit, but from a study of many years, living among them, going in and around their huts, and seeing how they react towards certain problems. I feel genuinely unhappy that the Colonial Office is not to be the dominant factor in all this business."

Nigerian Example

"Some Socialists," he said, "think that because an enterprise is run by a Government it is necessarily well-run. The railways in Nigeria have been run by the Government for years. Are they good railways? The coal-mines in Nigeria have been run by the Government for years. Was there any attention paid to the diseases of the miners there? Is it not a fact, as the present Colonial Secretary knows, that there was a report from one of his officials during the Coalition Government, during the war, in which it was proved that no protection was given to the bare feet

SOIL SURVEY IN GOLD COAST

By G. F. CHARTER.*

WHILST most universities and agricultural institutes in Great Britain provide tuition in the analysis of soils by laboratory methods, none provides a comprehensive course in soil science designed to train men to distinguish between different soils and to map their distribution in the field. Soil surveys aim at providing an inventory of a country's soil resources, so that the right soils can be used for growing the right crops in the right way. Such surveys are essential to planned agricultural development and, with the present world-wide shortage of foodstuffs, few other things are of such fundamental importance.

Regarding the training of such staff, Britain is far behind others, such as the United States of America and Canada, for example. There, university departments of soil science have been established many years; and it is possible for students to take degrees with soil science as their principal subject. Considering the extent of the territories in the Commonwealth dependent upon agriculture as their main industry, the provision of similar facilities in the Universities of Great Britain is long overdue. Later this month, a conference on tropical soils is being held at Rothamsted; and it is my intention to put forward a resolution strongly urging that this state of affairs be remedied.

It was only during and after the second world war that it was realized what an increasingly important part agriculture would have to play in the economy of Britain; and a national soil survey service has only very lately been initiated here. Despite this, plans for pushing ahead with similar work on the tropical parts of the Commonwealth are well under way. Whilst the Gold Coast Survey will be the first large-scale Colonial survey to be carried out, similar schemes are being considered for the West Indies and Nigeria.

Whilst every encouragement has been given the Gold Coast Soil Survey by the Home Government, it would not have been got going so rapidly if the people of the Gold Coast themselves had not realized the importance of this sort of work and urged its immediate prosecution. The Chiefs and the Members of the Legislative Council fully appreciate the need for having a firm and scientific basis for agricultural development; and it is due to their co-operation that the Cocoa Marketing Board has donated £150,000 towards the cost of the survey.

Apart from being the first of the large-scale soil surveys in the tropical parts of the Commonwealth, this undertaking has another important feature. The staff, I hope to recruit in Great Britain, will be mainly used for instructional purposes and for guidance. It is the intention, as far as possible, to make this a soil survey of the Gold Coast, for the benefit of the Gold Coast, by inhabitants of the Gold Coast. With these aims in view, considerable care and thought have been taken in devising suitable techniques for use both in the field and the laboratory. It is proposed that the African staff engaged should number about 120 and the first year's work will consist principally of training.

The Gold Coast African has, in the past few years, shown himself well adapted for work of this nature, has displayed considerable enthusiasm for it and has turned out results of high quality. A great deal of soil work has been done already; thus during the past three years, certain cocoa areas have been surveyed; whilst in the past 12 months, the selection of soil suitable for the mechanized production of groundnuts has been carried out and, at present, some of my staff are engaged in the investigation of land suitable for the growing of swamp rice under irrigation. The special facilities that the Gold Coast Soil Survey will provide for the technical training of African staff was given particular prominence in the Governor's inaugural address last December.

It would be quite possible for work of this character to be carried out almost entirely by European experts and then the people of the Gold Coast presented with a cut and dried scheme for the agricultural development of their country. I myself do not consider this to be the best procedure by a long way. If a technical scheme for a country's welfare is to be worked out, it is advisable that its inhabitants play an integral part in its development. Only then will the aims and objects of the scheme be thoroughly understood by the people for whom it has been devised; and only then will their whole-hearted co-operation in putting it into effect be secured. Using a large African staff, to carry out the soil survey, ensures that the purposes of the survey will be thoroughly appreciated and that the principles involved in the correct use of soils will be widely disseminated.

In the Gold Coast soil survey, the boundaries of the soil patterns only are being mapped throughout the country, not the boundaries of the individual soils which together make up the patterns. This is being done by running parallel traverses across the countryside about a mile apart and collecting observations along them concerning the soils and rocks that occur. In addition to this, small sample areas, characteristic of each pattern, are being surveyed in detail to show the relationship that the individual soils comprising the pattern bear to one another and the relative area that each soil occupies. Samples of every soil recognized will be collected and later examined in the laboratory.

By this method, it will be rapidly ascertained what soils are found in the southern part of the Gold Coast; where they recur; what is the importance of each, from the point of view of the area it covers; and what their properties are. If all goes according to plan, this information should be available for the southern half of the Gold Coast by the end of six years.

The principal crop of the southern part of the Gold Coast is cocoa. Cocoa in the Gold Coast has been badly hit by a virus causing swollen shoot disease. In 1936, before this disease had spread, the Gold Coast exported over 300,000 tons of cocoa, about 42 per cent. of world production; now, exports have fallen to about 200,000 tons. So two of the main objects of the soil survey will be to assist in the rehabilitation of devastated cocoa lands and to find other areas with suitable soils, as yet unplanted, where cocoa can be profitably grown. Cocoa is relatively a new crop in the Gold Coast, its cultivation dating from the latter part of the last century. It was found a profitable crop to grow and its cultivation spread very rapidly. In consequence, it was not always planted in soils suitable for it. So part of the work of the survey will be to decide which are the profitable cocoa soils and to indicate where they can be found. This will not only assist the trade of the Commonwealth, as a whole, but will help the Gold Coast farmer to get the maximum return for his labour.

The soil survey, however, will not be wholly concerned with increasing cocoa production, but will take into consideration other agricultural products as well; the soils most suitable for general subsistence crops will be studied; and areas satisfactory for the production of additional export crops, such as groundnuts, will be mapped. The soil survey is, in fact, designed to provide the technical basis for profitable crop production so that the African cultivator can, by his labour, secure the social and domestic amenities: educational and health services etc., which he desires and that we wish him to have; so that he can leave the land he tills in such a condition that his descendants can obtain similar benefits as a result of their efforts.

*Extracts from a talk in London last week.

Although the older wood-case system is still to be found, the method is not now permitted for new installations. Open-cleat wiring is still to be seen, but its use is diminishing, especially as semi-skilled African painters play havoc with such wiring when distempering walls and ceilings. Any form of conduit tubing is discouraged, as humidity and heat, coupled with salt sea air on the coastal regions, cause excessive condensation, which not only damages the cables but also corrodes the tubing.

The author concludes by stating that the most satisfactory system which is now almost always used for new domestic installations is to employ twin flat cab-tyre-sheathed cable fastened with buckle clips to the surface. This method has proved to be comparatively cheap, neat and easy to instal, even when semi-skilled African labour is employed. It has the further advantages of suffering less from local climatic conditions, and renewals or replacements can easily be made. One final advantage is that the whole installation can be distempered along with the rest of the building without damage to the cable.

* * *

West African Hotels

A COMPANY has been set up to establish a chain of hotels throughout West Africa. Acting chairman is Mr. A. H. Scroggs, a director of Gliksten (West Africa) Ltd. and Mr. F. Bateman-Jones, former assistant manager of Elder Dempster Lines Ltd., is a director. It is intended that "West African Hotels Limited" should build and operate first class hotels at Kano, Lagos, Accra, Takoradi, Kumasi, Freetown and Bathurst.

The hotel planned for Kano is to have 90 bedrooms and that at Bathurst 15. Accommodation in the other hotels will vary between these two figures. There will be no colour bar; and tourists and local residents will be welcomed. Among proposals for the scheme is the provision of an electric laundry at each hotel. If the long distance telephone between London and West Africa is put into service this autumn, as was hinted earlier this year, it will not be long before a resident in the United Kingdom (or in most parts of the world which are already on the London international switchboard) will be able to book his hotel accommodation in West Africa before leaving for the airport. The G.E. Development Company Ltd., of 11, Grosvenor Gardens, London, S.W.1, is certainly promoting a service which will comfort the traveller.

* * *

Newsprint and Literacy

THE importance of newsprint to Africa was stressed by Mr. George Wigg during the Estimates debate on the Board of Trade. "During the war," he said, "the right hon. Member for West Bristol (Mr. Stanley) produced a report on mass education in Africa, which looked forward to the time, within a very few years, when there would be a great growth of literacy. In that report, great stress was rightly placed on the development of newspapers in the African Colonies. At present, in Nigeria, the largest of our Colonies—one-third the size of Europe, with a population of almost 25 million—there is a total of 25 publications, and the total daily circulation of newspapers does not amount to more than 33,000. In the Gambia, with about a quarter of a million population, there is not one daily newspaper. So one can go on, Colony after Colony, with roughly the same story. If the Colonial Secretary is to succeed in his attempt to eradicate illiteracy in the African Colonies, there must be a great increase in the number of newspapers, particularly in English but also in the vernacular. But where is the newsprint coming from to supply the newspapers?"

* * *

"Not to Help Africa"

AGRICULTURAL development is by no means a problem for Africa alone. One British M.P., Mr. Baldwin (Leominster), said, in an adjournment debate last week, that one-third of the agricultural land in Great Britain is still classed as rough grazing. "If," he said, "we tackled a few million acres of that marginal land and rough grazing land and brought it into production, we should be doing a great deal more good for this country than by the millions of pounds which we are now pouring into Central Africa on what is a very problematical venture."

Said Mr. George Brown, Joint Parliamentary Secretary to the Ministry of Agriculture, during his reply: "The hon. gentleman . . . rather suggested that we were putting money into Colonial food production schemes rather than the development of marginal land at home. But this country depends more than any other on imported supplies of oils and fats; we depend on imports for 95 per cent. of our supplies. The groundnut scheme will make a contribution when it is really going of about 250,000 tons a year to our great need for oils and fats. It is not being done, as he so lightly said, to help Africa or Australia, but to get much needed additional supplies of these things for this country."

* * *

General Post for Teachers

THE Ministry of Education has published a circular (No. 170, H.M.S.O., price 3d.), which gives details of a scheme for broadening the experience of British schoolteachers. Selected teachers will be seconded for a period not normally exceeding three years (or five years at the most) to posts overseas. These posts will include the Colonial Education Service. The Ministry will circulate lists of suitable vacancies periodically; and teachers will then be able to apply through their home employers. Applications will be considered and appointments made by the overseas employer and not by the Ministry of Education.

"The scheme," says the official notice, "is not likely to have any noticeable effect on teaching strength in this country, since the total needs for overseas are very small in relation to the growing number of teachers available for employment at home. The Minister considers that it is in the interests of the teaching profession and of the educational service generally that teachers should be afforded an opportunity of acquiring overseas experience."

Since the cry on all sides in Colonial territories is a far different one, it looks as if this temporary export of teachers from the United Kingdom may be used with advantage by Colonial Governments to relieve their own shortages. From another point of view is there not good reason for African schoolteachers coming to the United Kingdom for three to four years' experience on a basis of reversed lend-lease? Acquiring overseas experience will therefore have a double benefit to European and African alike.

* * *

M. and B.

AN enormous pipe can be seen occasionally floating through the library and lobbies of the House of Commons. Those who penetrate its smoke cloud discover, in its propellant, a small, bearded, mild-eyed man with an abounding enthusiasm for the Commonwealth and a wide knowledge of its places and peoples.

He is 46-year-old F. W. Skinnard, M.P. for Harrow East, former schoolmaster, world traveller and a politician who regards West Africans as tenderly as he does his London constituents.

In the recent debate on purchase tax on medicines, questions arose about the protection of trade names. Having stated a case that, no doubt, commended itself to East Harrow, Mr. Skinnard turned to the defence of West Africa. "In a remote village of the Cameroons," he told the House, "I found a drug store in which every possible ju-ju was labelled M. and B. There was even an M. and B. preparation to guarantee faithfulness on the part of one's wife."

Mr. Skinnard rocked the House with laughter—and served the serious purpose of every West African doctor.

West African Mailbag . . . .

Sierra Leone's Legislative Council

MR. R. O. RAMAGE (Acting Governor of Sierra Leone) at a special meeting of the Legislative Council, called to consider the proposals for its reconstitution which are set out in Sessional Paper No. 2 of 1948, said: "There are two major aspects of the proposals to which I shall refer shortly, since they are fundamental but sometimes seem to be overlooked in considering details. These are: the substitution of a majority of non-officials in the Council for the present official majority; and provision whereby the Protectorate will be given a larger representation than at present. I feel confident that everyone will agree in principle with both.

"As Honourable Members are aware, the Protectorate Assembly, when recently considering this Sessional Paper, passed a resolution recommending certain changes, the most important of which is that there should be a member elected directly to the Legislative Council by each District, i.e. a total of thirteen such members, instead of nine in the Sessional Paper.

"In a matter of such importance as the framing of a new constitution, it is impossible to expect unanimity on all points. From discussions I have had, official and otherwise, I have reason to believe that there is a wide degree of agreement on a good number of the details in the Sessional Paper. In some other aspects, if there is not such agreement now, it seems likely that there will not be serious disagreement. There are, however, one or two matters on which I realize there is very considerable difference of opinion.

"Government has been fully conscious of the special problems which arise in a territory such as Sierra Leone, where there are two groups of the population whose standards differ materially. This has added considerably to the difficulties inherent in drafting any constitution, and is not to be solved by any hard and fast rules. On any major issue in serious dispute, the best that can be hoped for is a settlement in the best interests of the greater number concerned. It is, I think you will agree, essential for the future of Sierra Leone that where, on any issue, there is a majority opinion in its favour, the minority should recognize that the majority view cannot be set aside except for very exceptional reasons. The acceptance of a majority opinion is a recognized principle in the British constitution.

"The proposals for the Reconstitution of the Legislative Council are designed to create a Legislature which will give the people of Sierra Leone a much greater responsibility for their government in a form designed to meet present conditions. There is no intention to design now a constitution which will last indefinitely. A constitution, to be of value, must be a live thing, something which will grow in stature as it gains in experience. The present proposals for setting up, for the first time in Sierra Leone, a Legislature which has an unofficial majority is one of the most important steps which a territory can take on the road of constitutional development.

"It is no doubt tempting to try and cut out some of the stages through which other territories have passed. The introduction of an unofficial majority is, however, such a major step in itself that I am convinced that the true interests of the country can be secured only if the people of Sierra Leone take advantage of the opportunity for increased self-government on the lines of the present proposals, although not necessarily exactly as detailed in the Sessional Paper. Further constitutional progress will depend on the extent to which all concerned contribute to the successful working of the stage now proposed."

* * *

Nigerian Transport

FIFTEEN Leyland Comet lorries and four buses have been ordered by the Crown Agents for the Nigerian Railways.

Government, namely: "Every person who under this Act is a citizen of the United Kingdom and Colonies." The contention of the Government sponsors of the Bill is that this change of wording introduces so fundamental and undesirable a change in the symmetrical relationship of all British subjects or Commonwealth citizens (the terms being synonymous) as citizens of one part or other of the Commonwealth as to ruin the intentions of the Bill. Lord Altrincham, who moved the amendment and was supported by Viscount Swinton, Viscount Simon, the Marquis of Salisbury and the Conservative Peers generally, maintained that the change was only of verbal significance and was prompted by largely sentimental objections to the word "citizen" as well as attachment to the term "British subject" and a desire to see nothing intervene between the individual and that status.

The arguments of the Lord Chancellor, and his explanation of the effect of the amendment in wrecking the plan of the Bill, fell on deaf ears. The net result is that, in the Bill as amended, the United Kingdom and Colonies will be in a different category from the other members of the Commonwealth who will attain the position of British subject or Commonwealth citizen by virtue of citizenship of their own country while those born or naturalized in the United Kingdom and Colonies will be British subjects by virtue of that fact, without any local designation of citizenship of the United Kingdom and Colonies. It remains to be seen what the House of Commons will do with the Bill. It was introduced first in the House of Lords and has yet to be considered in the other House.

* * *

Fats are Short

THE world shortage of fats is even more serious than the world shortage of grain. Mr. J. C. A. Faure, of Unilever, presented the "fat" side of the situation at the Congress of the International Seed Crushers' Association in Brussels last week.

In 1938, he pointed out, world fat consumption was 21·4 lb. per capita. If this rate of consumption had been maintained, and if there had been no war, owing to the increase in population we would have needed, to-day, a world production of 22·4 million tons. Actual production is 18·3 million tons.

Looking into the future, Mr. Faure explained that, in order to maintain the present low ration and low per capita consumption, production must increase by 2 million tons in 1958; 4·1 million tons in 1968; and 6·4 million tons in 1978.

No wonder he takes a poor view of any early restoration to pre-war standards, and has sharp comments to make on the critics of groundnut schemes!

"It seems," he says, "impossible to believe that there are still those who think that the East Africa groundnut scheme is unnecessary and that it will result in flooding the market with groundnuts. . . . I hope a West African Scheme will also be embarked upon as a result of the survey made by the West African Oilseeds Mission. . . . May more such schemes be worked out and embarked upon whether by Governments or private enterprise!"

* * *

Gold Coast Follow-up

QUICK to follow up the publication of the Clay report on oilseeds in West Africa was the Gold Coast Secretary for Rural Development, R. H. Saloway. He has flown to London, had talks with the Colonial Office and the Colonial Development Corporation and has now returned to the Gold Coast equipped with new ideas for the detailed scheme for mechanizing agriculture which he has been carrying out in the Gold Coast ever since his first appointment one year ago.

In his late forties, Mr. Saloway had long experience in India. His acceptance in the Gold Coast, over the heads of other Colonial Servants whose natural ambition for promotion might have caused a little resentment, is a good instance of the best man for the job always hitting it off well. There must be instances, however, where "new blood," coming from India, Burma, Palestine and elsewhere, has caused some uneasiness to Colonial Servants longer in the field who now feel their hopes of climbing the promotion ladder receding in much the same way as did experienced subalterns at one stage of the war when disbanding units created surpluses of senior officers.

Whether the Colonial Service is beginning to feel a similar pinch or not is a point for discussion but, by and large, appointments of men with wider experience must benefit the Colonies.

* * *

At Last!

THE Colonial Office, negotiating with the Government Whips on the question of Parliamentary time for Colonial affairs, have scored a great success. Three days, according to Lobby reports, are to be devoted to the Colonies next session; not all that the Colonial Office wanted, but a big advance on the present allocation of one supply day.

If, now, the Whips of all Parties are put on to ensure a reasonable attendance of Members than is usual at Colonial debates, we might be tempted to believe that Parliament is taking the Commonwealth seriously!

* * *

African Team

DR. G. F. CHARTER, now on his way to the Gold Coast, took part in the 14 days' conference of chemists and agricultural experts from 24 countries held recently at Rothamsted Experimental Station and at Oxford. He was leader of the West African team, one of whom, Dr. Vine, now home from Nigeria, is to be second in command of the Gold Coast survey.

Dr. Charter, 43 years old, a son of Suffolk and a product of Cambridge, is a modern type of Commonwealth builder. Malaria contracted in British Honduras has quenched neither his abounding energies nor his scientist's passion. His special pride in his new and greatest adventure is the efficiency of his team of 120 Africans. "Soil problems, like all the others," he insists, "are for Africans to meet and overcome."

* * *

"Probable Publication"

MR. A. CREECH JONES announced, in the House of Commons on Wednesday, that the report of the Commission of Inquiry into the Gold Coast disturbances will probably be published simultaneously in Britain and in West Africa at the end of July. He refused to give an inkling of what the report contained.

The date given for the "probable publication" is in the last few days of the Parliamentary session. With a crowded agenda before it in the next session, after August, it will be difficult to squeeze in a Parliamentary discussion on the report.

Mr. Creech Jones paid a tribute to the rapidity with which the Commission completed its work. But he could have surely speeded the printing of the report to enable it to be discussed on the floor of the House of Commons. What happens in any part of the Commonwealth affecting the welfare of the people ought to be the intimate business of every Member of the Imperial Parliament.

* * *

Chance for B.B.C. Pioneers

You can't get to heaven on a groundnuts scheme,
For the groundnuts scheme is a politician's dream.

IT sounds like the British Army singing "Bless 'em all"—then getting on with the tremendous job of making the impossible the inevitable. And that is exactly the spirit conveyed in the brilliant B.B.C. broadcast—"New Pioneers in Africa"—of goings-on at Kongwa.

This broadcast makes Empire pioneering real, exciting and inspiring. It should be re-diffused throughout the Commonwealth, especially to West Africa, where interest is keen in the Kongwa prototype for all groundnuts schemes.

BRITONS UNITED IN DEMANDING SQUARE DEAL FOR COLONIAL PEOPLES

Secretary of State Reviews Recent Colonial Policy

COLONIAL hecklers interrupted Mr. Creech Jones's eighty-minute speech on Colonial policy, last week, before a London audience which included a large number of Colonials, at a meeting organized by the Fabian Colonial Bureau. Mr. Creech Jones said: "I believe that my colleagues, Ministers and Officials in the Colonial Office are doing a great job and I find it a great privilege to be the leader of so efficient and enlightened a team. We do not approach our work in any mood of complacency nor are we satisfied with our achievements so far. We are conscious of the enormous problems which wait to be tackled, the considerable amount of misery and distress, which have to be relieved, and we know that the answers to many of the problems, if good life is to be made possible for the Colonial peoples, are as yet not available.

"It is also the case that progress must necessarily be slow in many important directions where we are most anxious to achieve results; and those of us who are most anxious for results are possessed of a great impatience when we find problems not leading too readily to some of the solutions we believe we have found." He said it was imperative that we should recognize that many of the problems of Colonial policy do not arise from any weakness on the part of Europeans or aliens but are inherent in the problems of evolving societies, which have had little of the opportunities of the modern world made available to them, and whose people have to build up traditions and to adapt themselves to the needs of modern times. (Cries of "Nonsense").

He recognized that there are many difficulties which arise from certain policies which, in the past, have been pursued by those who have taken control of some of these overseas territories. There are episodes, in British Colonial history, which have brought these problems and evils which to-day cannot readily and easily be eradicated. He wanted to indicate what our policy is and what we have been trying to do but was conscious that, in the generalizations he would make, they will be inappropriate, inaccurate and will misinterpret the conditions in many territories.

We have been working on a background of considerable difficulty in the territories. We have had to adjust their conditions from wartime to peace. Many territories were devastated by war, many had their economies radically altered. In some areas there have been famine and shortages. Naturally, after the propaganda and aspirations for freedom after the war, the more educated and articulate sections of the population have been insisting not only on their political aspirations but on their social needs as well.

British Policy To-day

British policy to-day seeks to create for the Colonial peoples conditions in their territories which can help them to improve their economic livelihood and their standards of living and take them along the road towards responsibility in government. (Interruption and voices heard saying "You should be more subtle" . . . "Carry on. Carry on.") Our task is to assist completely the Colonial peoples. We cannot afford, nor is it desirable on human grounds, to remain in a forced relationship with the people amongst whom we work. We have to win their confidence and goodwill to help them move forward to welfare and responsibility. We have to dispel ignorance and disease and poverty, where we meet it; but all the time build up a sound and healthy relationship on equal terms with the people amongst whom we are working.

So far as this Government is concerned, we regard the relationship between Colonial peoples and ourselves as a matter of major importance. We must press on with the elimination of colour prejudice and discrimination of all kinds. "I want," said Mr. Creech Jones, "to see the Colonial peoples growing to responsibility and aspiring to play their part in the great Commonwealth of which we are all a part. I believe that it is only by the exercise of responsibility and by the extension of social and economic responsibilities to the peoples that disruptive and subversive movements can be checked in these countries."

Economic Development

With regard to economic development, he said: "I am conscious that sometimes the presentation of economic policy in our Colonial Empire is unhappy; the emphasis is often put in the wrong place and, too often, a much too optimistic picture of possibilities is presented and the territories overseas made to appear as estates existing in the exploitation of their territories for the advantages of Britain and of Western Europe." Its proper setting was the Colonial Development and Welfare Acts and the 10-year plans, which had been concerned with providing roads, railways, water supplies and the essential works which every society needs. In the 10-year programmes, money was provided so that utilities and public works could be created supplementary to the money which the territories themselves could provide.

In addition, a new impetus was given to economic enterprise in the territories. Without that increase, the social services which the people were clamouring for could not be sustained. You have to expand their agriculture and you have to create new industries, in order that decent standards of life should be available to the peoples. Long before we thought in terms of the economic difficulties of Great Britain, we were thinking out schemes how to strengthen the economy of the territories overseas.

The creation of the Colonial Development Corporation with its capital of £100 million is merely the logical development in respect of the Colonial Development and Welfare fund in the 1940 and 1945 Acts. State bulk purchasing had been introduced to insulate territories from the calamities which come from the trade cycles. In this development we cannot go as fast as we would wish. There is an appalling shortage of the materials for production. We have also been obliged to reorganize the whole economic side of our office and to remodel our Economic Development Council.

"I have heard it said that what we are seeking to do is to open a new chapter in the economic exploitation of the territories for which we are responsible. We have tried to push on in our economic development irrespective of the needs of Europe or Britain." (Cries of "Speak the truth" and long heckling from an African member of the audience). "The point," said Mr. Creech Jones, "I am anxious to make is that obviously there must be the completest safeguard for the Colonial peoples in any planning for economic development."

Surest Way to Colonial Stagnation

"It is axiomatic in regard to all social and economic development that the fullest co-operation of the peoples themselves is obtained and it is our most ardent desire to adopt every method of obtaining the co-operation of the Colonial peoples themselves. We are using the opportunity which the present economic difficulties create for Western Europe to help Colonial territories to build up their economic life, in order that better social life and better standards of living should become possible.

"I assert that if there is to be Colonial stagnation, then the surest way to it is by European economic collapse and, in any effort to save the good health of Europe, by that effort by integrating to a great extent the economies of the territories overseas with the economies of Britain, we are at the same time strengthening the economic lives of the Colonial peoples."

(b) Nigeria:- Subscriptions to Nigerian Internal Loan, £300,000 at 3½%, added to £815,000. Popular with institutions but only 136 individuals subscribed. Allocations made in full to individuals, lesser percentages to institutions.

More ordinances enacted, simplifying the Young Peoples Ordinance, July 1946, regulating child labor, juvenile delinquency, etc. Instances have occurred of these regulations being used as extortion threat by Natives impersonating police officers.

Rapid succession of aged chieftains in Ibadan suggests need for change of policy. Three incumbents in past six months, all died in office, two at age of 80, the third at 100 yrs.

Palm Oil Research gets £152,000; creek and river fisheries get £96,000. Local Development Board awarded £60,000 for 12 palm oil presses, but Native bitter reaction required official announcement that this did not presage institution of plantations or a "new menace of slavery".

Government decrees that firms with more than 10 employees must hire quota of ex-servicemen. Government itself carries many ex-soldiers as supernumary officials at cost of £130,000 a year.

Tudor-Davies report on cost-of-living (Col.204, Oct. 1946) generally favorable to employees, condemns attitude of some Government departments, suggests well organized G.O.L. committees, but recommends trained trade-union officers and greater control of press.

Government has a new Public Relations Officer and staff, including the Editor of the "Daily Times" and a member of "Zik" press. Recently the P.R.O. made 2500 mile tour "spotlighting" work of African farmers and technicians. Well received by press.

While Natives of Eastern Nigeria were bitterly opposing the new oil presses ("new menace of slavery") which Government was installing for the benefit of the countryside, the Native business men of the towns were complaining with equal bitterness of Government's action in financing Native village and home industry.

In November, 1946, a large mass meeting at Oko Awo drew up petition, which was presented to the Secretary of State, protesting against Nigerian Government's proposed Town Plan for Lagos

Editor of Onitsha "Spokesman" was fined £300 for sedition.

November - 1946-47

Liverpool School of Tropical Medicine published an account of its work in War years, and the section on Malaria control in West Africa is of particular interest to us. All methods are described- spraying, draining, filling, oiling, use of larvicidal fish; also use of quinine and experiments with the new drugs. The report states that out of the 40,000 Europeans who spent some time in the area, only 151 died. It is to be remembered, however, that these outstanding successes did not extend to the Natives, among whom at least 75%, it is reported, are suffering from some disease or other.

42/90/123

NIGERIA'S LEGISLATIVE COUNCIL

OPENING the second session of the Legislative Council at Kaduna, on March 3, Mr. Beresford Stooke said the occasion was remarkable because it was the first meeting of that Council in the Protectorate. For the first time, he said, the Nigerian Estimates contained votes for the Regional Services. In spite of criticism, the new constitution in the Legislative and Regional Council had shown that its first aim to serve the people had been achieved. This is more important than its form, for which provision as to its review existed. He was grateful that Nigeria had not been more seriously affected by the economic crisis, but stressed that the standard of living and medical and educational facilities were too low and meagre.

Expenditure was, however, £15 million greater than in 1938/39. This was due to more general and social services, but it was only a beginning. Many more improvements were required, especially with regard to agriculture and there was the problem of increasing the output per unit of work done. He stressed the need for improving the quality of Nigerian produce and the use of cooperative marketing to obtain better prices. Later in the session, he said, increases in the prices of certain agricultural products would be announced. He mentioned an assurance from Lord Trefgarne that the Colonial Development Corporation would work in partnership with local capital and enterprise and hoped that strong African representation would be forthcoming on all Boards of subsidiary organizations which were eventually to be created.

Mr. George [illegible]
Financial Secretary of Nigeria
where he had been Chief Secretary [illegible]
1896, Mr. Farquhar became Colonial Secretary
Leone at the age of 38. Subsequently, he was appointed
Financial Secretary of the Gold Coast and, between [illegible]
and 1945, held a similar position in Nigeria, where he
deputized for the Governor on several occasions.

Nigeria's First Officer

Sergeant Victor Ugboma, the first Nigerian to be recommended for a Commission in the Nigerian Regiment, has been accepted by a War Office Selection Board and is now training at an O.C.T.U. in Britain. 29 years old, Sergeant Ugboma comes from Onitsha and was flown to Britain last month. He joined the West African Clerks training school in 1943 and later served in India.

SOCIÉT

Avoiding a Breakdown

In 1907, 98,000 letters passed through the Colonial Office. In 1927, there were 323,816 letters. In 1937, there were 596,000 letters. In 1947, there were 954,000 letters. And in 1948, he expected the members of the Colonial Office postal service to celebrate the receipt and dispatch of the millionth letter. Telegrams had shown similar increases. Files fluttered on to Mr. Creech Jones's desk like leaves in Vallambrosa. The Secretary of State had to study the background of at least twenty questions in Parliament each week, so that he could answer any supplementaries.

He also had to perform his constituency duties, since it was only on the basis of his being a Member of Parliament that he was Secretary of State for the Colonies. As a member of the Cabinet, he shares collective responsibility for its actions. He represented the United Kingdom at international conferences and he had a stream of visitors from the Colonies. Devolution was carried out but, in the last resort, it was the Secretary of State for the Colonies who is responsible to the Cabinet and to Parliament.

There should be one Secretary of State for Africa, concluded Mr. Thomas; there was nothing sacred about the Colonial Office as such; and in making a separate Secretary of State for Africa, there would not be too much of a break with tradition since the Colonies had been administered by Home, Foreign and War Secretaries in the past. By making a separate Secretary of State for Africa, a breakdown in the overloaded machinery of Colonial Office administration could be avoided.

Representatives of the Select Committee on Estimates are to visit Nigeria to examine expenditure of U.K. funds under the Colonial Development and Welfare Act.

42/90/174

Increase of International Relations

In the field of international relations, the Colonial Secretary's responsibilities were also on the increase. The development of British Colonial Africa would have to be shared. The introduction of American capital, for instance, would demand a proper guidance and would have to be carefully watched by the Secretary of State. The recent indignation from South Africa over the restriction of African goods into British African Colonies was another example of the versatility required of a modern Secretary of State. Western European unity might be achieved in building up a United Africa.

Before long, "we shall have to meet with a rise of nationalism among Africans" and this nationalism would affect our relations with other European Powers in Africa. Recent events in the Gold Coast and the Ewe tribal dispute illustrated this point. The importance of East Africa to the British defence system would also increase the Secretary of State's responsibilities in a most important direction. If there was a strong case for a separate Secretary of State for Africa, there was an equally strong case for a separate Secretary for the non-African Colonies. Work in the Colonial Office needed to be subdivided these days.

THE first African to become a M.R.C.V.S. is mentioned in the Report on the Department of Animal Health (Gold Coast) for 1945/46. During that year, Mr. W. A. G. Richter took charge of the Training Centre at Pong-Tamale, after qualifying as a veterinary surgeon in the United Kingdom. As a result of the shortage of European staff, opportunity was given to African Veterinary Assistants to assume increased responsibility. Certain veterinary assistants showed marked ability in taking charge of the Department's farms and in undertaking technical duties which were normally performed by European officers.

The Pong-Tamale farm, for example, which has 2,000 cattle and 1,000 acres of land under cultivation, was managed by a Second Division Veterinary Assistant. A further example of the high standard of efficiency reached by these officers is the laboratory manual written by Mr. S. Agyen-Frimpong (First Division Veterinary Assistant) which has proved useful in the Gold Coast and elsewhere. Difficulties in the way of controlling cattle disease in the Gold Coast are exemplified by the fact that routine products needed to counter two major diseases amounted to 7,000 litres of anti-rinderpest serum and a quarter of a million doses of pleuro-pneumonia vaccine. The monetary value of these products amounts to several thousands of pounds.

The meat position is said to be poor. From French West Africa, came cattle only for Army requirements, while the shipping situation did not allow the import of any appreciable number from the French Cameroons, and Nigeria stopped exports.

42/90/46 Col. Review, June 48

Blindness in British African and Middle East Territories. (1948. pp. 99. 2s.) This interesting and comprehensive report covers a survey carried out jointly by the Colonial Office and the National Institute for the Blind, in the course of which three investigators travelled 30,000 miles, mostly by air. An attempt has been made throughout the report to see the needs of the blind in their proper prospective, and in relation to other and, in some cases, more pressing needs. The report suggests a scheme which can, in most, if not all, the Colonies, be initiated without delay, and one which from small beginnings has possibilities of wide expansion. The recommendations relate mainly to prevention of blindness and to the education, training and employment of the young blind. The general welfare of the older adults and of the aged is a matter which must be postponed for the present because any adequate scheme of general welfare would be beyond the resources of the Colonial Governments; suggestions as to possible voluntary enterprises in this connection are, however, made in the report. The report is in two parts: Part I: A Survey, and Part II: A Scheme. The first part deals with statistics of blindness, social condition of the blind, the medical services, causation of blindness, education, and training, employment and after-care. Part II advises on administration, voluntary organizations, finance, registration, prevention of blindness, propaganda, education of the blind, vocational training, employment and Braille production. Various appendices give details of institutions already in existence, schools, welfare societies and settlements; of the colonial medical departments, hospitals, rural dispensaries and mobile ophthalmic units. Lastly, there is a suggested curriculum in a school for the blind, and a list of native industries suitable for the blind.

January 21, 1948.

AFRICAN COLONIES
(CORPORAL PUNISHMENT)

Mr. Sorensen asked the Secretary of State for the Colonies why returns for corporal punishment of civilian prisoners in West and East African prisons between 1941 and 1945 show an increase in Kenya and Gold Coast and only a small decrease in Nigeria and Uganda despite the activities of the Treatment of Offenders Sub-Committee; generally for what offences this punishment was inflicted both in those colonies and in Northern Rhodesia, to what extent offences have fluctuated between 1941 and 1945; what consideration the sub-committee have given to the total abolition of this type of punishment; and what was the average number of strokes inflicted and the highest number respectively.

Mr. Rees-Williams: The reply is long, and I am circulating the information in the Official Report. Much consideration has been and is being given to the matter, and some substantial improvements have been made as a result of my right hon. Friend's despatch to Colonial Governors in October, 1946. My right hon. Friend will continue his efforts.

Mr. Sorensen: Does not the variation indicate that much more has to be done in order drastically to reduce the number of punishments of this medieval character?

Mr. Rees-Williams: My right hon. Friend is giving this matter his personal attention, and, as my hon. Friend will see from the reply, we have gone into it fully. The difficulty has been a considerable decrease in the number of prison officials available during the war, many of them having been on war service, and also the increase in the number of persons actually in prison.

Following is the reply:

The situation referred to in the first part of the Question must be judged in relation to the increase in the number of persons in prison and to the absence of regular prison staff on war service. The following table shows the percentage of corporal punishments to male prison population in the territories concerned.

—	1941	1942	1943	1944	1945
N. Rhodesia	2.1	3.4	6.0	3.5	1.7
Kenya	0.023	0.019	0.023	0.020	0.036
Uganda	0.37	0.35	0.29	0.12	0.28
Nigeria	0 37	0.28	0.56	0.50	0.55
Gold Coast	0.052	0.026	0.09	0.53	0.15

In 1945, the offences punished in this way were: assaulting a warder, fighting and using threatening language, refusing to obey a lawful order and repeated serious offences against prison discipline.

The total prison offences in the five Territories range from 4,271 in 1941 to 5,884 in 1945. The average number of strokes was 6.7, all with the cane. The highest number of strokes was 24 (once in Uganda and once in the Gold Coast). The next highest was 12.

In October, 1946, on the advice of the Treatment of Offenders Sub-Committee, I addressed a despatch to Colonial Governors urging them to reduce further the use of corporal punishment in their Territories with a view to its eventual abolition.

Rules Restaurant, and the management made an apology for such action. Speaking in the House on Mr. Driberg's question, **Mr. John Strachey,** the Minister of Food, said that he took a particularly grave view of the incident, and considered the interests of the British Commonwealth were most seriously injured by any example of racial discrimination. No official statement was made in view of the investigation of the incident which Mr. Strachey told the House he was instituting.

The League, of course, feels that something more than investigation of this kind of incident is necessary if Colour Bar is to be eliminated. President **Learie Constantine,** who was himself the victim of a similar incident a couple of years ago, has put the case for a thorough examination of the whole question of Colour Bar in a letter to the *News Chronicle* (13/4/48). This letter is so well balanced in its reasoning, that we could not do better than quote it fairly extensively. Pointing out that effort to **"keep coloured peoples in their places"** persists, Mr. Constantine says "it has long become obvious that this attitude to coloured people is not mainly emotional. Prejudice is a constant preoccupation of the educated Negro and is the cause of much bitterness, strife and frustration in his ranks."

Having stated this much of Mr. Constantine's letter as it appears in the *News Chronicle* (the Editors state that for reasons of length it had to be cut) comes next a point which subject peoples everywhere have very much at heart.

"However true or false," writes Mr. Constantine, "I am not in fact able to say, but Soviet Russia is quoted as the only country which does not practice racial discrimination and every Negro, wherever he comes from, has a regard and respect for the Union of Soviet Socialist Republics which is more sincere and sympathetic than the average white man could understand."

Coming down to the crux of this case, Mr. Constantine refers to a case when, during the war, five or six Negroes were charged before the Liverpool magistrates with doing damage to the goods and chattels of a publican. They were convicted and fined. The facts of the case were that they entered a public house and called for drinks but they were told that **"Niggers were not served in here."** As a result they lost their tempers and swept glasses and bottles from the shelves.

"It appears to me (perhaps erroneously) that justice was not done, in the sense that the individual who incited the breach left the court unpunished. It is the duty of every citizen to preserve the public peace. Anyone who commits a breach of the peace is guilty of an offence for which the State (charged with the maintenance of peace)

exacts a penalty. May it not be that anyone who incites another, or is guilty of inciting another, to commit a breach of the peace (as the Liverpool case proves) is also guilty of an offence punishable at law?"

"A simple examination of the situation would give many millions of Negroes the feeling that something tangible was being done to remove colour prejudice against them."

For a long time prominent coloured citizens in Britain have been suggesting that racial discrimination should be made illegal by Government decree, but the authorities when the point is put to them directly, always hedge with the excuse that "the time is not opportune." When will the time be opportune? One of the very first things the Soviet Union did after the November Revolution of 1918 was to outlaw racial discrimination. This principle has since been written into Article 123 of the Soviet Constitution, reading as follows:—

> "The equality of the rights of citizens of the U.S.S.R., irrespective of their nationality or race, in all spheres of economic, state, cultural, social and political life, is an indefeasible law. Any direct or indirect restriction of the rights of, or conversely, the establishment of direct or indirect privileges for citizens on account of race or nationality, as well as the advocacy of racial or national exclusiveness or hatred or contempt, is punishable by law."

We are constantly being reminded of the superiority of the Western democratic system as opposed to the oppression and tyranny of the totalitarian States grouped behind the "iron curtain." While we do not wish to enter into a polemic on this subject, simply because it is difficult to pierce an "iron curtain" in order to get at the facts for oneself, we do know that the Soviet Union is the only Great Power which, in its Constitution, makes racial discrimination a punishable offence at law.

Thus, whatever may be the merits of the democratic way of life as against the Soviet way, until Britain and other Western countries (the United States not least) endorse this principle in law, every Negro will continue to have a regard and respect for the U.S.S.R. which is possibly incomprehensible to all Britishers except professed Communists.

While we cannot possibly endorse wholesale purges or the transportation of populations which, in common with all other decent-minded people, coloured peoples feel that if there is repression in the Soviet Union, that repression is not based on racial factors. It is not imposed upon specific racial sectors but applies equally to all sections of the total population.

12/96/139

8. WEST AFRICAN HOTELS

A Company has been set up to establish a chain of hotels throughout West Africa. Acting chairman is Mr. A.H. Scroggs, a director of Gliksten (West Africa) Ltd. and Mr. F. Bateman-Jones, former assistant manager of Elder Dempsten Lines Ltd., is a director. It is intended that "West African Hotels Limited" should build and operate first class hotels at Kano, Lagos, Accra, Takoradi, Kumasi, Freetown and Bathurst.

The hotel planned for Kano is to have 90 bedrooms and that at Bathurst 15. Accommodation in the other hotels will vary between these two figures. There will be no colour bar; and tourists and local residents will be welcomed.

CURSE OF EWELAND

International Boundary : Arbitrary Frontier

IN view of the recent publicity given to Eweland the following remarks are of interest: "The curse of that country Eweland and the root source of all the evils that have befallen its peoples, since 1884, are those dividing lines that have been marked across its map; two neat straight lines scored with a foot-rule, and some fanciful wavy ones to join them. You sometimes wonder whether the first were drawn just as the ruler happened to be lying, so much have they no reference to anything at all. However, these lines are supposed to constitute the international boundary."

Scramble for Africa

"They are a classic relic of the rapacious days of the 'Scramble for Africa'; but to the people who live there, they are not a mere matter of historic interest; to them, they have meant untold hardships and suffering down the years. They may not cultivate their own farms, they may not visit their nearest kinsmen or be visited by them without being subjected to all sorts of handicaps and irritations because of these arbitrary frontiers. And it is not as if the frontiers were there and the people came and spread themselves on each side; the people were there all the time and yet the map was marked as if they simply did not exist.

"Your Excellency is doubtless aware of the efforts that are being made to discover a way out in this complicated matter—amateurish efforts, no doubt, for our people have no experience in the intricate ways of high power politics. But the human distress is there, and the longer it continues, the more it hurts; also the will that this crying injustice to the Ewe peoples shall be removed is there; so it appears that there is not going to be any lasting peace or quiet until some satisfactory solution has been reached.

"The object of my question to the Honourable the Financial Secretary was to discover whether it would be politic and practicable to suggest to this Government to approach the Government of French Togoland, with a view to coming to some mutual agreement whereby the people who live along these frontiers might be relieved of some of the more depressing vexations imposed upon them, pending the final conclusion of the mattter."

One Dividing Line Goes

"We are all the more grateful to you, therefore, Your Excellency, that you have decided to let human needs take precedence over unintelligible political arrangements, so that at least one dividing line is now to go, and Ewes in the Colony will now be united under one administration with their brothers in the Mandated Territory.

"So far, the two sections, though neighbours, have continued side by side, each living its own life with its face turned towards Accra and quite unconcerned about the fortunes or the fate of the other. Now they are to be integrated as one people, so that their needs and problems—which are the same—can at last receive some full-time attention and be studied as a whole and tackled in a big way.

"I hope very much that this development is also going to open the door for a forward movement of internal political life which, due to the confusions of which I have already spoken, is as yet miles behind that of the rest of this country." Rev. C. G. Baeta (Second Provincial Member for the Eastern Province) in a Legislative Council Debate of the Gold Coast on March 28, 1947.

[1948]

Central Africa 40/5G/12

THE NEW YORK TIMES

British Start Huge Power Plant on the Nile; Dams Will Rise at Outlet of Lake Victoria

Special to THE NEW YORK TIMES.

LONDON, July 18—Preliminary work has begun for dams and power stations in Uganda, Central Africa, that would produce the equivalent of nearly two-thirds of the electricity consumption in Britain.

The engineers' report on the project at Owen Falls has been published by the Uganda Government, which is undertaking the development with the encouragement and counsel of the British Colonial Office.

Bids for the main generating units, which will be installed at the outlet of Lake Victoria in Uganda, have been received and orders will be placed soon. The first phase of the development is scheduled to be completed in 1953.

The British Ambassador in Cairo has been instructed to seek the Egyptian Government's approval of further development of central Africa's water power. Negotiations have not been possible because of the disturbed relations between the two countries, caused by the Palestine war and the dispute over the British occupation of the Suez Canal zone.

Under the 1928 Nile Waters Agreement Britain is obliged to obtain the consent of Egypt for any change in the "regime" of the Nile, upon whose waters Egypt is dependent for irrigation.

Lake Victoria, surrounded by the British colonial territories of Uganda, Kenya and Tanganyika, is approximately the size of Ireland. Its water is discharged down the Victoria Nile through Lake Kyoga to Lake Albert, where the White Nile emerges to join the Blue Nile at Khartoum.

The New York Times July 19, 1948

Britain is building Nile dams at Owen Falls (cross).

Between the lakes, the water falls 1,700 feet in 260 miles. On that stretch, engineers say, 22,000,000,000 kilowatt hours of electricity might be produced annually. In 1945, about 38,000,000,000 kilowatt hours were generated in the United Kingdom.

The initial project, now under way, calls for the erection of dams on the eastern and western channels of the Victoria Nile, one 650 feet long and the other 590 feet long, and the installation of four generating units with a maximum output of 524,000,000 kilowatt hours.

A conference held here in Paris last month was ostensibly for the purpose of discussing Negro educational problems. It served to open active collaboration between the world's two greatest empire builders. Some 800 technical problems were discussed and a program of social and health reforms, tending to the eventual development of African resources, drawn up.

However, for France the problem is not only to develop the colonies but also to keep them. French African possessions have all shown a desire to part either completely from metropolitan France or at least to get a larger share of autonomy.

As a matter of fact, the preservation of their African empire is almost a question of life and death for both the English and the French.

All the products needed by France and Europe are plentiful in Africa and are only in the infant stage of their development there.

North Africa, with a population of 16 millions, produces wine, wheat, sugar, oil, tea. There are lead mines in Tunisia and phosphates in Morocco.

Next to Moslem Africa in trade importance is French West Africa. It comprises the territories of Dahomey, Ivory Coast, Guinea and Senegal. It sends peanuts, cocoa, coffee and ivory to France. Dakar, a town of 92,000 inhabitants, is its capital and the closest African harbor to the American continent.

Three Strategic Points

Descending south, comes French equatorial Africa which exports to France cotton, nuts and oil. Uranium was recently discovered in the region bordering the Belgian Congo.

On the other side of the continent lies Djibuti, key town to the immense Ethiopian empire and starting point of the Djibuti-Addis Ababa railroad. Its strategic value is considerable in case of penetration efforts coming from the Red Sea toward East Africa or the British possession of Kenya.

Thus, France possesses central Africa's three main strategic points: Dakar, Djibuti and Madagascar. Any British plan for the development and protection of Africa needs full French co-operation.

And, in turn, the French need the help of the British to keep their populations under control.

(Copyright, 1947, Chicago Daily News.)

40/5G/8 [1948] North Africa

Equal Pay

An official Gazette announces that all Puisne Judges in Sierra Leone are to get the same salary, irrespective of race. The same principle will apply to the post of Chief Justice, who will receive £2,150 per annum. Puisne Judges will be paid £1,700 a year. All other Government Officers will continue to have a basic salary plus expatriation allowance where necessary.

Northern Rhodesia's Mine Workers Union will organize African branches; and boycotts Dalgleish Commission because no Northern Rhodesians are on it. JAN. 1948

Mr. Ralph Morley asked the Secretary of State for the Colonies if he is aware that teachers employed by the Sudan Interior Mission School in Nigeria are compelled to sign a contract agreeing to be dismissed without notice if they join the Nigerian Union of Teachers? and if he will take action on this?

Mr. Creech Jones: The matter to which my hon. Friend refers is already being investigated by the Governor, who has promised a report as soon as possible.

One of the great by-products of World War II is the growing importance of Africa with the world's second largest land area, over 150,000,000 population and great natural resources. With the virtual loss of India and Burma by England, Indo-China by France and Indonesia by Holland, the centre of Western European Imperialism has shifted farther west to Africa. The growing wealth and power of the Arabians, traditional imperialism has had to leave the Middle East, and British troops are marching out of Egypt, while Syria and Lebanon are independent. The only imperialism remaining in Asia is Russian imperialism in Manchuria, Mongolia, Central Asia, and American imperialism in Japan and the Pacific islands.

Attention is now focussed on Africa as a source of supply for food, coal, diamonds and uranium. Without food from Algeria, Tunis and Morocco, France would have difficulty making ends meet. In February the British Labour Government announced that it was financing the development of one hundred and seven farms of 80,000 acres each in Tanganyika, Kenya, and Northern Rhodesia, scientifically operated, to supply food. The fear of losing one of its richest African possessions was that which motivated the French to suppress so drastically the wide spread revolt in Madagascar during the first week of April. With 60 to 80 per cent of the world's supply of uranium in the Congo "dependency," the Belgian Government is bending every effort to further atomic research in the hope that this uranium supply will enable Belgium to become a first-class power.

BOOKWORM'S APPROACH TO COLONIES

By OBSERVER

ONE of the most delightful little books on Colonies that I have yet seen is a shilling reader's guide by Elspeth Huxley, published for the National Book League by the Cambridge University Press. It has only fifteen pages and nearly half of them contain a list of books to which the reader is recommended. The author makes the plea that it is more likely that the peoples of the United Kingdom will be attracted to the Colonial scene if they approach it from the point of view of entertainment, than if they are continually being told that it is their moral duty to learn about peoples for whose safety and welfare they are responsible.

There is much in the idea; but there are other statements which deserve our serious attention. Here is one of them: "By knowing thoroughly one region, a reader learns much that will help him to understand the problems of all Colonies; by learning superficially about the problems of all, he may understand none." It would be difficult to have hit the nail more surely on the head. Or again: "it is safe to say that no judgment of value on a political topic is likely to be made by an individual ignorant alike of the country's history and of the traditions and development of its peoples." The argument is clinched.

But before recommending this pamphlet too highly to those interested in Colonies, let us give one warning; and perhaps another quotation of Elspeth Huxley will give an introduction: "the heart of our problem and our task is to fit these peoples, materially so backward, socially so differently organized and spiritually so unknown, into a modern world of speed and revolution in which we ourselves seem almost to have lost our way. Clearly our success will be impossible without an understanding of the life which the subjects of this metamorphosis have been leading, century after century—of the background from which they have sprung. To discover this information and present it to us has been the primary purpose of social anthropology."

The warning should be obvious. It is this, that while books, especially books by those who have spent large slices of their lives in Colonial territories or have made special studies of Colonial peoples are necessary to an understanding of Colonial peoples, they are no substitute for the peoples themselves. If we burnt every book that has been written on Colonies so far, the loss would be great indeed, for the reader or the student; but the Colonial peoples would remain and so would a great number of Europeans and others who have lived with them and know them at least as intimately as the British Member of Parliament knows his constituents.

Books are always a source of pleasure to the reader who enjoys them and they are, as Elspeth Huxley points out, properly a source of entertainment. But reading about Colonies will never be a substitute for listening to the voice of the peoples themselves at the time that they open their mouths.

African High Standards of Efficiency

SOUTH AFRICA SEES WHITES LOSING GRIP

Forecast Puts Europeans at 3,000,000 Ten Years Hence Against 14,000,000 Others

2/22-48

By G. H. ARCHAMBAULT

By Wireless to THE NEW YORK TIMES.

CAPETOWN, South Africa, Feb. 22—Figures avaialble today suggest the probability that ten years hence the Union of South Africa will be peopled by about 3,000,000 Europeans (generic name here for Whites) and about 14,000,000 non-Europeans (African natives), Asiatics and "Cape Colored," the latter the outcome of centries of the admixture of Whites and natives and imported slaves.

No census has been taken since 1936, but the population today is estimated at little more than 2,000,000 Europeans and between 8,000,000 and 9,000,000 others. The inferences of comparison are obvious.

The forecast for ten years hence is made by the Economic and Social Planning Council, which deduces from the figures that "it is impossible to exclude the native from his full part in the development of the country." This raises a racial problem in all its acuteness.

Speaking broadly, racial questions hitherto have frequently been postponed indefinitely or tension has been eased, provisionally by compromise. This may have been inevitable since they are intimately linked with political issues. But there is now a growing desire to reach a comprehensive solution and it is suggested that the Government might appoint a commission to draft a plan.

The concern caused by the racial problem is evident from many references in the debates in the current session of Parliament, as well as from discussions by sociological, economic and welfare organizations.

One solution advocated, notably by Dr. Bernard Price, retiring president of the Associated Scientific and Technical Societies of South Africa, in a lecture just published, is to abolish the color bar so as to widen social interests and improve the mode of living of some 80 per cent of the population.

Such a step would certainly arouse great opposition, mainly political, although the conservative Cape Times in an editorial this morning reproved the "seeking of illusory security by striving to keep eight-tenths of the populations semi-poverty stricken."

This allusion to cheap, unskilled labor points to one of the principal factors of the racial problem, for the advantage of such labor is counter-balanced by the fact that the native has an extremely small spending power and thus represents a handicap to the successful development of competitive home industries. But increasing the spending power of the native masses implies the raising of their status both materially and intellectually, with consequent demands for higher wages and the abolition of segregation.

It is hoped that an outline of a long-range solution to this complex problem may be forthcoming next week, when the Government introduces a bill touching upon one of its aspects, namely, the electoral franchise and land tenure for Indians in Natal Province.

In any case European opinion here ranges between two extremes—racial equality and fear of native domination. There is agreement on one point, however; that the solution of the racial problem is a matter for South Africa alone.

2. Administration.

Reports had not yet been received from Swaziland, Nyasaland, Gold Coast, and the Sudan.

£ 723,000 allotted for general anti-tsetse work in East and West Africa, and £ 100,000 for cinchona research. Field demonstration in Uganda with DDT and Gammaexane highly successful against tsetse and malaria. In 1948 the Rockefeller Yellow Fever stations will be taken over.

British Army and Navy, it was announced in June, 1947, now open to men of color; and equal pay established for merchant seamen regardless of race.

This last summer (1947) proposal was made in Parliament to create a 200,000 man African Army, to replace the old Indian Army. Proposal was rejected officially because self-defense and self-finance are two main pillars of British Colonial policy, and expense of this would be far beyond present possibilities; further, removal of such a large number of men from the labor market of areas already crying for more, would seem another inguperable problem.

40/52/15

November 1946-47

ADMINISTRATION

Headline Summary

1. Empire Affairs

(a) Britain: - British Colonial Service to be bettered, by selection and broadened training of Cadets, and by improved and equalized conditions of service - details in Colonial No. 197 and 198. The British Colonial Office, after 72 years in Downing Street, moves to Church House, pending erection of new building. Colonial Office staff numbers 1200, better than double pre-war strength. The Colonial Economic and Development Council numbers 10, including an ex-Governor of Nigeria, ex-Under Secretary of State, a West African economist, West African doctor, and head of Barclay's Bank.

-2- Central Africa

Central Africa

Northern Rhodesia iron-ore deposits, being surveyed by British industrialists reported extensive and rich, Lusaka's eassaying 65% and easily extractable; another deposit found near Broken Hill; Kafue River hydro-electric project favored to develop these, rather than Kariba Gorge. Report says Minister of Supply favors increased production of Northern Rhodesia's copper rather than Southern Rhodesia's chrome, as nearly $30 million of copper must now be bought annually; so diversion of coal cars by S. Rhodesia to haul her chrome is an economic mistake; Lobito Bay and Benguella Railway can handle 2000 tons more a month of badly needed supplies, but expense is high and compensating exports hard to find; coal receipts by mines continue to fall short of promised 39,000 tons monthly, Sept. 28,000 tons; increasing to Nov. 35,143 tons; wood fuel getting scarce; forced shut-downs seem likely.

40/56/14

Feeling is expressed that secondary industry is getting too far ahead of present realities, as Union now buys more abroad than her falling gold output can pay for. Retail activity is satisfactory, general merchandise stocks are heavy and buyers market is prevailing. Wholesale volume is good but prices are high with keen competition in heavily stocked lines. Shortages continue in cement, structural and sheet steel, piping and electrical conduits; timber shipments arriving regularly. Motor trade shortages continue in popular American makes, but supply of English and continental makes is equal to demand; used cars are scarce, with recent models keenly sought. Quota system for sugar industry ordered suspended for five years, and production is expected to reach 725,000 tons this year as compared to 500,000 a year under quota; Union's jam and fruit canning industry will benefit greatly also. Forty to fifty big British Industrial Firms are conducting surveys in the Union with a view to starting branches. Over 20 others are already constructing and due to start production this year, one being a £10 million textile plant employing 7,500.

Tati Goldfields, Ltd., (Bechuanaland) called a meeting on Jan 30th to consider voluntary liquidation; but by the time meeting convened prospective buyer for the company "lock, stock and barrel" appeared, so company decided to hold on (since it is self supporting) to see if advantageous sale can be made. Tati concession was obtained from Lobengula in 1887, before Rhodesia's beginnings, and mining operations date from 1868.

RESEARCH NOTES - GENERAL

Such an abnormal institution as this was destined to the long run & fall of its own accord. The first thing that struck the warning note was the insurrection in San Domingo — under the the greatest of Negroes Toussaint, surnamed the Savior.

"The most unhappy man of men
yet born"

The next fatal sign was the rise of moral revulsion in the hearts of the civilized world. led by Wilberforce & Clarkson Garrison & Douglass, men came to oppose slavery because it was wrong. The real decree & circumstance was however the utter failure of slavery as an industrial system in competition with free labor.

49-27-40

Rochelles Dolzens & Von Reck tell us in 1734 that there were 30,000 black slaves there which & that they outnumbered the whites. 5 & 1, coming in at the rate of 3000 a year. "Baptism" says Von Reck "is rarely here administered to the Children of Negroes, and Marriage is not in use among them." Virginia had the next largest slave trade and gradually in varying numbers slaves were introduced into every colony, although there were comparatively few in New England.

31-11-34

This represents the culmination of the commercial theory of slavery in the colonies and it is well to pause here & note the effect of the policy: it had firmly established in America a vast number of African barbarians, had swept away every vestige of their primitive culture, tribal & family life, and developed them into a sullen force of compulsory laborers held in subjection by harsh slave codes. Meantime however the conception of colonial life was changing The deepening of Religious ~~thought~~ & life & freedom of thought which characterized the 18th

I must not turn — all
the voices of all little blood children
dead born & unborn are calling me
daily back & backing me here. Beside
the saving country why in hell should
I surrender to Southerners?

X Autobiography

I asked the American Peace Commission to call a Pan-African Congress in Paris. They said ~~it was impossible~~ and that the French government would not permit. I turned to ~~the French government through~~ Blaise Diagne, the black under-Secretary of War who had secured the 75,000 black troops to defend Paris. He secured the consent of Clemenceau, the Prime Minister. But the Negroes of the various countries of the world, including the United States, were not allowed to ~~come to the Congress~~ attend. Nevertheless, a Congress of fifty-eight delegates was assembled in Paris in 1919.

From that beginning we went further. In 1921 we held a large and important Congress, meeting successively in London, Paris and Brussells. We had some two hundred representatives from all over the world, and aroused not only the interest of Europe, but the opposition of the imperial powers. In 1923 we had a small third Congress in Lisbon, Portugal. Then I went to Africa as Special Minister Plenipotentiary and Envoy Extraordinary to Liberia on the occasion of the second inauguration of President King. I tried in 1925 to have a fourth Pan African Congress in Tunis, but the French would not allow it so that finally the Congress was held in New York, interesting but small. There were no further attempts to hold congresses until 1945 when we met in Manchester, England, and there was present Nkrumah, the present Prime Minister designate of the Gold Coast, and Kenyatta, who has been accused of fomenting unrest in Kenya.

39-8-1

Along with my main activities went other parrellell efforts quite as important and even more human. For instance, I began my family life by marrying in 1896 while still teaching at Wilberforce, Nina Gomer of Iowa, of Negro and Alsacian descent. We lived together fifty-three years and had two children, but lost the little son in infancy. The daughter still lives and is a junior

I made between 1915 and 1953 seven visits to islands in the West Indies predominantly inhabited by peoples of Negro descent.

Search for democracy

o government nor economic system could have succeeded under such conditions, and it was natural to charge all the difficulties of these unhappy days to democracy and communism. The result was that Germany after the war suffered a ruthless re-distribution of wealth, comparable only to Russia, without Russia's consequent advantages. Royalty and the nobility went to the wall, and the old G German middle class of civil servants, teachers, professional men, shop-keepers, ~~manufacturers of industry~~ and the like, were threatened with extinction. The working masses ~~and the peasants~~ had no time to achieve a dictatorship ~~in trust for the proletariat~~. They tried, with the inevitable result of divided councils, mob-law and disorder. And this in a land where order, regimentation, and obedience to law , was by 300 year's training, second nature. There was but one clas that could seize power, and that was the civil servants and engineers. The power for them to seize the state was put in their hands by capital and big industry. Thus Hitler came to power with three watch words: Authority, Work, Satisfaction for the workers. Back of this must stand, the property rights protection. All this Hitler has done and Germany is satisfied.

How has Hitler established his power and popularity? First by establish- order-- a result which more than any other endeared him to the orderly minded German. Germany today, from Rhine to Oder and from North Sea to Alps is a land of Law and Order. There is no loafing, little petty crime, the streets are safe for women and childr ren even late at night; in the alleys and sailor quarters of Hamburg, crime has almost disappeared and vagrancy reduced to a minimum; in fact to the visitor there is almost too much order: almost at times a whispered breathlessness, which is not reassuring. One remembers how ruthlessly, and wth what defiance of conventional human freedom this has been accomplished by a military dictatorship, helped by secret police, spies and tale-bearing. However the result was ~~accomplished, it~~ undoubtedly accomplished.

Secondly and without the slightest doubt, Hitler has satisfied the workers. This has been his main job, and the fulcrum of all his endeavor. To this task has been brought all the ingenuity of the group that today rules Germany. First of all psychology has been appealed to: Hitler is himself an artisan. He and his friends continually make mention of this fact. This painter and private in the army is today Leader of this land! One can only measure the weight of thisfact who knew as I did a Germany ruled "Von Gottes Gnade" by the hooh-adel who sneered at the "Corsican parvenue" Hitler and Hitler's army are careful to avoid all pre-warassumptions of rank and social prestige:swords and costly, gay uniforms have nearly all dissapeared; the officer is no longer a caste apart. He is no longer a geltleman born ot bred.

But this wuold count for but little, if the worker was poor, mistreated and oppressed, with no chance to enjoy existence. Here Hitler and his state have deliberately copied Russia. Unable to raise wages and at the same time do away with unemployment, Hitler used the Russian method of indirect compensation through privileges vacations, travel , clubs, sports and clubs. It is safe to say that the German laborer today with his small wage is happier than ever before. He gets little cash to be sure; but he is practically sure of some sort of work; he is taken care of when sick and pensioned when old. He gets a chance to travel: 330,000 workers were given seavoyages by the "Strenth Through Enjoyment" organizations throughout Germany in 1936. Boys in the Hitler Youth organizatbon, to which every German boy had better belong have excursions, camps, vacations, etc. The hours of labor have been reduced so asto insure rest days every week. Servants especially have been raised far above the level of half-paid drudgery, which they used to occupy, chiefly by attracting the best of them to marriage or farm life. Especially is military life made attractive to the workers, with its chances of travel, athletics, and parading before a nation that loves parades

All this would not suffice unless accompanied by two things: absence of display of wealth by other classes, leading the worker to beleive that he is not much worse off than others; and more especially, propaganda, tireless and carried on by all media-- newspapers, radio, cinema and public utterances, all tending to establish these things as facts:

That the Germans are a superior race
That Jews are a menace to the German state
That Germany is threatened and must prepare for war
That the greatest threat against Germany and civilization is Communism
That democracy and universal suffrage have failed and must give way to the Atoritarian state
That Germany must have colonies or starve

It is safe to say today that after three year's of a propaganda unparrelled inpower, exclusive occupation of the field, and uncontradicted in any way that reaches the masses, the overwhelming majority of the Germany peolple believe thse propositions as proven and incontrovertible truth. It is an astonishing example of the tremendous power of propanda for good or evil in the hands of astute men.

Fairchild, Henry Pratt, Immigration, The MacMillan Company, New York, I930, p. 51.

...."These were the indented (or indentured) servants, or redemptioners. There were two main classes of them - those who were brought under compulsion, and those who came voluntarily. Of the first class, many were convicted criminals, who were sent over in great numbers from the mother country, and on arrival were indented as servants for a term of years. Under the barbarous legal system of the day many persons were sentenced to death for insignificant crimes, such as stealing a joint of meat worth over a shilling, or counterfeiting a lottery ticket. Many humane judges welcomed exile as an alternative to death penalty. It is estimated that possibly as many as fifty thousand criminals were sent to America from the British Isles, from the year I7I7 until the practice was ended by the War of Independence. Besides the criminals, in this class of indented servants were many who were kidnapped and sent over to America. Press gangs were busy in London, Bristol, and other English seaports, seizing boys and girls, usually, but not always, from the lowest classes of society, and sending them over to labor as indented servants in the colonies."

AMERICANIZATION

There have been four periods of immigration policy in the United States

To 1783 - settlement - English, Dutch, Swedes and Negroes

1783-1830 - free immigration - English, Scotch-Irish, Germans, French

1830-1882 - agitation and state regulation - Irish, German, English, French, Scandinavian

1882-1917 - federal control

1917-1938 - restriction

1845 Irish potato famine

1848 German politcal uprising

1864 The Danish-Prussian War

1850 Taiping Rebellion in China

Social Science Survey
(1938-1939)

Section IX: POPULATION

Chapter 48: Americanization

The Meaning of Americanization: The word Americanization has been used for years without a clear analysis of its meaning or implications. There is general agreement that Americanization involves the social adjustment of the immigrant to the American environment. It is a process of social expression by which immigrants in these United States come to participate in the life of the nation. When, however, it comes to the formulation of a program, there is disagreement as to what is implied in this process.

The term Americanization did not come into general use until the World War. It was at this time that the heterogeneous character of our American population made itself more evident. Many Americans were fearful that the diversity of aims might become a serious problem. This was not a new attitude. Anti-foreign outbursts have taken place in our history from time to time. Most Americans however believed that American environment would of its own weigh weight exert such pressure upon the immigrant that he would become an integral part of the community. The World War revealed that many immigrant groups were voicing the beliefs and aspirations of their kin in Europe. There was an intensification and a heightening of group consciousness. Reservists were called back by many countries and thousands returned to the country of their birth. In many instances the foreign press endeavored to mold public opinion in favor of the mother country. There were intrigues and plots on the part of hyphenated groups. On the other hand, fine loyalties and a deep sense of patriotism were evident on the part perhaps of most of the newcomers. The war lasted long enough to make Americans painfully conscious of their peculiar problem of nationalities. During the war period there was the beginning of a process of fusion of the divergent elements. This process continued in the post war period. Since the advent of the dictators with their fierce doctrine of racism, there is again danger of division among the foreign born, some allying themselves with the anti-democratic theories of the rulers of the country of their birth. Totalitarian states are making definite attempts to reach into every layer of society and win advocates for their ideologies through techniques designed to appeal to the particular interes interest of each group. These outside pressures threaten the unity of American life and the basic concepts of American thought and attitudes. The question of Americanization again looms as an important problem though not of the same character as in previous years.

Accomodation and Assimilation: Every continuing group cherishes a set of social values a tradition, History, language, and religion. These values may be called the cultural heritage of the group. Each group believes its standards, its culture good. Each group tends to regard its own ways as refined and excellent. Ethnocentrism of peoples must be reckoned with, since society is a vast array of groups and individuals. There must be a constant adaptation. As stated by Park and Burgess, "Mankind is distinguished, in fact, from the animal world by being composed of persons of divergent types, of varied tastes and functions. Civilization is the product of an association of widely different individuals and with the progress of civilization, the divergence in individual human types has been and must

continue to be constantly multiplied." In this world of differences, men must develop working arrangements to eliminate conflict without the complete destruction of the different. Accomodation is an adjustment by which the identity of the respective groups is not lost. It mitigates conflict between persons or groups and enables persons or groups widely separated by social distance to carry on activities and forestall undesirable assimilation. Accomodation rests upon acceptance, real or apparent on the part of conflicting groups.

Assimilation refers to the manner by which two or more cultures are merged, It means the sharing and fusing of folkways and mores. It is a process by which persons and groups assume the memories, sentiments, ideas, attitudes of other persons or groups and by sharing their experiences become incorporated with them in the common cultural life of the na tion. It may be a reciprocal process resulting in a new combination of elements. The process of accomodation is largely conscious, in assimilation the individual and groups are largely quite unconscious of the fusion of ideas, attitudes and habits that are taking place. There are forces which hasten assimilation, there are others which retard. Among the obstacles are those forces which stimulate the immigrant to look to the land of nativity rather than to America. When strong nationalist sentiment exists in Europe, the home government may encourage the immigrant to keep up contact with the homeland. The Italian Fascist government has taken this course as has the Nazi government. ~~which ordered registration at Consulates.~~ On the other hand there are forces helping assimilation, of which the school is perhaps the most important factor. A common language is a unifying force as are the history, geography, flag of the country, Extra-curricular activities, organized recreation under the guidance of the school or of private agencies make the immigrant child, America conscious. American institutions, particularly settlement house and community centers have aided the immigrant in becoming adapted to American life. It may be of interest ~~tha~~ that in many instances, the foreign language press has also been a factor for assimilation.

Theories of Americanization: 1. The Dominant Group Theory. Americanization has been defined as an adjustment to the American pattern of life. It aims to bring about the identification of the immigrant with American thought and feeling and enables him to participate in the life of America. There is one theory that may be called the Dominant Group Theory which holds that America is already populated with a fairly homogeneous type which in race and culture is Anglo-Saxon. All newcomers from foreign countries must as soon as possible divest themselves of their old character, their past traditions. They must completely accept the customs, patterns of the American type, and wipe out all ethnic distinctions. Under this theory, there was no expectation that American culture should itself be modified or influenced by the various types of culture of the different minority groups. They must forget the land of their birth and eradicate all recollections of its traditions. The newcomers must do all the changing and mold themselves into the form of the dominant group. This theory as stated by its proponents meant a complete forgetfulness of all connections with other countries because of descent or birth. It failed to recognize the positive terms of a loyalty to the new life but emphasized the negative attitude toward the past of the immigrants life. America is made up of many races. The composite American is Engligh-Scotch-Irish,-Spanish,-Polish,-Jewish,-Italian,-Russian,-Scandinavian, and many others. All of these are represented in substantial numbers. This dominate group theory advocates a fixed type of culture as against a diversified culture enriched by the tradition of many peoples. It tends to break down loyalty to the immediate family and even evokes a feeling of contempt for their language and custom. It has been a source of dis-

organization in the life of the immigrant. To conceive of America as belonging to the Anglo-Saxon race or to any other is a notion contrary to the fundamental idea of democracy and to the principle of free institutions. Such a program of Americanization based upon the superiority of one group would be a tyranny that would impose a superficial American pattern upon the newcomer and would violate the most profound feeling in American tradition; namely a decent respect for the worth of the individual. To interpret Americanism as the culture of one definite race denies the immigrant the right to modify and contribute to the development of American institutions. This conception of Americanization implies a static America instead of a growing, developing, dynamic nation.

The Melting Pot Theory: This second theory although it is broader than the complete assimilation theory agrees with the latter in that both theories aim for the disappearance of divergent ethnic cultures within the American framework. The Melting Pot Theory gives the newcomer a part in the development of American culture and welcomes the contributions of the newcom newer racial elements. Americanism is regarded as in the making. This theory which Zangwill evolved implied that the cultural heritage should be refined, melted into the American pattern. The minority cultures were to be obliterated but incorporated into the American cultural stream. A lowering of the morale of the immigrant is to be avoided. Pride in his past and in his people is to be encouraged until the ultimate fusion takes place. Old cherished customs and old ideals are not to be forsaken too rapidly. The tragedy of disintegrated families with a loss of social control is avoided by keeping the children faithful to the old life and bringing the parent nearer to the new. The Melting Pot Theory did not recognize sufficiently the vital needs of our minority groups nor did it provide for the preservation of the rich cultural values of age old groups. There are groups which wish to make their contributions perennially and not a once-for-all contribution says one of the critics of this theory. The contribution in culture made by completely absorbed groups is almost negligible. Few worth while customs, ideas, are added to the dominant culture by dying immigrant groups. Just as a great man usually continues to make his contribution to society as long as he lives, so a nationality is an ethnic personality that continues to contribute as long as it maintains its vital existence. Must such groups as desire to maintain their identity be suppressed! Must there be complete fusion or is there a way, compatible with the best interests of America of preserving freedoms for groups which wish to maintain their cultural existence!

Cultural Pluralism: One school of thought then believes the solution lies in the complete assimilation of all minority groups and the eventual blending of all nationalities into a composite pattern for America. Another school of thought is convinced that it would be a great loss to American life to disregard the rich and varied heritage which these many groups may continue to contribute to American life. In the conclusion of the report of the National Resources Committee on the Problems of a Changing Population in the section, Cultural Diversity in American life, it is stated, "There are undoubtedly powerful influences working at present in opposite directions. One set of forces tends toward the totalitarian state through the suppression of racial and cultural diversity and conflicting interests of all sorts. The other set of influences fosters cultural pluralism, the free adjustment of conflicting interests group and individual initiative and thus makes for the preservation and furtherance of democracy." Cultural pluralism makes possible the adjustment of minority groups to major civilizations. This theory assumes that no one culture contains all favorable elements but that each group which is a component part of the American population has unique values and that the nation will be finer and richer in its cultural composition if the

country conserves the best that each group has brought. The theory of cultural pluralism requires that cultural traits be preserved. It dignifies values and practices different from the dominant group. It creates a feeling of pride for them and their blends them into the best cultural patterns of American tradition.

Americanization Programs: The WORld War made many aware of the fact that there were millions of immigrants and their children within the country, who were not sufficiently adjusted to American life. The demand arose for the public schools and private agencies to undertake a nation-wide program to bring about more complete adjustment. As a direct result, the schools took on a more conscious program. Provision was made for evening classes for adult foreigners. These classes were often hasty and makeshift. It was instruction on a large scale and aimed at immediate results. Laws were enacted raising the upper age limits of compulsory education. English as the language of instuction was made mandatory in elementary schools. Employers insisted that their employees become naturalized. There was some tendency to use coercion and force, unfortunately too there was emphasis in the externals and too little attention to the fundamental concepts of Americanism. The critisism of the Dominant Group and Melting Pot theories of Americanization necessarily applies to this program which is based upon these theories. This program rests on the assumption that American culture is something already complete and does not give suffisient value to the culture of the immigrant. There is no particular pattern to which all Americans from every section of the country, rural and urban, North and South, East or West will conform. Uniformity is not only impossible, it is also highly undesirable. There are some who regard the Americanization process as highly successful if the immigrant is treated with a prescribed amount of American history, government, hygiene, and the English language to be followed up by taking out naturalization papers. Americanization has far greater implications. It is a slow process, a graduated adjustment by which the experiences, traditions, culture of the immigrant are related to those of America, a building of the new life upon the sound foundation of the old. It is usually a problen of re-education, an adjustment of another culture with that of the United States. The process cannot be carried on successfully by compulsion but rather by guidance and protection. Americanization should not disrupt individual standards with weakened guides and sanctions for behavior. Some concrete progress has been made in taking account of the worth-while qualties of alien cultures by the recording and popularizing of folklore songs and other cultural traits of various minerity peoples. The National Resources Committee says, "Americans have come to realize that while we do not have a wealth of cathedrals, fine carvings, old family customs, or a national folk music and literature, we do possess an abundance of cultural resources in the heritage of many American groups. Such recognition is becoming a spontaneous and wide-spread movement of great importance. Itis significant that this has been announced as a major theme of the New York World's Fair."

A present day Americanization plan envisages a more dynamic program. A conception of America in the making must assume some form of change, not an America crystalized, rigid but an America prepared to meet changing conditions. An Americanization program first and foremost must teach the basic implications of democracy as a vital force in an American life. It must give the immigrant a real understanding of the meaning and principles of philosophy underlying them. The immigrant would learn that it is the right of the majority to rule but also that the majority must not suppress the rights of the minority. Democracy accepts the existence of different economic and cultural interests says the National Resources Committee. The aspirations and needs of different economic and cultural groups must be recognized and be given free opportunity of expression.

The immigrant must recognize tolerance as a characteristic of democracy both in principle and practice. He must recognize the true meaning of tolerance, the higher tolerance as expressed by President Washington when he said, "The citizens of the United States of America have a right to applaud themselves for having given to mankind examples of an enlargod and liberal policy; a policy worthy of imitation. All profess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of as if it was by the indulgence of one class of people that another enjoyed the exercise of their inherent natural rights. For happily the government of the United States, which gives to bigotry no sanction, to persecution no assistance requires only that they who live under its protection should demean themselves as good citizens in giving it on all

occasions their efficient support. This concept of tolerance is not something that a dominant group grants to a subordinate and by its "indulgence" permits the minority to enjoy different cultural practices, but rather as America's first President makes clear the recognition of such practices as a natural right. In order that this higher concept of tolerance be inculcated in children, they should be taught to respect differences. Difference does not mean that people are better or worse. Through dramatization, through pageant, music and art, they may see different aesthetic values. This encourages the group that presents the program and also concretizes the idea that America respects differences and uniformity is not a desideratum but unity is the important objective. Such programs in presenting the contributions of all races and nationalities will develop esteem, respect and good will. It will help to make America safe for differences.

Democracy connotes cooperation as a complement to tolerance. Former attempts at cooperation among different groups were usually made by finding a common denominator. A higher basis of cooperation may be found by working out a plan of living together with an awareness of differences in point of view. It implies a conscious effort on the part of Catholic, Jew and Protestant to associate together as such with a common goal in terms of his own experience.

Americanization so conceived would mean teaching not only a knowledge of our fundamental, basic law and the guarantees granted in the Constitution but also the tolerance and cooperation they imply. An adequate program of Americanization would involve not only the political and economic relationships but also the social. Such a program would insist that the immigrant must learn the language of the country but it should not encourage the forgetting of the native tongue. In fact it would call for the giving of an opportunity to the younger generation to learn the language of their people. More over it would point out clearly the difference between political and cultural loyalties. For the citizen of the United States there can be only one political loyalty, since a citizen can be a member of only one state. There can be no divided alegiance, no dual loyalty for an American citizen. On the other hand many cultural loyalties enrich his personalities. The immigrant should become a part of the American scene, not an outsider, or an onlooker. ~~It must make~~ The immigrant should be eager to become an American citizen and to fulfill the duties of an American citizen.

Americanization in its broadest sense includes both the immigrant and those of native stock. Americanization is not a ~~one-~~ unilateral adjustment, but requires a giving and taking on the part of all persons living in America. The native born who follows ideas and practices contrary to Americanism is un-American to the same degree as is the immigrant who retains and follows an ideology contrary to our American democracy. Frequently native born Americans are less appreciative of the privilege that are theirs, than is the case of the immigrants who came to America because America symbolizes to them an ideal, the value of which was enhanced through experience in societies where that ideal was lacking. According Americanization programs must not be limited to work with immigrants but should be provided to all elements of American society. Naturally the character of the program would vary with the specific needs of each group. All programs would have this in common the aim to make manifest that our democracy implies faith in the ability of a people as a whole to solve its problems through the participation of the entire electorate. This participation expresses itself through the ballot and through the choice of representatives who express the will of the electors The emplications of democracy transcend the political aspect of human relationships. Democracy implies the right to think, to talk, to worship as one wishes and what is more, as a necessary corollary, the recognition of THE RIGHT of others to exercise those same privileges. Likewise democracy betokens an economic opportunity to all elements of the population. The factors which determine the specific economic opportunity which shall be OPEN TO ANY individual are not subject to control but democracy at no time can tolerate the limiting of opportunity to special groups or classes WITHOUT BEING UNTRUE to its fundamental principles.

should be

89-121-35

desideratum

Theseconcepts of democracy might perhaps be summarized in the emphasis which democracy places on the dignity of man, the value of the individual and in marked contrast to the totalitarian ideology, the insistence that the function of the state is to serve the citizen rather than the notion that the citizen is of no consequence excepting to the degree which he serves the state. Americanization must be of a character which would focus the attention of native and immigrant upon the philosophy of human relationship and must be planned to evoke the fullest cooperation of all elements individual and collective for the common welfare.

Questions for Discussion:

1. What are the differences of implication of Americanization programs in the various theories of Americanization?
2. How would Americanization broadly conceived be related to the problems of(a) relations between immigrant and native, (b)white man and negro?
3. Contrast the attitude of the totalitarian statesand democracies in respect to (a) treatment on of minorities, (b) function of the ballot, (c) autarchy, (d) effeciency and inefficiency in the solution of social and economic problems.
4. Discuss the role of the school in the Americanization process.
5. Describe the naturalization process.

SAN FRANCISCO FIRE AND EARTHQUAKE

April 18, 1906.

The night before, April 17, Caruso sang in Carmen with the Metropolitan Opera Co. in San Francisco.

As a result of the earthquake and fire:

4 square miles were burned, or 500 blocks

$350 million worth of property was destroyed

200,000 were homeless

There were 438 known deaths

500,000 library books were destroyed.

NOTES 1881. 1847 35 ---1---

Ben Tillman was born at Chester, Edgefield District, South Carolina-1847. From this same county came men like Butler and Wigfall. Tillman's family once owned 2000 acres and many slaves, but he had smaller holdings, although he was a well to do farmer by 1881 . He was an uncouth and self-rightous man rude and abusive . He once told Senator Hoar " All the Yankees from Cape Cod to Hell, can't make us submit to Negro domination."

52-13-42

He had a fist fight with McLaurin, his fellow senator in the 90's , which was the first fight on the floor of the senate for 50 years . He got a bloody nose and was excluded from the senate four days and the president's invitation for him to dine with Prince Henry was revoked . He never forgave Roosevlet. He was given to profanity but was really conservative on property. He was blinded in one eye by an absess and loss the eye in 1865 . In 1873 he joined the Straight Out faction of Carolina and led the Hamburg riot in 1876.

He gave a good deal of time to reading of general literature, but did not know much about economics . In 1882 he became captain of the Edgefield Hussars and was very proud of that . Meantime economic differences took place in Carolina; the rice crop faded out in the low-lands while cotton flourished in the uplands . The Bourbons of Charleston, the old aristocracy followed the philosophy of Grady in the 80's . From 1883 to 86, Tillman was near bankruptcy and became a great advocate of reform and education in agriculture . He attended the Rx Farmer's Convention in 1886 and joined the Farmers Alliance in 1887 .

In 1890, he was nominated for governor in a stampeded convention , but when the real convention met, although he got the nomination, Haskell made a vote, he quoted the Negro vote ; and while Tillman got 59,000 ballots , Haskell got 15,000 including 5000 Negroes . As governor, Tillman increased taxes on corporations and pushed the state monopoly of liquor. Hampton was replaced

33-12-43

Kriby , a drunkard in the senate in 1890. In 1892, Tillman was re-elected as governor , while Blease became House Leader . Tillman who had first opposed lynching now defended it violenty . He supported the white primary

In 1882, a second Haskell manisfesto , asking for Negro votes was issued. In December 1894, the legislature elected Tillman as senator. In 1894, anti-Tillmanites again appealed to the Negro votes . Evans was elected governor , but Pope , another candidate fought for the Negro vote . Evans was elected 39,000 to 17,000 , while all but 10,000 of the possible 130,000 Negroes were kept from the polls by threats or violence .

In 1903, Jim Tillman, Nephew of Ben, killed Gongalez , editor of THE NEWS AND COURIER. From 1898 to 1909, Tillman gave continual talks and lectures against the Negro. In 1902, he was not invited to the White House for dinner and called the president an S.O. B. In 1903 he made a long and continuous fight on Crumb, and in 1908, a last attack on Roosevelt . That year he was stricken with paralysis, while in 1910 Blease was elected governor.

Ohio

The provision in this law requiring colored settlers to give bonds was, as far as I can learn, a dead letter till 1829, when the trustees of Cincinnati, alarmed at the increasing colored population, issued a proclamation ordering the colored to comply with the requirements of the law within thirty days or leave the city. They petitioned and obtained from the authorities an extension of thirty days. In the meantime, they sent a deputation to Canada to ascertain what provision could be made for them there. Before their return the sixty days expired; finding that few if any had given security, and that the authorities had made no effort to enforce the law, some of the citizens became exasperated and resolved upon forcible expulsion. The fury of the mob raged for three days and nights. In vain the colored people besought the authorities for protection, and at last barricaded their homes and defended themselves. Several of their assailants were killed and wounded, and at length the mob retired. The deputation from Canada soon returned with favorable news. Sir James Colebrook, Governor of Upper Canada, said he would extend to them a cordial welcome, and "Tell the Republicans on your side of the line that we royalists do not know men by their color. Should you come to us you will be entitled to all the privileges of the rest of His Majesty's subjects." On receipt of this intelligence, it is estimated that one-half of the colored population of Cincinnati, numbering about 2,200, left the city and founded a settlement in Canada, which they called Wilberforce. (Page 44.)

MARYLAND COUNTY.

Section 16. There shall be four administrative districts in this County, two of which the Department can presently define, namely: Kru Coast and Cavalla.

Paragraph 1. The limits of the Districts in this County will be ascertained by consultation with the authorities in the County Government.

Section 17. A Commissioner will be appointed to each of the administrative districts provided for ~~[illegible]~~ in this Circular, and they shall bear the official title of "County Commissioners".

Section 18 The County Commissioners shall be under the direction of the Secretary of the Interior and shall forward their reports to the Interior Department, furnishing copies to the Superintendents of the respective Counties.

Section 19. The Salary of each County Commissioner is fixed by law at $300.00 per annum.

Section 20. This Circular becomes operative from May 1, 1923, and in making reference there to in letters or reports, the title hereinabove given must be cited.

NOTES

During the war, 84,000 schools, universities and libraries were completely destroyed.

In 1941, there were 1,222,805 teachers; in 1943, 774,795; in 1949, 1,225,000 teachers.

There are 34,000,000 pupils in the Russian elementary and secondary schools. 1,280,000 in the Middle professional schools. 674,000 in the Institutes for Higher Learning.

Amounts devoted to education and culture.

1943---12,000,000,000 Rubles

1944---21,000,000,000

1949---60,000,000,000 --equals 26% of total budget.

822.4-SS

1943--1,340,000 in Kindergarter

1945--1,000,000 " "

1950--5,000,000 " "

1946---3,152 technical schools with 891,000 students.

304 Universities and Institutes.

Every school has clubs, circles for sports, arts & sceinces, handicraft and hobbys.

32 Universities

20 types of Institutes with 1000 to 4000 students each.

Adult Education

10,000 schools for secondary education of adults

95,400 workers clubs with palaces of culture

Lectures, and Lecture Bureaus

1948--800 higher educational institutions with 700,000 students.

"The goal is eventually to make higher education universal." The goal of adult education is to give everybody at least 7 years schooling.

The road to higher education is open to all who can qualify.

Primary and Secondary education is free. Higher Education charges tuition but most students through the Scholarship system do not have to pay.

35-4-229

Bureaucrats contended for power during the last few years.
Approach to the Emperor comes through channels: the Supreme War Council; the Imperial household ministry, stronghold of the bureaucrats; and the cabinet
Capital rules the bureaucrats. The war party is against capital. The rebellion of young officers in Feb. I936, was on the whole against industry and party government. War council has ruled by assassination

Japanese mill hands receive one tenth the wage of Americans, and yet are contented, healthy, comfortable, with recreation, study and advancement (Report of American mission under W.Cameron Forbes)

Europe reached industrialism by the disintegration of Feudalism. The intervening age of freedom and independence, produced science, skepticism and invention. Then Europe attempted to re-build the integrated social structure it had lost. Japan did not disintegrate Feudalism, jumped the period of freedom, indivualism and inventiveness and landed into an integrated industrial system, borrowing the results of the Industrial Revolution in Europe.

Wage in Japan is low but expense of living in Japanese comfort is so much lower that the Japanese worker is happier on I yen a day than the European laborer on I0 yen.

Japan in North China: A Chinese official, with a Japanese wife, and a Japanese brother-in-law, who was a Japanese army officer, were set up with the consent of Chiang Kai- shek as Administrator-General of the East Hopeh demilitarized Zone. This official declared the autonomy of I8 counties, with a low tarif. Japanese goods were poured into China. China lost as $I20,000 a day in customs. Bankruptcy of Chinese firms followed and Japanese beganto invest in Chinese textile mills

The Emperor of Japan is not a ruler-- he is that by virtue of which rule is excersized Since 536, the real political question in Japan, has been: Who is using the Emperor now? From 536 until I867, the power was for the most part exercizby the Shogun, while the Emperor was used almost purely for ceremonial purposes. Today the Emperor's prestige is so high that he ranks as god; nevertheless although theoretically the Emperor is the state, he never acts save on the advice of his ministers. Until the World War these ministers belonged to two noble clans, the Chosu and Satsuma, led by Viscount Ito.Gradually after the World War, the power of the new financiers and business men became evident, but they worked through the army onthe one hand, and the civil servants on the other. Thus the War Council, and the

One and a Half Millions Invested Outside

The total ordinary revenue of the Native Administrations of Nigeria for 1945/46 was £2,430,168 and the surplus balances on March 1, 1946, amounted to £3,100,026. These figures were given by Mr. Rees-Williams, in reply to a question by Mr. Gallacher. About half of the total recurrent expenditure, said Mr. Rees-Williams, is devoted to general administrative purposes, such as district and village administrative, judicial, treasury, police and prisons; and with the remainder, provision is made for agriculture, education, forestry, health, public works and other services of a local character. £1,580,400 of the surplus balance was invested outside Nigeria.

Prohistory has come to the fore in Africa, with several important newly found sites and the holding of the first Pan-African Prehistoric Conference. This latter event took place at Nairobi in January (1947) and was attended by representatives of 24 nations. Several notable addresses were made by world recognized authorities, and the conference was invited by General Smuts to hold the next of its meetings, in 1951, in South Africa. Opportunity was taken to visit a few of the remarkable sites recently uncovered in Kenya and Tanganyika.

(c) Sierra Leone:- The actions taken by the Church Mission Society to save Fourah Bay College are most favorably received by all Gold Coast people. Country-wide drives have been organised to raise funds to help retain in perpetuity the full facilities now provided by the College. The Secretary's original decision would have relegated it to a very minor role, and the Gold Coast Government proposed to expropriate the College buildings.

Prehistory in Africa

Several notices regarding Prehistory in Africa have appeared during the past year. The important discoveries by Dr. L.S.B. Leakey in East Africa during the past few years were amply publicized particularly by his article in the "London Illustrated News" of 5 Oct., 1946 (pp. 382-385), which describes the happy discovery and subsequent development of the sites at Olorgesailie, with photographs and a spirited 2 page depiction of prehistoric men hunting prehistoric baboons. A month later the News"followed up with a two page spread showing animals of the period reconstructed from skeletal remains found in the area, drawn to scale with their present day counterparts. The East African finds are further described, with photographs, in "The Museums Journal", July 1947 (pp. 67 and 68), showing the work done at Ogesailie and Kariandusi.

The first "Pan-African Prehistoric Scientific Conference" was held at Nairobi in January, 1947. "Man" for July, 1947, article 106, carries a digest of the memorable paper read before the Conference by Dr. LeGros Clark; and the "London Illustrated News" of June 7, 1947, (p. 606) has a column on the conference with photographs. A brief summary of the status of African Prehistory up to and including the Conference appeared in "African Affairs", April, 1947, p. 64, which is here quoted:

"It has been known for some time that Africa provides a rich field for the scientific study of the origins of man, and not in his living survivals only. Work has been done in almost every region: on the marine terraces of Morocco, on New Stone Age Sites (Caspian) among the stone circles of the Gambia and French West Africa, on Old Stone Age sites in the Sudan (Chellean and Acheulean), in the Congo, and French Equatorial Africa where new caves have just been discovered near Manyamba. Until recently, Southern Africa had yielded perhaps the most exciting clues; fossil apes belonging to ages infinitely older than any we have mentioned - the Lower Miocene, 20 million years ago. But interest has now shifted to East Africa and especially to Kenya, where a wealth of remains have been discovered. It was therefore only just that the first Pan-African Prehistoric Scientific Conference should be held in Nairobi in January. Representatives of 24 nations, among them some of the leading prehistorians of the world, gathered to listen to papers and to visit some of the sites made famous by the discoveries of Dr. L.S.B. Leakey. Perhaps the most remarkable of the papers read was one by Professor Le Gros Clark of Great Britain, who declared that, in the light of South African finds of fossil apes at Sterkfontein and Kromdraai, we shall have to revise our views on the development of man; for these creatures combined many apelike features (in proportions and brain) with many equally human, including teeth, face-bones, and some limbs. (It follows that man's body cannot have developed uniformly, as was once thought). Some of these apes have been discovered in Kenya; but perhaps the most remarkable site is the Living-floor recently found at Olorgesaile, near Nairobi, which is left almost exactly as it was when occupied by a group of Acheulean (Old Stone Age) men 200,000 years ago. EDUCATION

Headline Summary

1. General

(a) Britain:- As of January 1947, Mass Education Officers have been appointed for the Gold Coast and Nigeria. Sierra Leone, Nyasaland and Northern Rhodesia are also to get them. Experiments in mass education in 5 areas total some 8,000 or 10,000 people, and show that extensive schemes will be very expensive. Kenya estimates £ 1 million a year just to achieve child literacy. Uganda says rapid cure of illiteracy impossibly costly. Northern Rhodesia, however, is hopeful and enthusiastic. Nigeria has big program - 12 officers, literature bureaus, broadcasting, movies, newspapers, competitions, etc.

-9- W.A.F.

42/9C/69

7

Nov. 1946-47

8. Western Africa

(a) General:- (August 1946), There are about 500 or 600 West African students in Britain of whom some 150 are Government scholars.

#8 -2- W. A.

(b) Nigeria: - United Africa Co. plans many developments in Nigeria: at Sapele, a timber mill to have £500,000 plywood mill employing 300, a planing mill, and seasoning kilns; the yield of this forest area will be quadrupled, and reforestration carried out on Government plan to assure regeneration in 100 yrs.; cargo handling facilities at Burutu, the company's Niger Delta base; a brewery at Lagos (with Dutch assistance); an extension of the Apapa soap factory; and new works at Port Harcourt.

The "Nigerian Farmers and Commercial Bank" was incorporated in Jan., 1947, with Government approval. It is owned by Natives, backed by Indian and American money, and affiliated with the "Gold Coast and Nigeria Farmers' Bank". The National Bank(President, Dr. Moja) increased its capitalization to £250,000.

Mining concession of 900 sq. miles, in Sokoto and Kabba Provinces, taken by London African Trust Co. An all African mining company has formed, £100,000 capital.

Nigerian economy is by no means sound in the palm oil areas, or in other places where over-population is out-stripping improvements in farming standards.

The new oil mill at Amwo is to sell 1/3 of its 60 ton output to African middlemen. 5000 traders have been on strike at Ibadan against conditional sales.

A waterway between Lagos and Sapele is to be re-opened, thereby avoiding the stormy Lekki Lagoon - it was blocked 100 yrs. ago in operations against the slave-raiders.

42/90/99

6. Western Africa

(a) General: - United Africa Co. (branch of Unilever) has placed four Natives in managerial positions. The Company plans £9 million developments throughout Africa. (These will be noted under the respective areas). Regular publication of Trade Information Bulletins, covering Nigeria and the Gold Coast, is planned by the Company for the near future.

Jefferson:- On Our "free press"

"And I will add that he who never looks into a newspaper is better informed than he who reads them, this inasmuch as he who knows nothing is nearer to the truth than he whose mind is filled with falsehoods and errors." --Jefferson, in 1808.

Lincoln and Franklin Roosevelt confirmed Jefferson. A few years ago, Dr. Robert M Hutchins and his 12 able colleagues in their investigation of our press confirmed Jefferson likewise.

It has been suggested that we of the United States are the most MISinformed Nation on Earth. What do you think?

Upland California

PARAGRAPH 1: Message sent by cable to the Anti-Slavery and Aborigines Protective Society for presentation to the British Government:

> "From correspondence so far received it appears Secretary of State and British Cabinet do not favorably consider our case but as General Assembly at UNO is International Tribunal to decide future South West Africa including our relative position we ask for assurance that our full documents will be placed before General Assembly at UNO stop I earnestly request you to place above representation before Secretary of State on our behalf and at same time I trust and ask for Secfetary of State pardon in not sending message through official channels my action being merely prompted by fact that time practically gone before reply given us on this point despite repeated requests."

PARAGRAPH 2: In terms of the mandate over South West Africa the welfare of the Native Aboriginal population was a "sacred trust" accepted by the Union of South Africa and all other Nations parties to the mandate system in order to protect backward people until they were able to stand on their own feet. This postulates that such people are in the position of minors and in no recognized civilized Court of Justice are the rights of such people dealt with or waived without appointing a curator-ad-litem to protect their equal rights and privileges. Such a curator would have had to consider the aborigines' rights under the existing mandate and under the mandatory system detailed in the Charter of the United Nations and then argued before any impartial tribunal what would be the result of handing such backward peoples without the said rights to the Union of South Africa as its private property. Nothing of that kind has been done and surely the least the General Assembly should be called upon to do is to appoint an International Independent Committee to take evidence on the whole position of the mandate of South West Africa and report back to the General Assembly before any final action terminating the mandate is decided upon?

31-4-18

PARAGRAPH 3: The Director's memo concerning the South African Institute of Race Relations' attempts to obtain independent inquiry is:

1. This Institute proposed to send three representatives, including a former Native Affairs official, to South West Africa, to ascertain all facts relevant to the Union Government's proposal to annex the territory, also to ascertain opinion among both Europeans and non-Europeans in the territory.

2. After consulting the Administrator of South West Africa, the Institute sought the approval of the Prime Minister, making it clear that the representatives would visit the territory after the plebiscite of natives had been concluded, i.e. after the end of April.

3. The Prime Minister replied that he feared the visit would confuse the natives and asked that the visit be postponed. He said that Lord Hailey, who had also suggested visiting the territory, had been asked to defer his visit. The Prime Minister added "As I have to bring the question of South West Africa before the UNO Meeting next September, I myself consider these visits should be postponed until after that meeting.."

4. In June the Institute drew the Prime Minister's attention to the unfavorable inferences which had been drawn by the public in the Union and elsewhere from his disapproval, and again asked for his approval for a representative to visit

PRESIDENTIAL ELECTION, 1912

South Carolina casting 50,348 votes had 9 electors
Massachusetts " 488,156 " " 18 "

Georgia and New Jersey each had 14 electors
Georgia cast 121,532 votes for hers
New Jersey cast 432,534 votes for hers

I

WIFE OF FORMER ASSEMBLYMAN E.A. JOHNSON DIES

After an illness of several months Mrs. Edward A. Johnson, nee Lena Allen Kennedey, the daughter of George and Sarah H. Kennedey died January 30th at 11.57 p.m. She was born August 20, 1865 at Hastings, Minnesota and reared in Sioux Falls, South Dakota. After completing her Public school education she entered the Boston Conservatory of Music and later taught music in Sioux Falls privately to Senator Pettigrews' family and also the family of Banker Tate. ~~#########~~ Mrs. Johnson taught at Bennett College, Greensboro, N.C., St. Augustine, Raleigh, N.C. and Shaw University. She was married in 1894 to Ex-Assmeblyman Edward A. Johnson and has been a resident here since 1907. While ~~######~~ living in New York she was active in the N.A.A.C.P. and raised more money than any single person in the organization. She was a member of the Board of Managers of the Y.W.C.A., organizer of the Womens' Republican Club, succeeded in enrolling the largest number of colored voters in various districts of Harlem in 1917and 1918. She was a member of Bethel A.M.E. Church which was founded by her great grandfather Bishop Richard Allen in 1808. She is survived by ~~##########~~ a daughter, Adelaide, one sister, Mrs. Lillian N. Hawkins, wife of Prof. John R. Hawkins, financial secretary A.M.E. Church, ~~two~~ three neices, Mrs. Kate Burnley of Burlington, N.J. and Mrs. Irene Hall Walker of Philadelphia and Corbin Hall and Mrs. Ester Hawkins Wilson, daughter of Prof. and Mrs. John R. Hawkins. Funeral services will be held at Bethel A.M.E. Church on Wednesday at 1 p.m. and will be conducted by Rev. J.K. Spearman the pastor and assisted by Rev. Hutchins C. Bishop of St. Philip's & President Emeritus Chas. Francis Meserve of Shaw University

Interment at Woodlawn Cemetery.

.....DEPT. 192

WASHINGTON, D. C., May 7.-- Perry W. Howard, special assistant to the Attorney General, is now the highest salaried Government official of color in the United States. This distinction comes as the result of a promotion in the tangible form of an increase of $1,000 in his yearly salary. He now receives $6,000 a year.

Result of Legal Efforts.

This promotion is a recognition of the very valuable legal services Mr. Howard has rendered the Government. He received his appointment two years ago and was assigned a large number of suits brought by various railroad companies against the United States. Many millions of dollars in claims against the Government were involved. The railroad companies had the best lawyers they could retain. But Mr. Howard went to his work enthusiastically and, as a result of the success with which he defended these claims against the Government, the Attorney General shortly after his return to the Department of Justice last week approved this promotion for him.

Engaged in Important Work.

A conception of the importance of the work in which Mr. Howard is engaged at the Department of Justice may be had from the fact that during the fiscal year ending June 30, 1922, 91 railroad cases handled by him, in which the amount claimed was $4,999,415.70, were disposed of. The claimants, however, secured judgments for only $513,850.19, for a large part of which there

was no defense; the only question involved being the ascertainment of the correct amount due. He now has 102 cases pending, in which the amounts claimed aggregate $3,901,204.46.

He has also represented the Government in two coal cases involving the question of the liability of the United States for losses incurred by producers in selling their coal at prices fixed by the Fuel Administration under the wartime powers given the President. In both of these cases he filed demurrers to the petitions, which were sustained in the Court of Claims. The coal companies immediately appealed to the Supreme Court and if these test cases should be decided adversely to the Government, the United States will probably be called upon to satisfy judgments amounting to millions.

31-23-13

A Fine Example.

Born and reared in Mississippi, his is a splendid example to the Negro youth of this country of the height which may be attained in the legal profession by application and determination.

---ooOoo---

Statistics on Crime relative to Negroes

Although the following is not a true measure of the incidence of crime in the United States, yet it gives some idea of crime as far as statistical information makes it possible to measure such anti-social acts. The following data refers to crimes committed by Negroes fifteen years old and over for 1940; The figures represent the per cent that the Negro committed of the total of such offenses reported per 100,000 population:

Crimes 1940 and 1910

	1940	1910
criminal homicide	40.1%	56.0
robbery	30.8	33.3
assault	44.0	41.1
burglary	28.5	30.5
larcency	28.4	31.8
auto theft	14.8	
embesslement-fraud	11.5	16.6
stolen property	27.3	
arson	17.4	
forgery-counterft.	9.1	14.6
rape	22.1	25.7
prostitution	25.4	33.6
other sex offenses	14.9	
narcotic drug laws	19.3	

	1940	1910
weapons: carrying, possess.	45.8%	
offenses against family	15.6	
liquor laws	47.2	31.9
driving while drunk	6.8	
road and road driving laws	21.6	
parking violations	14.3	
other traffic and motor laws	21.0	
disorderly conduct	28.1	
drunkenness	12.3	15.9
vagrancy	19.5	16.4
gambling	41.9	
suspicion	27.1	
not stated	19.5	
all other offenses	23.5	37.6

Negro proportion of all offenses committed 22.8% 1940
21.9 1910

35-1-282

Prisoners material for 1944, and 1910

Of the 38,880 male felony prisoners received from courts by State and Federal prisons and reformatories during 1944, 11,354 or 29.2 per cent were Negro.

Of all prisoners, including juvenile delinquents, in 1910, 21.9 per cent were Negroes

Crime 1910
homicide 56.0

EDUCATIONAL ENROLLMENT

Negroes 6 to 20 years of age in school

1910 1,644,759 or 44.7 per cent

1940 4,188,998 or 64.0 per cent

Lynchings

Southern States with Negro Policemen

1917: In this year there was not one Southern state employing Negroes as policemen.

1947: At least twelve states employ Negro policemen in more than fifty cities, although in practically every case the Negroes are limited to the policing of Negroes only.

Health Data

1920: The life expectancy for Negro males was 40.5 years and for females 42.3 years.

1940: The life expectancy for Negro males was 55.9 years and for females 58.5 years.

For the United States as a whole 47 per cent of all Negro registrants in those age groups physically examined for induction were rejected as "unfit" as compared with 27 per cent for whites. In the South, where the majority of Negroes live, and the health and educational facilities are the poorest, the percentage of rejections is considerably higher than in the North where these services for Negroes are better still but grossly inadequate. In the North, the rejection was 39.0 per cent and in the South, 49.3 per cent

35-1-804

MATERIAL ON THE NEGRO: 1917 to Present

Holders of the Ph.D. degree:	1910-1917	6
	1937-1947	279
other doctorates	1937-1947	35
of education		
of science		
of laws		
total doctorates: all types	1917-1947	454

Recipients of Phi Beta Kappa	1910-1917	15
	1937-1947	40

Recipients of undergraduate degrees (Bachelors)	1917	475
	1947	6,052

Negro enrollment in higher institutions	1930	25,082
	1947	71,792

Illiteracy of Negroes 10 years old and over	1910	30.4 %
	1920	22.9
	1930	16.3
	1940	10.0 SEE NOTE

NOTE (The 1940 Census did not secure data directly on the number of "illiterate" persons in the U.S. The nearest approach to this information is available in the data for the number of years of school completed. In 1940, 10% of the total Negro population, 25 years old and over, had completed no school years.

Selective Service Rejections for Military Service due to Educational Deficiency

For the entire United States, 7.4 Per cent of the whites rejected were disqualified because of educational deficiency; 32.1 per cent of the Negroes rejected were disqualified for this defect.

Educational deficiency was the cause of per cents of rejections more than twelve times as high among Negroes in Alabama (44.4 per cent of all rejections) as among Negroes in Minnesota (3.6 per cent).

In all states except one, Kentucky, the per cent of disqualifications caused by educational deficiency accounted for a larger per cent of all rejections among Negroes than among whites. In Louisiana the per cent of disqualifications for educational deficiency was over three times as high among Negroes as among whites; in Illinois the rate was five times as high among Negroes as among whites.

It should be noted, however, that the per cent of all rejections due to educational deficiency was higher for whites in North Carolina (15.0 per cent of all rejections) than for Negroes in Massachusetts (5.6 per cent of all rejections); and the incidence of disqualification for educational deficiency was over six times as high for whites in Texas (22.7 per cent of all rejections) as for Negroes in Minnesota (3.6 per cent).

35-1-205

An analysis by race of special training unit figures for a period in 1943 shows that of the Negro illiterates inducted by the Army, 90.7 per cent completed the training satisfactorily, and 9.3 per cent were discharged for inability to learn and other reasons; while 84.5 per cent of the white illiterates succeeded in completing the training and were assigned, and 15.5 per cent were discharged.

Differences in the Army General Classification Test rating were found also among Negroes in various regions of the country. in the First Service Command (New England) and in the Sixth (Illinois, Michigan, and Wisconsin), eight times as many Negroes socred above average grades as scored above average in the Fourth (Alabama, Florida, Georgia, Mississippi, N.C., S.C., Tennessee) and Eighth (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas) Service Commands. The proportions of Negroes scoring below average grades in the First and Sixth Service Commands were far lower than in the Southeast or the Southwest, where no more than 7 per cent of the Negroes attained even the average rating, and only 1.1 per cent made above average scores.

This variation in scores reflect relative educational opportunities among regions of the country is shown by comparative median years of school attainment for Negroes 18 through thirty-nine years of age. In the Second Service Command (Delaware, New Jersey, New York), a median of 8.5 school years was attained; the in the Fourth Service Command (see paragraph immediately above) a median of 5.7 school years.

The regional differences in degree of literacy and schooling of Negroes were known from the testing of World War I inductees. The per cent distribution by letter grade on induction tests among Negroes in five Northern states was compared with that among Negroes in four Southern states. The results, showe regional differences parallel to those of the AGCT scores of Negroes in World War II.

The median year of school attained by Negroes at the time of World War I scores shows again the close relationship between schooling and test grades, just as it did twenty years later in World War II. The Negroes from five Northern states in the World War I sample had attained a median of 4.9 yeras of schooling; the Negroes from four Southern states had 2.6 years.

GAINFULLY EMPLOYED NEGROES FOR SELECTED MAJOR OCCUPATION GROUPS, 1900 and 1940
(1900, Negroes 10 years of age and over; 1940, Negroes 14 years of age and over)

From Writings of Washington letter to Lear

"without going into the detail on the several points of your letter I can assure you that the measures you have adopted with respect to Washington, George and Lawrence, my black people, and the employment of Mr. Fraunces and Mrs. Emmerson -- ... meet my entire approbation. "

Iconography of Manhattan Island: (Phelps-Stokes)

Aug. 23, 1775

"During the firing 'a house next to Roger Morris's and Samuel Fraunces' at the corner of the exchange each had an 18 lb. ball shot into their roofs; some other houses suffered a little but the principle damage was sustained by some small buildings adjoining the battery.

"The statement about 'Fraunces' is substantiated by Freneau, who mentions the incident in one of his poems:

"'Scarce a broadside was ended till another began again --
By Jove! it was nothing but Fire Away Flannegan!
At first we supposed it was only a sham,
Till he drove a round ball thro' the roof of black Sam .'"

(the Poems of Philip Freneau, written chiefly during the late war (1786) p. 321.

"The Landmark of Fraunces Tavern" 1901

A Retrospect by Mrs. Melusina Fay Pierce for Womens Auxiliary for preservation of Scenic and Historic Places and Objects:

"This new owner was a West Indian and though from the swarthiness of his complexion commonly was called "Black Sam", he was of French extraction."

The New York Age Sat. Dec. 18, 1926

"Historic Frances Tavern at Broad and Pearl Sts."

"Founded by Samuel Frances, West Indian Negro, in1763"

..."Yet it is not a matter of common knowledge that this historic eating place patronized by George Washington, Governor Clinton and other great Americans of that day was originally owned and conducted by Samuel Fraunces, a West Indian Negro of French extraction, familiarly called "Black Sam" because of his swarthy complexion."

..."It is presumed that he came to the U.S. from the West Indies on an English vessel where he served as a n officer's cook; that upon landing here he settled in the Negro colony in the Wall Street District which section of the city was then used as a depot for supplying ships."

Wall Street Journal News Bulletin Weds. Aug 26,1914

"In 1762 Sam Fraunce or Fraunces called "Black Sam" a West Indian, purchased the De Lanney property.

"Already an innkeeper in 1755 he had been made a Freeman of New York"

33-12-52

From Pamphlet: "Fraunces Tavern" published by Sons of the Revolution in State of New York. Written by H. R. Drowne 1919

In 1762 the property was sold by de Lancey, Robinson & Co. for 2000 pounds -- deed Jan. 15, 1762 to SAMUEL FRAUNCES, a man of French extraction from the West Indies. Fraunces, who had been an innkeeper in New York since 1755, took possession early in 1763 when he opened the place, calling it the "Queens Head Tavern."

32-12-53

From pamphlet put out by Fraunces Tavern celebrating 1719 - 1918

On January 15 of that year (1762) it was opened as a tavern by Sam Fraunces, a West Indian known to his contemporaries as "Black Sam."

From magazine "Old Castle Gardens" Sept. 1935, v.5 no. 3 Published by the Mission of Our Lady of the Rosary, 7 State St. N.Y.

"Samuel Fraunces -- Immigrant and Patriot "

... it remained for a native of the West Indies -- we do not know more definitely his birthplace -- to be commemorated in the oldest and best loved memorial of revolutionary times -- Fraunces Tavern. According to reliable authority he came to New York before 1755, but whether on his own initiative or at the suggestion or invitation of others we know not.

From The Elks Magazine, Washington & South Avs. Dunellan, N.J.
May 1940

"Tavern in the Town" by Fairfax Downey.

"He came from the West Indies. Born there in 1722 of French extraction. It was his swarthy skin tanned by the tropical sun that gave him his nickname of Black Sam.

INFORMATION TO SECURE FROM NATIONAL ORGANIZATIONS

I. ORGANIZATION:

1. National organization:

a. Form
   1" Centralized
   2" Decentralized
   3" Internal organization - various depts. with functions.

b. Executive boards of national organizations.
   1" How organized, who elects, what representation have local units of organization, how often does it meet?
   2" Powers - who determines policies of national organization.

c. National executives
   1" Who appoints?
   2" What powers have they, and who are they responsible to?
   3" Have they an advisory ~~?~~ council?

d. Relationship of local units to national organization
   1" Membership in national organization
      a" Individual memberships
      b" Organization memberships
   2" Branch organization
      a" What is the nature of the tie with national headquarters?
      b" What degree of autonomy has local unit?
      c" Does request for organization of local group come from community or from national headquarters or both?

2. Local Units

a. Form
   1" One or more units within a community, how grouped?
   2" Internal organization of local organization

b. Executive boards of local units
   1" How organized, who elects?
   2" Powers - who determines policies of local organization - to what extent may local body disregard, or adapt national policies?
   3" Who exercises control over local executives?

c. Local executives
   1" Who selects and what is basis for selection, what control has national has national organization over selection of local executives?
   2" What powers have local executives, and duties, and who are they responsible to?
   3" Have they an advisory council which functions, or is it a one man organization?

d. Relation of local units one to another in the same community and in neighboring communities.
   1" Membership in local organization and whether this automatically establishes membership in national organization.
      a" Kinds of membership
   2" Subdivisions of local unit.

II. FIELD FOR WORK OF ORGANIZATION

1. National organization
   a. Any restrictions as to territory
   b. Any restrictions as to groups in community with whom organization will work.

2. Local organization
   a. Restrictions as to territory
   b. Restrictions as to groups in the community for which service is intended.

III. PROGRAM

1. National Organization
   a. Who established program and why?
   b. Has it been changed in any way since originally established and why was it changed?
   c. What other organizations have the same general program intended for the same groups in the community?
   d. Is any attempt being made by agency to turn over its work to any other agency public or private?
   e. Has any attempt been made to amalgamate any agencies in the same field? What have been the obstacles in the way of such amalgamation?
   f. Have any cooperative arrangements been worked out with organizations having similar programs or allied programs?

2. Local organization
   a. What are the possibilities of adaptation of the national program to a local community?
   b. Who determines such adaptation? and must it be submitted to national headquarters for approval?

IV. METHODS OF WORK

1. National Organization
   a. What is the approach to local communities?
   b. How far does national organization go in forcing the formation of a local unit or is that against policy?
   c. Does national organization attempt to bring local work of an organization up to certain standards before admitting it to membership or affiliation?
   d. Does national agency serve other organizations in the community?
   e. Does national organization consult with any other national or regional agencies before going into a community?
   f. What formal types of service are offered by national headquarters to local units and under what conditions are they offered?
      1" Field Service - what is purpose-organization, supervision, consultation, public speaking, etc. Is field service continuous, available only in emergencies, or upon special invitation of local community?
      2" Educational Service - training courses for executives, for possible workers in local units, for local groups who might serve as volunteers? Follow-up work done on such students? Publications along educational lines for the use especially of executives? Conferences for general educational purposes. Compilation of statistics and collecting material for the use of executives when educating communities to their responsibilities.

5" Publicity Service - material sent out to local units? Throughout the year or only at times of campaigns? Kind? Is it sent to individuals direct or to local unit for distribution? What use is made of motion pictures? Is approach to newspapers made through national headquarters or local units? Are there special publications for publicity purposes?

4" Speakers' Bureau - are speakers from the national organization furnished to local communities at any time during the year or only at time of campaigns or special meetings? Are speakers used chiefly for inspirational purposes or to give local people an opportunity to meet and directly ask advice on their local problems of national executives?

3" Personnel Service - Does national organization actually recruit workers for local communities? Does national organization place workers in local communities or does it just recommend available personnel to the local group? What control does national organization exercise over personnel chosen by the local group? Does it insist on certain standards of qualifications?

6" Survey Service

7" Conference Service - National conference, for whom, how often.

8" Correspondence Service - this may include the information service if there is no other bureau for this.

MILITARISM

The growing numbers of colleges in business abuse their tax exempt status, under the federal income tax laws, the Association of American Colleges said that unless the trend toward college controlled business that was not related to education stopped, the future of higher education would be in danger. 445 colleges and universities operated projects beyond their campuses.

[illegible] of Bernal an Indian-terrorist trade

"Bernal is an outstanding and unique product of this exciting half-century, which -- it must be remembered -- has been a period of unparalleled advance: from Tsarist society to Soviet society, from bourgeois democracy to new democracy; from the discovery of radio-activity to the atomic pile, from the overthrow of classical physics to the victory of atomistics; from the first international combustion engine to the jet-propelled aircraft, from the Hertzian waves to radar; from the atomistic approach to man to the integrated study of man and his environment; from ethnocentric anthropology to the comparative study of culture; from science as an 'aristocratic pursuit' to science as bread-and-butter work; from the learned society for the few to the association of scientific workers for the many."

###

illiteracy; less than one-fourth because of white illiteracy. If Congress should create a fund which would give $3 per annum per capita for the education of this class alone, it will require an aggregate annual sum of $18,719,958. Of this, Mississippi, e.g., would receive $1,119,603; but of this $959,529 would be for colored illiterates and $160,344 for white illiterates.

Representing an educational work in the South chiefly for the negro race, in which have been expended about $10,000,000, and speaking with a wide knowledge of facts, we emphatically assert the impossibility of accomplishing this great work unless the General Government shall come to the assistance of those States in which this illiteracy is chiefly found.

Every dollar we have expended expresses the conscientious and earnest desire of the donor that this work shall be done, and is an emphatic vote for the action for which we ask.

In the name of the millions of Christian citizens whom we represent we earnestly urge Congress to help qualify the ignorant voters who are intrusted largely by Congresstional action with the ballot for the duties with which they are charged, believing the power to do this is co-ordinate with the power that enfranchised them.

The following deeply interesting documents were presented to the Senate Committee, of which Hon. Mr. Blair was chairman, in 1884, but were republished in his speech introductory to the debate on the bill and for the second

time presented to the Senate in 1886.

Document I.

Address before the Senate Committee on Education and Labor, by gentlemen representing the South; under the direction of a committee of superintendents of schools consisting of Hon. G. J. Orr, of Georgia; Hon. M. A. Newell, of Maryland; Hon. J. H. Smart, of Indiana; Hon. Hugh Thompson, of South Carolina; Dr. J. W. Dickinson, and Hon. B. G. Northrop, of Connecticut. Address of Hon. Hugh S. Thompson, then state superintendent of public instruction; afterwards Governor of South Carolina.

The bill, as passed the second time by the Senate, March 5, 1886, by a vote of yeas 36, nays 11 was in substance the bill of 1884; with the addition of $2,000,000 as a common schoolhouse fund; not more than $150 to be paid towards the cost of any single schoolhouse; nor more than half the cost of it in any case. This valuable addition was an amendment offered by Hon. John Logan of Illinois. This bill reads as follows:

(S. 194, March 5, 1886)

(Bill too mutilated to copy)

I hope that you Legislature will adopt a code in reference to free persons of color that will be acceptable to the country, at the same time doing justice to the white and colored population.

Andrew Johnson.

- McPherson's Hist. of Recon. Page 24.

41-9-334

The criminal laws of the State are extended in their operation to embrace persons of color, and the same punishment is inflicted on them as on the whites, except for rape, which, if a white female is the victim, is a capital crime for a black. The law regarding apprentices is so amended as to make its provisions applicable to blacks, but it gives the former masters the preference, and declares that they should be regarded as the most suitable persons.

- McPherson's Hist. of Recon. Page 29.

41-9-335

Governor Patton has also vetoed the bill "to extend the criminal laws of the State, applicable to free persons of color, to freedmen free negroes and mulattoes." He says:

"The bill proposes to apply to the freedmen a system of laws enacted for the government of free negroes residing in a community where slavery existed. I have carefully examined the laws which, under this bill, would be applied to the freedmen; and I think that a mere recital of some of their provisions will show the impolicy and injustice of enforcing, them upon the negroes in their new condition."

- McPherson's Hist. of Recon. Page 21.

41-9-336

Sec. 1 provides that it shall be the duty of all sheriffs, justices of the peace, and other civil officers of the several counties in this State to report to the probate courts of their respective counties semi-annually, at the January and July terms of said courts, all freedmen, free negroes, and mulattoes, under the age of eighteen, within their respective counties, beats, or districts, who are orphans, or whose parent or parents have not the means, or who refuse to provide for and support said minors, and thereupon it shall be the duty of said probate court to order the clerk of said court to apprentice said minors to some competent and suitable person, on such terms as the court may direct, having a particular care to the interest of said minors:

Provided, That the former owner of said minors shall have the preference when, in the opinion of the court, he or she shall be a suitable person for that purpose.

- McPherson's Hist. of Recon. Page 29.

41-9-337

Sec. 2 provides that all freedmen, free negroes, and mulattoes in this State, over the age of eighteen years, found on the second Monday in January, 1866, or thereafter, with no lawful employment or business, or found unlawfully assembling themselves together, either in the day or night time, and all white persons so assembling with freedmen, free negroes, or mulattoes, or usually associating with freedmen, free negroes , or mulattoes on terms of equality, or living in adultery or fornication with a freedwoman, free negro, or mulatto, shall be deemed vagrants, and on conviction thereof shall be fined in the sum of not exceeding, in the case of a freedman, free negro or mulatto, fifty dollars, and a white man two hundred dollars and imprisoned, at the discretion of the court, the free negro not exceeding ten days, and the white man not exceeding six months.

41-9-338

- McPherson's Hist. of Recon. Page 30.

Sec. 5 provides that all fines and forteitures collected under the providions of this act shall be paid into the county tr treasury for general county purposes, and in case any freedman free negro or mulatto, shall fail for five days after the imposition of any fine or forfeiture upon him or her, for violation of any of the provisions of this act to pay the same, that it shall be, and is hereby made, the duty of the sheriff of the proper county to hire out said freedman, free negro or mulatto, to any person who will, for the shortest period of service, pay said fine or forfeiture and all costs: Provided, A preference shall be given to the employer , if there be one, in which case the employer shall be entitled to deduct and retain the amount so paid from the wages of such freedman, free negro or mulatto, then due or to become due; and in case such freedman, free negro or mulatto cannot be hired out, he or she may be dealt with as a pauper.

41-9-339

Sec. 6 provides that the same duties and liabilities existing among white persons of this State shall attach to freedmen, free negroes and mulattoes, to support their indigent families and all colored paupers; and that in order to secure a support for such indigent freedmen, free negroes and mulattoes, it shall be lawful, and it is hereby made the duty of the boards of county police of e each county in this State , to levy a poll or capitation tax on each and every freedman, free negro or mulatto, between the ages of eighteen and sixty years, not to exceed the sum of one dollar annually to each person so taxed, which tax when collected shall be applied by the commissioners of the poor for the maintenance of the poor of the freedmen, free negroes and mulattoes, of this State, under such regulations as may be established by the boards of the

county police in the respective counties of this State.

Sec. 7 provides that if any freedman, free negro or mulatto shall fail or refuse to pay any tax levied accroding to the provisions of the sexth section of this act, it shall be prima facie evidence of vagrancy, and it shall be the duty of the sheriff to arrest such freedman, free negro or mulatto, or such persons refusing or neglecting to pay such tax, and proceed at once to hire, for the shortest time, such delinquent tax-payer to any one who will pay the said tax, with the accruing costs, giving preference to the employer , if there be one.

- McPherson's Hist. of Recon. Page 30.

41-9-340

Section 1 provides that all freedmen, free negroes and mulattoes may sue and be sued, implead and be impleaded in all the courts of law and equity of this state, and may acquire personal property and choses in action by descent or purchase, and may dispose of the same in the same manner and to the same extent that white persons may: Provided, That the provisions of this section shall not be so construed as to allow any freedman, free negro or mulatto to rent or lease any lands or tenements, except in incorporated towns or cities, in which places the corporate authorities shall control the same.

- McPherson's Hist. of Recon. Page 31.

41-6-14

Sec. 4 provides that in addition to cases in which freedmen, free negroes and mulattoes are now by law competent witnesses, freedmen, free negroes and mulattoes shall be competent in civil cases, when a party or parties to the suit, either plaintiff or plaintiffs, defendant or defendants; also in cases where freedmen, free negroes and mulattoes are either plaintiff or plaintiffs, defendant or defendants, and a white person or white persons is or are the opposing party or parties, plaintiff or plaintiffs, defendant or defendants. They shall also be competent witnesses in all criminal prosecutions where the crime charged is alleged to have been committed by a white person upon or against the person or property of a freedman, free negro or mulatto: Provided That in all cases

41-9-342

* McPherson's Hist. of Recon. Page 31.

Sec. 5 provides that every freedman, free negro, and mulatto shall on the second Monday of January, one thousand eight hundred and sixty-six, and annually thereafter, have a lawful home or employment, and shall have written evidence thereof, as follows, to wit: If living in any incorporated city, town, or village, a license from the mayor thereof, and if living outside of any incorporated city, town, or village, from the member of the board of police of his beat, authorizing him or her to do irregular and job work, or a written contract, as provided in section six of this act; which licenses may be revoked for cause at any time by the authority granting the same.

41-9-343

Sec. 6 provides that all contracts for labor made with freedmen, free negroes, and mulattoes, for a longer period than one month, shall be in writing and in duplicate, attested and read tos said freedman, free negro, or mulatto by a beat, city, or county officer or two disinterested white persons of the county in which the labor is to be performed, of which each party shall have one; and said contracts shall be taken and held as entire contracts, and if the laborer shall quit the service of the employer before the expiration of his term of service without good cause, he shall forfeit his wages for that year up to the time of quitting.

- McPherson's Hist. of Recon. Page 31.

Sec. 7 provides that every civil officer shall, and every person may arrest and carry back to his or her legal employer any freedman, free negro, or mulatto who shall have quit the service of his or her employer before the expiration of his or her term of service without good cause; and said officer and person shall be entitled to receive for arresting and carrying back every deserting employe aforesaid the sum of five dollars and ten cents per mile from the place of arrest to the place of delivery, and the same shall be paid by the employer and held as a set-off for so much against the wages of said deserting employe.

- McPherson's Hist. of Recon. Page 31.

41-9-344

Sec. 8 provides that upon afidavit made by the employer of any freedman, free negro, or mulatto, or other credible person, before any justice of the peace or member of the board of police, that any freedman, free negro or mulatto legally employed by said employer, has illegally deserted said employment, such justice of the peace or member of the board of police shall issue his warrant or warrants, returnable before himself or other such officer, directed to any sheriff, constable, or special deputy, commanding him to arrest said deserter and return him or her to said employer, and the like proceedings shall be had as provided in the preceding section; and it shall be lawful for any officer to whom such warrant shall be directed to execute said warrant in any county of this State, and that said warrant may be transmitted without indorsement to any like officer of another county to be executed and returned as aforesaid, and the said ~~warrant~~ employer shall pay the cost of said warrants and arrest and return, which shall be set off for so much against the wages of said deserter.

- McPherson's Hist. of Recon. Page 31.

41-9-345

Sec. 9 provides that if any person shall persuade, or attempt to persuade, entice, or cause any freedman, free negro, or mulatto to desert from the legal employment of any person before the expiration of his or her term of service, or shall knowingly employ any such deserting freedman, free negro, or mulatto, or shall knowlingly give or sell to any such deserting freedman, free negro or mulatto any food, raiment, or other thing, he or she shall be guilty of a misdemeanor, and upon conviction shall be fined not less than twenty-five dollars and not more than two hundred dollars and the costs; and if said fine and costs shall not be immediately paid, the court shall sentence said convict to not exceeding two months' imprisonment in the county jail, and he or she shall, moreover, be liable to the party injured in damages.

- McPherson's Hist. of the Recon. Page 32.

41-9-346

Sec. 1 provides that in every case where any white person has been arrested and brought to trial, by virtue of the provisions of the tenth section of the above recited act, in any court in this State, upon sufficient proof being made to the court or jury, upon the trial before said court, that any freedman, free negro or mulatto has falsely and maliciously caused the arrest and trial of said white person or persons, the court shall render up a judgment against said freedman, free negro or mulatto for all costs of the case, and impose a fine not to exceed fifty dollars, and imprisonment in the county jail not to exceed twenty days; and for a failure of said freedmen, free negro or mulatto to pay, or cause to be paid, all costs, fines and jail fees, the sheriff of the county is hereby authorized and required after giving ten days' public notice, to proceed to hire out at pb public outcry, at the court-house of the county, said freedman, free negro or mulatto, for the shortest time to raise the amount necessary to discharge said freedman, free negro or mulatto from all costs, fines, and jail fees aforesaid.

- McPherson's Hist. of Recon. Page 32.

41-9-347

Sec. 1. Be it enacted, &c., That no freedman, free negro or mulatto, not in the military service of the United States Government, and not licensed to do so by the board of police of his or her county, shall keep or carry fire-arms of any kind, or any ammunition, dirk, or bowie-knife; and on conviction thereof, in the county court, shall be punished by fine, not exceeding ten dollars, and pay the costs of such proceedings, and all such arms or ammunition shall be forfeited to the informer; and it shall be the duty of every civil and military officer to arrest any freedman free negro, or mulatto found with any such arms or ammunition, and cause him to be committed for trial in default of bail.

Sec. 2. That any freedman, free negro, or mulatto, committing riots, routes, affrays, trespasses, malicious mischief and cruel treatment to animals, seditious speeches, insulting gestures, language, or acts, or assaults on any person, disturbance of the peace, exercising the functions of a minister of the gospel without a license from some regularly organized church, vending spirituous or intoxicating liquors, or committing any other misdemeanor, the punishment of which is not specifically provided for by law, shall, upon conviction thereof, in the county court, be fined not less than ten dollars, and not more than one hundred dollars, and may be imprisoned, at the discretion of the court, not exceeding thirty days.

41-9-348

3

- McPherson's Hist. of Recon. Page 32.

Sec. 4. That all the penal and criminal laws now in force in this State , defining offences, and prescribing the mode of punishment for crimes and misdemeanors committed by slaves, free negroes or mulattoes, be and the same are hereby re-enacted, and declared to be in full force and effect, against freedmen, free negroes, and mulattoes, except so far as the mode and manner of trial and punishment have been changed or altered by law.

- McPherson's Hist. of Recon. Page 32

41-9-349

March 9 - That among persons of color the parent shall be required to maintain his or her children, whether legitimate or illegitimate.

- McPherson's Hist. of Recon. Page 33.

41-9-350

March 17 - County courts organized, as in other States, for hearing of "cases arising out of the relation of master and servant," &c.

- McPherson's Hist. of Recon. Page 33.

41-9-351

Sec. 13 states that persons of color constitute no part of the militia of the State, and no one of them shall, without permission in writing from the district judge or magistrate, be allowed to keep a fire-arm, sword, or other military weapon, except that one of them, who is the owner of a farm, may keep a shot-gun or rifle, such as is ordinarily used in hunting, but not a pistol, kusket, or other fire-arm or weapon appropriate for purposes of war. The district judge or a magistrate may give an order, under which any weapon unlawfully kept may be seized and sold, the proceeds of sale to go into the district court fund. The possession of a weapon in violation of this act shall be a misdemeanor which shall be tried before a district court or a magistrate, and in case of conviction, shall be punished by a fine equal to twice the value of the waapon so unlawfully kept, and if that he not immediately paid, by corporeal punishment punishment.

- McPherson's Hist. of Recon. Page 35.

41-9-352

Sec. 22 provides that no person of color shall migrate into and reside in this State , unless, within twenty days after his arrival within the same, he shall enter into a bond, with two freeholders as sureties, to be approved by the judge of the district court or a magistrate, in a penalty of one thousand dollars, conditioned for his good behavior , and for his support, if he should become unable to support himself.

- McPherson's Hist. of Recon. Page 35.

41-9-353

Sec. 30 provides that, upon view of a misdemeanor committed by a person of color, any person present may arrest the offender and take him before a magistrate, to be dealt with as the case may require. In case of a misdemeanor committed by a white person toward a person of color, any person may complain to a magistrate, who shall cause the offender to be arrested, and, according to the nature of the case, to be brought before himself, or be taken for trial in the district court.

- McPherson's Hist. of Recon. Page 35

41-9-354

Courts are established to have "exclusive jurisdiction, subject to appeal, of all civil causes where one or both the parties are persons of color, and of all criminal cases wherein the accused is a person of color, and also of all cases of misdemeanors affecting the person or property of a person of color, and of all cases of bastardy, and of all cases of vagrancy, not tried before a magistrate."

- McPherson's Hist. of Recon. Page 35

41-9-355

"Colored children between 18 and 21, who have neither father nor mother living in the district in which they are found, or whose parents are paupers, or unable to afford them a comfortable maintenance, or whose parents are not teaching them habits of industry and honesty, or are persons of notoriously bad character, or are vagrants, or have been convicted of infamous offences, and colored children, in all cases where they are in danger of moral contamination, may be bound as apprentices by the district judge of one of the magistrates for the aforesaid term."

41-9-386

It provides that no person of color shall pursue or practice the art, trade, or business of an artisan, mechanic, or shopkeeper, or any other trade, employment, or business, (besides that of husbandry, or that of a servant under a contract for service or labor,) on his own account for his own benefit, or in partnership with a white person, or as agent or servant of any person until he shall have ~~been~~ obtained a license therefor from the judge of the district court, which license shall be good for one year only. This license the judge may grant upon petition of the of the applicant, and upon being satisfied of his skill and fitness, and of his good moral character, and upon payment by the applicant to the clerk of the district court of one hundred dollars if a shopkeeper or pedlar, to be paid annually, and ten dollars if a machanic, artisan, or to engage in any other trade, also to be paid annually: Provided, howe ver, That upon complaint being made and proved to the district judge of an abuse of such license, he shall revoke the same: And provided, also, That no person of color shall practice any mechanical art or trade unless he shows that he has served an apprenticeship insuch trade or art, or is now practicing such trade or art."

McPherson's Hist. of Recon. Page36

December 2 - Anti-slavery amendment ratified in this form:

1st. That the foregoing amendment to the Constitution of the United States be, and the same is hereby, ratified, to all intents and purposes, as part of the Constitution of the United States.

2d. That this amendment to the Constitution of the United States is adopted by the Legislature of Alabama with the understanding that it does not confer upon Congress the power to legislate upon the political status of freedmen in this State.

- McPherson's Hist. of Recon. Page 21.

41-9-357

"Resolved, that this amendment to the Constitution of the United States is adopted by the Legislature of State of Florida, with the understanding that it does not confer upon the Congress the power to legislate upon the political status of the freedmen in this State."

- McPherson's Hist. of Recon. Page 24.

41-9-358

3. That any attempt by Congress towards legislating upon the political status of former slaves, or their civil relations, would be contrary to the Constitution of the United States as it now is, or as it would be altered by the proposed amendment, in conflict with the policy of the President, declared in his amnesty proclamation, and with the restoration of that harmony upon which depend the vital interests of the American Union.

- McPherson's Hist. of Recon. Page 23.

41-9-359

November 6 - Slavery abolished - "slavery having been destroyed in the State by the Government of the United States." Same ordinance gives colored people the right to testify in all cases where the person or property of such person is involved, but denies them the right to testify where the interest of the white class are involved.

- McPherson's Hist. of Recon. Page 24.

41-9-360

It gives them all the privileges of white persons before the courts in the mode of prosecuting, defending, continuing, removing, and transferring their suits at law and in equity, and makes them eligible as witnesses, when not otherwise incompetent, in "all controversies at law and in equity where the rights of persons of color shall be put in issue, and would be concluded by the judgment or decree of court; and also in pleas of the State, where the violence, fraud, or injury alleged shall be charged to have been done by or to persons of color. In all other civil and criminal cases such evidence shall be deemed inadmissible, unless by consent of the parties of record;

Century or Harper's

A)

"In the metropolis of the modern world, in this the closing year of the nineteenth century, there has been assembled a congress of men and women of African blood, to deliberate solemnly upon the present situation and outlook of the darker races of mankind. The problem of the twentieth century is the problem of the colour line, the question as to how far differences of race, which show themselves chiefly in the colour of the skin and the texture of the hair, are going to be made, hereafter, the basis of denying to over half the world the right of sharing to their utmost ability the opportunities and privileges of modern civilization."

(B)

24-41-45

Save us, World-Spirit, from our lesser selves!
Grant us that war and hatred cease,
Reveal our souls in every race and hue!
Help us, O Human God, in this Thy Truce,
To make Humanity divine!

(C)

The ideals of the peace Congress have to do with the rights of distincitive peoples; a more distinctive people than the American Negro would be difficult to imagine when taken in his present surroundings and as compared with the other races interested which have not the distinguishing mark of color.

More than to the Black race within her borders, America owes to the world the solution of her race problem, from this very year. The question can be resolved and should be resolved, by the same impartial and righteous judgment that is to be applied to other peoples. The consequence of such an effort would not be revolution but untramelled [redacted]olution.

(D)

A Conference held to consider the dispisition of the former German colonies

(D --Continued)

in Africa will serve, perhaps, better than any other means that could be taken, to focus the attention of the peace delegates and the civilized world on the just claims of the Negro everywhere.

(E)

The sending of personal invitation to representatives of the Negro race who can attend such a Congress and who represent the Governments of Abyssinia, Liberia and Haiti; the French, English, Spanish, Italian, Belgian, Dutch and former German Colonies; and the descendants of Negroes inhabiting North and South America and the Islands of the Sea.

The making of strong representations to the Peace Conference sitting in Paris in behalf of both voice in and protection for 250,000,000 Negroes and Negroids in the League of Nations.

The cordial and sympathetic co-operation of the Black, Yellow and White Races on terms of mutual respect and equality in the future development of the world.

24-41-44

(F)

We of America fight the great fight of Peace--we agitate, we petition, we expose, we plead, we argue. It is a long, slow, humiliating path, but for us War, Force, Revolution are impossible, unthinkable. For anybody the costs of bloody uprising are so vast and uncounted that they must bring pause to the wildest. Yet, who can judge, others? Who sitting in America can say that Revolution is never right on the Ganges or the Nile? Who of us who suffer can judge how unbearable is the suffering of unknown friends? We bow our heads and close our aching ears. Only our hearts pray that Right may triumph and Justice and Pity over brute Force and Organized Theft and Race Prejudice, from San Francisco to Calcutta and from Cairo to New York.

(G)

Wherever persons of African descent are civilized and able to meet the tests of surrounding culture, they shall be accorded the same rights as their fellow citizens; they shall not be denied on account of race or color a voice in their own government, justice before the courts and economic and social equality according to ability and desert.

Greater security of life and property shall be guaranteed the natives; international labor legislation shall cover the native workers as well as whites; they shall have equitable representation in all the international institutions of the League of Nations, and the participation of the blacks themsleves in every domain of indeavour shall be encouraged in accordance with the declared object of article 19 of the League of Nations, to wit: "The well being and the development of these people consittute a sacred mission of civilisation and it is proper in establishing the League of Nations to incorporate therein pledges for the accomplishment of this mission."

Whenever it is proven that African natives are not receiving just treatment at the hands of any State or that any State deliberately excludes its civilized citizens or subjects of Negro descent from its body politic and cultural, it shall be the duty of the League of Nations to bring the matter to the attention of the civilized World.

(For the Pan-African Congress, composed of 57 members from 15 countries, inhabited by 85.000.000 Negroes and persons of African descent--to wit:)

(H)

I find that I can arrange a meeting between the officers of the Pan-African Congress and members of the Labour Party Advisory Committee on Sunday Afternoon August 28th in order to discuss questions connected with your movement.

(N)

The hall of Liga Africana where we met was a gem--scarce 20x50 feet but with beautiful frescoes, and a tapestry covered table at the end and brass-studded leather chairs.

Jose de Magalhaes presided quietly and without pretense. He is a man of fifty and more--a deputy from the black colony of San Thome in the Portuguese Parliament, a professor in the State School of Tropical Medicine. The audience was singularly striking. They were mostly young black men, students, well dressed and courteous in manner and they hailed from eight African colonies: from Angola, San Thome, Mozambique, Guinea, Nigeria, Ajuda, Cape Verde, and also from Goa (India) and of course from Lisbon and America.

We had as guests and speakers the present Portuguese Minister of Colonies, E. Vicenti Ferreira, and Vieria da Rocha, who has twice formerly been Minister of Colonies, and Professor Adolfo Benarus.

The first session was devoted to an explanation of the history and meaning of the Pan-African Movement and to a most interesting exposition of the work of the Negroes of San Thome--the most independent and progressive of Portuguese African colonies. The second session was devoted to the history and work of American Negroes and the future of the Pan-African Movement.

(M)

Calvin Coolidge, President of the United States of America, To His Excellency, Charles D. B. King, President of the Republic of Liberia.

"Great and good Friend:

I have made choice of Dr. W. E. B. Du Bois as my Special Representive,

24-41-41

(M--Continued)

with the rank of Envoy Extraordinary and Minister Plenipotentiary, on the occasion of your inauguration for another term as President of the Republic of Liberia.

(N)

Here were England, France, Germany, Spain, Belgium, Holland and Panama to be presented to me in order of seniority by the small brown Secretary of State with his perfect poise and ease.

The President entered--frock-coated with the star of a European order on his breast. The American Minister introduced the Envoy and the Envoy said:

"Your Excellency:

The President of the United States has done me the great honor of designating me as his personal representative on the occasion of your inauguration. In so doing, he has had, I am sure, two things in mind. First, he wished publicly and unmistakably to express before the world the interest and solicitude which the hundred million inhabitants of the United States of America have for Liberia. Liberia is a child of the United States, and a sister Republic. Its progress and success is the progress and success of democracy everywhere and for all men; and the United States would view with sorrow and alarm any misfortune that might happen to this Republic and any obstacle that was placed in her path.

24-41-42

May I, finally in thus expressing to your Excellency the good wishes of my country and its President, be permitted to add my own personal sense of the distinction put upon me in making me the humble bearer of these messages. I have now the honor, Sir, to transmit to you the personal word of Calvin Coolidge, President of the United States of America by the hand of Charles E. Hughes, Secretary of State.

(P.*)

My scheme then for the Pan-African movement had to depend upon voluntary organization largely outside the NAACP. This to some degree I secured and planned a congress to sit successively in three capitals of Europe: London, Brussels, and Paris, from August 29 to September 6, 1921. This congress really deserved to be called Pan-African and it attracted world-wide attention. There were one hundred thirteen accredited delegates from twenty-six different groups, including thirty-five persons from the United States, thirty-nine from Africa and the rest from the West Indies and Europe.

24-41-39

Among the speakers were Sir Sidney, now Lord Olivier, and Norman Leys of England; Paul Otlet, often called the "father of the League of Nations;" and Senator La Fontaine of Belgium; Dr. Vitellian, former physician of Menelik of Abysinnia; General Sorel s of Spain; Blaise Diagne of France; and Florence Kelly and Bishop Hurst of America. The attention which the Congress attracted all over Europe was astonishing. It was discussed in the London TIMES, the OBSERVER and DAILY GRAPHIC; in the Paris PETIT PARISIEN, MATIN and TEMPS; in the MANCHESTER GUARDIAN and in practically all the daily papers of Belgium. It led to heated debate in Brussels touching the rights of these delegates to discuss at all the relation of colonies, and it emphasized in the minds of all of us

(C)

The ideals of the peace Congress have to do with the rights of distincitive peoples; a more distinctive people than the American Negro would be difficult to imagine when taken in his present surroundings and as compared with the other races interested which have not the distinguishing mark of color.

More than to the Black race within her borders, America owes to the world the solution of her race problem, from this very year. The question can be resolved and should be resolved, by the same impartial and righteous judgment that is to be applied to other peoples. GENERAL AIMS

American Negro Labor Congress:

A

Against White Terrorism, Lynching, Mob Violence, Police Brutality.

Against Segregation and All Forms of Race Hatred and Discrimination.

For Equal Pay for Equal Work.

For Better Working Conditions.

For the Organization of All Negro and White Workers Into Industrial Unions on a Basis of Full Equality.

For the Organization of all Negro and White Farmers and Agricultural Workers.

National Association for the Advancement of Colored People:

B

We have before us today five major aims: 1, the complete abolition of lynching and mob law; 2, political freedom; 3, industrial democracy; 4, better education; 5, the absolute ending of segregation of all sorts based on race and color.

The Object: Justice

This Association exists in order to combat the spirit of persecution which confronts the colored people of this land, safeguard their full civil, legal and political rights, and secure for them equality of opportunity with all other citizens.

To Make 12,000,000 Americans:

Physically free from Peonage;

47-5-225

Mentally free from Ignorance;

Politically free from Disfranchisement;

Socially free from Insult.

L Y N C H I N G

American Negro Labor Congress:

The immediate enactment of a Federal law against lynching as a capital crime, with severe penalties against all states and counties where lynchings occur.

National Association for the Advancement of Colored People:

(continued on Page 3)

Sec. 5-44

N.A.A.C.P. (Continued from P. 2)

L Y N C H I N G

Resolutions of the Conference of 1909:

Denounce the murder of Negroes with impunity.

Denounce, "most of all the crimes committed by mobs in the mockery of the law."

--First Annual Report, 1911.

The attempt to detect and prosecute the lynchers at Coatesville, Pennsylvania.

--Third Annual Report, 1913.

Support of Anti-Lynching Bill introduced in the Legislature of Pennsylvania.

--Fourth Annual Report, 1914.

Investigation of lynchings in Cherokee, Dawson and Forsyth Counties, Georgia, and in Waco, Texas. Beginning of anti-lynching fund of $10,000.

--Seventh Annual Report, 1916.

Investigation of lynchings in Tennessee and Texas.

--Eighth Annual Report, 1917.

Beginning of the systematic lynching campaign with investigations, telegrams, letters and press stories.

--Ninth Annual Report, 1918.

Natl Conf. re Lynching

Lynching made a national issue by an Address to the Nation signed by 140 leading citizens from 30 states; publication of Thirty Years of Lynching; campaign to secure Congressional investigation; special articles in the magazines. $15,793 spent in campaign.

--Tenth Annual Report, 1919.

Further investigations of lynchings. Anti-lynchingsbills introduced in Congress.

--Eleventh Annual Report, 1920.

42-5-223

45,000 pieces of literature on lynching sent out from the National Office.

"The following is a summary of what the Association has been enabled to accomplish, with the aid of generous contributors, both white and black:

(1) Investigated more than a score of lynchings and race riots.

(2) Kept an accurate record of lynchings.

(3) Published "Thirty Years of Lynching in the United States," a book of 105 pages, and the only statistical study of lynchings ever compiled.

(4) Sent 4,462,899 copies of the Crisis to every state in the Union and to every country on the globe.

(5) Sent out hundreds of news releases. Of 139 press stories sent out during 1921 from the National Office, 30 were devoted to the subject of lynching.

(6) Held more than 2,000 public meetings, attended by more than 3,000,000 people, at which speakers acquainted the audiences with the facts about lynching.

(7) Sent literature on lynching, with actual photographs of lynchings and burnings at the stake, all over the civilized world, disproving the statement that rape is the cause of lynching.

(8) Fought successfully six notable extradition cases when attempts were made to carry colored men accused of crimes from Northern States back to sections of the South where the men would probably have been lynched.

(9) Held in New York City in May, 1919, a great and successful conference against lynching. The call for this conference was

was signed by 120 of the leading citizens of the country, 20 of them from Southern States. The number included 5 governors, 4 ex-governors, members of Congress, judges of the higher courts, members of the President's cabinet, and other men and women prominent in the nation's affairs.

(10) Issued the "Address to the Nation," signed by citizens of 29 States and the District of Columbia, urging upon Congress a nation-wide investigation of lynching and mob murder.

(11) Raised and expended since 1911 in the fight against lynching $33,928.56, this amount being spent for investigations, printing and publicity of all kinds, meetings and conferences.

(12) Through its Frankfort Branch secured the passage of a law in Kentucky providing for the punishment of any peace officer who allows a prisoner to be taken from him and lynched.

(13) Furnished information which led to the introduction and passage of a similar bill in West Virginia.

(14) Presented to committees of both the Senate and the House of Representatives of Congress, through its representatives, evidence and testimony showing the necessity of a Federal law against lynching.

(15) Furnished lawyers to defend colored men involved in lynching cases; secured the acquittal, for example, of 12 of 13 colored men arrested in connection with the lynchings at Duluth, Minn., in June, 1920, totally disproving the charge that criminal assault on a young girl had been committed by any of the three men lynched; defended since October 1919, 12 men sentenced to death and 67 to prison terms, thus preventing a legal lynching in Phillips County, Ark."

--Twelfth Annual Report, 1921.

47-5-2284

The Dyer Anti-Lynching Bill is passed by the House of Representatives January 26, 1922 by a vote of 230 to 119.

Memorial presented to the Senate by Senator Lodge, signed by 24 state governors, 39 mayors of cities, 47 lawyers, 88 bishops and churchmen, 29 college presidents and professors, 30 editors and 37 other prominent citizens. Appeal to President Harding. Filibuster in the Senate prevents the passage of the Bill.

--Thirteenth Annual Report, 1922.

Re-introduction of Dyer Anti-Lynching Bill. President's message advocates passage of the Bill.

--Fourteenth Annaal Report, 1923.

Dyer Anti-Lynching Bill reported favorably by the House Judiciary Committee. Anti-lynching campaign in England during the meeting of the American Bar Association in London. Sandwich men parade the streets with placards,"American Lawyers--How About Burning Alive of Human Beings in Your Country?"--"Fight for Law Enforcement"--"Write for Information to the National Association for the Advancement of Colored People, 69 Fifth Avenue, New York."

Meantime, lynching drops from 65 in 1920 to 16 in 1924.

New Anti-Lynching Bill introduced in Congress.

--Fifteenth Annual Report, 1924.

Investigation of lynching in South Carolina and Florida and attempts to punish the lynchers.

--Seventh Annual Report, 1926.

Presidential message against lynching,and Anti-Lynching Bill again introduced. Lynchings continue to decrease.

--Eighteenth and Ninteenth Annual Reports, 1927 and 1928.

Rope and Faggot

V O T I N G

American Negro Labor Congress:

The removal of all restrictions, actual or implied, which operate to prevent Negroes from voting, and will organize Negro and white workers to resist the terrorist tactics of the fascist American Legion, Ku Klux Klan, Vigilante Committees and other agents of white ruling class government against Negro voters.

National Association for the Advancement of Colored People:

(Continued on Page 8)

47-5-330

V O T I N G

(Continued from Page 7)

N.A.A.C.P.

"The systematic persecution of law-abiding citizens and their disfranchisement on account of their race alone is a crime that will ultimately drag down to an infamous end any nation that allows it to be practised, and it bears most heavily on those poor white farmers and laborers whose economic position is most similar to that of the persecuted race."

--Proceedings, 1909.

"The National Association for the Advancement of Colored People seeks to uplift colored men and women of this country by securing to them the full enjoyment of their rights as citizens."

--First Annual Report, 1911.

"In February, 1920, the National Office sent to seventeen men who had been mentioned as candidates for the presidential nomination a questionnaire asking their views on lynching, enforcing the fourteenth amendment, Jim Crow Cars, education, etc."

--Eleventh Annual Report, 1920.

A letter to the Cleveland Conference for Progressive Political Action:

"Gentlemen:

"The National Association for the Advancement of Colored People in Fifteenth Annual Conference, speaking for a large portion of the thinking Negroes of America, takes this opportunity to lay before your Conference certain considerations touching the Negro race.

"The political power of Negroes has greatly increased owing to the continuous migration of black working people from the disfranchising South to the industrial centers of the North.

47-5-231

"Any political party which aims to attract the votes of Negroes today must first convince them of its determination and ability to forward their industrial and political and social emancipation.

"This emancipation involves the same problems of labor and wage, of monopoly and privilege, of effective industrial democracy, which face all laboring classes the world over.

"But the American Negro has in addition to these another and more subtle and more dangerous problem, that of discrimination against him within the very ranks of labor itself; discrimination to keep him out of the unions; discrimination in the unions after he has joined; discrimination of all sorts to deprive him of earning a decent livelihood.

"It is this widespread and determined race discrimination that is alienating the Negro vote from the progressive liberal and labor vote, and is furnishing the capitalists free of charge not only cheap and increasingly efficient and non-union and union-hating labor, but also a large and growing vote in the main industrial centers of the country.

"We appeal to the Cleveland Conference for Progressive Political Action to take such enlightened and far-sighted steps against race and color discrimination as will enable us to appeal to our people in behalf of the liberal and labor parties of the nation, without being faced by the present incontrovertible fact that these very persons are today greater enemies of our right to earn decent bread and butter than the captains of Monopoly and Privilege."

47-S-033

A letter to the American Federation of Labor:

"For many years the American Negro has been demanding admittance to the ranks of union labor.

"For many years your organizations have made public profession of

your interest in Negro labor, of your desire to have it unionized, and of your hatred of the black "scab."

"Notwithstanding the apparent surface agreement, Negro labor in the main is outside the ranks of organized labor, and the reason is first, that white union labor does not want black labor and secondly, black labor has ceased to beg admittance to union ranks because of its increasing value and efficiency outside the unions.

"We thus face a crisis in interracial labor conditions; the continued and determined race prejudice of white labor, together with the limitation of immigration, is giving black labor tremendous advantage. The Negro is entering the ranks of semi-skilled and skilled labor and he is entering mainly as a "scab." He broke the great steel strike. He will soon be in a position to break any strike when he can gain econo economic advantage for himself.

"On the other hand, intelligent Negroes know full well that a blow at organised labor is a blow at all labor; that black labor today profits by the blood and sweat of labor leaders in the past who have fought oppression and monopoly by organization. If there is built up in America a great black bloc of non-union laborers who have a right to hate unions, all laborers, black and white, eventually must suffer.

"Is it not time, then, that black and white labor get together? Is it not time for white unions to stop bluffing and for black laborers to stop cutting off their noses to spite their faces?

"We, therefore, propose that there be formed by the National Association for the Advancement of Colored People, the American Federation of Labor, the Railroad Brotherhoods and any other bodies agreed upon, an Interracial Labor Commission.

44-5-383

"We propose that this Commission undertake:

1. To find out the exact attitude and practice of national labor bodies and local unions toward Negroes and of Negro labor toward unions.
2. To organize systematic propaganda against racial discrimination on the basis of these facts at the labor meetings, in local assemblies and in local unions.

"The National Association for the Advancement of Colored People stands ready to take part in such a movement and hereby invites the cooperation of all organized labor. The Association hereby solemnly warns American laborers that unless some such step as this is taken and taken soon the position gained by organized labor in this country is threatened with irreparable loss."

--Fifteenth Annual Report, 1924.

42-5-234

"For a long time the Southern States of the United States have defied democratic government in this land. They form an oligarchy where the political power is held by a small minority of the qualified voters and by a minority which does not represent the best intelligence of their own section. This condition has been permitted by the silent acquiescence of the North and by a series of evasive and unconstitutional laws and practices. The most outrageous of these laws were the so-called "Grandfather Clauses." Through the co-operation of this Association these laws were finally declared unconstitutional by the Supreme Court. There still remain, however, the laws and customs which support the White Primary. The White Primary is an attempt to substitute a single political party for the whole state and local government and to allow that party to base its membership upon purely racial lines. Such laws are a plain defiance of the constitution of this government, and this

Association pledges itself to keep this matter before the courts until justice is done."

"Particularly is it possible and right for American Negro voters so to cast their ballots as to restrain Financial Imperialism which has throttled Haiti and threatens Liberia and Central and South America and which is still using slavery and forced labor to heap up profit in Africa.

"For several years the National Association for the Advancement of Colored People has tried on the one hand to show the white labor movement in the United States that it must recognize colored labor, welcome it to Union ranks and affirm the unity of all laborers in the great fight for industrial democracy. On the other hand, this organization has sought to impress upon Negro labor its duty to leave no stone unturned in an attempt to cooperate with organized labor and to maintain and advance the standards for which organized labor has so long fought. We are glad to note in the unionization of the Pullman porters a great step towards both these objects. We regret that white Union labor is still disappointingly laggard and unfair in taking effective steps toward organizing black labor."

--Seventeenth Annual Report, 1926.

"For twenty-five years the white primary system of the South has been the most successful method of disfranchising Negroes. This year, for the first time, we have secured from the Supreme Court of the United States, in the Texas case, a decision which is the beginning of the overthrow of the white primary; and not only this, but in its decision the Shpreme Court in the most emphatic language rewrote and reaffirmed the Fourteenth Amendment as the fundamental charter of the rights of Negroes in America."

--Eighteenth Annual Address, 1927.

"The year of the Presidential Election brings forcibly to the mind of every American, white and black, the insistent problem of Democratic Government in the United States. The National Association for the Advancement of Colored People in its 19th Annual Conference reiterates its charge that the disfranchisement of the majority of intelligent adult Negroes in the United States is not simply a race problem, it is a problem of Democracy and it affects the entire nation and the whole world.

"If Democracy is discredited and sneered at today, it is very largely because of its partial failure in the United States. We are today dominated openly by selfish private interests, rather than by free and intelligent public opinion; and this is no no small measure because the disfranchisement of 3,750,000 black voters in the South has involved the disfranchisement of more than 5 million Southern white voters. Despite an increase of 100 per cent in the voting population of 11 Southern states, and despite the 19th Amendment, we face the astonishing fact that in the last forty years the voting population there has increased only 50 per cent and in the Southern South, there has been practically no increase in the number of voters in a generation.

"These facts, together with the disfranchisement of the foreign-born in New England, and the gerrymandering of congressional districts elsewhere, give the astonishing result that a million voters can elect 45 Congressmen in the South and 16 in New England, but only 13 in the Middle West and 12 on the Pacific Coast.

"Facts such as these are running the interest of Americans in elections all over the United States. Ordinarily, scarcely one eligible

44-5-036

American voter out of three goes to the polls, and the number of citizens 21 years of age and over who did not vote in the last election, reached 90 per cent in two states; 70 to 90 per cent in 7 states; from 50 to 70 per cent in 9 states; and from 40 to 50 per cent in 16 states.

"Thus, Democratic Government in the United States has become a farce, primarily because for the sake of disfranchising black men, white America has been willing to disfranchise itself."

LABOR ORGANIZATION

American Negro Labor Congress:

The removal of all restrictions against the admittance of Negro workers into existing trade unions and their full participation in all offices and affairs of the union;

The immediate organization of all Negro and white workers into industrial unions in industries where no union now exists.

The calling of Inter-Racial Labor Conferences as a step toward the organization of Negro workers and for the promotion of the solidarity of all workers regardless of race or color.

The organization of Negro agricultural workers and farmers to put a stop to existing conditions of landlord domination; to abolish oppressive conditions of work on the farms, and to establish on all farms the eight-hour day and the five-day week.

The building of farmers' co-operatives of Negro and white farmers, to get cheap credit, purchase seed, machinery and live stock and to market crops.

National Association for the Advancement of Colored People:

We stretch again hands of fellowship and sympathy to all the working people of this land and the world. We would unite with them as equals and as fellows, striving through organization to make modern industry democratic rather than autocratic, to end monopoly aand privilege in credit and capital and to make social welfare rahher than individual wealth the end of all industry.

We still face the discrimination and exclusion of trade unions, and we hereby repeat our invitation and warning of 1924 to the American Federation of Labor:

"Is it not time that black and white labor get together? Is it not

8sc-5-th

time for white unions to stop bluffing and for black laborers to stop cutting off their noses to spite their faces?

"We propose that there be formed by the National Association for the Advancement of Colored People, the American Federation of Labor, the the Railway Brotherhoods and any other bodies agreed upon, an Interracial Labor Commission.

"We propose that this Commission undertake:

1. To find out the exact attitude and practice of national labor bodies and local unions toward Negroes and of Negro labor toward unions.
2. To organize systematic propaganda against racial discrimination on the basis of these facts at the labor meetings, in local assemblies and in local unions.

"The National Association for the Advancement of Colored People stands ready to take part in such a movement and hereby invites the co-operation of all organized labor. The Association hereby solemnly warns American laborers that unless some such step as this is taken and taken soon the position gained by organized labor in this country is threatened with irreparable loss."

For several years the National Association for the Advancement of Colored People has tried on the one hand to show the white labor movement in the United States that it must recognize colored labor, welcome it to Union ranks and affirm the unity of all laborers in the great fight for industrial democracy. On the other hand, this organization has sought to impress upon Negro labor its duty to leave no stone unturned in an attempt to cooperate with organized labor and to maintain and advance the standards for which organized labor has so long fought. We are glad to note in the unionization of the Pullman porters a great step towards both these objects. We regret that white

E D U C A T I O N

American Negro Labor Congress:

The right of every Negro child to a free, adequate education fitting him for any occupation or calling he desires.

The immediate abolition of "Jim-Crow" schools.

Equal school facilities for communities where Negroes are in majority.

Uniform expenditures for all schools in proportion to population regardless of race or color.

Equal pay for Negro and white teachers.

Selection and promotion of all teachers on a merit basis regardless of race or color.

National Association for the Advancement of Colored People:

"In the past, racial discrimination in the United States has been repeatedly excused on account of the ignorance of the descendants of the slaves, despite the fact that this ignorance was once notoriously made compulsory by law. Even today with the tremendous advance which black Americans have made in intelligence, their means of education are deplorably limited. In the chief centers of Negro population there is open discrimination in the salaries of teachers, length of school terms, provision of housing and equipment, and amount of money spent on white and Negro public schools.

"A recent document published in the Congressional Record shows that the states which have separate schools for Negroes have only 3,000 college students, where they ought to have 37,000 and receive only $2,300,000 a year from State and National funds, when they ought to receive twelve millions. This is illegal and unconstitutional and socially suicidal. It must be remedied and we must remedy it by every means in our power and especially by ballots and by court action."

I. RACE CAPACITY.

Every race must be judged by what the average individual of that race is able to accomplish. If the average individual of a race can be educated, then we are warranted in cocluding that that race can be educated. This same test will hold good respecting all lines of development and progress.

Applying this test to the negro, it is seen that in all important respects the negro is the same as the other peoples that compose this nation. He has the same intellectual qualities, speaks the same language, practices the same arts, sings the same songs, thinks the same thoughts and can and does admit of the same kind of education. The above is in harmony with present day anthropology. It was recently said that, "going from extreme to extreme of the line (that is from white to black) we realize how much alike the races are in all essential respects. Observe the physical characters in the form of the head, the body and the limbs; the relative proportions of the parts, the upright position, the graceful movement, and the smooth skin. Note the intellectual qualities, the use of articulate speech, the ability of each to learn the speech of all and to practice the arts of all, to sing the songs of all and think the thought of all." See Am. Anthropologist, July-Sept. 1902. p.369ff.--Sketch of the origin, Development and Probable Destiny of the Races of Men.

31-6-81

II. PROGRESS OF THE NEGRO.

The past forty years has demonstrated the fact that the Am. negro is capable of a high degree of intellectual developement.

1. Decrease of Illiteracy. "It may be said that in 1860 the colored race was totally illiterate. In 1870 more than 85% of the colored population of the south 10 years old and over could not read and write. In 1880 the per cent of illiterates had been reduced to 75%, in 1890 to 57% and in 1900 to 44.5% of the total colored population. In 40 years almost 60% of the illiteracy of the colored race has disappeared. This is a very remarkable showing, and if this proportionate decrease in illiteracy continues, it will be practially wiped out in 50 years.

References:- Reports of the Commissioner of Education, 1894-95, pp 1332ff.

Census Report for 1900. Population. Vol.I, Pt.II. Illiteracy.

2. The College bred Negro. "I am a man, and all things which are human appertain to me, although circumstances and environments may hamper me for a season, I will suffer it to be so now, but will relinquish none of the ultimate claims of my species." "Class education has no place in the order of society, and the American people will never accept it in any form." Why should the negro? In a speech at Trinity Church, Boston, Pres. Eliot of Harvard Univ. said: "If any expect that the negro teachers

of the South can be adequately educated in primary schools, or grammar schools or industrial schools pure and simple, I can only say in reply that's more than we can do at the North with the white race. The only way to have good primary schools and grammar schools, in Massachusetts, is to have high and normal schools and colleges, in which the higher teachers are trained. It must be so throughout the South: the negro race needs absolutely these higher facilities of education."

1). The negro has been successful in the higher institutions of learning. 2) About 400 negroes have graduated from northern institutions.

3) Their records in scholarship have averaged up with their white companions, in several instances negroes have made exceptional records.

4). There have been about 3000 negroes who have graduated from colleges in the U.S. since the ~~first one~~ graduation of the first one from college Bowdoin college in 1826.

5). There were in 1900 about 750 negroes pursuing courses

6). There are to-day less than 1,500 negroes who are pursuing actual college courses.

The Report of the Commissioner of Education for 1901, Vol. I, p.815f shows that while the proportional number of secondary and higher students to the whole number of children attending school in the U.S. as a whole had increased from 2.22 per cent in 1875 to ~~7.99~~ 5% in 1897, nearly two and one half times, the proportion of colored in secondary schools and colleges had increased very little, that is, from 1% to 1.16%. "And that now at the height of all this outcry against any further aid, public or private, for the higher education of colored youths, there is only one fifth as many colored students in secondary and higher institutions in the U.S. as a whole. In this same school year 1897-98, the total number of students taking the higher education in the U.S. as a whole was 144, 477, or 1,980 to each million of the total population. The total number of negroes pursuing collegiate courses for this same year was 2402, which is only 310 to the million of the negro population, that is, 6 1/2 times less than the proportion for the whole population. The investigations of Prof. Du Bois show that there were in 1901 not more than 1000 negro students of collegiate grade according to the average American standard. If the negro therefore, is to have his quota in college studies, it will be necessary to increase the proportion tenfold.

III. THE IMPORTANCE OF OPPORTUNITY.

What a people will be depends for the most part upon the environment in which that people lives. Ripley in his studies of the races of Euro Europe, shows that people of the same ethnic derivation will differ widely in their impulses, tendencies and general progressiveness according as they are subjected to particular influences of one sort or another. The peoples of Northern and Southern Italy and of Eastern France differ in their artistic temperament, yet they all belong to the same ethnic stock The reason why some provinces of Germany show a higher rate of suicide than others appears to be on account of a greater stress and strain resulting from a higher degree of civilization. Whither the people of particular localities will be a race of peasants without ambition, or progressive artisans and merchants depends for the most part upon whether

[FAINT PRINT]

that people is advant[illegible] or disadvantageously situated.

The negro has [illegible] sufficiently in the past 40 years to show that what he will be is dependent more upon the opportunity which he will have than upon any particular social characteristic. It is especially important therefore that as the negro have an opportunity to develope along all lines and not be confined to a particular vocation or calling.

According to his opportunity the negro has made commendable progress

1. Along Educational Lines.

See previous statements and Reports of the Commissioner of Education.

2. In morality. Consider the examples of immorality that were constantly before him.

3. He has increased in style worth. (This to be shown).

4. He has increased his wealth. Worth in 1865 practically nothing. Under the most adverse circumstances he has during the past forty years amassed property to the amount of over $500,000,000. In 1890 [illegible] negroes owned their farms and homes, against [illegible] whites, [illegible] % of the colored families owned their farms and homes. This is not an indication of lack of thrift and energy.

Bulletin of Labor No.35, July 1901. The Negro Landholders of Georgia.

M. A. Wak Negro Real Estate Holders of Chicago. Thesis for degree of Master of Arts in the University of Chicago, found in the library of that Institution.

5. He has increased his economic efficiency. The negro agriculturist of to-day with all his faults and his disadvantages and abuses of the credit system [illegible] than all his slave predecessors. The slavery-trained artisans were for the most part careless and inefficient. The negro mechanic of to-day is progressive and efficient [illegible] a place in the ranks of organized labor. The labor parade in Chicago Sept. 7, 1903 is a witness to this fact. There were in 1901 about 40r000 negro artisans who were scattered through many trades, mostly semi skilled.

31-6-83

"The chief value of the mechanical and industrial schools of the South is that they inculcate in the minds of the crude agricultural population notions of tariff, economy, and decency, and not [illegible] that they teach the mechanical and scientific trades. Hampton, Tuskegee, and Claflin are among the most useful . . because their graduates go to and fro throughout the South and carry with them their newly acquired notions of character and life and disseminate them among the people. They are for the most part engaged in teaching school. I venture the assertion that not one such graduate in ten finds an opportunity to pl, the trade which he learned in school." It is often urged as an argument against the negroes higher education that after he has filled his mind with knowledge he cannot find a field in which to use it: but cannot this objection be urged, and that too with a greater show of probability, against too much industrial training? A trained mind is likely to be more fruitful in expedients than a mere "hand"; if it does not find a way it will make one. The one will do with his might what his hands find to do, the other will find with his mind what his hands might do." Kelly Miller, Report of Comm. Ed. 1901. Vol. I. p.820f.

NOTES ON MILITARY PLANS

DURING WORLD WAR I

— NOT WRITTEN BY DU BOIS ? —

Outline of the Plan of Engagement

1. Zone of action -

Limited on the East by La Harazee a shut-off crossroads from Serron Bagatelle, Pavillon and the N.S. Railroad. La Harazee, Fontaine-aux-charmes, Binarville, Lancon.

Limited on the west by branch of Trench 10, Bois Carre, branch trench of Hill 176; 500 metres west of Binarville.

Disposition

1 Basis of mission of the Battalion of the 1st-line

c. In case of the retreat of the enemy, follow him up linking his movement with that of the 11 cuirassiers

As follows:

The battalion will form a line of defense of retreat as far forward as possible. Push strong patrols forward into the first German, if these last are abandoned or feebly defended occupy these and

30-5-2

push out new strong patrols against the second line of the enemy.

Keep liaison with the 11th Cuirassiers as far as the Morris branch in the direction of Bois Long (a mixed detachment under the orders of an officer of the 11th Cuirassiers) send out patrols to maintain contact. (maintain direct communication between the colonels commanding the 368th & the 11th Cuirassiers.

30-5-3

The battalion will maintain a mixed liaison detachment with a neighboring American unit; and direct communication between the colonels of the 368th & the American forces in the Argonne.

c) It shall be ready to be an advance-guard on the road to Binarville

B The Battalion of support (in camp at Placardelle)

At the disposition of the colonel of the regiment either for pushing the groupes of the battalion in the first line toward Binarville or for covering off a counter attack coming from the direction of Tour de Paris. It will not start fight except at the authorization of the brigade commander

The Commander of the Battalion will take cognizance during the day of September 25. of the state of affairs which will decide his moving his ~~battalion~~ battalion either north of the Biesme in the direction of Binarville or on the plateau of Placardelle in the direction ~~forward of~~ La Harazée - Tour de Paris front.

30-5-4

C. Reserve Battalion in camp at Hauts Bois

Reserve of D.C.P. To take part only at the order of the general commanding the division.

The head of the battalion will take cognizance during the day of Sept. 25- of the state of affairs which will decide his moving this battalion either to the north of Vienne le Chateau or upon the plateau of Placardelle.

Fisk Articles

In a case like this the question of succession presents a singularly difficult problem. The young radical white or black would say, "we want for this University the best person for president, quite regardless of his race or color. This is certainly true, but it has to be modified by fact, and as long as a prevalent complex exists the existence of separate Negro colleges so long as we have a "Negro college" we must say "we want for this Negro college the best president regardless of color," and in saying this we know that many candidates for such a job will not apply because they will not want to teach in Negro institutions for various reasons but especially because of social difficulties, of intercourse with the students, with the professors and with the surrounding white communties. Therefore against modifying the demand, the college must ask for the best man "who understands the situation and is willing to face it." This of course seriously narrows the field. Here the conservative Negroes will cut the Gordian knot and say frankly "we want and must have a Negro president." To this the Negro radical would reply "We must not compromise ourselves by such a purely racial demand", and the whites would add, " There is no Negro qualified." The capital is investigating [illegible] and the matter would seem to be solved by the fact that there is a candidate for the job, who can fill the requirements from every point of view.

an recognition of the colored citizens of the United States a statue of one of that race, Pietro Alonzo, who sailed as pilot with Christopher Columbus on his voyage of discovery, will be erected in the triangle bounded by Vermont avenue, U and 10th streets northwest.

Alonzo is credited by a number of historians and other authorities with having been the pilot of the Nina of the fleet of Christopher Columbus on his first voyage to America.

According to the historical information furnished Col. Sherrill regarding Pietro Alonzo by the memorial committee, he was also on the second voyage of Columbus to America, and afterward made some explorations of lesser importance on his own initiative.

Other Facts on Career.

The information also sets forth: "His name appeared in the 'Libretto' 1504, as Pietro Alonzo, il nigro. This is repeated in 'Paesi Nouamente Retrouati,' Venice, 1507, also in Simon Grynaeus' 'Novus Orbis Regionum,' Basle, 1532, also Peter Martyr's 'Decades,' Seville, 1511, and also in the German edition of 'The Libretto,' 1508. There the proper names of the entire crew are Germanized and the African pilot is called Pero Alonzo, der Schwartz (meaning, the black). But, there are other authorities that sustain the above, and so strong is the array, that no one can find justification for doubting that the negro was a factor in the discovery."

Extracts from the book, AGAINST THESE THREE, by Stuart Cloete

41-9-269

1870 Was a critical year, France had just been defeated, the American Civil War had ended six years before. The Suez Canal was almost completed. Europe was stretching out hands toward the tropics to supply raw material for factories. International finance was beginning and people understood the stock Company. Rudyard Kipling was five years old, four years later Lord Randolph Churchill was to marry his American wife. Hitler's father was working as a customs official in Germany. Carl Marx was 52 years old, Freud was fourteen, Oscar Wild was a boy, George Bernard Shaw was at School.

In 1870 diamonds and gold had been discovered in Africa. A new generation of gold-hunters and prostitutes traveled over the land, and In the mining camps, women autioned themselves off nightly to the highest bidder.

Lobengula, king of the Matabele had just succeeded his father. I In 1870 Cecil John Rhodes arrived in Africa, and that same year Jan Christian Smuts was born in the Cape Province. Paul Kruger was a man of 45.

The World Almanac for 1952 lists the following states as having a poll tax at the end of 1951:

1.

BOYS AND GIRLS INDUSTRIAL SCHOOL, STONY HILL.

The boys at Stony Hill are trained as tailors, carpenters, masons, blacksmiths and bakers. Thirty boys and fifteen apprentices were employed during the year 1930 in the corpenter's shop; they made articles of furniture of the value of £731 4s. 9d.; 26 boys and one apprentice were employed as masons and bricklayers; they did work valued at £227 19s. 8d. The work in the tailoring branch was performed by twelve boys; they made all clothing, cots and mattresses for the institution, valued at £581 12s. 10d. In the blacksmith's shop the value of work was £164 11s. 1d. Other boys worked in the bakery, garden and fields. By their steady application to labour the cultivation, which in 1878 was only half-an-acre, is now extended to 43 acres, comprising coffee, vegetables, provisions, guinea grass, bananas, corn, cocoa, oranges and grape-fruit.

The gross cost per head per annum for the 369 inmates who were in the institution during the year ending the 31st December, 1930, was £23 4s. 10d., and the average earnings per child for that period, £14 7s. 10d.

The girls are taught sewing, washing, hat-making, house-cleaning and some are taught cookery. During the year ending 31st December, 1930, the washing of clothes was valued at £271 13s. 5d. The girls made and mended clothing valued at £55 12s. 0d.

H10/5/14

IMPERIAL COLLEGE OF TROPICAL AGRICULTURE.

The Imperial College of Tropical Agriculture was incorporated in September, 1921, as the outcome of recommendations made by the Tropical Agricultural College Committee appointed by Viscount Milner in 1919 in their Report (Command Paper 562).

The object of the College is to promote the study of Tropical Agriculture in suitable surroundings and to create a body of British expert agriculturists well versed in the knowledge of the cultivation of land in the tropics, of chemists and of scientific advisers possessing an intimate knowledge of the means of combating pests and diseases and to conduct reasearch. The college buildings are at St. Augustine, near St. Joseph, Trinidad, on land granted to the College by the Government of Trinidad and Tobago. The funds of the College are derived from contributions from Colonies and industries participating in the movement and an imperial grant. The Imperial Department of Agriculture, founded in 1898, was amalgamated with the College on April 1st, 1922. The academic year extends from October 1st to June 30th. The following courses and facilities for study are available:-

1. A three years course leading to a Diploma. This is primarily intended to give instruction in West Indian Agriculture and admission to it is limited to students from the Caribbean area, save in exceptional circumstances.

2. A three years course leading to a Diploma followed by a fourth year is provided for students wishing to qualify as sugar Technologists.

3. Post Graduate Courses for Post Graduates of any British University, University College or other academic institution approved by the Governing Body.

4. Refresher Courses for officers of Agricultural Departments in the tropics.

The tuition fees for the Diploma Course are £50 per annum but a limited number of students from Contributing Colonies and Industries are admitted on nomination without payment of fees.

For the Post Graduate Course the fees are £75 per annum.

The fees for other than British subjects are £100 per annum for all courses.

KINGSTON TECHNICAL SCHOOL.

The School premises are situated at 82 Hanover Street, and the work is divided into the following branches:-

Day Continuation School--The object of this department is to enable pupils leaving the elementary schools to continue their general education up to the point where they can profitably enter on the specialised study of technical, commercial, and domestic economy subjects.

Day Technical Course (Boys)--Students who have satisfactorily completed the year's Continuation Course or who produce evidence of having reached a satisfactory standard of general education may proceed to take up in this department a two years' course of study embracing English, Spanish, geography, and in addition science, technical mathematics, technical drawing, workshop arithmetic, woodwork, and metalwork. The object of this department is to provide the kind of training which will develop the general intelligence and enable the boys to make rapid progress in whatever occupation they choose to take up after leaving the school. No attempt is made to instruct the boys in the methods and detailed processes of any particular industry or craft.

Day Commercial Course--Before being admitted to this course students must have attained a satisfactory standard of general education. A thorough training in the usual commercial subjects is given, but boys and girls in addition are required to continue their study of subjects of importance from the general educational standpoint, viz., English, Spanish, geography, history, and mathematics. The object of the training is not to provide intensive training in a narrow range of commercial subjects but to give instruction of the type given in secondary schools but with a less academic bias.

Day Technical Course (Girls)--Girls whose standard of general education is satisfactory are admitted to this course which provides instruction in English, arithmetic, drawing and in addition cookery, needlework, housecraft, laundry work. The object of the training given is to enable the students to enter the better class occupations open to girls and young women. The course is only incidentally a training for domestic service.

CARRON HALL CONTINUATION SCHOOL.

This School is in Saint Mary. Girls who have reached their fourteenth birthday or who have reached the necessary standard are received. Special attention is given to training in Domestic Economy, Sick-nursing and care of children. Students are also trained for the Pupil Teachers Examination and Junior Cambridge Examinations. Shorthand and Book-keeping are also taught and pupils are trained for the Examinations of the Associated Board of the Royal Academy of Music and the Royal College of Music.

The Government makes an annual grant towards the support of the school. The fees for Boarders are £30 per annum and for Day Scholars £5 per annum.

TRAINING COLLEGES.

The following means are employed by the Government for the college training of Elementary School Teachers.

1. 40 students are supported at the Mico Training College in Kingston who are being trained as schoolmasters. In addition to the number supported by the Government there are 16 students on the original foundation supported by the Mico Trustees in England.
2. A Training College is maintained at Shortwood, in St. Andrew, for women, in which 44 students are under training as teachers.
3. Provision is made for the payment of grants to the managers of certain voluntary Training Colleges for a specified number of resident students under training, and of an additional grant for every student, resident or non-resident, who passes the yearly examination. Under this provision 41 women students are trained at Bethlehem, a Moravian College in the Santa Cruz Mountains; 6 resident and 19 day students, women, at St. Joseph's (Roman Catholic) College in Kingston.

There are also regulations providing for an annual examination of students in Training Colleges and of teachers of Elementary Schools with a view to the granting of Certificates after a period of four years probationary work in school to those who are successful.

The number of Registered Teachers engaged is 1,479 and 967 of these have received a college training.

40/5 a/17

MICO TRAINING COLLEGE.

Institutions and Schools under the Lady Mico Charity were founded in the year 1834 by the late Sir Thomas Fowell Buxton. The idea was to afford the benefit of education and training to the black and coloured population of this and the other West India Islands, as well as to train out of this population Teachers for their own Schools and the Schools of all denominations of Christians.

Training institutions were established in Jamaica and Antigua; and schools in Trinidad, Demerara, Bahamas, St. Lucia, Mauritius, and the Seychelle Islands. Of these the Training College in Jamaica alone remains.

The origin of the Charity is as follows:-

Jane Mico, widow of Sir Samuel Mico, Knt., of London, a member of the Mercers Company who died in 1666, bequeathed the sum of £1,000 "to redeem poor slaves." This money was invested by direction of the Court of Chancery in certain London properties which were conveyed to Lady Mico's executors.

The original sum towards the middle of the 19th century increased to £120,000 and in 1834 Sir Thomas Fowell Buxton conceived that the interest of the money might be legitimately applied to the Christian instructions of the childred of West Indians, a purpose as charitable as that for which the money was originally left. A charter was obtained, and the British Government added a grant of £17,000 per annum for five years. The system adopted from the commencement was liberal, comprehensive and undenominational in schools and training colleges.

Students are admitted once a year, after a competitive examination, by a selection committee. They remain three years, go out as teachers in elementary schools on the completion of their college course and are under bond to teach for six years. During residence they receive free teaching, board, lodging and medical attendance. Each student pays an entrance fee; First year £10. Second year £7 10/. Third year £7 10/. There are now fifty-five students in residence, including two from Grand Cayman, and two from Bermuda.

SHORTWOOD TRAINING COLLEGE FOR WOMEN TEACHERS.

This College was established in September, 1885, to meet the want, long and pressingly felt, of a greater number of trained women teachers for the elementary schools of the island. Formerly under the management of a Board of Visitors consisting of ladies and gentlemen appointed by the Governor, it is now under a Board of Directors similarly constituted. The college is strictly undenominational; students are admitted after a competitive examination, by a selecting committee which, besides considering their position in this examination, takes into account (1) the report of the Medical Officer (2) position in the Pupil Teachers' Examination, (3) recommendation of responsible persons in the district to which they belong, (4) general bearing. A fee of six pounds for each year of residence is charged. Students are boarded and lodged during the period of their training, subject to an undertaking on their part to teach in Jamaica elementary schools for six years at least.

The ordinary College course occupies two or three years, during which the instruction is in accordance with the schedule attached to the Government Rules for Training Colleges. The course of training includes the study of subjects generally taught in the public Elementary Schools and in addition, History, Practice in Teaching and the management of a class and Domestic Economy, both theoretical and practical. In addition a limited number of students are received who undergo a course of training for domestic work only extending over a period of not less than four terms.

JAMAICA UNION OF TEACHERS.

The objects of the Union, which was founded in 1891; are to create local associations of primary school teachers in the island, and to unite and concentrate their interests and influence by affiliation with a central body; to obtain the benefit of the collective experience of teachers on practical educational questions; to promote improved legislation on the subject of popular education; to improve the qualifications and status of teachers, to help teachers in finding employment in schools, and managers in filling vacancies therein; to establish a provident fund for the benefit of teachers.

Two vacation courses for teachers were held by the Union of Teachers of Great Britain. There are at present 43 Associations and 7 Federations of teachers affiliated with the Union, with a membership of 633 regular members and 40 honorary members.

40/5a/16

RHODES SCHOLARSHIPS.

Under the Will of the late Mr. Cecil Rhodes, a Scholarship of £400 a year, tenable for three years at Oxford University, is awarded each year in respect of this colony.

The terms of the Will are given in the Handbook for 1909.

The Trustees of the Will of the late Mr. Cecil Rhodes issue from time to time a Memorandum for the information of educational authorities and intending candidates for Scholarships in Jamaica. Explanatory notes on the Memorandum are obtainable on application to the Secretary of the Jamaica Schools Commission who is also Secretary to the Committee of Selection for Jamaica. Copies of the Memorandum can also be obtained from the officer of the Trust. The Rhodes Trust, Seymour House, Waterloo Place, London, S. W. 1.

Candidates must have taken the examination prescribed for the Jamaica Scholarship (Boys) now the University of Cambridge Higher School Certificate Examination. A fee of one guinea must be paid.

The following are the conditions under which Candidates are eligible to compete:-

(a) Candidates must be British subjects and unmarried.

(b) A candidate must be a British subject who was himself born in Jamaica, or of whose parents (or guardian) either one has been domiciled and resident in Jamaica for at least five years immediately preceding January 1st in the year of his candidature or, in the event of both being dead, one had been domiciled and resident in Jamaica for at least five years immediately prior to his or her death.

(c) Candidates must have been educated in Jamaica for at least five years between the ages of nine and twenty.

(d) Candidates must have passed their nineteenth birthday but not have passed their twenty-fifth birthday, on October 1st of the year for which they are elected.

(e) Candidates, at the time of their election, must have passed the Responsions Examination of the University of Oxford or its equivalent. The Committee of Selection is free to apply to candidates, or to any selected number of them, such further intellectual tests as they may consider necessary.

40/5a/18

WOMEN'S SOCIAL SERVICE ASSOCIATION.

The objects of the Association, which was formed in 1918, are as follows:-

a. To co-operate as far as possible with the different agencies and societies already existing, endeavouring to enlarge their usefulness wherever possible. b. To improve the health of the Womanhood of the Island. c. To take all steps necessary for the enforcement or alteration of the present Laws governing Child Welfare. d. To spread information regarding the treatment of children and the cause and effect of many of the present prevalent methods of failure and mismanagement. e. Better housing for the poor.

The Association has a work room for girls at the old Public Works Building, Parade, Kingston, with the object of teaching girls who leave school at the age of 14 a trade and so fitting them for the battle of life and giving them a chance to remain decent and self-respecting. Many girls have been sent out equipped with knowledge to earn a living.

Any woman may become a member of the Association. Names are sent to the Secretary by some member of the Association, and presented at the next meeting for confirmation: the payment upon enrolment of a membership is a fee of half a guinea. No one shall be a member in good standing until she has paid her annual fee, such fee being due and payable to the Treasurer before the annual meeting in each year.

President--Mrs. Michael DeCordova; Vice-Presidents--Mrs. Hooke, Mrs. L. Ashenheim, Treasurer--Mrs. C. DeCordova. Secretary--Mrs; Latreille.

LADY MUSGRAVE WOMEN'S SELF-HELP SOCIETY.

The Women's Self-Help Society was founded by the late Lady Musgrave, and formally opened as a depository by Dr. Nuttall, (late Archbishop of the West Indies) on 1st November, 1879. During these years it has successfully carried out its objects, viz.: the development of some of the specially feminine industries of the island (thereby fostering self-help), and that of providing employment for poor needle-women.

KINGSTON GLEE SINGERS SOCIETY.

The Kingston Glee Singers Society was founded in September, 1909, its object being the study of unaccompanied vocal part music. The season is from October to June and the Society aims at giving at least one public concert each season. The subscription is eight shillings per annum.

Conductor--George D. Goode, Hope Gardens, Kingston; Secretary--S. M. Kitchin, 60 Duke Street, Kingston.

JAMAICA SILK GROWERS CO-OPERATIVE SOCIETY.

The Jamaica Silk Growers CO-operative Society was formed in Mandeville in May, 1929.

The object of the Society is to promote, foster and encourage the production of raw silk in Jamaica, and generally to adopt all such methods as may be deemed desirable, from time to time, to give effect to that object. Any net profit which may accrue from the operations and transactions of the Society will be shared by the members pro rata. The annual subscription is 1/-.

WEST INDIES PARLIAMENTARY COMMITTEE.

The West Indies Parliamentary Committee consists of a number of Members of Parliament both of the House of Lords and the House of Commons, under the Chairmanship of the Right Hon. The Viscount Burnham, c. h., which was formed in England in 1923, on the suggestion of the Jamaica Imperial Association to watch over the interests of the British West Indies and to give special utterance to British West Indian affairs in Parliament.

Since its formation, this Committee has done valuable work for the West Indies in voicing West Indian interests.

The original Committee consisted of fourteen members which are being added to from time to time. The title to membership is a personal knowledge or association with the British Caribbean.

The Honorary Secretary of the Committee is Mr. Percy Hurd, m. p., House of Commons, London, England.

SALVATION ARMY DISCHARGED PRISONERS' AID DEPARTMENT.

The Salvation Army carries on the work among the ex-prisoners, on lines the same as those which were employed by the Discharged Prisoners' Aid Society, which ceased to operate in December, 1928.

The funds entrusted to the Salvation Army for this purpose, are dispersed in the following marrer: (1) To provide temporary food and shelter when necessary, for a day or two, so as to give the released man or woman an opportunity to seek employment. (2) To assist them, when possible, in seeking work. (3) To supply necessary tools with which to work. (4) To assist with railway or boat fares, when thought advisable. (5) To supply necessary articles of clothing. (6) All confidentials from the chaplains as formerly, will be dealt with.

There are now, Probation Officers in most of the parishes in the island.

The following officers form the department for aiding discharged prisoners; Colonel Mary Booth, C. B. E., Territorial Commander, Chairman; Brigadier John C. Martin, Vice-Chairman, Supervisor; Adjutant J. S. Austen, Secretary.

Africa

The two chief suppliers of the South African market are the United Kingdom and the United States. Before the war, Great Britain led by a large margin as the chief exporter to the Union, supplying between 42 and 45 per cent of total South African imports. The United States furnished somewhat less than half that amount, or around 20 per cent.

During the war, however, the British share declined while that of the United States increased. In 1946, the United States furnished about 27 per cent of the Union's total imports while the United Kingdom supplied about 35 per cent and Canada nearly 8 per cent, Argentina was in fourth place with a little less than 5 per cent. The four countries combined, thus, furnished three-fourths of total imports.

40-8P-2

In 1947, as goods became in freer supply here, Union imports from the United States exceeded imports from the United Kingdom, with this country furnishing a little more than one-third of South Africa's total imports. Last years, imports from each of the two countries are estimated to have been about equal, with each country supplying about one-third of the Union's total imports.

per cent did not vote. Order No. 5,039 dated January 3 was shipped today. Traim No. 509 arrived at 185th Street at 10.40 p. m.

Our records show that the freight about which you ask in your letter of Fe Feb ruary 20. was billed to Messrs. H Jones and Smith, 1050 West 20th Street

To Christopher Lathan Sholes, who was born on Columbia County, Pe Pennsylvanian on February 14, 1819, foes the honor of being the central figure in the invention oa the dirst practical typewriter. The naming of the typewriter had been quote as long a job as the evolution os the machine itself. Shiles may not have expected to revolutionize weiting, yet h knea that the correct naming of hes inve inventuin was imporyant. He called it a Atype-writer.

31-2-2

THE TINE: the winter of the year 1866 -67.

THE PKEACE: JUST A LITTLE NACHINE shop in the quietly outskirts of the city of Milwaukee,

THE SCENE: three middle aged man, each quietly working on hes pet invention but ex pecting little nore then a small measure of fame or fortune.

THE TIMEP the winter of the year 1yyyyyyy66 1866-67.
THE PLACE: JUST A LOTTLE just a little machine shap in the outskirts of the city of Milwautee.

The whole voter is ~~[illegible]~~ d Council for next

getting out the vote

The black vote has the vote ~~today~~ later

away & is funneled for Rocky &

~~Delegates~~ Delegates in committee

32-12-25

Earlier t ird parties started and spent their chief energies on local officials and congressmen but tended to neglect the highest office The Progressive Party must not make the opposite er or but keep the party a alive for the presidency while also striving especially in this election for Progressive Congressmen. Marcantonio must go back to Washington; Adam Powell has a lien on progressive xx support for the votes he has cast but fault is that he has been absen from his seat more often than any of the 24 New York congressmen. Out of 100 chances to vote he has only voted 44 times a shameful neglect of duty

52-12-26

3rd Parties

1860	Breck Dem	845,000	(Douglas)
	R	1,866,000	
	D [illegible]	1 375 000	
1892	Cleveland	5,554,000	
	Harrison	5 190 000	
	Weaver	1,027,000	
1912	Roosevelt	4,216 000	
1920	Debs	919,000	
1924	La Follette	4,822,000	
1948	Progressive	1,157,000	
	Dixiecrats	1,169 000	

32-12-28

Population, I950,	I50,697,36I	97,000,000 voters	
Negro	I4,894,000	8,600,000	

I940 all voters 84,000,000 total population I3I,000,000 64%

Negro 7,400,000 or 8.8 % of total population 58% of total population

I940 Negroes in North 2,790,000
South 9,904,000
West I70,000

I947 Non-white

North	4,595,000	2,750,000 voters
South	9,530,000	5,7I8,000
West	892000	535,000

Vote, 1940 – 50 million voted a 59½ % voters

4 50 % 1950 vote = 50,000,000

1948 4/8½ million voted

93-12-23

The rise in the number of people over 20 from 1910 to 1920 was from 53 million in 1910 to 63 million in 1920. (I have counted less than half a million as the next lower figure and more than half a million as the next higher figure.)

This gives the approximate population of voting age. The figures are not given for over 21, because they are grouped in bunches of 5 years. Over 20 is the best we can do.

The number of voters voting for president and vice-president on the two major parties was 15 million in 1912 (the nearest presidential year to 1910) and 27 million in 1920.
Thus the population over 20 rose by 10 million in this period, but the number of voters by 22 million. This was undoubtedly due chiefly to the woman suffrage amendment.

The effect would have been even bigger but for some special considerations, such as the poll tax. The operation of the poll tax among lower-income families (the majority) is such that if there is money for one vote only, the adult male in the family votes. Only if there is money for more poll taxes do the women of the family also vote. There were many more poll tax states in 1920 than today.

All figures from the Statistical Abstract of the United States.

Culture Color & Income

Ch. I Culture

Changes in meanings of words
Culture as "good manners" & as manners
men follow manners & customs more than laws
Culture folders = pictures of a good soul
We used to think our C. right – others wrong or wrong
Man by chance experiment, imitation, learned to do
things – handed the learning down &
built a culture
The study of culture is the study of men
– Ruth Benedict – test by social success

30-31-5

Ch. I Continued

Why do we do so
inheritance
learning
invention
change & reform
Freezing the past & some of – Religion
The possibility of change
physical world
Possibility of planning – Ethics

Chapter 2.

Color

The Negroland of the Arabs by W. D. Cooley
London 1841

30-1-43

Original Kings of Ghanah (q. called of King as well) ruled as far
North as Audaghost — Black ruby White
Berbers; afterward relocated South the Negro
King settles at Aukar

1054 the Morabites destroyed Audaghost
the richest King the rule of unbelievers

Aukar had 2 towns: Mohammedan
with 12 mosques & Ghadah where King &
his Blacks resided

The Rule of the Blacks — land covered many days
Wandigoes from S.W

Their conquests must have been completed
by the Arabs & merchants penetrated to inland.
They found no nation of blacks so powerful
as Ghanah, dominion of extended
West as far as ocean. Ghana was conquered
by Morabites & but was virtually independent
& converted to Islam. Then the
Black Susu invaded & absorbed Ghana.
Mali conquered Susu & Ghana. under Edris

PLACE UNCERTAIN

30-15-9

11-14. Kircher Museum. Head of a Moor with a ring in his ear facing right. An Asiatic elephant with a little bell hanging from its neck, facing left. The bronzes bearing these types differ among themselves by having four different letters of the alphabet, which are here seen in reverse and are: : three of these: are often also repeated in their proper form.

15. In the Strozzi Collection. This coin has the above-mentioned figures and, as a distinctive letter, an M in its proper form and in reverse; but in its proper form, there are two other letters by the side of the M. Gamurrini asserts that the letters in their proper form are Latin and mean: ; I, on the other hand, realizing how hard it is to ascertain, must however say that such a reading seems impossible to me. I take it to mean: , and I see this third letter M divided in two in the reverse letter which Gamurrini has read as an . The letter M is marked on the coin as well as on the reverse side. The seems to me to denote two-and-half. Bronzes with these figures are usually found in Val di Chiana and their weight runs from 2.40 to 2.80 grams.

The image of the elephant does not place it in the sixth century as if it were of African stock, since we know that at the time of the Punic War such elephants were seen in Italy; but these elephants, on the contrary, are the Asiatic ones of King Pyrrhus shown at Rome by Sulpicius Saverrio the Censor after the Battle of Ascoli. Nor does the picture depicted here of the

30 - 15 - 9

Moor guarding the animal serve to belie this: for these Moors were also in Asia, and the Indians as well as the Africans were distinguished by their outstanding expertness in training elephants; so that Lelio, discussing them, correctly brackets together the Indians and Africans he saw in Africa during the time that he was an envoy of Scipio (Cicero: De Repub. II, 40): Non et tibi (Scipioni) cum essem legatus (bello punico tertio) saepe vidi. Ergo ille indus aut poenus unam coercet belluam et eam docilem et humanis moribus adsuetam. According to Dionysius of Halicarnassus (Frags. LXIX c. 14 p. 134, med. ed.), Pyrrhus used Indians who had been sent to him by his father-in-law, Ptolemy of Egypt, and he had also made use of them to recapture Epirus.

No attempt to change anyone belief

But a determination to make us think

not just actual slogans

"No segregation" means nothing in our present

unsaved. So is the yelling "an end"

"Segregation is an evil" is eternally true

but how do we attain end to this evil in

Montgomery

But what to do next. End is the greatest

Can we simply yell No Evil!

37-9-92

17
15

37-9-93

We assemblies of the anti segregation campaign have been all wrong. This is not our fault. It is our misfortune. When I went to AU in 1897 & slowly the Negro problem, & read comparatively few books on ignorance: once Negroes knew calculus & whites knew Negroes & the problem is solved. The proposition is true but the solution finding among those who should demand. Negroes are child ignorant. But the happy & assertive thing is that white people are just as ashamed & Negroes of abnormal & curious as of any other kind - teachers more so. Not all writers of course but the overwhelming majority. Our main material fellow plant. We also advisers & members. We auditors are tired & afraid. We agitate & get angry. We face the blank fact: Negroes are dead uncertain — neither as scholars, nor dreamers men, neither as clerks nor artisans, neither as artists nor writers. What can we do? We cannot vote free. We cannot control laws even if we get it or the schools books. So long as human conscience & goodness & defenseless color segregation we are helpless & weakened remedy. We can only train our auxiliaries — & the school children — & your tools & record!

Bentkamiana

The assumption that
that settles your problem
& is for your ease comfort
& satisfaction is for the best
interests of the Negro race

37-9-94

The harmonies

Your sent your check
Eleanor Calhoun & let Hanlon
schools go & hell

We are dappled of all nationalities
of independence
We have no originality
We are afraid of ourselves

37-9-95

The art of Slacking
These truly are the brave!

A Programme that always
involves a humiliating self sacrifice
scramble & crawl somewhere, where
you're not wanted, when you cannot
use a trained dog —

37-9-96

Or even a Programme you cannot
finish or understand

We Cry God: should ever in a multitude
of Tell the whole crowd to get to hell rather than
lick boots in a trance

37-9-79

Negro Bourgeoisie

37-9-80

There was a gehörig Lunge — 30 years had rested. Yes — he was in the war with the land-storm in Prussia under Hindenburg.

We were war — we — and then we were conquered we were angehungert and now I want to go also to my above relies (graves relies are his cultural!) + now 5+ 6 months!

36-3-62

The Rhein

They have travelled to Lorelei and the deathless beauty of the Rhine is there rocks blossoming and castles: the towns of the Rheinfels — the great cruise by Guntrannen Ehrenbreitstein + the walls of old towns

Lec. Mss.

undated

In the law of Moses woman had no right of divorce, cound inherit only in the absence of sons. In India woman had only limited rights of inheritance and were disqualified as witnesses. Under Roman law woman was completely dependent. She could have no property, was under a perpetual guardianship of her father and after his death of her agnates. The wife was the purchased property of her husband. No woman could hold any public office. She could not be witness or surety, could not make a will.

In the later empire, however, women gained considerable independence, except in capacity to make a will or contract or be a witness.

Christianity introduced some alleviations and on the other hand brought in various bars. Women were not allowed to hold any office in the church or approach the altar or administer baptism.

In the Germanic tribes there was some difference, but often women could not inherit and were under perpetual tutelage.

Under English law women had only limited rights of making wills and being witnesses. They were strictly limited as to the kind of dress they could wear.

38-13-302

The gaining of civil rights of women has proceeded as follows: as late as 1910 a husband in England could obtain a divorce for adultery but a wife only for adultery coupled with some other cause, such as cruelty. In modern women have secured the right to hold property in their own names even if married. The systematic education of women did not begin until near the middle of the nineteenth century. They have gradually been admitted to the professions. In France in 1900 they were admitted as barristers. They are not admitted to the English Bar yet. The first woman physician was placed on the English medical register in 1859 and the first woman apothecary in 1865. In 1908 the Royal College of Physicians and Surgeons admitted women. The Woman Suffrage Movement began in England in 1847.

Lecture notes

CHRONOLOGY OF RECONSTRUCTION

FOUR THREADS: moral, economic, political, racial

1861-1864, United States borrowed three billion dollars
1863, Draft Riots
1862-1865, Lincoln's plan of migration
1862, Sumner's state suicide theory
1862, Lincoln admits Louisiana
1863, Lincoln's plan: states still exist; one-tenth of the voters can act; Negroes free
1864, Syracuse Convention
1864, Louisiana election; Lincoln suggests limited Negro suffrage
1864, Wade-Davis plan; the South as territory; white suffrage, majority vote, Negroes free
1864, Lincoln vetoes Wade-Davis plan and is reelected
1865, Stevens suggests free land for Negroes
1865, Louisiana excluded by Congress; Lincoln defends Louisiana
1865, Johnson, President
1865-1866 , Black Codes
1865, 14,000 pardons in nine months
1865, Johnson's plan of provisional governors
1865, May to December, South reconstructed with white suffrage and no slavery
1864, April to December, Congress not in session
1860, August, Johnson suggests suffrage to Mississippi
1865, December, 39th Congress, first session; Confederates apply for admission; vice-President, four general, five colonels, six cabinet members, fifty-eight congressmen
1865, December, Committee of Fifteen
1865, December, Johnson's message; United States has no power over suffrage
1865, March, Freedmen's Bureau Bill passed and vetoed; Johnson's speech; Congress refuses admission of South
1865, March, Civil Rights Bill vetoed
1866, January, Congress defeats first 14th Amendment
1866, May, second Freedmen's Bureau Bill vetoed and passed
1866, June, 14th Amendment passed
1866, July and August, General Amnesty to South and Johnson's campaign
1866, November, Republican success; South rejects 14 Amendment
1867, March, Reconstruction Bill, 5 military divisions, manhood suffrage, conventions; passed over veto
1867, April, appeal to Supreme Court
1868, Election
1869, Impeachment

Arabia includes Arabia proper (one-third the size of the United States with seven million people), Iraq which was formerly a part of Turkey, Trans-Jordan and Palestine.

Arabia proper is a plateau sloping eastward from highlands bordering the Red Sea. The northern part of it is the Hejaz; the lower Yemen; inland are the three deserts: the Syrian, the Nafud and the Nejd. South along the Arabian Sea is Hadramaut.

Explorers:

Niebuhr - 1761

Burkhardt - 1814

Burton - 1854

Teaching Negro History

1. Why Was the Negro race no history
2. Why has no civilization risen in Africa
3. Why could Negroes be enslaved
4. Why Did Negro slaves never revolt
5. Why did the U.S. make the mistake of giving Negroes the ballot.
6. Why did not Negroes use the ballot intelligently
7. Why are we called Negroes.

Who knows!

41-1-555

I believe that there have always been + are now men who have consecrated their lives for the good of others + the service of their own fellowmen + I believe that the ideals called Jesus Christ, was such a man so far as we can discern these ideals of strength + beauty

41-1-556

I sincerely hope that there is in this universe a living power + directing force which strives for the good of men + the fulfilment of life + which I see in the life of Jesus. This I will act as tho' it were true so long as Jesus' teachings + the ideals of righteousness do not disappear + all will [illegible] that is to do and agree with him

41-1-557

Life everlasting
Resurrection

Figures of Speech as Literal Truth

There is no evidence of a Personal benevolent ruler of this universe who created it

The known laws of life indicate that such unity as a Person exists + I say that the facts of history indicate

41-1-558

a clear benevolent purpose
is to live.

We may say this we believe
that God is a loving benevolent
God & we frame a report &
say this is what we mean by
believing that truth and having we
believe this is the test & this
we are going to act as if it
were

But this does not prove
God's existence nor does it give
us any right to frame or
assume [illegible] motives & desires &
persons who have not had help
and persons (& mankind) closing
& such help & talk of our help

a belief in God — a basis
of Reason unity & harmony in
This terribly troubled world
And it is absurd & Ray Bird
we know that is true or Paul
has been raised again or
Christ he has risen when
we asked it or received ever dead
Surely a church of belief is dangerous
existentialism or deliberate falsehood & it
is unforgivable & leads us & Ebo young
& ignorant as both

"The KGC: A Filibustering Fraternity"
C. A. Bridges

The secret known as the KGC was organized August 4, 1854 at Lexington, Ky with 5 members. Its chief aims, organizer & General Inspector was George W. Bickley, a native of Boone Co. and but there during his boyhood 287

Dict of U.S. History by J. Franklin Jameson, ed by A.E. McKinley
Phila: Hist. Pub. Co, 1931

269- KGC The W.C. was an organization formed in 1867 in Tennessee for the purpose of intimidating and restoring Negro supremacy. The early speed rapidly over the Confederate States, with the restoration of political rights to the white people of the South, the organization gradually died out

Authentic Exposure of the KGC as a Hateful Treason Plot by a Member of the Order, Autobiography, 1861-1862
C.O. Perrine, Pub. 1861

It did not receive its name of KGC until 1855, but the principles upon which it was based, and the activities began in 1834, at the close of that year there were to be found in Charleston, New Orleans and some other Southern cities a few gentlemen who secretly detested the Republican Democratic Party. These men formed themselves into secret juntos, which united in Portalon for a system more called SRC's (Southern Rights Clubs) They had certain signs of recognition by which they made themselves known to each other, and met weekly semi-weekly or otherwise, they might have had some said

Const and rules and regulations, but of these still is now known (5)

Geo C. Bickley a native of Bxone City, Indiana, but then living in Cincinnati, went south in 1855 and org the SRC into the KGC framing a Const, by-laws, and ritual. The div of KGC were to be known as "Castles." There were subordinate castles, and a Grand Castle, State Castle, & Legion and Gr or State Castles were by delegates in what was known as Gr US or Judges

officers:- Capt, Lt, Sergt, treas, guard (for the inner door) sentinel (outer door) a corresp secy recorder Offices of G Castle same as subordinate except the "Grand" before positions "Grand United States Commander" Southern Interests and opposition to ~~extension~~ the

encroachments 3X of unbelievers"
and pledged to do all within their
power in order to maintain by
the US Grit, to set up a "free
Southern Grit." (8-9)

Among these members" were many of
the wealthy capitalists of the South,
such as the Lyncoln's of Toombs S. and
they were fully confident that the
South was rapidly coming when they
would literally subdue up the
West of their section of the country." (10)

Uniform consisted of a helmet for
the head with a silver spear at the
rear and a frontal position carrying
a silver crescent; a close fitting
garment like a coat of mail, and a
sword worn the left side.
Emblems were skull and crossbones
signifying death to all unbelievers
(12)

Murder could be instructed opponents if he believed the opponent was a good Southern man, and patriotic" so does the trigger. (12)

This sole effort began in 1858 was the Richmond Enquirer, which they considered "an accurate barometer of Southern sentiment and opinion in the South. Coffee was a guest at the leaders' tables, and even some prominent Northern men came knocking at the door for admission. Whenever they were known to be good Southern men they were welcomed and treated with joy." (12)

Knights of the White Camelias
" " " Golden Circle

185-224; 201

Surgeon from the Confederate
army, Dr. Geo. W. L. Bickley
was the originator and founder of
the secret political order
known as The K G C. Its sign
was that of a Maltese Cross
surmounted by a star and en-
circled by the inscription
"Great Seal of the G. C., 1856."
Metal stars were emblems of
the order.

It had the usual grips, signs,
passwords etc.

Bickley when arrested at New Albany
Indiana on July 17, 1863. He types
to secure his release he made
Gen Burnside in Cincinnati, Gen
John Dix in NY, Sec of War Stanton

and Pres. A. Lincoln & and
him letters to these persons he
admitted his connection with the
KGC but said it was "an order
established for the purpose of colonizing
Mexico" and denied it had any re-
lation to the secret proceedings
under examination that name and
them existing in border states
(He was released in March, 1865 from
Ft. Lafayette, NY) 185-187

The actual membership was never
known, since no correct and complete
files were kept and the merger was
in the hands of local State secessionist
leaders. The overall plans of the order
were exposed in 1864. C. L. Dunn
and in command of the rebellion in the
Swamp before the arrest of Marshall Sanders,
Ct St Louis in July 1864 There
were 100,000 in Mo., 100,000 in

Illinois, 125,000 Indiana,
40,000 Ohio, 20-25000 Michigan
Southern Calif 24,000 but counted
central 50,000 men.

In conf with the Confederate agents
in Canada in 1864, Mr Clement
L. Vallandingham said the strength
of the Sons of Liberty was 300,000,
In a speech at Dayton, Ohio in the
summer of 1863 he said 500,000,
which the Dodge Advocate thought
reported as near the true total.

There KGC was a secret political
Secretive stream by the names
of KGC, K of the Columbian Star,
Order of Knights,
Sons of Liberty, Copps Belgique,
Knights of the mighty host,
Knights of the Circle, Honor
Mutual Protective Society
188-190

KGC was organized in 1854 in Cincinnati, Ohio, and began activity with the establishment of a lodge there & in a number of towns of the state. (190)

Its object as stated in the manual was the "entire and speedy conquest of Mexico and the establishment of a separate and independent nation upon such a basis as to render it subservient" to the work of American conquest. The "rules" laid down the doctrine that:

"Each & every American citizen has a right to denationalize himself and become a citizen of any other nation, and to his the superior right (whenever there) to rebel against the existing govt (as in the case of Texas) and assist the establishment of a new govt." (191)

The "rules, regulations and principles" which were to govern the orders were issued by the "Congress of the K.C.S. (Knights Commanders South) and the Grand President" from the Head-Quarters at Wash., D.C. They provided for 2 sections, The American Legion vs The Dixieland Legion, Dickey my Commander-in-C of the Dixieland Legion vs Grand Prior.

The regulations provided for civil vs military duty, but save the object of the order was mission to conquer & foreign territory, the initiatory degree was attentions. The laws & rites first provided that the Dix Leg "Shall consist of 2 & div, each perfect military staff, each com by a marshall, who shall be responsible to the C-in-C

Its military personnel fought for the US Army - regulars, regulars, engineers Scholarships for officers and enlisted men were established. In addition Grants of land were promised

EM - 640 Acres	Lt Col 0 Acres
Capt 1280 "	Major 2560 "
Majors 2880 "	Col - Brig 3200 "

Each member was required to take an oath to support & defend the Constitution of the United States against all enemies foreign & domestic & bear true faith & allegiance to the same & to obey the orders of the President of the US & the officers appointed over him according to the rules & articles of war" 191

"do anything which in his judgment would be contrary to the Constitution of the USA ... and in no instance will the regiment be allowed to take up arms against the US" 192

The new 3 degrees in Freemasonry

1st was a simple oath of allegiance to any member who was to bear arms. It was to be kept secret, allegiance and obedience to the KGC 192

2nd Brig. gold degree, same as first but ordinarily only to non-comm officers

3rd Division degree taken only by comm officers who must have served a part of the army canada (192)

The regulations contained provisions for the organization of castles in all parts of the country and also a long list of general and political questions with which new candidates for particular important meetings were made familiar. A ceremony of steamship [illegible] to the ship to finish the capital necessary to carry out the plans of the KGC (193)

The first definite public info of the KGC is to be found in the Mobile Register, April 16, 1860. This was a general order from the commander, No 546. This shows its spread and seeming strength in the South. This order by Col Bickley concluded that although it had nothing to do with

(145) 45000, 15000 militia

they pointed out religious questions then disturbing the country. "That the southern governments will have their forces on the right six months is confidently expected. If so, the KGC may find its hurtle in the District of Columbia." (195)

Another an open letter to the KGC in the Richmond, Va., Whig, July 7, 1860, Cassius Clay urged the South to assist in carrying out the plans of the order; that the country was divided into 2 parts — northern & southern — and reconciliation was impossible. "With Mexico annexed and southernized, the South will equal in territory the north." He pleaded with the slaveholders to lend financial assistance to the movement, promising that "no more negroes will be sprinted away on the U.R.R. There will not be a full negro in the Southern States in 1870, and your cotton production will be 15 millions bales." (196)

funds raised be sent to several southern citizens or banks to which funds could be sent, indicating the order of priority most represented in the following 1860 (196)

In 1861 a charge in the national declared that the agencies of the country of Mexico had for its general purpose the extension of slavery and the political equality of free and slave states. (198)

The first of these initial charges said: "...We hold it to be our duty to offer our services to any southern state to repel a northern army. We hope such a contingency may not occur." (198)

In 1861, Lynch, the local organizer in Kentucky with "orders" 8000 workers and "orders" in Marion, Barron, Daviess, Christian & Henderson Counties

In May, 1861, a resolution was passed in the Kentucky House of Reps asking that the KGC be investigated - never made (199)

Never definitely known how KGC
was linked to northern states (200

They committed acts of violence such
as kidnapping, looting, murder,
destroying property, making 208-2
and they attempted in every possible
way to upset local Administration
208-211

The KGC was more numerous in
Indiana than in any other Northern
state. Members were evidently stat-
ioned in nearly all southern counties
including the city of Indianapolis (214

Leaders in the KGC were found in nearly
Iowa, Ill, Conn, NJ, Md, Dela, Pa,
Ohio, Del, Indiana, Kentucky, Mo, Calif
and Wash. D.C. (189

Memo FROM W. E. B. DU BOIS

30-31-d

9+ is the considered opinion of this Body that the first duty of an African Institute should be a thorough-going and exhaustive study of the economic condition of the Native colonial people — their income and expenditure, their wages + taxation, homes and clothing health + conditions of life + labor; that this studies be made independent of colonial officials and investment interests by men of scholarship and character, with the avowed purpose of determining just how far colonial land, and labor

a Declaration

Segregation

Hunting alone, in pairs
& in groups

Negro lynchings in parties

32-6-30

This thing that has
changed & threatened the ark
of the Lord's testimony is
that America has not responded
& begun descent as quickly as
we calculated

It is not sudden conquest
we are dying — it is a long
slow process

Meantime
we live
we do
we desire

30-9-31

Neglect of Negroes — Working outline

In Mixed schools

- Watching teachers
- encouraging Colored
- helping them & backward
- asking explanations & Control if necessary

In Segregated schools

- increasing curricula
- getting appropriations
- Closing poor & Mob violence

32-9-32

When a man can go where
he pleases he wants no Reprieve

When he cannot go where he
will he wants always Reprieve
& he dies then when he does
go

32-9-33

~~We talk in Alabama today and are asked~~

We have segregated institutions
We recognize them
We organize others
& make them excellent

31-2-38

DEFINITIONS: Wise and Otherwise

REFINEMENT: The ability to yawn without opening your mouth.

CRITICISM: A thing that may be avoided by saying nothing, doing nothing and being nothing.

CONSCIENCE: An inner voice that warns us someone is looking.—*Mencken.*

SMILE: A light in the window of the face which shows that the heart is at home.

ORIGINALITY: Undetected imitation.

FRIEND: One who knows all about you and loves you just the same.—*Hubbard.*

RELATIVES: Inherited critics.

ADVICE: That which the wise don't need and fools won't take.

SILENCE: The college yell of the school of experience.

beyond defeatism; Prostitute Tarnish

30-8-13

But over much of negro life &
existence like the Tubus stand
forth & firm — no prohibition of dances,
no intermarriage instinct crimes,
no decent black women, no virgins
no romance, nothing heroic or
fine

30-8-13

41-9-295

All seas are Tears
The world were water
But for the laughing of little
children
whence the lingering sand

41-9-288

1

like Ruffled
waters ~~tt~~ tossed
on a bed of dreams
~~dot~~ twilight
(or a dream of twilight)

I'm ~~not~~ going to
make a splash
— you may make
a splash

41-9-287

the tones & under-
tones of the ancient
sea — the whole black
hull of sky with
its splash of a
million stars

She was
a burning
brown — dark
as tho' some
fiery flood
was steadily
held beneath

41-9-286

41-9-284

Her hair arose like
twisted
smoke — a curling & dusky

If we laugh it is because thirsty
Humanity is the great Flood of the
Tears of all Mankind

We are the Eternal Crucified
— in all ages &
climes.
We Dipper

41-6-283

His words curled out from
his lips like soft down
~~from~~ smoke & soared away
lingeringly & slowly and
dauntingly with elusive perfume

4-6-289

MESSENGER BOND

To Glenn

I have seen Louvain lying
beautiful & quiet; Belgium resting in
garden & town until it leads at large
& hills. Gradually Brabant folds the
grey canal curve of its hills & thin slim
church & strange towns & — the
Ruhr

31-2-16

On the colder regions with brute ice & snow & tough stony nature one can read on chance & natural selection with certain mental reservation. And I must admit difficult to look on the palms & trees of the tropics, the flowers & fruits without a complete sense of Personal Design. or perhaps better design of Purpose

Facts if not reason.

The New York woodland flora — the red oak, cucumber, linden & the sago palm, & the Cryptomeria Japonica — these are for the Kew gardens. Add if you will the bamboo, the yellow pine (the mazy ^ twisted, crooked conifers, the cactus a Botanic) & the great columnar beeches the high evergreen pleasures of the year

ah! this were too beautiful. How dwelleth God!

date?

~~See what has been~~

How have we used our beautiful world — the Palace of Power, the Tower of Glory, the Temples of Learning? & afterwards about us walls & ruins & the voice of death & horror, the Book is sealed. The birds sing but children weep. All is pain & fear — wound & horrible fear

40-81-2-18-04

May God we who seek the Father attend your Christ Chairman? the Empire builder & the slumber Ruler & allow the Rule & Reign among our Empire & Power & 450 million slave & barracks & sword as now

5 00,000

5 00000

40-81-4

Was the matter of Colonies and Colonial peoples touched on in any way at Bretton Oaks? It is clear that Colonial labor & materials are fundamental matters of commerce & finance. The interest in Colonies is today economic more than political. A third of the earth's population lives in colonies Can we settle the post-war industrial troubles and neglect colonial troubles

40-81-3

The Queen of the Clydon Fields reaches
of danger & the Lord of Trafalgar
have charted on dark, the deeds of the
Dragons are known & the Ringabout
is on Tarbo. All the world is wary
& hurt & weary, while cowards
kills & blinds & maims at men.

The wound is wide & watchers;
wicked were the faces of men

Hamilton

4

True Black & 21, speaking the English language somewhat more aptly than his fellows and quite as correctly

---

this means that when you kick him kill him — is this fair & you have You a right to rule community from being knocked down — is there any likelihood of a world in which matters & people do so.

Every Negro — Winchester — in interests of peace. — Allen not shot when most fatal must died & a white southern jury acquitted every man.

Problem no diff than other human problems

33-2-75

Most unfair to the south is the present Yankee
wanderlust attitude of North — anything to calm
the baby — Paregoric yes but paregoric
is bad for it — O damn the baby stop its
infernal noise

Africa

Every thing of animal life moves & creeps of the earth & fowls

LYNCHING - 1927

---

1 February 1: WILLIS, TEXAS: (New York Times, February 3) - Tom Payne was taken from two officers by an unmasked mob of white men near Willis and hanged to a tree. Payne had been arrested and charged with assault to murder in connection with an attack on a white sawmill worker. Fearing mob violence Payne was being taken by two officers to Huntsville for safe keeping when they were surrounded by a mob and disarmed.

2 March 19: MAYO, FLA.: (Florence S. C. Review, March 20) - Berry Allen (white) is reported to have been seized by a mob and thrown into the Suwanee River while being taken to a hospital suffering from wounds sustained when his barricaded home was dynamited by a sheriff's posse after he had shot and killed Will Brock, a range rider, and seriously wounded a deputy sheriff.

3 May 4: LITTLE ROCK, ARKANSAS: (New York Times, May 5, 1927) - John Carter, accused of assault on a white woman and her daughter, with an iron bar, as they rode along the road near the city, was hanged by a mob, after which his body was dragged behind an automobile through the main street, then saturated with gasoline and burned at one of the principal corners in the Negro section.

4 " 20: MACON, MISS.: (Washington Post, May 21, 1927) - Dan Anderson, alleged to have confessed that he killed a young white farmer was lynched by a mob which took him from officers. More than 200 shots were fired into his body.

5 " 22: BRAGGADOCIO, MO.: (N. Y. Evening Post, May 23) - Will Sherod was lynched after an alleged criminal assault on a white woman. He was strung up by the hands to a temporary scaffold in the town square and his body pierced with bullets. He had been taken from jail.

6 May 25: LEAKESVILLE, MISS.: (Mobile, Ala., Register) - Bernice Raspberry (Ed Lively) was taken from jail by a masked band of about 100 men and strung up to a tree. His body was then riddled with bullets. He had been arrested on a charge of beating a board bill, after which the sheriff was informed that he was wanted at Bothwell, Miss., for alleged improper conduct with a white woman.

7 June 13: LOUISVILLE, MISS.: (New York Times, June 14) - Jim and Mark Fox, brothers, accused of having slain Clarence Nichols, a sawmill superintendent, were seized by a mob, paraded through the streets and then taken a short distance from town, where they were tied to a telephone post saturated with gasoline, and burned to death. The men were taken from officers who were taking them to Jackson, Miss., for safekeeping.

Lynching - 1927

8 June 16: HELENA, ARK: (Philadelphia Tribune, June 16): Owen Fleming was shot to death by a posse of 200 whites. He was charged with killing a white man who tried to force him to work while sick.

9 June 17: PARIS, TENN.: (New York Times, June 18) - Joseph Upchurch who shot and killed Sheriff T. D. Caldwell when the latter attempted to arrest him, was shot to death by a posse of about 50 men. The cabin where Upchurch had been placed by a deputy sheriff was riddled with bullets.

10 July 7: YAZOO CITY, MISS.: (New York Times, July 8) - The bullet ridden body of Joe Smith, alleged to have attempted an attack on a young white girl, was found hanging to a tree.

11 July 21: CHIEFLAND, FLA.: (Bronson, Fla., News, July 22): Albert Williams was shot to death by a mob charged with assault on a turpentine operator. The trouble is said to have arisen over a debt which Williams owed the white man.

12 August — BAILEY, N. C.: (Chicago Whip, August 20): Thomas Bradshaw accused of a statutory offense escaped from police officers and was chased for three days by foxhounds until he was exhausted. As he emerged from the woods with the hounds at his heels, he was shot to death by a posse of armed men.

13 " 26: WILMOT, ARK.: (New York World, August 27): Winston Pounds was taken from a posse of deputy sheriffs and hanged to a tree one and a half miles from Wilmot, charged with having attacked a young married woman.

14 Sept. 28: MEMPHIS, TENN: The bullet ridden body of Thomas Williams, alleged to have attacked a fifty-year-old white woman, was found in Pleasant Union churchyard, two miles from the scene of the crime.

15 November 13: COLUMBIA, TENN: Henry Choate, 18 years old, was taken from jail by a band of 250 men, and hanged from a second story window of the court house building. He was alleged to have attacked a white girl.

16 " 30: WHITESBURG, KY.: Leonard Woods alleged slayer of Hershel Deaton, a mine foreman, was lynched by a mob said to have been composed of citizens of Kentucky and Virginia. After hanging the Negro the mob fired many shots into his body.
